At the close of the morning session of the National Civic Federation December 15, President Low appointed the following Committee on Nominations of Officers for the Federation during the ensuing year:

Theodore Marburg, of Baltimore, Chairman.

W. D. Ryan, General Secretary of the United Mine Workers' Union.

Marcus M. Marks, of the Clothiers' Association.

James M. Lynch, President of the Typographical Union.

V. Everit Macy, of New York City.

W. G. Lee, President of the Brotherhood of Trainmen.

ELECTION.

At the afternoon session Mr. Theodore Marburg, Chairman of the Committee on Nominations of Officers, presented the following ticket, which was unanimously elected:

Seth Low, President.
Samuel Gompers, Vice-President.
Nahum J. Bachelder, Vice-President.
Ellison A. Smyth, Vice-President.
Benjamin I. Wheeler, Vice-President.
Isaac N. Seligman, Treasurer.
Ralph M. Easley, Chairman Executive Council.
William H. Taft, Chairman Public Employes' Welfare Committee.
William R. Willcox, Chairman Welfare Department.
Charles A. Moore, Chairman Industrial Employes' Welfare Committee.
Nicholas Murray Butler, Chairman Industrial Economics Department.
Melville E. Ingalls, Chairman Public Ownership Commission.
John Mitchell, Chairman Trade Agreement Department.
Seth Low, ex-Officio Chairman Conciliation Committee.
John Hays Hammond, Chairman Committee on Organization.
Franklin MacVeagh, Chairman Immigration Department.
D. L. Cease, Secretary.

MITCHELL ADDRESSES COLONY CLUB.

"The American Federation of Labor" was the subject of John Mitchell's address to a large audience of women in New York City, February 16. The gymnasium of the Colony Club, used as a hall, was filled with interested members of a section of society which is often counted as being devoted exclusively to pleasure and fashion. The description by Mr. Mitchell of the purposes and aims of the great aggregation of national and international trade unions known as the American Federation of Labor was listened to with great attention. At its conclusion the speaker was enthusiastically applauded.

Questions asked, upon Mr. Mitchell's request, by women in the audience, showed intelligent interest in labor unions, and expressions of sympathy with their leading objects were general.

The New York Tribune's comment upon the meeting was as follows:

"John Mitchell, former president of the United Mine Workers, gave a number of wealthy women his views on the subject of trade unionism yesterday at a meeting of the Colony Club, of which Mrs. J. Borden Harriman is president. The members of the Colony Club have taken up industrial and economic questions, and this was one of a series of fifteen lectures on these subjects, which are being given weekly.

"At these meetings it has been arranged that outsiders preside, and August Belmont was the chairman yesterday. Mr. Mitchell gave his usual arguments in favor of the unions, stating that they had always prevented a competition in wages which would often be disastrous to the wage-workers; that they were educational and tended to good citizenship, and that they had come to stay and were part of the inevitable evolution of the industrial system."

FRANKLIN MacVEAGH, Chairman Immigration Department.
RALPH M. EASLEY, Chairman Executive Council.
D. L. CEASE, Secretary.

EXECUTIVE COMMITTEE

On the Part of the Public:

ANDREW CARNEGIE, Capitalist, New York.
CORNELIUS N. BLISS, Ex-Secretary of the Interior, New York City.
NAHUM J. BACHELDER, Master of the National Grange, Concord, N. H.
JOHN HAYS HAMMOND, Mining Engineer, Gloucester, Mass.
BENJAMIN I. WHEELER, President University of California, Berkeley, Cal.
WM. H. TAFT, President of the United States.
CHARLES W. ELIOT, Former President Harvard University, Cambridge, Mass.
NICHOLAS MURRAY BUTLER, President Columbia University, New York City.
SETH LOW, Publicist, New York City.
ARCHBISHOP JOHN IRELAND, of the Roman Catholic Church, St. Paul, Minn.
P. H. MORRISSEY, President The American Railroad Employes and Investors' Association, Chicago, Ill.
DAVID R. FRANCIS, Ex-Secretary of the Interior, St. Louis, Mo.
ISAAC N. SELIGMAN, of J. & W. Seligman & Co., New York City.
JAMES SPEYER, of Speyer & Co., New York.
V. EVERIT MACY, Capitalist, New York.
JOHN M. STAHL, President Farmers' National Congress, Chicago.
RALPH M. EASLEY, Chairman Executive Council of National Civic Federation, New Canaan, Conn.

On the Part of Employers:

HENRY PHIPPS, Director United States Steel Corporation, New York City.
AUGUST BELMONT, President August Belmont & Co., New York City.
W. C. BROWN, President New York Central & Hudson River Railroad Company, New York.
CLARENCE H. MACKAY, President Postal Telegraph-Cable Co., New York City.
MARVIN HUGHITT, President Chicago & Northwestern Ry. Co., Chicago, Ill.
FREDERICK D. UNDERWOOD, President Erie Railroad Company, New York City.
M. H. TAYLOR, President Pittsburg Coal Company, Pittsburg, Pa.
MELVILLE E. INGALLS, Chairman C., C., C. & St. L. Ry. Co., Cincinnati, Ohio.
SAMUEL MATHER, of Pickands, Mather & Co., Cleveland, Ohio.
CHARLES A. MOORE, Manning, Maxwell & Moore, New York City.
FRANKLIN MacVEAGH, of Franklin MacVeagh & Co., Chicago, Ill.
ALEXANDER H. REVELL, of A. H. Revell & Co., Chicago, Ill.
FRANK A. MUNSEY, Publisher, New York.
ELLISON A. SMYTH, President South Carolina Cotton Manufacturers' Association, Pelzer, S. C.
MARCUS M. MARKS, President National Association of Clothiers, New York City.
OTTO M. EIDLITZ, Former Chairman Board of Governors, Building Trades Employers' Association, New York City.

On the Part of Wage Earners:

SAMUEL GOMPERS, President American Federation of Labor, Washington, D. C.
JOHN MITCHELL, Former President United Mine Workers of America, New York City.
A. B. GARRETSON, Grand Chief Conductor Order of Railway Conductors, Cedar Rapids, Iowa.
JAMES DUNCAN, General Secretary Granite Cutters' International Association of America, Quincy, Mass.
W. G. LEE, Grand Master Brotherhood Railroad Trainmen, Cleveland, Ohio.
WARREN S. STONE, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland, Ohio.
WILLIAM D. MAHON, President Amalgamated Association of Street Railway Employes of America, Detroit, Mich.
TIMOTHY HEALY, President International Brotherhood of Stationary Firemen, New York City.
WILLIAM J. BOWEN, President Bricklayers' and Masons' International Union, Indianapolis, Ind.
W. S. CARTER, President Brotherhood Locomotive Firemen, Peoria, Ill.
JAMES O'CONNELL, President International Association of Machinists, Washington, D. C.
JOHN F. TOBIN, General President Boot and Shoe Workers' Union, Boston, Mass.
JOSEPH F. VALENTINE, President Iron Moulders' Union of North America, Cincinnati, Ohio.
JAMES M. LYNCH, President International Typographical Union, Indianapolis, Ind.
DENIS A. HAYES, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia, Pa.
WILLIAM HUBER, President United Brotherhood of Carpenters and Joiners of America, Indianapolis, Ind.

A PROGRAMME OF GREAT UNDERTAKINGS.

The annual meeting, with its inspiring review of the past year, was the starting point for renewed efforts along the lines laid out for itself by The National Civic Federation.

Probably no better illustration could be gained of the purpose of the Federation "to organize the best brains of the nation in an educational movement toward the solution of some of the great problems related to social and industrial life" than by a glance at a brief summary of its more recent activities.

One of the leading subjects now occupying public attention is the needed amendment of the Sherman Anti-Trust act. The efforts of the National Civic Federation to assist in presenting to Congress such measures as would effect this purpose have been long continued and earnest. The deep interest of the active and controlling elements of our nation in this subject was indicated by the appointment of over a thousand delegates by governors of States and by national organizations of industrial, commercial, agricultural and manufacturing interests to the Trust Conference, held in Chicago, under the auspices of The National Civic Federation. This conference in its resolutions declared that the enforcement of the Sherman act had revealed "the necessity for legislation which shall maintain all that the Sherman act was intended to secure and safeguard interests it was never expected to affect."

The National Civic Federation's effort to secure amendment of the Anti-Trust act followed. The experience of the last two years and the growth of intelligent appreciation of the problems involved promise to assist in the difficult work laid upon the new committee which has been appointed to draft and recommend to Congress such amendments as seem now to be most needed. It is made up of Seth Low (who, at the request of the lawyers on the committee, acts as chairman), Frederick P. Fish, H. W. Taft, Frederick N. Judson and R. D. Silliman.

The organization of the Trade Agreement Department, under the chairmanship of Mr. John Mitchell, is one of the most important and beneficial of the great undertakings of the organization since its inception. The bringing into closer relations of over a thousand employers and employers' organizations and the leaders of the wage-earners, who meet face to face in conference over hours, wages and conditions of employment, is an immense advance in industrial progress.

It is known that Mr. Mitchell accepted the chairmanship of this department at no small sacrifice of high official and pecuniary personal benefits. He was urged by one of the great national parties to accept nomination as Governor of Illinois, and before that offer was made he had been earnestly solicited by the same national party to stand for Vice-President of the United States. Holding the interests of labor above all others, Mr. Mitchell chose the work in which he now exerts his vast influence and his practical powers of application for the benefit of the industrial world.

A new work of far-reaching significance is being initiated by the Federation through its committee, headed by Mr. John Hays Hammond. It is intended to organize State councils of one hundred members each, with the object of making a systematic effort toward securing something approaching uniformity of legislation among the States of the Union. From the point of view of the practical man of affairs who is deeply interested in the material development and well being of his State and local habitation to the larger outlook of the statesman who confronts the affairs of the nation, this attempt to bring order into the confused product of long years of rapid growth in these States is of pronounced value. That it will involve long continued, patient and intelligent endeavor, conservative judgment and courageous perseverance is certain. If in the end it serves its purposes and aids in welding into a more compact, efficient and united whole the States which make the Union, the object of the Federation in projecting and setting the enterprise in motion will have been gained.

The Welfare Department, which is mainly devoted to interesting employers in improving the conditions under which employes in all industries work and live, has organized an Industrial Insurance Commission, with Mr. George W. Perkins as chairman. It will collect information relative to wage-earners' insurance, including accident, sick and death funds, as well as pensions. Especial attention will be given to the subject of compensation in case of accidents, and an examination is to be made by the commission of the various methods employed at home and abroad in connection with the subjects in which it is interested. Ultimately this commission will try to secure uniform legislation throughout the United States to provide for the protection of wage earners.

The Woman's Department, in perfecting and extending its organization and inaugurating its own practical steps in welfare work, is rapidly developing in efficient and influential activity. Its membership is largely drawn from women who are themselves stockholders or who are financially interested in industrial organizations through family relationship, and who therefore naturally should also be interested in the welfare of workers in the enterprises from which they draw their incomes.

In this department Mrs. William Howard Taft, wife of the President-elect, is chairman of the National Committee on Welfare Work for Government Employes. At the annual meeting of the Woman's Department Mrs. Taft aroused great enthusiasm by her attendance and report on a plan of work for the coming year.

The visit of American teachers to the United Kingdom, which was arranged through the Industrial Economics Department, proved to be a very successful affair. Upwards of four hundred teachers availed themselves of the opportunity to visit the schools of England on two months' leave from the American educational authorities. The teachers give enthusiastic accounts of the courteous and friendly assistance and entertainment which they have received on all sides from our kin across the sea. In addition to the facilities extended to them in visiting the schools, many delightful social affairs were arranged, including a reception at Dorchester House by the American Ambassador and Mrs. Whitelaw Reid. A special number of the *Review*, devoted to the reports of the teachers, is now being prepared.

The Industrial Economics Department is making a study of three subjects of vital interest at the present moment.

First—"In its fundamental principle, is our government representative or democratic?"—involving consideration of direct nominations; the initiative and referendum; imperial mandate and recall; direct election of judges and of United States Senators; abolition of the executive power of veto; and the amendment of the Constitution by a majority vote.

Second—"Has any portion of society the right to use its combined purchasing power for its own benefit, and if so, in what manner and to what extent?"—involving consideration of the first and secondary boycott; the white list, the union label; co-operative purchasing, etc., etc.

The third subject—"The menace of Socialism to American institutions."

No more important and useful inquiry will be made by the Civic Federation than the one now under way by its Public Ownership Commission. As will be remembered, that commission, after eighteen months' investigation in this country and Europe of the relative merits of private and public ownership and operation of quasi municipal utilities, recommended regulation rather than operation by the public. The Civic Federation commission will investigate and report on the question, "How far can regulation go without interfering with management?"

Thus the closing of one year is but a mark as to time. No stop is made in the work of the Federation, for it must keep one hand on the plough, even while it looks back over the just turned furrow to mark its line and course.

THE CONTEMPT CASES OF MESSRS. GOMPERS, MITCHELL AND MORRISON.

By SETH LOW, President of The National Civic Federation.

THE National Civic Federation has in its membership both large employers and the leaders of organized labor. In a matter like the injunction proceedings in the Buck's Stove and Range case it seems as if it ought to be possible to make each side realize the other's point of view at least fairly enough to enable both to do justice to each other. This article is an attempt to do this.

In one of the international rifle matches of twenty-five or thirty years ago one of the contestants took careful aim and made a bull's eye; but he failed to score because he hit the wrong target. Something like this is seen in the firing of both sides in this famous controversy. They hit the other side's weak point, but not that of their own. The manufacturers and those who sympathize with them in condemning the boycott that figures in this affair—and that means a very large section of the American people—starting with the idea that such a boycott is obnoxious to fair play as well as unlawful, are inclined to believe that anything which enables the courts to contend successfully against such a boycott is a legitimate weapon to use in such a struggle.

Organized labor, on the other hand, as represented by the American Federation of Labor—starting with the belief that such a boycott is a natural right—sees in the effort to destroy the boycott an attempt to crush organized labor—and identifies its objection to the actual use made of the writ of injunction in this case with a struggle to preserve for all Americans the right of free press and free speech. The claim of organized labor is that every man is entitled to control his purchasing power in his own interest, and that, therefore, an organized body of men should be free to do the same thing. This is the basis of organized labor's belief that the boycott is a natural right.

It does not seem to occur to either party that both may be partly right; that the boycott as illustrated in this case may be the hateful thing that many believe it to be; but that, also, the method adopted for contending against it may involve the use of powers by the court as dangerous as the boycott itself.

When Samuel Johnson was asked why he believed in free will, he replied: 'We know we're free, and that's the end on't." It is probable that no one who has not found it to his personal advantage to use the secondary boycott in an industrial controversy ever has looked upon it or ever will look upon it as involving anything but a tyrannical use of the power of the many against the well-being of fellow citizens who have done them no wrong. This is something that the disinterested know by intuition, as Dr. Johnson knew that his will was free. It is significant that in England, neither before nor since the passage of the Trades Disputes Act of 1906, has any such boycott ever been attempted. It is true that in our own Revolutionary days such boycotts were put in force; but this was as a political not as an industrial measure—and led right up to actual war. It is also clear tnat in the contemplation of the Sherman Anti-Trust Act such boycotts are now not improbably illegal in the United States while that law remains as it is. It should be pointed out, however, that when this Buck's Stove controversy began the decision in the Danbury Hat case had not been rendered by the Supreme Court. It may well be believed that organized labor, as an evidence of its good citizenship, will refrain from such boycotts as have been condemned by the court until, in an orderly way, it can bring about, if it can, a change in the law so that the law will permit what it now forbids. All who believe that organized labor is, in its essential being, law abiding will recognize that such boycotts must be a thing of the past while the law remains as it is.

On the other hand—the contention of organized labor that the effort to down the boycott through publicity, by the use of the injuction, involves in this case, and necessarily, an attempt to control the freedom of the press and the freedom of speech is not to be lightly dismissed. The injunction issued in the Buck's Stove and Range case enjoined in fact many different actions, and it did in terms forbid the use of the press to enforce the boycott, and the use of speech to the same end. This is the particular aspect of the injunction which is called in question.

The exact phraseology of Judge Gould's injunction is that the defendants are enjoined, among other things, "from publishing or otherwise circulating, whether in writing or orally, any statements or notice of any kind or character whatsoever, calling attention of the complainant's customers, or of dealers, or tradesmen, or the public, to any boycott against the complainant," etc.

Messrs. Gompers, Mitchell and Morrison have been adjudged guilty of contempt because they have treated this part of the court's mandate as void because unconstitutional. The injunction was obeyed in the particular command to omit this firm's name from the "We don't patronize list," but the *American Federationist* and these gentlemen continued to discuss the propriety of the injunction. Partly because the case became a "cause celebre" such discussion of the injunction became more effective than the "We don't patronize" list itself in enforcing the boycott, and the court has held that the gentlemen were in contempt because the attempt of the court to shield this firm's business by injunction, against injury by publicity, had been rendered nugatory by them; while, on the other hand, it must be recognized that the action of the court itself in enjoining publicity has resulted in publishing the fact of the boycott more widely than ever.

It was argued as contempt of court, for instance, that the injunction itself was printed in the *American Federationist*. Every other paper and magazine in the land could print the injunction as a matter of news, but, when the *American Federationist* printed it, it became contempt of court. Furthermore, Mr. Gompers was held in contempt because he discussed the case, or for the manner in which he discussed the case, in the political campaign, in a perfectly legitimate effort to bring about, in an orderly way, a change in the policy of the country in respect of such questions.

The determination of the legal questions at issue can safely be left to the Supreme Court of the United States; but it is legitimate to call attention to two aspects of the case which cannot fail to impress a layman. Every other person in the United States, except the persons affected by this injunction, is left free to do what those defendants are forbidden to do; that is, discuss in the press and on the platform all the aspects of this case despite the publicity thereby given to the boycott. Of course, the injunction might be extended to cover others, in case of need. But what would be the effect of the injunction if it were made universal? If this procedure be a proper remedy at all, why may it not be applied to everybody; and if it were to be so applied, would there not be at least one subject in the United States as to which free press and free speech would not exist?

Secondly, in this aspect of the case the injunction was issued to prevent the publicity of the boycott, and it has increased the publicity of the boycott a thousandfold. As a preventive of publicity, therefore, the injunction seems to be a failure entirely irrespective of any violation of it by the defendants. If boycotting by publication is illegal, why not enforce the law against it in the usual way? If it is a crime, why is not somebody indicted, tried and convicted? If it is not a crime, why not sue for threefold damages, as has been done in the hatters' case under the Sherman Anti-Trust Act? But what ground is there for resorting in such a controversy to the exceptional process of an injunction against publicity which can only be made effective by forbidding certain men to do what every other man in the country is left free to do at his pleasure—that is, discuss the action of the court as it bears upon the controversy to which it refers?

To the writer the boycott as practised in this case seems wrong as well as probably illegal, but is the remedy by an injunction upon publicity a proper remedy?

INDUSTRIAL INSURANCE COMMISSION.

Will Make Exhaustive Examinations in This Country and Europe of All Employers' Liability, Old-Age Pension and Industrial Insurance Plans for Aiding the Wage Earners—Geo. W. Perkins Has Accepted the Chairmanship.

PURSUANT to a resolution adopted at the annual meeting of the Welfare Department of The National Civic Federation, the Executive Council of that department has authorized the appointment of a commission to make a thorough study of industrial insurance, including compensation for wage-earners in the form of sick, accident, old age and death benefits. Mr. George W. Perkins has accepted the chairmanship of this commission, the personnel of which will be announced later. The commission, which on being called together will map out the plan and scope for its work, will be composed of experts who have investigated foreign plans, employers especially interested in securing benefits for

GEORGE W. PERKINS.

their employes, and wage-earners and public spirited citizens. It is expected that the commission will collect data, compare various methods now in force in Europe as well as in this country and promote such legislation as may be deemed necessary.

An entire day at the annual meeting of the Welfare Department was given to this subject. It was shown that the United States is far behind European countries in making provision for the protection of this class of the unfortunate. The plans abroad were contrasted with industrial insurance in this country now provided by:

1. Mutual benefit funds contributed to by employer and employes;
2. Trades union funds and fraternal lodges;
3. Liability (indemnity) insurance companies;
4. Private insurance companies, such as the Metropolitan and Prudential;
5. The Savings Bank Annuity Plan in Massachusetts.

Some of these plans are desultory and apply to comparatively few of the mass of wage-earners.

Questions pressing for consideration in the interest of laborers are:

SICK INSURANCE.

How may the wage-earner be protected against the necessity of borrowing from the usurer when he or some member of the family may fall ill?

PENSIONS.

Shall we by Federal or State legislation, as has been proposed, follow the example of England in providing pensions for the superannuated by general taxation?

Can we adopt Germany's plan for compulsory old age insurance, dividing the burden of premiums between the employer and the employe and the State?

WORKMEN'S COMPENSATION.

Is one of the great needs in industrial relations in the United States a radical change in the law respecting the employer's liability?

Should the victims of industrial accidents and their families bear the cost?

Should the industry through trade associations of employers, as in Germany, bear the burden incident to death or bodily injury of employes?

Or, should individual employers, as in England. be held liable?

AMENDING THE SHERMAN ANTI-TRUST LAW

COMMITTEE TO DRAFT BILL—VITAL INTERESTS INVOLVED—PRESIDENT LOW'S VIEWS—MODIFICATIONS MUST APPLY EQUALLY TO LABOR AND CAPITAL

THE Executive Council of the National Civic Federation has appointed a committee to draft proposed amendments to the Sherman Anti-Trust act. By request of the lawyers upon the committee Seth Low will serve as chairman. The other members are Frederick P. Fish, of Boston; Frederick N. Judson, of St. Louis; Reuben D. Silliman, of New York, and Henry W. Taft, of New York.

No attempt will be made to submit anything to the present session of Congress. It is proposed to draft a tentative bill as soon as a careful study of the problems will permit. This will then be submitted for examination and suggestion to various representative bodies in all parts of the country, and with the aid of the comments thus received the final draft of the bill to be submitted will be prepared. The National Civic Federation confidently appeals to all who believe that the public interests require a rational amendment to the Sherman Anti-Trust law for their co-operation in this movement.

President Seth Low in his annual address described the situation as regards the amendment of the Anti-Trust act to the Federation as follows:

SHERMAN ANTI-TRUST LAW.

The most important activity of the Federation, during the year under review, was the effort to obtain at the last session of Congress an amendment of the sweeping provisions of the Sherman Anti-Trust Law. The members of the Federation will recall that in October, 1907, a Conference was held in Chicago under the auspices of the Federation, at which the sentiment appeared to be substantially unanimous that some amendment of this law ought to be had. This Conference adopted certain resolutions, and appointed a Committee to present them to the President and to Congress. When these resolutions were presented to the two Houses, the Conference Committee was asked to submit a definite Bill in legislative form to carry out its proposals. The Conference itself had given no such authority to any Committee; but, in view of the situation as it had developed, the Executive Committee of the Federation took the matter up. The result of its action was the preparation of a Bill, which was submitted in due time to Congress, and which became the subject of numerous hearings before the Judiciary Committees both of the House and of the Senate, but especially of the House. The Bill of last Spring was based upon the belief that at that time, and before the approaching Presidential election, it would be impossible to change the substantive law as embodied in the Sherman Anti-Trust Act. This being taken for granted, it became impossible to do more than propose a method by which, without changing the law, certain restraints of trade if not disapproved in advance by some government authority, might be assured freedom from prosecution. The hearings before the Congressional Committees made it evident that no relief from the embarrassments caused by the Sherman Anti-Trust Law can be looked for along this line of procedure. Perhaps it ought also to be said that none ought to be looked for, because the situation really calls for a change in the substantive provisions of the law. Let no one imagine, however, that it is an easy thing to say what such changes in the law ought to be. Your Committee last Spring began its work in the hope that it would be able to submit a law which would command very large support, not only from employers but also from organized labor. After working upon the subject for many weeks, the bill which it actually presented commanded no large measure of support from either. The mercantile classes favor amendments to the law which, instead of forbidding all restraints of trade, will forbid only unreasonable restraints of trade; and which will provide amnesty for the past, (1) on the theoretical ground that what has been done has often been done without any realization that it was contrary to the law; and (2) on the practical ground that to attempt to rip up what has already been done will destroy the industry of the country. The representatives of organized labor, on the other hand, ask to be omitted altogether from the provisions of the Sherman Act. It is evident to your Committee that the changes desired by the mercantile classes are going to meet with very serious objection, unless they are combined with some positive legislation which will provide some effective method of assuring to the country, in the future, the power to protect itself in advance from new combinations in the industrial sphere, such as have been made in the past, and which originally created the sentiment which placed the Sherman Anti-Trust Law upon the statute books.

In other words, precisely as a city may desire to limit the height of buildings, for the future, without taking down those that are already erected, so many persons believe that the right to make commercial combinations, in the future, should be under some sort of governmental control, even though those already formed be left unmolested; and such persons, also, believe that there is the same inherent right in the body politic to do the one as the other. On the other hand, the demand of organized labor to be exempted altogether from the operations of this Act has been objected to in the past, and is likely to be objected to in the future, as class legislation of a kind that has no place on American soil, because organized labor is believed to be capable of exercising restraint of trade no less than commercial corporations.

These being the terms of the problem, it is apparent, on the face of things, that the effort to amend the Sherman Anti-Trust Law in any effective way is beset by difficulties at every turn. The Anti-Boycott Association objects to the use of the words "reasonable" and "unreasonable" in the law, on the ground that they will make the meaning of the law so indefinite as to destroy the law as a penal statute. Others think that the use of these words will destroy the law for any purpose. The whole subject is made infinitely difficult by the Constitutional limitations upon the power of Congress, which have led the United States Supreme Court to decide, in effect, that Congress can regulate inter-State commerce, but cannot regulate the corporation that does it; because the corporation that does inter-State commerce is a creature of the State and not of the United States. The separate States, on the other hand, can regulate the corporations that do inter-State commerce, because they create them; but the States cannot regulate the inter-State commerce that is done, because under the United States Constitution, inter-State commerce is under National control. It cannot be too clearly apprehended that the effect of this situation is, that neither sovereignty—neither the National sovereignty nor the State sovereignty—can regulate both the agent that does inter-State commerce and the inter-State commerce that is done.

This seems to me personally a situation very nearly intolerable, when it is recognized that, at the present time, according to the best estimates obtainable, perhaps 90 per cent. of all commerce is inter-State commerce, and only 10 per cent. intra-State commerce. As a result of this situation, I look for a constant strengthening of the demand for Federal incorpora-

A STRONG MOVEMENT FOR NATIONAL UNITY

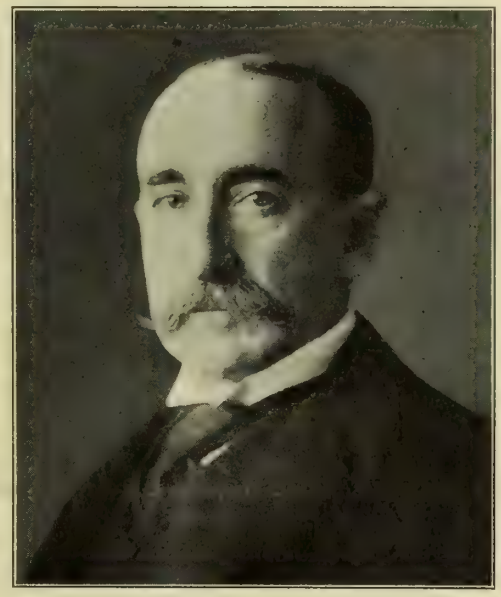
EFFORTS TOWARD SECURING MORE UNIFORMITY IN STATE LAWS—DANGERS OF SECTIONALISM —BETTER UNDERSTANDING NEEDED AMONG STATES WIDELY SEPARATED

THE National Civic Federation, through its experience in holding national conferences on such subjects as the trusts, taxation, immigration and election reform—conferences to which the Governors of States sent official representatives—has become impressed with the necessity for a systematic national effort toward securing, within reasonable limits, more uniform legislation in the States of the Union.

There are useful national organizations of farmers, manufacturers, wage-earners, bankers, merchants, lawyers, economists and other organizations which hold national meetings for the discussion of affairs peculiar to their own pursuits and callings. The Civic Federation, however, provides a forum in its annual conference for representatives of all these elements to discuss national problems in which they have a common interest. Heretofore there has been no effort to crystallize into State organizations this representative membership for the accomplishment of concrete aims.

A committee has been appointed to organize a Council of one hundred representative men in each State.

Mr. John Hays Hammond has accepted the chairmanship of this committee, of which the following are also members:



Messrs. Alton B. Parker, New York; Myron T. Herrick, Ohio; David R. Francis, Missouri; Curtis Guild, Jr., Massachusetts; Nahum J. Bachelder, New Hampshire; Edwin Warfield, Maryland; Herman Ridder, New York; C. F. Brooker, Connecticut; Bruce Haldeman, Kentucky; Victor Rosewater, Nebraska; Clark Howell, Georgia; P. I. Bonebrake, Kansas; James Lynch, Indiana; Harry Pratt Judson, Illinois; A. H. Revell, Illinois; John B. Lennon, Illinois; John H. Holliday, Indiana, and Benjamin Ide Wheeler, California.

The continued existence for eighteen years of the Annual Conference of Commissioners on Uniform State Laws, created by the different States at the instance of the American Bar Association, shows that the State Executives and Legislatures are fully alive to the importance of this subject. The last-named organization has been instrumental in securing the passage in thirty-five States of a uniform negotiable instruments law, and is promoting other commercial measures, including a uniform food law to conform to the national law.

This necessity for uniform legislation is further illustrated by the proceedings at the annual meetings of the National Association of the State Attorneys General and of the State Labor Commissioners, Insurance Commissioners, etc., etc.

The development of the nation, and the changes in conditions brought about by that development, have emphasized the harmfulness of the incongruities in the laws, adopted as they have been without any attempt at uniformity in regulating the same subject matter.

Professor Edwin R. A. Seligman, of Columbia University, at the National Civic Federation Conference on Taxation at Buffalo, referred to the injustice resulting from our present lack of uniform laws as follows: "Mississippi is vastly different from Massachusetts. South Dakota is not the same as Pennsylvania. A system of taxation may still work fairly well for an agricultural community and may be entirely unsuited for its industrial neighbor." "Yet," he continued, "even here it must be remembered that in Mississippi and South Dakota, as well as in Massachusetts and Pennsylvania, we find the railroad, the telegraph, the electric light and the bank—*i. e.*, some of the agencies of a complex modern society—in the midst of a new, pioneer, or still primitive economic community. . . . An unequal tax on a farmer in one State may make it difficult for him to sell his product in the world's market; an unjust tax upon the manufacturer or business man may drive him out of the business in that State; an unfair tax upon a corporation may cause it to move to another State. Action by any State is sure to react upon its neighbor. The business of the United States has become national and international."

JOHN HAYS HAMMOND.

Elihu Root, in 1906, when he was Secretary of State, in an address before the Pennsylvania Society, declared, "No State can live unto itself alone," and insisted that it is the duty of each State to frame laws and administer the public business "with reference not only to its own social affairs, but with reference to the effect upon its sister States." And Mr. Root has recently pointed out the need of patriotic and intelligent action in strengthening the efficiency of the State governments.

In his address at Albany, in January, 1909, he said:

"But there are two dangers coming with the development: One is the danger that the National Government will break down in its machinery through the burden which threatens to be cast upon it. This country is too large, its people are too numerous, its interests are too varied, and its activity too great for one central government at Washington to carry the burden of governing all of the country in its local concerns, doing justice to the rights of the individual in every section, because that justice can be done only through intelligent information and consideration.

"And the mass of business that is now pressing upon the legislative and executive and judicial branches of our government in Washington seems to have come about to the limit of their capacity for the transaction of governmental business.

"The other danger is the danger of breaking down the local self-government of the States. After all, the thing that we have government for is ultimately the preservation of our homes and our individual liberty. And we ought to be at liberty to regulate the affairs of our homes in accordance with our own ideas."

Further, the importance of the proposed organization as an agency making for a deeper sense of the unity of the people of the whole country becomes apparent in view of the benefits arising from the coming together of representative men from all parts animated by a broad patriotic spirit.

Washington, in his Farewell Address, warning his countrymen against the spirit of sectionalism, pleaded for the maintenance of the unity of the American people as "the main pillar in the edifice of their real independence." Manifesting his solicitude for the welfare of the entire country, East and West, North and South, "protected by the equal laws of a common government," he set forth the dangers attending "geographical discrimination—Northern and Southern, Atlantic and Western—whence designing men may endeavor to excite a belief that there is a real difference of local interest and views." And, he continued, "one of the expedients of party to acquire influence within particular districts is to misrepresent the opinions and aims of other districts. You cannot shield yourself too much against the jealousies and heartburnings which spring from these misrepresentations; they tend to render alien to each other those who ought to be bound to each other by fraternal affection."

During the century which has passed since Washington spoke his warning the country has expanded far beyond the known territory of that day. It has indeed been bound together from ocean to ocean and from lakes to gulf by the railways, the telegraph and the still stronger invisible bonds of social, commercial and political interests in common. Yet the mischievous effects of sectionalism have been constantly felt and they are still shown. The people of the various sections of the country do not sufficiently know each other. It is confidently expected that the meeting for the common good of men from all the States and the opportunities such meetings will afford for better understanding and appreciation of the people and the institutions of widely separated sections will bring about an increased sense of the unity of the whole people and a deeper and more intelligent love of country.

AMENDING THE SHERMAN ANTI-TRUST LAW

(Continued from page 14.)

tion of all the larger organizations that are carrying on inter-State commerce from Maine to California. Granted Federal incorporation, the United States Government would then be related to federally incorporated enterprises doing inter-State commerce, precisely as it is related now to National banks. It can then provide for a similar supervision of such corporations, and can pass laws, if need be, defining what such corporations can do and what they cannot do. No one, I suppose, desires to have the Federal Government attempt such oversight of all inter-State commerce. The desire for such control is limited to the few very large corporations whose uncontrolled power may make them a source of danger both to the people and to the commonwealth. It is evidently impracticable to determine the corporations that must be federally incorporated by the percentage of business which they do; and any effort to discriminate between inter-State corporations upon the basis of capital, while it offers a more easily applied rule, is, after all, purely arbitrary. It has occurred to me that possibly an effective discrimination could be made by requiring all corporations doing inter-State business to incorporate federally, whose stocks or bonds are either listed upon the exchanges or sold upon the curb. In other words, it is ordinarily only such corporations that attain a magnitude sufficiently great to involve serious questions of public policy. There is no object whatever in interfering with the class of corporations which in the olden time would have been partnerships, but which, in our day, have taken the corporate form for purposes of convenience. I recognize that such an outcome, if it is ever to take place, will be the result of a long agitation, and it may involve an amendment of the United States Constitution before anything of this sort can be done. I speak of it here because it seems worth while to point out the radical questions that are involved in any attempt to deal thoroughly with the conditions aimed at by the Sherman Anti-Trust Law. Almost any large interest, by insisting that nothing shall be done until it gets all that it wants, may easily keep this law upon the statute book without any amendment, indefinitely; thus exposing both corporations and labor enterprises to the extreme hazard of having this law enforced without rhyme or reason, like a savage running amuck.

The law as interpreted by the Supreme Court, declares all restraint of interstate trade illegal. United States Judge Lacombe, in the Tobacco Trust case, recently decided in the Circuit Court of New York, uses the illustration, originally used, I think, by Mr. Justice Holmes of the Supreme Court, of two expressmen who combine forces, instead of competing with each other as before; and says that even such a combination, under the law, would be illegal, because competition to that extent would have been lessened. To leave a law on the statute books, unamended, as drastic as this is to invite disaster.

Every one who realizes what an instrument of oppression and destruction this law can be, in the light of recent judicial decisions, ought to be willing to concede something to secure its early modification. One thing goes without saying, whatever modification of the law is made to apply to combinations of capital must apply equally to combinations of labor; and whatever amnesty as to the past is given to capital must be equally given to labor. If all the elements concerned will approach the question in this spirit of adjustment, it is possible that some amendment may be devised which will command sufficient backing to be successful. Except in such a spirit, I apprehend that nothing can be done. The Executive Committee of the Federation has placed the matter once more in the hands of its president to carry forward, if possible, the work already begun. I take this opportunity of asking the co-operation of all of our members in this most necessary and most difficult undertaking.

SOCIALISM'S MENACE TO THE FAMILY

A WARNING FROM "PROBLEMS OF TO-DAY," MR. CARNEGIE'S LATEST BOOK—CITATIONS OF SOCIALIST TEACHINGS AS TO MARRIAGE AND THE HOME

(Copyright, 1908, by Doubleday, Page & Co., New York.)

THE most serious objection to Socialism one hesitates to name, but this cannot be avoided. We gladly believe that most of the so-called Socialists of our English-speaking race would repudiate it, and yet it is clear that the system would naturally tend to produce, at least in some degree, the effects feared. We refer to the foremost of civilization's triumphs—the creation of the happy home—the product of man and woman, holily married, with the blessings of children coming to them, to give us here a taste of heaven on earth. Of all that evolution has given man during the long, slow march of ages, from savagery till now, this is the crown. Take this away, and to millions who possess it—the best of the race—life becomes undesirable. The holy of holies is the pure and happy home.

We have been treating of wealth, land, labor. Changes regarding these are unimportant compared with threatened changes in our family relations. That way degradation lies. Here rests the most precious root of all that elevates, refines, and improves human nature.

The writer would gladly have omitted reference to this feature of Socialism, but he felt it could not be ignored. One looks in vain through the booklets, so far published, for a repudiation of the sentiments of Socialistic leaders, both past and present, who admit that family relations must be greatly changed under Socialism.

The writer confesses it was with surprise that he found several modern and well-known writers going so far in the direction of accepting the doctrine that Socialism compelled this change.

The first exponent of modern Socialism, Fourier, is responsible for this taint, although even Owen quarrelled with the accepted views of marriage, so that it is not a recent development.

It appears advisable that the best-known writers among acknowledged Socialists, especially those of our own race occupying eminent positions, should give to this feature prompt attention, and, we trust, public repudiation.

We quote from "The Case against Socialism," pp. 374-398:

We have the admission of the leading English Socialist historian of Socialism, in no less a work than the "Encyclopaedia Britannica," that "In the Marx school, which in Socialism is by far the most important in this as in other countries, there is a tendency to denounce the legally binding contract in marriage."

The connection, however, bases itself upon this, as treated by Lamartine in his celebrated History of the French Revolution of 1848: "Communism of goods leads, as a necessary consequence, to communism of wives, children, and parents, and to the brutalization of the species."

Other historians have arrived at a like conclusion. Not only this, but Socialist leaders have themselves admitted all that Lamartine here asserts, save only his last conclusion. Jager, in his "Socialismus," observes that the possession of land and soil in common, if it arises out of Materialism, leads also to community of wives as being another expression of materialistic Communism.

In his essay treating of "Socialism and Sex," Professor Karl Pearson, said to be one of the most distinguished of Socialist writers in this country, writes: "With the centuries as the last traces of the patriarchate vanish, as woman obtains rights as an individual, when a new form of possession is coming into existence, is it rational to suppose that history will break its hitherto invariable law, and that a new sex-relationship will not replace the old?"

In a later passage Professor Pearson throws further light upon the nature of this "new sex-relationship."

In his essay he informs us that woman will be the "physical and mental equal" of man "in any sex-partnership they may agree to enter upon. For such woman I hold that the sex-relationship, both as to form and substance, ought to be a pure question of taste, a simple matter of agreement between the man and her, in which neither Society nor the State would have any need or right to interfere."

This latter conclusion Professor Pearson proceeds to modify in the case where "the sex-relationship does result in children; then," so Professor Pearson emphatically declares, "the State will have a right to interfere . . .;" and, apparently, in the writer's opinion, will be forced to interfere.

One of the greatest of French Socialist writers, M. Gabriel Deville in advocating the suppression of marriage under Socialism and the substitution of "free love," summarizes the principal reasons which account for the inherent antipathy to the continuance of marriage on the part of Socialism, saying: "Marriage is a regulation of property, a business contract before being a union of persons, and its utility grows out of the economic structure of a society which is based upon individual appropriation. By giving guarantees to the legitimate children, and ensuring to them the paternal capital, it perpetuates the domination of the caste which monopolizes the productive forces. . . . When property is transformed, and only after that transformation, marriage will lose its reason for existence."

Bebel, the great international Socialist leader, in his "Woman and Socialism" (translated into English under the title of "Woman: Her Past, Present, and Future"), expresses much the same views as Deville in the following passage:

"The *bourgeois* marriage is a consequence of *bourgeois* property. This marriage, standing as it does in the most intimate connection to property and the right of inheritance, demands 'legitimate' children as heirs. It is entered into for the purpose of obtaining them, and the pressure exercised by society has enabled the ruling classes to enforce it in the case of those who have nothing to bequeath. But, as in the new community there will be nothing to bequeath . . . compulsory marriage becomes unnecessary from this standpoint, as well as from all others."

"The existing monogamic relation," write two of the foremost leaders of English Socialism—Mr. Belfort Bax and Mr. H. Quelch—concerning marriage, "is simply the outcome of the institution of private or individual property. . . . When private property ceases to be the fulcrum around which the relations between the sexes turn, any attempt at coercion, moral or material, . . . must necessarily become repugnant to the moral sense of the community."

Lecky says: "It is perfectly true that marriage and the family form the tap-root out of which the whole system of hereditary property grows, and that it would be utterly impossible permanently to extirpate heredity unless family stability and family affection were annihilated. . . ."

Mr. Hepworth Dixon, who has devoted special study to the actual working of communistic societies, observes that, "The fact remained, and in time it became known, that Fourier's system could not be reconciled, any more than Owen's system could be reconciled, with the partition of mankind into those special groups called families, in which people live together a life devised by nature, under the close relation of husband and wife, of parent and child."

"The very first conception of a Socialistic State is such a relation of the sexes," again writes Mr. Hepworth Dixon, "as shall prevent men and women from falling into selfish family groups. Family life is eternally at war with social life. When you have a private household you must have personal property to feed it; hence a community of goods—the first idea of a Social State—has been found in every case to imply a community of children and to promote a community of wives. That you cannot have Socialism without introducing Communism is the teaching of all experience, whether the trials have been made on a large scale or on a small scale, in the old world or in the new."

The late Mr. William Morris, in company with Mr. Belfort Bax, has written in denunciation of the present "sham" morality, the aim of which "is the perpetuation of individual property in wealth, in workman, in wife, in child."

. . . . . .

Professor Karl Pearson writes:

"Such then seems to me the Socialistic solution of the sex problem: complete freedom in the sex-relationship left to the judgment and taste of an economically equal, physically trained, and intellectually developed race of men and women; State interference, if necessary, in the matter of child-bearing, in order to preserve inter-sexual independence on the one hand, and the limit of efficient population on the other."

"The Socialistic movement with its new morality and the movement for sex-equality," writes Professor Pearson in an earlier passage, "must surely and rapidly undermine our current marriage customs and marriage law."

Mr. H. M. Hyndman predicts under Socialism the complete change in all family relations which must issue in a widely extended Communism.

M. Jules Guesde, one of the leaders of International Socialism, writes, "The family was useful and indispensable in the past, but is now only an odious form of property. It must be either transformed or abolished."

There are other quotations in the book named, which we refrain from quoting.

In judging Socialism, we are forced to consider this aspect of the question and see where it leads us. The opinions expressed, we trust, are not accepted by many Socialists of our own race. What concerns us is whether the result of the Socialistic system tends to change or destroy marriage and present family life as it exists to-day.

Socialism, with its equal conditions of life and equal incomes, must tend to evolve the common assembling room, the aggregation of members in one common building, and all the features of the barracks. Mrs. Besant pictures these conditions—"public meal rooms," "large dwellings which are to replace old-fashioned cottages," "one great kitchen," "one dining-hall," and "one pleasant tea-garden."

The result of all this must be to destroy the home as we know it, and tend to substitute the ideal of the Socialist, all people being brethren and members of one family and one home; hereditary wealth and hereditary blood relationships abolished, father and son, wife and mother, sisters and brothers no more to each other than other members of the one great Socialistic household. The ties of kindred, even of father and mother and children, must eventually sink into one common affection for all.

All are to stand upon an equality of relationship, one to the other, under the sway of Socialism, in respect of homes, property, food, dress, and all other things. Even the children are to be taken care of by the State. "But if any provide not for his own, and specially for those of his own house, he hath denied the faith, and is worse than an infidel," becomes obsolete, for the home of Socialism is not to be Individualistic but Communistic. It becomes the Socialist's duty henceforth to provide for all as for his own, they being members of one great household and one family. Such is apparently the final aim of the extreme Socialist. This would mean a second fall of man. Farewell to human happiness in its purest, most elevating, most entrancing form. Destroy our home life as it exists to-day, and we may well lament that—

> "The wine of life is drawn, and the mere lees
> Is left this vault to brag of."

Just as Socialism goes back to the savage past and urges man to return to Communism, so seemingly it contemplates the return of man and woman to barbarism in their holiest relations, if we are compelled to accept literally some of the writers quoted in "The Case against Socialism," as true exponents of the new system.

The laws of Britain compared with those of America are less favorable to woman, and those of continental nations still less so; under American laws she has proper standing, proving the estimation in which she is held by American men in all the relations of life. Socialism being a continental outgrowth, the references made to woman by French and German Socialistic writers, some of which we have ventured to quote, shock our sense of what is due to beings who in their highest development are capable of reaching heights unattainable by men.

It is earnestly to be hoped that the respected leaders of Socialism will deal effectively with this phase of the question by repudiating the sentiments expressed.

A pagan philosopher, weighing the claims of Christ to rank among the great teachers, would probably give first place to what He did for the elevation of woman. Civilized man in his upward march has not only outgrown, he has reversed the Miltonic idea of Adam and Eve.

> "For contemplation he and valor formed.
> For softness she and sweet attractive grace;
> He for God only, she for God in him."

In the happiest and holiest homes of to-day, it is not the man who leads the wife upward, but the infinitely purer and more angelic wife whom the husband reverently follows upon the heavenly path as the highest embodiment of all the virtues that have been revealed to him: he for God in her. Throughout the English-speaking race, as a rule, to-day, it is the wife and mother who sanctifies the home.

If all the dreams of the wildest Socialist were realities purchasable at the cost of the present happy home of Individualism, with wife and children, the sacrifice were too great—the blow to our civilization would be fatal.

EXECUTIVE COUNCIL OF THE NATIONAL CIVIC FEDERATION.

SOCIALISTS ACTIVE IN THE AMERICAN EDUCATIONAL FIELD

GOSPEL OF DESPAIR FOR TEACHERS AND CHILDREN—THE KARL MARX VIEW OF AMERICAN HISTORY—SOCIALIST SONGS AND SCHOOL BOOKS

By ADA C. SWEET.

An active contingent of the Red Flag fighting line is made up of those who aim to reach college men and women. These converts, in their turn, are expected to influence the schools, and so bring the youth of the nation into close touch with Socialism. The proletariat is for the moment ignored by this section of the Socialistic propaganda, as the element to be converted, or it is exploited mainly in the limelight for dramatic purposes.

When the Intercollegiate Socialist Society was formed a few years ago, it was recognized by a few here as an offshoot of the International Society of Socialist Students and Graduates, which holds its congresses regularly in Europe from year to year. This American branch was started by Jack London, J. G. Phelps Stokes, Oscar Lovell Triggs, Upton Sinclair, and other Socialists, and in the colleges and universities of the country it has many sympathizers, and not a few agitators and propagandists among the students, and even in the chairs of professors.

At the January, 1909, dinner of this society, there were present among three hundred guests more than one hundred who registered themselves as from institutions for higher education. While the reports then made by Prof. Scudder of Wellesley, and by a Vassar student, did not show a great number of Socialist converts at those two colleges, there was exhibited in the meeting an enthusiastic interest in the scheme to enlist college students and graduates in the United States.

In New York City the "Inter-High School Socialist League" has been formed, the object being to place before high school pupils the theories of Socialism through a systematic study of books and the hearing of lectures Saturday afternoons.

Another Socialist movement of immediate interest is one whose object is to bring into the ranks of the Red Flag the school teachers of the United States.

The *Progressive Journal of Education* is a new Socialist publication which makes its appeal especially to teachers. The editor, in the third number of the magazine—that for January, 1909—declared that the publication is now firmly established; that "its roots have already taken deep hold, and nothing can keep it from steadily growing but the neglect of its friends."

Garbed in unobstrusive style, the magazine presents the appearance of the ordinary periodical devoted to educational objects, and its price, fifty cents a year, brings it within the means of any teacher or student of pedagogy. To the more ambitious among these such a publication may well seem to promise something worth reading and study, especially as it has among its contributors such an authority as Professor John Dewey of Columbia University, who is well known among private and public school teachers through his educational work and writings. Another Columbia University Professor, William Noyes, of the Teachers' College, is a contributor, while Catherine E. Dopp of the Chicago University presents her views on "The New Education" in the January issue.

In looking through its pages the careless reader would not at first be struck by the Socialistic features of this magazine, as the articles of several contributors are neutral so far as their bearing may be seen at a glance. But one or two subscribers who had not been interested enough in the magazine to read it have lately been led to examine it by the circular which its publishers have sent to its Socialist readers. In some instances this circular was inadvertently mailed to teachers whose Socialistic tendencies were guessed at rather than known, but it is evident that some care was used in selecting the persons who were to be thus appealed to.

Here is the circular as it is printed on the back of a subscription list blank:

"THE SOCIALIST FIGHT OF 1920.

"Socialism is not coming four years from now and perhaps not eight years from now, but it may come twelve years from now if all who are now Socialists will put forth every effort during the next twelve years. It takes time, argument and thought to make Socialists.

"The *Progressive Journal of Education*, THE NEW SOCIALIST EDUCATIONAL PERIODICAL, is destined to play an important part in the steady process of conquering capitalism. Already it has begun its work of IMPLANTING SOCIALISM IN THE MINDS OF THE SCHOOL TEACHERS OF AMERICA, thus opening the way to the training of the youth of the land along progressive instead of reactionary lines.

"The value of propaganda among the school teachers of America is two-fold.

"(1) Because of the influence of the teacher on the community. THE TIME IS NOW PASSED WHEN FOR A TEACHER TO BE KNOWN AS A SOCIALIST WILL ENDANGER HIS OR HER JOB; AND, SINCE THE TEACHER, especially in rural districts, is looked up to for superior learning and intelligence, THE KNOWLEDGE THAT HE OR SHE IS A SOCIALIST WILL HAVE GREAT EFFECT.

"(2) Because of the influence of the teacher on the child. Prejudices instilled in the mind of a child are hard to eradicate. AT PRESENT THE CHILD IN THE PUBLIC SCHOOL IS THOROUGHLY STEEPED IN EXAGGERATED PATRIOTISM AND INDIVIDUALISM, SO THAT, AFTER IT GROWS UP, IT IS HARD TO REACH WITH SOCIALISM. SCHOOL TEACHERS WHO ARE SOCIALISTS CAN CHANGE ALL THIS.

"TWELVE YEARS FROM NOW, WHEN SOCIALISM IS FIGHTING ITS DECISIVE BATTLE, THE SCHOOL CHILDREN OF TO-DAY WILL BE FIGHTING AS ADULTS ON ONE SIDE OR THE OTHER.

"During the next twelve years the *Progressive Journal of Education* can be the means, either directly or indirectly, of winning a million votes for Socialism. It all depends on the use which the Socialist makes of it."

After reading this circular one takes up the rather dull looking *Progressive Journal of Education* and examines it with interest.

Two characteristic Socialist articles are found in the January number, both by typical Socialists, and both belonging to series of articles on very important general subjects, namely, "American History and Economics."

An interpretation of history from the Socialist point of view is well worth examining when we consider that it is addressed especially to American teachers. It it remembered by people who are familiar with the Socialistic propaganda in Europe that Prof. Enrico Ferri, of the University of Palermo, addressing the International Congress of Socialist Students and Graduates, once said:

"We should introduce Socialism into the student's mind as a part of science, as a logical and necessary culmination of the biological and sociological science. No need of making a direct propaganda which would frighten many of the listeners. Without pronouncing the word Socialism once a year, I make two-thirds of our students conscious Socialists."

And touching the subject of history, a Socialist paper in indorsing the idea of publishing a teachers' journal, made the following frank and illuminating suggestion: "Let the object be by all means to reach the teachers of history in the public schools and get them to teach THE MATERIALISTIC CONCEPTION OF HISTORY. This can be done without mentioning the word 'socialism,' and in most cases they won't see any connection."

Mr. A. W. Simons began his "New Interpretation of American History" in the December issue with his introduction and a chapter on "Conditions Leading to Discovery." These are followed in January by an article entitled "Why the Colonists Came to America."

This interpretation of history is not new, nor does it follow the tactics of sophistication laid down in the above quotations. Mr. Simons, thorough-going Socialist that he is, takes his text from Karl Marx, giving book, chapter and page with all the precision of a disciple. The gist of Mr. Simons's article, as might have been predicted, is that the colonization of America was but a part of the "revolution which was placing the capitalistic class in power," and Mr. Simons goes out of his way to say that "the Reformation, with its individualism in theology, was as complete a reflex of capitalist interests as was free competition and *laissez-faire* in economics. 'Every one for himself and the devil take the hindmost' became the motto of capitalism in industry, economics, religion and politics."

This inscription will seem to American teachers and students rather unique, when affixed in fancy to the altars of the Reformation and inscribed over the humble doors of the fathers who settled along the shores of the Atlantic in the New World to found what was to become the American Republic!

But Mr. Simons in his introduction has given in brief compass the crass materialism of his conclusions as to the great events of American history. Heroism, devotion to great ideals, sacrifices for love of liberty, individual responsibility or individual virtue, these are allowed no consideration in the Marxian philosophy. Here is a bit of it as expressed by this Socialist interpreter of American history:

"The discovery of America was not due to the appearance on this earth of a more devoted and intrepid navigator than had ever appeared before, but to the industrial and commercial changes which had taken place on the continent of Europe. The 'fathers of our country' will be found to have had a very direct and immediate interest in the revolution and to have been acting strictly in accord with their class interests in furthering that revolution. The Constitutional Convention will be shown to have been but a general committee from the possessors of the commercial, financial, manufacturing and plantation interests. The proceedings of that convention are little more than an attempt to divide power between these interests, and principally to secure the permanent subjection of the farming and laboring portion of the population.

"When the truth is told about the struggle between the North and the South we shall find that the ruling class in each section was pursuing the policy which furthered its own interest. We shall discover that the Civil War was a fight between two divisions of the ruling class, each of which wished to use the national government to further its own interest. The emancipation of the chattel slave (if we call it emancipation to change the form while retaining the substance of slavery) was but an incident in the great military conflict."

The second Socialistic series, begun in January, is that of "Charles F. Dight, M. D., University of Minnesota"—to copy from the magazine its style of presenting its writers. In "The Economic Wrongs of Capitalism" Dr. Dight makes a savage attack upon the entire life, thought and aspiration of to-day, his main argument and conclusion being that whatever is is wrong. This piece of destructive criticism was announced by the publishers as the beginning of a "notable series of articles on economics." An idea of the style can be gathered from the following quotations, the first being employed by Dr. Dight to characterize what he calls "the masters of industry and middlemen attachés":

"Their thought is to get more machines and material, with which to work more men, women and children, to make more profits, in order to get *more* machines, to work *more* men, women and children, to make *more* profits, that they may get *more* machines to work *more* men, women and children, and to make *more* profits, *ad infinitem*."

There follows the usual Socialistic rant about "wage slaves" and "their masters," there being nineteen counts in the indictment of capitalism, duly numbered and paragraphed, and then the unwearied Jeremiah notes that there are "many other objections of a major and specific type besides the nineteen enumerated," and concludes with a grand volley of musketry and artillery directed toward "capitalism, the system to which the whole category of economic wrongs is chargeable."

"These wrongs," says Professor Dight, "are so vast, and so ever with us, that we are blinded to them, as children who grow up accustomed to see their parents kill and eat other human beings do not realize the horrors of cannibalism. Only by pointing it out to them can they be made to see it. Born into capitalism, and having grown up under it, we are ametropic to its outrages, to the economic cannibalism which we practice. The few fatten, the millions emaciate and die. Yet the objectors to Socialism lament that it would limit what they call the 'earning capacity of the capable ones.' Cannibals, likewise, would not have their 'earning capacity' circumvented."

So the fangs of Socialism are snapped in the faces of teachers and students as they read the publication which poses under the grandmotherly guise of "Progressive Education."

That school children of the United States are in danger of having their minds drugged by the deadly materialism and spiritual hopelessness of Socialism is not good news. To teach children that they and

their entire country, and indeed the whole world, are in the grasp of influences entirely cruel, strong and pitiless, that there is no hope for any individual under prsent conditions, no matter how he may struggle and labor, is to permanently cripple and make useless for life the boy or girl who really absorbs and accepts such teachings. The worst feature of Socialism as it is now being taught in the United States is the mental and spiritual paralysis which must follow acceptance of its doctrines. In its eagerness to attack the present system of society by destroying the private ownership of property, Socialism weighs down the spirit with such a load of pessimism that only a strong mind is able, when subjected to it, to keep up hope and endeavor for a life of usefulness, happiness and good works for self and others. If the ideas advocated by the *Progressive Journal of Education* could be placed before the children of our public schools, as is contemplated, during the next twelve years, and if the children should become converts in large numbers to those ideas, there would be a nation of cowardly, hopeless and desperate men and women at the beginning of the second quarter of the twentieth century.

There are already in the large American cities many Socialist schools for children. Nearly all of them are Sunday schools; that is, they are in session on Sunday. It is not for teachers in these regular Socialist schools that the *Progressive Journal of Education* is published. That magazine is primarily intended for the public school teachers, who have in their charge the great majority of American children. These teachers the Socialist propagandists hope to convert and influence, so that while using the ordinary school books they will interpret their texts according to Socialistic ideas, especially in the studies of history and economics. Thus is it planned to introduce into the minds of the youth of the country the germs of the Socialistic doctrine, without the authority, consent or sympathy of parents, school boards or school officials.

That the lessons of the Socialist schools are quickly absorbed by some of the mites of humanity to whom they are given seems to be shown by the writings of the children themselves. The Socialist weekly, "The Workers," has published samples of "essays" said to have been written by Socialist Sunday school children on such subjects as "The Cause of Crime," "Social Organism," "The Moral Order," "Class Struggle," etc. Little Lena Rosenbeck, aged thirteen, in her essay on the social organism, says that "the science of Socialism proves that the individual is not a responsible being; first, because he is practically unconscious of the universal ego; and second, even upon becoming class conscious he is powerless to act freely, being the slave of capitalism!"

Another philosopher, aged eleven, wrestling with the subject of the moral order, succumbs to fatalism. "It cannot be different," he says; "people cannot be kind, true or honest under the capitalist system." Of course, these little people have only repeated, parrot-like, what they have been taught. It may be that they and the other children of the Socialist schools will forget their lessons in despair and pessimism as easily as most children forget what they are taught in school. But some things are too easily learned, things which once taken for granted and adopted exert an influence for evil during the entire life of the unfortunate pupil. After all, what lessons are so easy to learn, for children or grown-ups, as those of irresponsibility? What rises so easily to the lips as the excuse, old as Adam, laying blame for failure, delinquency or crime upon others rather than oneself?

For use in the existing Socialist Sunday schools and for Socialist meetings there has been published a pamphlet of Socialist songs, with music. The words of these songs are for the most part set to well-known airs, and the songs themselves are often travesties and solemn parodies of old and popular favorites. The "Marseillaise," of course, appears among these songs; it has been universally favored by the International Socialists as their anthem. But the other songs, like everything else which proceeds from the prevailing Socialistic propaganda, are full of despairing and complaining, but without fire or valorous inspiration, and offer no hope except in the one promise of faraway but approaching relief from all sorrow and distress upon the coming of Socialism, whatever that word may represent.

Here are some specimen verses from a song entitled "A Harvest Hymn":

"There's light upon the cornfield, and yellow grows the grain,
The Summer now is over, and harvest comes again;
The year is crown'd with glory, the vales with corn are glad,
But the reaper's voice is silent, the farmer's heart is sad!

"The lords have now the vintage, the bankers claim the corn,
The produce of the farmer, by craft and guile is torn
From both himself and household, to spend in court and hall
On minions and their masters, who crowd to hunt and ball."

The old drinking song "Down Among the Dead Men" has received a new touch or two to make it apply to the much-berated capitalists. A verse of this is enough:

"There's liquor left, come, let's be kind,
And drink the rich a better mind—
That when we knock upon the door,
They may be off, and say no more,
And he that will this health deny,
Down among the dead men let him lie!
Down, down, down, down,
Down among the dead men let him lie"!

Another song, to the rollicking air of "The Elephant Now Goes Round," deals with "The Long-Haired Kings." From France, where the warrior kings came to grief, the story comes across the water to John D. Rockefeller and predicts the time coming when he, with the other kings of to-day, shall be brought low:

"For the Socialists smile
In their sleeves all the while
For they know what is next to come"!

"The Red Flag" is an international song with a rousing chorus. After appeal to the martyred dead of France, Germany, Moscow and *Chicago*, each verse ends in the chorus:

"Then raise the scarlet standard high;
Within its shade we'll live and die.
Though cowards flinch and traitors sneer,
We'll keep the red flag flying here"!

These songs, if the "Marseillaise" be excepted, are not incendiary or warlike. To the ordinary fighting American they are worse than that; they take the spirit out of the people instead of rousing vivid life. Every one of them contains a draught from the stupefying cup of pessimism.

That existing conditions are perfect no one will argue. There is much to be done to make life worth living for not a few, but for all human beings. But is it possible to prepare young people for the great task of helping to uplift humanity by instilling into their minds hopelessness, and, worst of all, by teaching hatred for any of their fellow men?

The sense of humor compels a smile as one reads some of these songs, but the smile must disappear when it is remembered how easy it is to arouse to violence by the most banal words of abuse people whose minds are unformed, or in some degrees unbalanced, or who are lacking in self-control and moral resolution. The subtle power of mental suggestion is used to advantage in many Socialistic songs. There are usually no open threats, it is true, but none the less the idea of vengeance is introduced.

What happened to the "long-haired kings of France" and what is going to happen to the capitalists need little further exposition after the jingles about them have been sung to a miscellaneous crowd. And the grotesque introduction through the old drinking song refrain of the idea of the fate which should overtake the rich is a clever piece of this jugglery of the mind. Nothing is more certain than that the shafts thus aimed will often hit their mark.

He who teaches hatred is giving preparatory lessons for every form of violence and crime.

Illustrating the clever adaptation of means to an end by which the Socialists teach their doctrines to beginners in reading English, either children or grown-ups, the *Review* prints six fac-simile pages of "The Socialist Primer." This red-covered pamphlet, which is issued by the *Appeal to Reason*, teaches class hatred in words of one syllable in thirty-two easy lessons, and along with the lessons in hatred is pressed the view that by circumstances and conditions alone life is governed, and that without material prosperity no one can prepare for or live a life of usefulness, excellence or happiness. This is the teaching of The Rose, Lesson XXI, and it appears in perhaps less conspicuous form, but quite effectively, in every page of the publication.

It should be remembered that in the large cities of the country are many men and women of foreign birth whose first care in preparing themselves for American life is to learn English. That these people should be taught the lessons of hopelessness inculcated by the Socialist primary school books is nothing less than a calamity to themselves, as well as an injury to society at large.

FIRST LESSONS IN CLASS HATRED.

LESSON XII.

Lots	Too	Starve
Of	Much	Homes
Room	Food	Dies

O, see the Map! It is the Land they call the States. Do you live in the States? Does your chum live in the States? Yes, we all live in the States. A few years ago it held no folks too rich or too poor. All had some food to eat and a home in which to live. This was in the days when the west was new and men went west to be free. The States is big and all the men in the world could live in the States. There is land here for all. Do all the men have land? Do all men have homes? The soil is rich, and we can work so that all men will have food. Do all men have good food? Why is it that men have no land? The rich, Fat Man owns it! Why is it that men have no homes of their own? The Rich, Fat Man owns most homes. Why is it that men have no food? The rich, Fat Man owns the right to most of the food. Is this right? No, it is not.

ALL MEN MUST HAVE NICE HOMES. ALL MEN MUST HAVE GOOD FOOD.

17

LESSON V.

HERE IS A MAN who begs. Why does he not go to work? He would, but he can not get a job. Can he not go to work in a shop? No; for a Fat Man owns the shop. Can he go to work in a mine? No; for a Fat Man owns the Mine. Can he go to work on the Land? No; for a Fat Man owns the Land. IT IS A GREAT SCHEME! When the Thin Man can get work, he must work for the Fat Man. The Thin Man is poor. Is the Fat Man poor? The Thin Man makes the Fat Man rich. Would you like to be the Thin Man?

WHO WORKS FOR THE FAT MAN?
WHO IS A SLAVE?

10

LESSON XV.

Land	Wheat	Soft
Tools	Corn	White
Cars	Oats	Hands

Look at these two men. One does not look as if he were rich, does he? You can see that he works hard. He works on a big, wide farm. Now look at the man with the Plug Hat. You can see that he is a rich man. Look at his style. His hands look soft and white. He does no work to speak of. Yet he owns the land on which this poor man works. He owns the cars on which things are sent to the big town. In town, he owns the store in which wheat, corn, fruit, meat and such things are sold. You see, dear child, he is rich. The poor man makes these things, but the man with the Plug Hat gets them. This means SKIN the poor man, but much BIZ for the Fat Man with the Plug Hat. So you see that the man who works is not the rich man, but the man who SKINS the MAN who WORKS. Get this clear! The Man who owns the tools, land and cars is the man who will get Rich and Fat and wear a Plug Hat.

Is your Pa rich? Does your Pa work? Has he nice, soft, white hands?

THE LAND, TOOLS, CARS AND STORES ARE FOR ALL MEN.

20

LESSON XXI.

Rose	Air	Men
Pot	Sun	Bad
Grow	Rain	Place

What is this? It is a rose in a pot. Would you like a rose? Yes, all men like a rose. The rose is in a pot. The pot is in a bad place. Can the rose grow if it has no air, sun and rain? No, it can not grow? If you put the rose in a nice place and give it air, rain and sun, will it grow? Why, to be sure it will! Then it will be a nice rose, and smell sweet. It is just so with men, my dears. Put men in a bad house with few good things, no love, joy or good clothes, and they will be bad men. But if you give them all the good things they need to real life, they will be nice, good men, and they will bloom like the nice rose. Do you like good men? Do you want to be a good boy or girl?

DO NOT FIND FAULT WITH THE MAN. CHANGE HIS MODE OF LIFE, AND YOU WILL HAVE A REAL RULE OF GOLD.

90

LESSON XVI.

Toil	Must	Thus
Pick	Have	Makes
Digs	Chance	Wealth

What do we see here? It is a man at work with a pick. What is his name? We call him TOIL. Will he dig all day? No, he will work eight hours. He will work two hours to make his own wage, and six hours to make his BOSS rich. Is this fair? This poor man keeps his wife and babe poor, while his BOSS is rich and wears silk and drinks wine. This is not fair! This is what we call a wage slave. If you tell this man that he is a wage slave, he will get mad. He wants to think that he is free. Is he? He is not, for the job he has, and the tools that he must use are owned by the rich man. Thus the rich man takes the wealth made by the poor. The poor man must have a chance. He will get a chance when all the men will own all the tools and land that they must have to live. Man must also have rest as well as work.

THAT WHICH GAVE US LIFE, GAVE US THE RIGHT TO BE FREE.

21

LESSON XIX.

Strike	Law	Food
Poor	Said	Keep
Slave	Work	Sure

See the poor Slave! See the man with the whip! Will he strike the Slave? It would be bad to do so. Is he not a bad man to hit the poor slave? But he has this right. He owns the Slave and may do with him as he will. The law said a man may own a slave. No law like that now. It was a bad law for the Slave, was it not? Is it nice to be a slave? No, it is bad to be a slave. The Slave had to work. He got no wage. But he got his food and keep. He got this sure! Does the white slave now get his food and keep? Does he get it sure? I know lots of men who would be glad to work for their food and keep. Right in this town where we are told that we have no slave. Would you like to be a slave? Do you want a slave? Is your Pa a slave? Does he want to be free? The law will wipe out the wage slave.

LET US BE FREE. NO WHIP. NO WAGE SLAVE.

24

SOCIALISTS PLAN TO UNDERMINE AMERICAN ARMY AND NAVY

MUTINY A VIRTUE—DESERTION HEROIC—AUSTRALIAN SOCIALISTS CONSPIRED TO SAP THE LOYALTY OF SAILORS OF VISITING AMERICAN FLEET

[From a chapter entitled "Anti-Patriotism," by Martha Moore Avery, in a forthcoming volume on Socialism.]

ANTI-PATRIOTISM, the sometimes veiled and sometimes brazen-faced product of Socialism, has long since set up its "battle plan" in every department of industry, philosophy, politics and education. Within trade union lines, as we are told, the work goes on in the shop, at noon hour, at local meetings, at the State and national conventions, but nowhere more freely than in the labor-press does the "insidious propaganda" go on. Year after year there is a perpetual deluge of oratory and of imagery washing away the virtue and the valor of patriotism.

Its meaning is veiled when it argues that "the Socialists ask no arbitration. They do not recognize that the employer has any rights to arbitrate; (*International Socialist Review*, October, 1904). But it is brazen-faced when it presents its annual resolution at the American Federation of Labor Convention asking for support in demanding the abolition of the militia system of the United States in favor of some other "method of arming in a well organized and orderly fashion *every* sober and reputable citizen in the United States." For while *there is such a thing as mutiny*, it were probably not the "shortest route in the end" to Socialism. At all events, with scientific arms in every *sober* Socialist's hands, there would be a large and constantly increasing contingent in the "armed nation" which "would make it possible to introduce a Socialist Republic gradually, peacefully and without convulsions and revolutions. It might take a little longer—and yet it would have to be the shortest route in the end;" *(Social Democratic Herald*, Dec. 21, 1907. Editorial in defense of the anti-militia resolution which was offered at the American Federation of Labor Convention that year by Victor L. Berger.)

Having, upon the floor of the convention, freely delivered himself of his treasonable intentions toward the country in which he votes, Mr. Berger was stoutly assailed for his lack of patriotism. And although he had openly advised "union men to stay away from the militia," and had argued his scheme in the interest of a "peaceful revolution" by which the United States should lose its life, Mr. Berger had the effrontery to make a great display of self-pity that he should have been so "misrepresented." . . .

Yet the issue is sharply drawn between unionists and Socialists. The *American Federationist*, of August, 1903, states emphatically the loyalty of unionists to the militia. But because Socialists have "no country," membership in the militia is forbidden by their organization.

The official committee of Clinton, Mass., sent to Charles Stevenson a letter which makes this plain. It reads in part as follows: "It is the unanimous opinion of your associates on the Socialist Town Committee that your action in joining the militia is in violation of the spirit and aim of the great worldwide Socialist movement. The present structure of government is the creation of the ruling class. That being so, the militia is part of the equipment of capitalist society. . . . Your membership on the Socialist Town Committee is not desired by the other members thereof, and by vote of the committee your resignation is asked for;" (the *Worker*, Aug. 16, 1903).

The Socialist organization of Waltham, Mass., having refused to recall one of its members who had been elected to public office in the town, for the reason that he was a militiaman, the Massachusetts State Committee intervened to suspend the local. The *Worker*, Dec. 25, 1904, editorially endorsed the suspension in no uncertain words. "When a local so flagrantly violates party discipline in so important a matter as that of the attitude of the party toward the militia," the action of the State Committee should be upheld by all loyal Socialists.

There are, it is true, few such flagrant violations of party discipline, for the obvious reason that patriotism is almost an unknown quantity within the Socialist camp. . . .

Although the means that are now employed are largely intellectual and psychological, there should be no illusion about the quality of that energy which attacks our nation from every quarter of the globe at once—in the guise of science, under the impact of the class-struggle, and in the name of a higher stage of social development. . . .

A philistine of romance joins with the old New Englander to pluck up love of country by the roots. South, North, East and West the Socialist Sunday-school children are taught that they have "no country," that their sole earning fathers are slaves, and that their mothers are slaves to slaves. And when, under this instruction a group of small children tore down and insulted the picture of the President of these United States, it went throughout the English speaking world that this uproar "was an inspiring moment—a pleasure too deep for words;" (the *Socialist*, Seattle, Wash., April 10, 1904.) . . .

"Will They Submit?" is the title of a discussion which has been running for weeks in the *Wage Slave*, as to the probable difficulty Socialism will encounter when it shall be ready to enter upon its course of wholesale robbery. Eugene V. Debs has been all along of the opinion that "they" will not. "The time will come to incite the populace. In the very near future there will be an uprising of the people; Con-

MRS. MARTHA MOORE AVERY.

gress will be dispersed and the Supreme Court abolished. When that time comes, you can count upon me. I will be ready to shed the last drop of my blood when that time comes;" (address, St. Louis, August, 1897).

Because "there is such a thing as mutiny" it has become the satisfactory business of Socialism to foster disobedience to lawful orders. The National Secretary of the Socialist party in the *Call*, Sept. 11, 1908, sounds the keynote on this score. "We find," writes Mr. J. Mahlon Barnes, "immense encouragement" in the fact that several incidents prove that the soldiery, being honeycombed with the idea of Socialism, refuse to obey orders. "All hail to the man who will not shoot against the men of his own class."

The New York *Socialist*, April 18, 1908, reports that the General Committee of that State passed a motion calling upon the National Executive of the Socialist party to send to all its locals in the United States asking them to protest against increasing the army, and making the especial request that individual "comrades" be asked to do all they can to induce trade-union bodies to follow the Socialist lead.

Such is not merely an American policy; as we have seen, it is international, though over the water it is somewhat further advanced in its stage of action. In France five editors are now serving jail sentences for publishing a symposium on "What to Do in Case War Is Declared." *L'Humanite*—Jaures' paper—champions undermining the French army, and defends the editors of *La Voix du Peuple*. Under a commendatory title, the *Call*, New York, Oct. 7, 1908, gives to its American readers the gist of the advice which was given to the new recruits in France, through the columns of *La Voix du Peuple*, in case the mob should take into its own hands the law: "Soldiers, do not fire! You are not under arms to assassinate workmen! And if an order to massacre is given, be executioners of Justice, not assassins. Aim and kill without pity him who gives the murderous command, no matter what epaulets he may wear." There follows the comment that as Aristide Briand, the present Minister of Justice, being a Socialist, holds this advice to be entirely defensible, a prosecution of the paper "can hardly be expected," notwithstanding the "great excitement" which was provoked by the Socialist instructions to the French army.

In her lectures, as reported by the Chicago *Daily Socialist*, July 18, 1907, Mrs. Lena Morrow Lewis makes it an especial point to impress upon her audiences that "there is such as thing as mutiny." Mrs. Lewis's advice to our soldiers is given in the form of suggestion: "If it ever comes to a crisis in this country, they will probably follow the example of German soldiers and refuse to shoot down the working class of their own or any other country." . . .

Evidently thinking that the diversion of the soldiers from their sworn duty to protect their country was their best way to keep their oath of allegiance, three officers, being members of the "camp local," were selected to procure from headquarters bundles of Socialist literature to spread among the 7,000 men of the camp. It would indeed be "safer," in the time of trouble, if the army were "honeycombed" with treason, for officers to remember that "there is such a thing as mutiny." And that in the event of a Socialist triumph at the poles the State shall "die out."

There should be "No Fear of the Army," announces the *Call* of Jan. 6, 1909. Its confidence is grounded in a visit of Eugene V. Debs to Capt. W. E. P. French at his country place on the Hudson. This intimacy is the cause of the *Call's* hope that the army is being subverted by the conversion of its officers to the notion that our country's defense is merely the "big stick" of the capitalist class; and that therefore it shall be fit only for treason and for spoils. . . .

More than two years ago a group of revolutionists of Oakland, Cal., entered upon the publication of a Socialist paper exclusively in the "interest" of the enlisted men of the army and navy of the United States. The circular setting forth the argument for its usefulness to the cause was indorsed by many prominent Socialists, Jack London among them. And the proposal was not "condemned" by a single Socialist. The reasons supporting the venture are that "the United States Government—always incompetent and impotent—will be powerless to stop our propaganda. So long as the army and navy are loyal to the capitalist class, it will be well-nigh impossible to introduce a co-operative commonwealth; but armies are not always loyal to their masters: There is such a thing as mutiny." This circular was printed in the Chicago *Daily Socialist*, Nov. 13, 1906.

Later, the proposal, which "not a single Socialist, so far, has condemned," was realized in the Oakland *World*. Its management has the determination to "deluge" soldiers and sailors with "class conscious literature." And it is predicted that "the results will be astonishing." For "there is such a thing as mutiny."

The Oakland *World* it was that carried the information into every port made by the great cruise that "every battleship of the Pacific fleet carries on it a band of devoted Socialists, who are spreading the propaganda" (the *Call*, Oct. 1, 1908).

The "cheering" information was brought out from an investigation, which was ordered by Secretary of the Navy Metcalf relative to ascertaining if there be any violation of the United States regulation in the formation of Socialist clubs, "there are 100 on one vessel, and that 40 per cent of the enlisted men on the torpedo boat flotilla are Socialists." James Flynn, fireman, a writer of Socialist pamphlets, attached to the cruiser West Virginia, was called before the captain, McCracken, of the vessel, "three times in one day and closely questioned" (Chicago *Daily Socialist*, July 30, 1908). So it is "cheering" news that the navy is being undermined!

On land and on sea the vicious work goes on. The *Tribune*, Seattle, Feb. 3. 1908, reports resolutions from the party organization of Los Angeles in condemnation of the world cruise as a policy "by which always and everywhere the chains are riveted more firmly on the limbs of labor." Continuing, its members are exhorted to do all in their power to induce labor unions to pass resolutions asserting "that the military arm of the Government does not show any friendliness toward organized labor."

To the Chicago *Daily Socialist*, May 28, 1908, a special from Seattle gives the news that thousands of papers and pamphlets were given to the "jackies" who thronged the park, and the literature was taken "aboard." Hundreds of sailors "expressed sympathy" and many declared themselves "full-fledged" Socialists.

When the fleet was in Los Angeles, the editor of the Oakland *World* went on board the Connecticut and distributed literature among the officers. He learned that "on every battleship in the fleet which came around the Horn" there was a Socialist group. On board the West Virginia, where seventy-two copies of the *Appeal to Reason* are received each week, there are 100 in the group. Socialists aboard say confidently that the entire army and navy is being "honeycombed with Socialist thought." With more effort put into this line of propaganda "amongst the so-called defenders of the flag it would not be

long before the masters of this land would find themselves up against the same conditions which developed in Russia and France." For "there is such a thing as mutiny."

Being international in its principles and in its policies, the Socialists of one country logically take an active part in undermining the *force de resistance* of another. To quote from the *Call*, of Nov. 1, 1908: A correspondent from Australia reports that "a novel reception has been accorded the officers and men of the visiting American fleet by the Melbourne Socialists." Permission being granted, they swarmed aboard distributing Socialist literature, principally a circular of "Socialist welcome." In return for this courtesy from men of another nation, since "leave was granted, hundreds of sailors visited the Socialist hall and signified their approval" of the Australians' efforts in undermining the American navy. To give, in part, the circular:

"Socialist Welcome to the American Fleet."

"We greet you in all sincerity. . . . We know, and are fully confident that you also know, that the armies and navies of the world are utterly inimical to the true interests of the workers and exist exclusively in the interests of the dominant plutocracy. .

"Comrades—Great as your navy is, we belong to a far greater fighting body. We are members of the great class-conscious fighting proletariat of the world. . . .

"Brothers of America, our hearts go out to you as men; and our blood thrills with increased animation to know that among you are many straight-out *Socialists*. It was with very great pleasure we learned from the *World*, of Oakland, Cal., that 'every battleship of the Pacific fleet carries on it a band of devoted Socialists, who are spreading the propaganda' . . . 'that agitation is carried on continuously.' . . .

"We are at one with you . . .believing . . . 'the world is my country' . . . therefore we view with exceeding pleasure the rapid march of international Socialism. . . . Do not forget . . . and remember that we, too, are ready . . . when the hour arrives for the workers to throw off their oppressors and establish the Socialist Commonwealth throughout the world.

"Yours for the Social Revolution,

"The Members of the Victorian Socialist Party."

Perhaps no other argument will be deemed necessary to convince the American people that Socialism is a deadly foe to this great nation than the presentation of a treasonable circular which was, by a Socialist paper, sent broadcast throughout the country, and without the whisper of dissent coming from any "revolutionary" quarter.

This paper, the *Appeal to Reason*, claims a paid subscription list of over 300,000, and a bundle circulation that is enormous besides. It has an indefatigable corps of unpaid workers who propagate Socialism not alone by means of the *Appeal*, but by other literature which the management sends out, tons upon tons.

This circular letter to the "Appeal Army" lauds desertion as a new mode of virtue. Money is wanted! So, with a full heart, Mr. J. A. Wayland, the editor, not alone hails the man "comrade" who learned treason from his own columns, but he opens them wide to the some-time soldier—now of "no country" —that he may sow for a multitudinous crop.

It was after more than three years of dutiful service that Mr. C. Hudspeth "fell in with a copy of the *Appeal*, and from that time" he was too much of a Socialist to serve . . . in the organized mob called the army of the United States."

Having turned his face to this *Appeal to Reason*, he fled from duty and honor. Mistaking shame for glory, Mr. Hudspeth tells the tale of his own crime exultingly. He "deserted the armed mob, and after one year they caught" him. Hence his eighteen months in prison. And then the little "piece of yellow paper"—a dishonorable discharge—his badge of shame—of which he seems vastly proud.

His record of infamy proved his passport to the columns of the *Appeal*. And in a series of five articles—"Enlisting," "Drilling," "Fighting," "Deserting," "The United States Military Prisons"—Mr. C. Hudspeth did what he could to "undermine the army."

The circular calls for money to send out the five editions containing the story of how "I was formally and officially tabooed by the plutes;" and that "they gave me a piece of yellow paper to certify that I am no longer worthy to be called a servant of the plutes."

In "bundles of five to every army post in the United States and its foreign possessions," this story should be sent to show "the power of the *Appeal*—and "to a class of men we need to reach." Under his own signature Mr. Wayland informs his readers: "I never received a letter that did my old heart more good" than this one from Deserter Hudspeth. For "it shows the power of the *Appeal*"—to cultivate the virus of treason among "100,000 men who are just as susceptible to our teachings as is the comrade" who was, alas! once an honorable man.

WOMAN'S DEPARTMENT ANNUAL MEETING

REPORTS FOR 1908—PLANS FOR THE ENSUING YEAR—ENERGETIC ORGANIZATION WORK

OFFICERS AND EXECUTIVE COMMITTEE OF THE WOMAN'S DEPARTMENT, 1909.

MRS. WILLIAM H. TAFT, the Honorary Chairman.
MRS. HORACE BROCK, Chairman, Lebanon, Pa.
MRS. J. BORDEN HARRIMAN, First Vice-Chairman, New York City.
MRS. JOSEPH MEDILL, M'CORMICK, Second Vice-Chairman, Chicago, Ill.
MRS. JOHN K. OTTLEY, Third Vice-Chairman, Atlanta, Ga.
MRS. WILLIAM H. CROCKER, Fourth Vice-Chairman, Burlingame, Cal.
MRS. B. FRANK MEBANE, Fifth Vice-Chairman, Spray, N. C.
MRS. EVA M'DONALD VALESH, Sixth Vice-Chairman, Washington, D. C.
MRS. MARY HATCH WILLARD, Treasurer, New York.
MRS. MARCUS M. MARKS, Secretary, New York.
MRS. ARCHIBALD ALEXANDER, Hoboken, N. J.
MRS. S. THRUSTON BALLARD, Louisville, Ky.
MRS. WILLIAM B. BOURN, San Francisco, Cal.
MRS. FRANCIS HIGGINSON CABOT, New York City.
MRS. ANDREW CARNEGIE, New York City.
MRS. W. MURRAY CRANE, Dalton, Mass.
MRS. SARAH S. PLATT DECKER, Denver, Col.
MRS. MICHAEL DREICER, New York.
MRS. MARSHALL FIELD, Chicago, Ill.
MRS. EDWIN FARNHAM GREENE, Boston, Mass.
MRS. CLEMENT ACTON GRISCOM, JR., New York City.
MRS. ARCHIBALD HOPKINS, Washington, D. C.
MRS. OVERTON LEA, Nashville, Tenn.
MRS. ARTHUR LEE, Elkins, W. Va.
MRS. NICHOLAS LONGWORTH, Cincinnati, O.
MRS. FRANK O. LOWDEN, Oregon, Ill.
MRS. V. EVERIT MACY, New York City.
MRS. BOWMAN H. M'CALLA, Santa Barbara, Cal.
MRS. CYRUS HALL M'CORMICK, Chicago, Ill.
MRS. HENRY B. F. MACFARLAND, Washington, D. C.
MRS. A. F. M'KISSICK, Greenwood, S. C.
MRS. CYRUS PITMAN ORR, Birmingham, Ala.
MISS ANNA D. SLOCUM, Boston, Mass.
MRS. SAMUEL SPENCER, Washington, D. C.
MRS. CORNELIUS STEVENSON, Philadelphia, Pa.
MRS. OSCAR S. STRAUS, Washington, D. C.
MISS ADA C. SWEET, New York City.
MRS. WILLIAM H. TAFT, Cincinnati, O.
MRS. EDMUND LEIGHTON TYLER, Anniston, Ala.
MRS. TALCOTT WILLIAMS, Philadelphia, Pa.
MRS. ROGER WOLCOTT, Boston, Mass.
MRS. BENJAMIN IDE WHEELER, Berkeley, Cal.

Chairmen of National Standing Committees

On Welfare Work for Government Employes, MRS. WILLIAM H. TAFT.

On Welfare Work for Industrial Employes, MRS. J. BORDEN HARRIMAN.

On Industrial Economics, MRS. CORNELIUS STEVENSON.

Membership Committee, MRS. CLEMENT ACTON GRISCOM, JR.

Finance Committee, MRS. MICHAEL DREICER.

The annual meeting of the Woman's Department of the National Civic Federation was held at the Hotel Astor, New York City, on December 14 and 15, 1908.

The proceedings were restricted to reports of officers and committees, the adoption of plans for the ensuing year, and the election of officers and appointment of committees.

Mrs. J. Borden Harriman, Vice-Chairman, presided on Monday, the 14th, in the absence of the National Chairman, Mrs. J. Medill McCormick.

The Chairman, in her opening remarks, reported:

"There are at present four organized sections, namely:

"New York and New Jersey, Mrs. Archibald Alexander, Chairman.

"California, Mrs. William H. Crocker, Chairman.

"District of Columbia, Mrs. Samuel Spencer, Chairman.

"Kentucky and Tennessee, Mrs. S. Thruston Ballard, Chairman.

"In addition there have been authorized by the Executive Council:

"New England, the Sectional Chairman to be selected in consultation with Mrs. Roger Wolcott.

"Pennsylvania, Delaware and Maryland, Mrs. Horace Brock, Chairman.

"Virginia and West Virginia, Mrs. W. T. Harris, Chairman.

"North and South Carolina, Mrs. B. Frank Mebane, of North Carolina, Chairman, in consultation with Mrs. A. F. McKissick, of South Carolina, with power to create two sections of this territory if desirable.

"Georgia and Florida, Mrs. J. K. Ottley, Chairman.

"Alabama and Mississippi, Mrs. Cyrus Pitman Orr, Chairman.

"Illinois and Ohio, the Chairman to be selected in consultation with Mrs. Cyrus H. McCormick."

The rules and plan of work for the ensuing year of the following national standing committees were presented by:

Mrs. William Howard Taft, Chairman of the Government Employes' Welfare Committee.

Mrs. J. Borden Harriman, Chairman of the Industrial Employes' Welfare Committee (read by Mrs. Cornelius Stevenson), and Mrs. Horace Brock, Chairman of the Industrial Economics Committee.

These comprehensive reports will be published in the Handbook of the Woman's Department.

Mrs. Archibald Alexander, Chairman of the New York and New Jersey Section, reported:

"The work accomplished by the New York and New Jersey Woman's Department, since the last report was made in Washington in May, might be divided into three parts: The work of organizing and the actual field work of our two committees.

"This section, being the first one formed, has found it necessary to feel its way as the work progressed in order to find a form of organization allowing enough freedom for the committees to do their work unhampered and yet enabling our efforts to tell as a whole and as part of the national work, while also preventing as far as possible mistakes which might prove extremely serious to the large interests involved in our investigations.

"We are also engaged in the task of organizing our office in a business-like way, and we have been fortunate in securing, as our Executive Secretary, Dr. Lucy A. Bannister, who for several years has been in charge of the very successful welfare work of the Westinghouse Lamp Company. It will be the duty of Dr. Bannister to accompany committees on their visits, and she will also have charge of filing reports which in time should prove valuable.

"We are trying a plan of having an office morning, when the chairman and vice-chairman of the department are to be found in the office, so that any one wishing information or suggestions will know when and where to find them.

"The reports of our two working committees are as follows:

"Work that has been done since March 15, 1908, by the Industrial Employes' Welfare Committee has been: Investigations by the Cigar Factories, Garment Trades, Recreation, Stationary Firemen and Traction committees. But we have confined ourselves principally to securing information, addresses being made by persons who could illuminate us along the line of endeavor of our sub-committees.

"We accomplished one result very gratifying as being directly in accordance with the policy of the Woman's Department of the Civic Federation. One of the members of the Committee on Stationary Firemen persuaded her husband, for the first time in the history of his place, to give a two-weeks' vacation to each of the stationary firemen in his buildings. The Stationary Firemen's Committee also cites the Belmont Hotel as an instance of model welfare work.

"The Recreation Committee has found that two sizes of halls are much needed for the working people in New York—one with a capacity of 3,000, for dancing purposes, and a smaller one for meetings of two to three hundred persons."

It was not proposed at present to appoint any new committees. Mrs. Alexander further reported the following suggestions of subjects coming from the Industrial Employes' Welfare Committee, on which the section might be addressed by expert welfare workers: "Provision for Leisure Time;" "The Physician's Place in a Manufacturing Institution;" "The Needs of Women Workers in a Department Store;" "Some Experiences in Connection with the Relief Department of a Local Transportation Company;" "Industrial Training from the Employers' and Employes' Standpoint," and "The Trades Union Movement."

With the Chairman of the Industrial Employes' Welfare Committee, Mrs. J. Borden Harriman, are the following chairmen of sub-committees: Cigar Factories, Miss Caroline Shippen; Garment Trades, Mrs. Marcus M. Marks; Stationary Firemen, Mrs. Frank McNeil Bacon; Traction, Mrs. Clement Acton Griscom, Jr.; Recreation, Mrs. Orrin S. Goan; Printers, Miss Dorothy Whitney; Teamsters, Mrs. D. W. Evans.

Mrs. Alexander also read the report of the Committee on Welfare Work for Government Employes, which was formed in the Spring of 1908. Its duties are to investigate the working conditions of Federal, Municipal and State employes, to ascertain what welfare work has been undertaken for their benefit, and to inquire into the need for improvements.

Through the sub-committee on postal employes an investigation of the Post Office stations in Manhattan was made last Spring. The committee made a recommendation, through Postmaster Edward M. Morgan, who requested suggestions, that the roof of the new Post Office at the Pennsylvania Terminal be used as a swing room for letter carriers between shifts. The committee also sent a letter indorsing the amendment to the Post Office appropriation bill to increase the salaries of postal employes receiving more than $1,000 per annum, and to allow thirty days' vacation to all postal employes.

In April several visits were made to the Brooklyn Navy Yard, which resulted in a proposal to establish a lunch room for the men within the gates of the yard. At times 6,000 mechanics are employed there daily; when work is slack, 3,000. The sub-committee still has this subject in hand.

Owing to the vast scope of its work, and the danger of lacking in thoroughness in attempting to cover such a field, the committee has decided to take up one department at a time. In this way all the members of the committee can concentrate on the work in hand, and the monthly lectures can relate to the work being done at the time.

A new Buildings Committee has been formed to get the plans of proposed new buildings—city, State and Federal—and make suggestions for the welfare of employes before the buildings are put up.

The work of the Government Employes' Committee is mainly that of investigation. This work moves slowly, but it leads to legislation. This committee has the idea that the government may become the best employer in the city, State and nation, and an example to others. For this end its members are striving, meantime training themselves to work more intelligently.

With the Chairman of the Government Employes' Welfare Committee, Mrs. Francis Higginson Cabot, are the following chairmen of sub-committees: Navy Yard, Miss Anne Morgan; New Buildings, Mrs. Mary Hatch Willard; City Hospitals, Mrs. Ernesto G. Fabbri; State Hospitals, Mrs. A. H. Harris.

Mrs. William H. Crocker, Chairman of the California Section, reported that this section was organized at the Fairmont Hotel, in San Francisco, on September 18 last. Previously, however, heads of large industries and department stores had promised not only their own hearty co-operation, but also that of their wives and daughters.

Mr. Benjamin Ide Wheeler, who was a guest of the Section on September 18, addressed the ladies present, explaining the aims of the Civic Federation and especially of the Woman's Department. The following officers were elected on that occasion: Mrs. W. H. Crocker, Chairman; Mrs. John Johns, Secretary; Mrs. John F. Merrill, Mrs. William B. Brown, Mrs. Andrew Davis, Vice-Chairmen; Mrs. Arthur Cornwall, Treasurer; Miss McKinistry, Membership Committee; Mrs. Reginald Knight Smith, Press and Literature; Miss Jessica Peixotto, Programme; Mrs. McCalla (Navy) and Mrs. Maus (Army), Government Employes.

In some notable instances the work of the Civic Federation has been anticipated in California, as in the cases of two large stores, in both of which, employing hundreds of women, rest and lunch rooms and proper toilet facilities are provided.

Mrs. Crocker, in concluding her report, said: "The Southern Pacific Railway and the Santa Fe Railway have done good work in providing for their trainmen clubs at which they find relaxation and shelter from the influence of the saloon. The club at Dunsmuir has been in operation two years and is extremely successful. Others have been located at important points like Tucson, Sparks and Rocklin. This work is under the charge of Mr. Athearn, graduate of the University of California, who is showing ability for this line of work.

"The two fields distinctly Californian are the great ranch and farm enterprises and mines. In some of the great ranches hundreds of men are herded together, and little or nothing is done to relieve their lives from utter sordidness and coarseness. I believe that nothing has been done for the miners. In regard to the Goldfield Consolidated Mines of Nevada, Senator Nixon has already promised his co-operation in installing welfare work whenever we are ready to make suggestions, which will be in February or March of this year."

Mrs. Samuel Spencer, Chairman of the District of Columbia Section, reported that at a meeting at the New Willard Hotel, in Washington, on May 11, 1908, at which Mrs. Archibald Hopkins was chairman, Mrs. McCormick, the National Chairman, made an address to the women assembled. A committee to nominate officers and members of the Executive Committee was thereupon appointed. On the 12th the section was formally organized, and the following, being the nominees of the committee, were unanimously elected: Mrs. Samuel Spencer, Chairman; Mrs. John Boit, Treasurer; Miss Mary Sheridan, Secretary; Miss Alice Lovering, Assistant Secretary. Honorary Vice-Chairmen—Mrs. William H. Taft, Mrs. James R. Garfield, Mrs. George B. Cortelyou, Mrs. Oscar S. Straus. Executive Committee—Mrs. Archibald Hopkins, Miss Mabel Boardman, Miss Maude Wetmore, Miss Georgia Nevins, Mrs. S. W. Woodward, Mrs. Richard Wainright, Mrs. A. Lisner, Mrs. William C. Eustis.

The officers and members of the Executive Committee met a few days later at Mrs. Spencer's residence to plan for the work. They drew up sectional by-laws and appointed the following committees, to be enlarged and added to when the work is thoroughly established: Committee on Welfare Work for Government Employes—Mrs. W. C. Eustis, Mrs. Archibald Hopkins, Miss Maude Wetmore, Mrs. Oscar S. Straus. Committee on Welfare Work for Industrial Employes—Mrs. Charles W. Richardson, Mrs. S. W. Woodward, Mrs. A. Lisner, Mrs. Collins, Mrs. James F. Harlan. Committee on Programme—Mrs. Archibald Hopkins, with four assistants whom she was authorized to select. Committee on Press and Literature—Mrs. Jas. Hobson, with three assistants of her selection. Committee on Membership—Mrs. Richard Wainwright, Mrs. Ward Thoron, Mrs. James F. Harlan.

The chairman of authorized sections made the following recommendations and reports:

Mrs. Roger Wolcott, of Massachusetts, while unable to accept an executive position, expressed a willingness to aid in the initial work by forming a committee in Boston to interest the women of that section in the Federation.

Mrs. B. Frank Mebane, of North Carolina, reported that while her section had not been organized, a great deal of enthusiasm had been created in Richmond, Va., Danville, W. Va., Charlotte and other cities in North Carolina. She stated that there is a great desire to organize and that Mrs. William H. Taft would accompany her to Spray, N. C., where there are 10,000 employes in the cotton mill industry, for the purpose of making an address to women in that vicinity. She said this will give an impetus to the work of organization. She also hoped to have a meeting in Richmond, Va., in January.

Mrs. Cyrus Pitman Orr, Chairman of the Alabama and Mississippi Section, who was detained at the last moment, in offering recommendations, wrote:

"Once districted the work in Alabama, Mississippi and Georgia would naturally go into three channels: department stores, mines and furnaces, and cotton mills. Having few large cities, the department stores problem is not acute. In my own State of Alabama missionary work on the part of the Conciliation Department seems the crying need of the hour in the coal and iron industries, and may precede welfare work. . . .

"The third department, that of the cotton mills, is one that appeals to me—this situation is complicated by no foreign element, or practically none. Here is a place where we do not have to make Americans. We only educate, encourage and sustain them; with all the faults and some of the virtues of the pure American type, they sometimes seem refractory ones, but with the proper flux none yield so fine a return of the pure metal. They are the illiterates of whom we hear so much, at once the menace and the hope of our Southern country. Among them are the men who would make the bed rock of our civilization. Failing them, the gaps in our structure of democracy will affect every part of our great country. This work in cotton mills is along the lines of least resistance. Manufacturers are already doing their work, and will welcome our assistance. We have taken from the East some of their earnest workers, and we have already mills which are garden spots in the counties where they are located. 'Nothing succeeds like success,' and although the success was not ours we can use it."

Mrs. Horace Brock, Chairman of the Committee on Amendment of By-Laws, presented its report, the proposed amendments being discussed and passed upon. The by-laws as amended will be published in the Handbook of the Woman's Department.

Upon the motion of Mrs. Eva McDonald Valesh, seconded by Mrs. Brock, the Chairman appointed the following committee of seven to nominate officers and members of the National Executive Council: Mrs. V. Everit Macy, Chairman; Mrs. Archibald Alexander, Mrs. Arthur Lee, Mrs. B. Frank Mebane, Mrs. Eva McDonald Valesh, Mrs. Marcus M. Marks, Mrs. William B. Bourn.

At the close of the first session, Hon. Seth Low, the President of the National Civic Federation, said:

"Ladies, I feel much gratified that the Ladies' Department has taken up the work with us. There certainly is no more important work to be done in the country in bringing about good relations in the field of industry and commerce than the welfare work in which you are specially concerned. It is one very important and very humane part of the business.

"The last time I had the pleasure of seeing the late German Ambassador von Sternberg, he said to me that he thought the Civic Federation, in its efforts to deal with this question, was doing a work of the utmost importance—not only for our own country, but for all countries, because, as he said, this is the most difficult problem of modern civilization, and it really requires Americans to handle it. In other words, every possible influence that can be brought to bear to make a better understanding all along the line between the employer and the employe is very helpful, and no one knows better than some of you ladies how much there is to be done in making the conditions, under which men and women spend a greater part of their time, such as ought to be provided where men and women have to work. Of course, the men are trying to aid along that line too, but I am fully persuaded that there is a real field for women, in which they can be very helpful. I have little doubt that you will find many things that can be done and that are worth doing.

"I simply want to add, Mrs. President and ladies, that if at any time or in any way, as the chairman of the general organization I can be of service to you in your work, I hope you will feel at liberty to qualify me. Thank you very much for giving me the privilege."

The second session of the Woman's Department, on Tuesday, December 15, was called to order by the Vice-Chairman, Mrs. Cornelius Stevenson.

Mrs. V. Everit Macy, Chairman of the Nominating Committee, reported the nominees for officers and members of the Executive Committee, who were duly elected. The list appears at the beginning of this report.

MRS. TAFT AT SPRAY, NORTH CAROLINA

HER ADDRESS AS HONORARY CHAIRMAN OF THE WOMAN'S DEPARTMENT ON THE OCCASION OF ORGANIZING A NEW SECTION

On December 17, immediately after the annual sessions of The National Civic Federation in New York, a meeting was held in Spray, N. C., at the home of Mr. and Mrs. B. Frank Mebane, under the auspices of the Woman's Department, with a view to organizing a section for that part of the South.

Mrs. William Howard Taft, wife of the President-elect, accompanied Mrs. Mebane from New York to North Carolina, Mr. Mebane meeting them at Danville, W. Va., with a special train.

Mrs. Taft, who was the principal speaker of the occasion, was one of the original members of the Woman's Department. She was last year chairman of the Committee on Welfare Work for Government Employes. While retaining the position for the present year, she was also elected in New York Honorary Chairman of the Department. Her appearance at the first public meeting of the Woman's Department held in the South Atlantic States was regarded by all present as significant and promising.

The proceedings were opened by Mrs. W. T. Harris, of Danville, who presided. Following her preliminary talk in which she explained the purpose of the meeting, Mrs. Harris introduced Mrs. Taft.

There were present about two hundred Southern women who had become interested in the work of The National Civic Federation. Among the members of the Woman's Department were Mrs. A. F. McKissick, of Greenwood, S. C., who, after Mrs. Taft's address, told those in attendance of her work and that of others to promote the welfare of operatives in South Carolina cotton mill towns, especially in Pelzer, her former home, and at Greenwood, where she now lives.

Mrs. Charles D. McIver, of Greensboro, N. C., was one of the speakers. She urged the extension of schools in the country districts of the State.

Another interesting speaker was Mrs. Lindsey Paterson, of Winston-Salem.

Other Southern women present were Miss Jennie English, Atlanta, Ga.; Mrs. J. W. Menefee and Mrs. Tom Meade, Danville, West Va.; Mrs. J. Allison Hodges, Richmond, Va.; Mrs. Ralph Dula, Mrs. A. B. Carrington, Mrs. Henry Vass, of Virginia; Mrs. Robert L. Parrish, Covington, Va.; Mrs. Alma Richardson, Greensboro, N. C., and Mrs. Claude A. Swanson, wife of the Governor of Virginia. The universal enthusiasm in the cause of welfare work was described by one of the women guests as "amazing."

After the assembly had dispersed, Mrs. Taft was conducted through some of the large cotton mills in Spray, a town which has ten thousand operatives. In the evening she returned to Danville, where she joined Mr. Taft on his way South.

Mrs. Taft's address was as follows:

MRS. TAFT'S ADDRESS.

The Woman's Department of The National Civic Federation is the outgrowth of the Federation's efforts to promote Welfare Work. It enlists the ready sympathy of women, and the Woman's Department affords an opportunity for active support. Our main object, as declared in our articles of organization, is "to secure needed improvements in the working and living conditions of women and men wage-earners in the various industries and governmental institutions throughout the United States." There are three reasons why this work should appeal strongly to women: First, they have the opportunities; second, it often concerns their interests closely, and, third, they have a peculiar fitness for it by situation and disposition.

The opportunities of women to influence the economic well-being of the world's workers are greater perhaps than they realize. They are, as stockholders, the too often silent partners in many large industrial enterprises. In one of the great railways alone it is stated that 28,000 stockholders—practically one-half—are women, their holdings amounting to $148,000,000. Besides those who hold stock in their own names there are many others who through family relationship are financially interested in, or dependent upon, industrial agencies, mills, railroads, stores and mines. Some of them are actively concerned for the well-being of the workers in the enterprises from which their incomes are drawn. Some are members of our department, and we feel sure that many others will join in our efforts when they realize the opportunities which they have at hand.

In public affairs the wives and daughters of officials can exert a wide influence in awakening an interest in the conditions of government service. The government itself is one of the largest employers of labor in all parts of the country. In many branches of its service, notably in the Post Office, it may well be worth while to investigate whether all is being done which should be done for the health and comfort of employes.

The country has grown so rapidly in population and developed so enormously in a short time that its public institutions often have helplessly fallen behind the best ideals. In the State and municipal institutions, such as asylums and hospitals, and in the police and fire departments of our cities, much remains to be done before the employes of the public can be said to be respectably, not to say comfortably, cared for. And when we think what interests are confided to them it seems superfluous to insist and argue that they should be well housed, furnished with proper food and given opportunities daily, not only for rest, but recreation and exercise.

That women have a legitimate interest in these matters is apparent, when we stop to think how much of the world's work is done for women and the home. Women's interests are almost commensurate with the whole field of industry. The employes of railways and of mines, the stationary firemen and engineers who work in ill-ventilated basements and sub-basements, the coal passers who toil in all sorts of narrow and crowded quarters, hotel employes, bakers, and the throngs of mill hands in the textile industry, the teamsters of great cities, all these and many others are engaged in work in whose ultimate results women have a personal interest.

NAVAL CLUBHOUSE, MARE ISLAND, CALIFORNIA.
Provided by Admiral and Mrs. Bowman H. McCalla.

But, again, there is a peculiar fitness for women engaging in such work where they can in many respects ameliorate the conditions of their own sex. The old-fashioned family duties have passed in large measure from the home to the factory and workshop. The United States statistics for 1900 show that one out of every three women between the ages of sixteen and twenty is a breadwinner, and that of all women over the age of sixteen years one in five works for wages. Many, it is true, very nearly one-quarter of them, are in domestic service. The remainder are in mills, factories, shops and offices, and nearly one-half of them are under twenty-five years of age. From them will spring many of the new generation. To secure for them healthful, orderly places in which to work, with facilities for innocent recreation, proper exercise and opportunities for social relaxation and educational improvement, is obviously a proper activity for this department.

LIBRARY FOR ENLISTED MEN, MARE ISLAND.

The Woman's Department seeks to accomplish its purpose through committees, of which three are now in existence.

The Committee on Industrial Economics, still in its infancy, will seek to familiarize the women of our department with the larger aspects of the industrial life of the present.

The Industrial and the Government Employes' Welfare Committees will investigate the conditions of such employes in private enterprises and in government institutions to learn what welfare work has been undertaken for their benefit and what improvements, if any, are needed.

That the friendly influence of women may be felt both in private enterprise and in public service may be indicated by two examples.

The glass industry of this country is in special need of arrangements for the comfort of the men and women workers. Probably no other large industry is conducted in such old and dilapidated buildings, with such inadequate provision for either heating or ventilation. Arrangements for the comfort of employes too often reflect these primitive industrial surroundings. Through the efforts of two of our members, who are the daughters of the president of a great glass manufacturing company, the women employes of the works have recently been substantially benefited by the establishment of rest rooms for their special use, and in October of this year a coffee house was opened in the yards for the benefit of the glass blowers, the restaurant being kept open night and day to meet the needs of those who work on eight-hour shifts. The work having begun, other manufacturers are asking for information and examining into the possibilities for improving their own works.

No better example of the co-operation in good work of the wife of a public official can be given than that of Mrs. Bowman H. McCalla. Twelve years ago, when Admiral McCalla was stationed at Mare Island, he and Mrs. McCalla witnessed the pitiful condition of the boys and young men who were carried there on ships to be repaired in the Navy Yard.

The town of Vallejo, opposite the naval station, is a workmen's town of 12,000 inhabitants, with over two hundred saloons. Mrs. McCalla has been working for five years in the interest of the bluejackets and marines, who when she began had no decent place of amusement to visit when on leave from their ships; their uniforms debarred them from respectable places. For the purpose of providing pleasant companionship and amusement for the enlisted men she and her husband undertook to provide a permanent club to be patronized only by that type of government employes; it has bedrooms, bathrooms, a library, a game room, an auditorium, a bowling alley, shooting gallery and restaurant within its four walls, thus securing for the men the enjoyment and recreation of the saloon without its injurious elements. This naval clubhouse was opened in 1904, with an attendance exceeding 50,000 during its first two years. It is reported that in that period over one hundred thousand dollars of the men's pay had been placed by them in the club's bank for safekeeping, this money having been spent formerly in the saloons or worse places.

The clubhouse is overcrowded, and Admiral McCalla has been informed by the chief of police that arrests diminished in Vallejo seventy per cent during the first two years after the opening of the building.

But the cost of this splendid achievement in welfare work was not, as it should have been, met by the employer—the Government of the United States. A heavy burden of debt was incurred by Mrs. McCalla and a committee of women interested with her, funds having been loaned by private citizens, without interest, and the lot having been purchased, sad to relate, with all of Admiral McCalla's prize money of the Spanish War, so great was his interest in many cases of heart-breaking misery where boys of fifteen going into the navy were hopelessly ruined in body and soul. He and Mrs. McCalla felt impelled to alleviate the conditions of a special temptation assailing the lads who had left home and friends and were thrown upon their own resources in a strange town.

We hope to assist the Public Employes' Committee of The National Civic Federation in having extended the efforts of the government for the benefit of its employes, such as beneficial features instituted in army stations, army posts, and at Panama, that it may be financially responsible and not permit its employes to be dependent upon haphazard contributions of sacrificing and interested citizens.

The establishment of provident funds, including industrial insurance, pensions and safe investments for savings for women as well as men employes, and for government as well as private employes, we consider to be of great importance, and we are planning, as members of The National Civic Federation, to aid in that line of endeavor.

The Woman's Department sees and appreciates great possibilities for usefulness. May it live up to its best and highest ideals, and help to secure and maintain a spirit of good will and fair understanding —the true American spirit.

EDMUND J. JAMES

A GROTESQUE TRAVESTY OF LINCOLN'S SPEECHES

AMERICAN LABOR'S GOOD WHOLE CLOTH CUT UP AND MADE INTO SOCIALISTIC PATCHWORK

BY ADA C. SWEET

COLOSSAL impudence is shown by the Socialist press in publishing garbled and mutilated sentences, half-sentences and paragraphs from the speeches and papers of Abraham Lincoln in an attempt to pretend that the great Emancipator held Socialistic opinions. Robert Hunter, commenting upon these maimed and distorted extracts torn from their context and printed in an issue of the *Social Democratic Herald* with his own article, declares that Lincoln "stated powerfully the entire demand of Labor and Socialism." Concerted action among Socialists to appropriate the great name of Lincoln to their own purposes is shown by an article entitled "Lincoln and Labor," by W. J. Ghent, the Socialist leader, published in the *Independent* of February 11, and by the printing of some of the same garbled extracts from Lincoln's speeches as those used by the *Social Democratic Herald* in the programme of the conference on Socialism, held by the friends of the movement in Boston, February 5-7, of this year.

The confusing and indentifying of labor with Socialism is constantly kept up by Socialist speakers and writers, and it is a very useful, though entirely unauthorized, adjunct to their efforts. By this false assumption it is possible to torture into some form of apparent complaisance with Socialistic ideas every utterance of broad charity and justice toward mankind in its struggle which has come from the leaders and the prophets from the time when words were first recorded.

Of course, Abraham Lincoln not only conceded, but urged the just claims of labor. But he did not ignore the just claims of capital, nor of the element of society which neither does manual labor nor draws its maintenance from its own capital, the section to which Lincoln himself belonged during most of his years after he reached maturity.

The method employed by the Socialist enthusiasts in their effort to get something of their dismal gospel into Lincoln's mouth is to quote paragraphs, sometimes unfinished, and sentences and half sentences from his notes and speeches. An example is furnished by the quotation of several passages, mutilated, from Lincoln's message to Congress, December 3, 1861.

Referring to the Civil War, which he called "the insurrection," Lincoln, alluding to the dangers of the situation and the arguments of the Slave Power, is quoted as saying:

"It is not needed or fitting here that a general argument should be made in favor of popular institutions, but there is one point, with its connections, not so hackneyed as most others, to which I ask a brief attention. It is the effort to place capital on an equal footing with, if not above, labor, in the structure of government. It is assumed that labor is available only in connection with capital; that nobody labors unless somebody else, owning capital, somehow, by the use of it, induces them to labor. This assumed, it next considers whether it is best that capital shall hire laborers and thus induce them to work by their own consent." . . .

The conclusion of this last sentence, **"or buy them and drive them to it without their own consent,"** is omitted. This omission was, without doubt, intended to blind present day readers to the fact that Lincoln was speaking in that address of the doctrines of slavery as opposed to those of free labor.

Again, the following is quoted from the same message by the Socialistic publications:

"Labor is prior to and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital, and deserves much the higher consideration." And the immediately following sentences are left out, viz.: **"Capital has its rights which are as worthy of protection as any other rights. Nor is it denied that there is, and probably always will be, a relation between labor and capital producing mutual benefits."**

This omission is at once significant and amusing.

In another instance Lincoln's words are quoted as follows, the fact, however, being that the opening sentences of the paragraph—which we print below the quotation—are left out:

"No men living are more worthy to be trusted than those who toil up from poverty; none less inclined to take or touch aught which they have not honestly earned. Let them beware of surrendering a political power which they already possess, and which, if surrendered, will surely be used to close the door of advancement against such as they, and fix new disabilities and burdens upon them till all of liberty shall be lost."

The omitted beginning of the paragraph is as follows:

"Again, as has already been said, there is not of necessity any such thing as the free hired laborer being fixed to that condition for life. Many independent men everywhere in these States a few years back in their lives were hired laborers. **The prudent, penniless beginner in the world labors for wages awhile, saves a surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another new beginner to help him. This is the just and generous and prosperous system which opens the way to all, gives hope to all, and consequent energy and progress and improvement of condition to all."**

The passage from which these fragments were taken by the Socialist publication was included, says the *Social Democratic Herald*, in Lincoln's reply to the Workingmen's Association of New York, March 21, 1864. But this very paper has in it such complete refutation of these absurd Socialistic assertions regarding Lincoln, and withal so much characteristic good sense and strong feeling, that THE REVIEW prints the opening and the two closing paragraphs. It will be observed that Lincoln tells what he was contending for in the message of December, 1861, the very document which Socialism is now trying to torture into an attack upon one portion of society, and then use it for the inflammation of class prejudice generally:

REPLY TO A COMMITTEE FROM THE WORKINGMEN'S ASSOCIATION OF NEW YORK.

March 21, 1864.

"Gentlemen of the Committee:

"Honorary membership in your association, as generously tendered, is gratefully accepted. You comprehend, as your address shows, that the existing rebellion means more than the perpetuation of African slavery—that it is, in fact, a war upon the rights of all working people. Partly to show that this view has not escaped my attention, and partly that I cannot better express myself, I read a passage from the message to Congress in December, 1861.

[Here follows the extract from his message.]

"None are so deeply interested to resist the present rebellion as the working people. Let them beware of prejudice and hostility among themselves. The most notable features of a disturbance in your city last Summer was the hanging of some working people by other working people. It should never be so. The strongest bond of human sympathy, outside of the family relation, should be one uniting all working people, of all nations and tongues, and kindreds. **Nor should this lead to a war upon property, or the owners of property. Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise.**

"Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when finished."

FOUR YEARS OF PROGRESS.

New England Civic Federation Executive Committee Hears Reports and Discusses Industrial Situation in Meeting at the Parker House, Boston.

A meeting of the Executive Committee of the Civic Federation of New England was held at the Parker House, Boston, Friday evening, December 4, 1908. The following were present, including the chairman of the Welfare Committee and one of the vice-chairmen, and several members of the Federation at large, who attended by special arrangement in behalf of committee members who were unable to be present:

Henry Abrahams, Secretary Cigarmakers' Union, Boston.

Louis D. Brandeis, vice-president New England Civic Federation.

George W. Brown, treasurer United Shoe Machinery Company, Boston, and Vice-Chairman Welfare Committee.

James R. Crozier, Carriage and Wagon Workers, Boston.

Dennis D. Driscoll, Secretary-Treasurer State Branch American Federation of Labor, Boston.

John Golden, President United Textile Workers of America, Fall River.

Hon. Charles S. Hamlin, Boston.

John Mason Little, Boston.

Augustus P. Loring, President Plymouth Cordage Company, Boston, and Chairman Welfare Committee.

Frank H. McCarthy, Organizer American Federation of Labor, Boston.

Norman E. McPhail, President Typographical Union, Boston.

Wallace L. Pierce, President Walworth Manufacturing Company, Boston.

James L. Richards, President Boston Consolidated Gas Company, Boston.

Hayes Robbins, Secretary New England Civic Federation, Boston.

Gen. Thomas Sherwin, President New England Telephone and Telegraph Company, Boston.

P. H. Sweet, President State Branch American Federation of Labor, Boston.

Lucius Tuttle, President Boston & Maine Railroad, and of the New England Civic Federation, Boston.

Edmond F. Ward, United Brewery Workmen, Boston.

W. C. Winslow, Metropolitan Coal Company, Boston.

Secretary Robbins presented a report on the work of the past year, reviewing also the efforts and results of the movement during the four years since its organization in New England. In the course of this report the secretary announced that on account of impaired health he was obliged to retire from the work, for the present, at least.

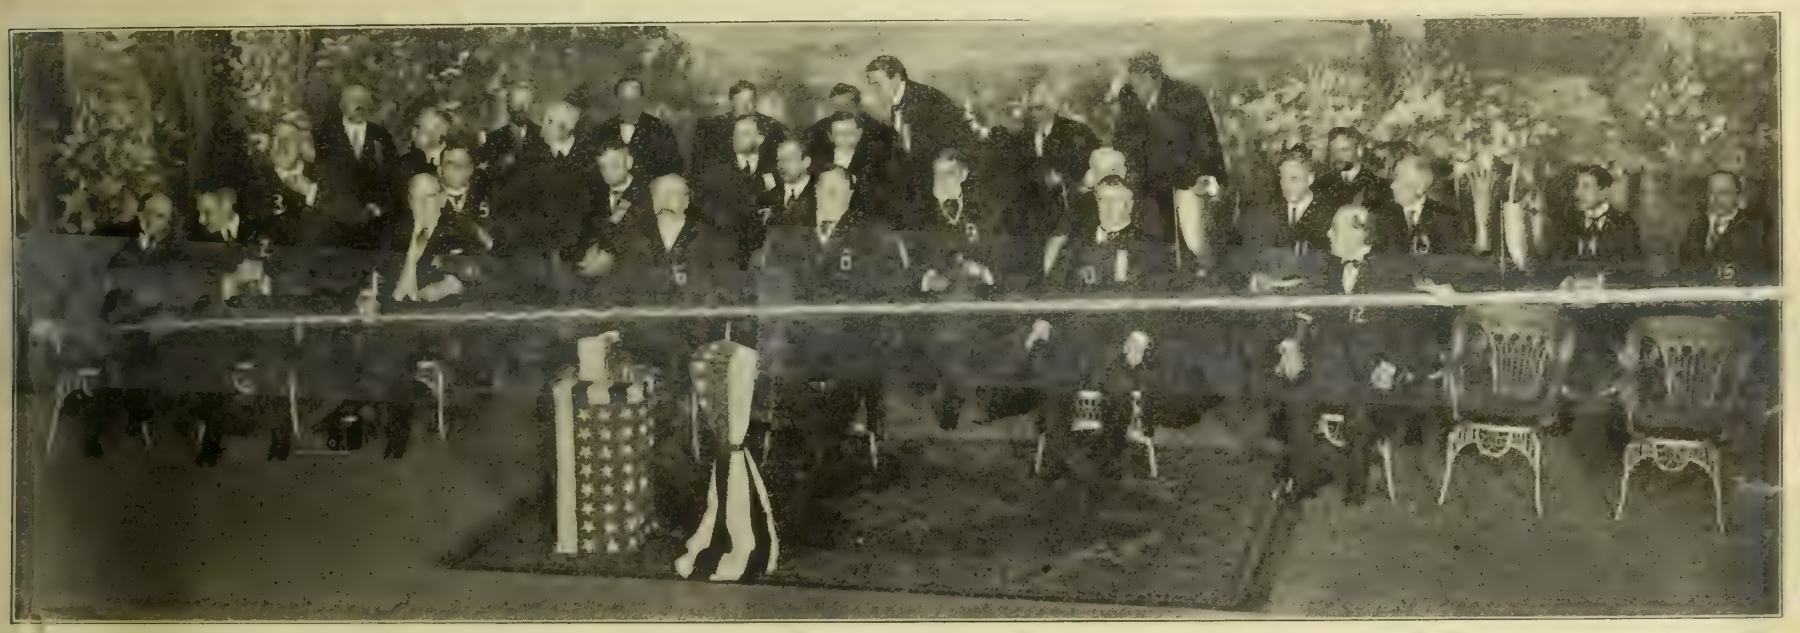
Mr. John B. McPherson, of Cambridge, was engaged to conduct the work of the Federation during the absence of Secretary Robbins. Mr. McPherson, who was formerly secretary of the National Association of Wool Manufacturers, took up his new work on January 1.

MISS ADA C. SWEET.

Miss Ada C. Sweet, formerly of Chicago, has taken up her work in the Department of Industrial Economics, at the headquarters of The National Civic Federation, in New York.

Miss Sweet is an active worker in clubs and organizations of a public and semi-public character. She was a member of the Board of the original Civic Federation of Chicago, founded in 1894, and was the first president of the Municipal Order League of Chicago, a society of women whose object was to obtain and maintain for that city public health and cleanliness, order and beauty. In 1895 she was president of the Chicago Woman's Club, an organization of which she has been an active member since 1885, and of which she was recently elected an honorary life member.

Upon the death of her father, the late General B. J. Sweet, President Grant, in 1874, appointed Miss Sweet United States Agent for Paying Pensions, at Chicago, and she was reappointed for the term of four years by President Hayes, and again by President Arthur. After an interval of foreign travel she opened an office as United States Pension Attorney, in Chicago, and continued in that work until 1905.



Miss Sweet is known to many people as a writer, having been connected with the Chicago daily papers, both editorially and writing over her own signature, during the past fifteen years, with occasional ventures into the magazine world.

A GREAT CONFERENCE ON VITAL PROBLEMS

UNIFORM STATE LAWS DISCUSSED IN WASHINGTON MEETING—NATIONAL AND STATE EXECUTIVES, SCHOLARS AND STATESMEN JOIN THE GREAT ORGANIZATIONS IN VOICING LEGISLATIVE NEEDS

1—MR. JOHN HAYS HAMMOND.
2—HON. ELIHU ROOT.
3—MR. CHARLES A. MOORE.
4—HON. HENRY B. BROWNE.
5—GOV. AUGUSTUS E. WILLSON.
6—HON. ALTON B. PARKER.
7—MR. JOHN MITCHELL.
8—PRESIDENT WILLIAM H. TAFT.
9—MR. ISAAC N. SELIGMAN.
10—HON. SETH LOW.
11—PROF. J. W. JENKS.
12—MR. SAMUEL GOMPERS.
13—HON. H. B. F. MACFARLAND.
14—MR. JAMES SPEYER.
15—HON. WILLIAM R. WILLCOX.

THE National Civic Federation's Conference on Uniform State Legislation at Washington was in its purpose and in its representative character, in its dignity and authority, unexampled among national gatherings. The 750 delegates, representing by appointment of the Governors forty-four States in the Union, or sent by over one hundred civic, commercial, labor, professional, agricultural, financial, manufacturing, economic and other national organizations, gathered in Belasco Theatre Monday morning, January 17th, 1910.

The assembly was a study of unrivaled interest. Many of the Governors, present at the Capitol to attend the Governors' Conference, sat with their State delegations, and members of national associations from the various parts of the country arranged themselves in congenial groups awaiting the opening of the meeting.

The personnel of the gathering in itself was impressive, and when its meaning was thoroughly understood it became doubly significant for its earnest purpose was nothing less than the binding more closely together of the States in harmonious union. The correspondent of the Richmond (Va.) *Times-Dispatch* well expressed the spirit of this assembly and the impression it made in the following special dispatch to his paper:

"Welded together by the common purpose of uplift, the visitors cared not that different points of view are leading them to the goal, nor that geographically they arrived in Washington from the four corners of the Union. The result was little groups of executives from the North and East discussing States' rights and the need of uniform laws with similar representatives of the South and West with as much mutual satisfaction as if there had been no Civil War in the sixties, and no Robert E. Lee statue to threaten the peace of the United States Senate in 1910; those interested in Civic Federation problems cared not a whit whether the person best equipped to illuminate certain phases of the work in hand was a bona-fide voter, a suffragist or a suffragette, and the Forestry Association declared its superiority by entirely ignoring the erstwhile, all-absorbing Ballinger-Pinchot controversy, with its present and future results."

Surely sectionalism, the influence against which Washington so strongly cautioned his countrymen, is no longer a menace. Local pride and national love of home, neighbors, institutions and people, happily remain, but the cruel old spirit of geographical discrimination and intolerance is fast disappearing. The last stand of sectional criticism is perhaps the current discussion as to the elimination, or the over-exploitation in different sections of the country, of the letter "r" or the final letter "g" in the spoken language of our people.

Escorted by President Low, of the National Civic Federation, and Judge Alton B. Parker, the President of the United States came upon the stage. The audience arose, warmly greeting the national Executive and remained standing until he was seated. On either side of President Taft sat Mr. Low, Judge Alton B. Parker, Associate Justice Brown, retired, Samuel Gompers, president of the American Federation of Labor, and John Hays Hammond. There were also upon the stage ex-Senator Dryden, of New Jersey; Senator Root, of New York; Commissioner Macfarland, of the District of Columbia; Governor Willson, of Kentucky; John Mitchell, William R. Willcox, Charles A. Moore, James Speyer, J. W. Jenks, N. J. Bachelder, Isaac N. Seligman and ex-Senator Dryden.

Immediately after the inevitable flash-light photograph, which explodes its harmless batteries upon even the most august public assembly, Mr. Low began his opening address, in which he declared the purpose of the Conference "to give an impulse to the movement for uniform legislation by the States as to matters upon which such legislation is desirable." He expressed appreciation of the presence and assistance of President Taft, and of the Governors of the States, and in urging the standardization of State laws by making them uniform as to matters which affect the interest of all the people in common, he paid a tribute to the patient labors and substantial achievements during the past twenty years of the Commissioners on Uniform Laws.

After closing his address Mr. Low introduced President Taft, and the audience rose and gave the Chief Executive a rousing reception. President Taft was in his happiest mood. Speaking without notes, he easily carried with him the entire assembly in his discussion of such themes as the responsibility and

uty of the States, and the problems of marriage and ivorce, or condemned the deep wrong of delayed udicial procedure which afflicts the entire nation.

Governor Willson, of Kentucky, made a delightfully nformal speech. In his own behalf and that of the ther Governors he thanked the Civic Federation for s consideration and courtesy extended to them and xpressed himself as strongly in favor of standardiza- ion, or uniformity in the State laws.

Judge Alton B. Parker quite captured the Confer- nce by his opening remarks, in which he good aturedly commented upon President Taft's hit at he Constitutional lawyer as "a gentleman who has one out of the practice of law and into politics." udge Parker's allusion to his own case as a lawyer, nd, for a few months a politician, was received with aughter and applause. The able address with which udge Parker followed his introductory talk was stened to with strict attention and received by the ssembly with many expressions of approval.

The Conference met in the ball-room of the Arling- n Hotel on Monday afternoon, with Judge Parker, ho had been elected as permanent chairman, presid- g. Again there was present a large audience of nterested men and women. The delegates were now rouped by States, presenting the usual appearance f a national convention and affording facilities to he onlookers of finding in the delegations this or hat celebrity or distinguished visitor to the capital.

Walter George Smith, president of the Conference f Commissioners on Uniform State Laws, addressed he assembly, giving an outline of the work of the ommissioners, describing their methods and the re- lts so far attained. For most of those present the ll scope and significance of the national movement r Uniform State Laws became defined with in- reasing clearness as President Smith proceeded in s speech. In closing, the speaker, in referring to e occasion and the Conference he was addressing, id: "This gathering, representing as it does, al- ost every department of human activity, is perhaps ore representative in character than any which has er assembled in the United States. Its conclusions ust have weight."

One of the most inspiring addresses delivered at e Conference was that of Senator Elihu Root, hose appearance was greeted with great applause. r. Root, originally one of the promoters of the idea the widening and deepening of the movement for niform State Laws, gave a clear-cut review of the esent chaotic conditions affecting the entire people the nation because of legislation which had little no co-operative and harmonious activity of thought its initiation in the different States. His speech, d those of Mr. Low, President Taft, Judge Parker, r. Walter George Smith and Governor Willson are inted in full in this issue of the *Review*.

Each session of the Conference was attended not ly by the delegates, but by crowds of interested sitors, the occasion being recognized by the public one of first importance.

In taking leave of the delegates previous to the al adjournment, Judge Parker, the chairman, said: The results of this meeting cannot fail to be far- eaching. There have been more than were ever con- mplated by the most enthusiastic among us. Ac- pt my deep appreciation for the service you have ndered your communities by your presence here. d be assured that the work thus begun will be car- ed on by willing hands."

OPENING ADDRESS—PRESIDENT LOW.

MR. PRESIDENT, Ladies and Gentlemen: On behalf of the National Civic Federation, it ves me the utmost pleasure to welcome you to is conference. We appreciate the action of the overnors of so many of the States in appointing legates, and also the action of the many com- ercial and other influential bodies which are here presented. You are all heartily welcome!

In particular, Mr. President, the conference is ighly honored by your presence, not only because ou are here, but especially because your presence dicates your active sympathy with the objects the conference.

This conference has been called to give an im- ulse to the movement for uniform legislation by e States as to matters upon which such legis- tion is desirable. The National Civic Federation es not pretend to be the originator of this move- ent; but it does hope that, as a result of this nference, the importance of uniform legislation the States as to many subjects will be more dely understood. The Federation is confident that, re fully in proportion as this is understood, will the strength of the popular demand for such slation be the greater.

Though many of us are, we all know that e Federal Government has exclusive control of ne matters, while each State has exclusive con- ol within its own borders, of other subjects. We know that there are some subjects as to which oth the Federal Government and the State gov ernments may each legislate within their respec- tive spheres. This situation has naturally led, in constitutional discussions, to the placing of the emphasis upon the effort to define accurately the limitations of power as between the Federal Gov- ernment and the State governments. In the mean- while, without any regard to such limitations, the people of the whole Union have been growing to- gether in their business relations, and in all the relations of life, without regard either to State lines or to constitutional theories. The result is, that of late years, especially, during which this process of unification of the vital and material interests of the people has been going on with continually increasing rapidity, the conviction has been steadily growing that uniform legislation by the States on many subjects is becoming, if it has not already become, essential to the welfare of the people of each State and of every State. I venture to think that before this conference adjourns, even those who are best informed will be astonished to learn in how many different fields such legislation is al- ready felt to be desirable, not to say necessary. Under most systems of government, the central legislative power, whatever it may be called, would pass the necessary laws, and these would then con- trol from one end of the country to the other; but under our Federal system this is not possible and we can obtain uniformity of statutory law in only one of two ways. We can give, by constitutional amendment, additional and exclusive power to Con- gress; or we must develop the capacity and the habit in the separate States of acting together with reasonable uniformity upon the subjects of common interest that overleap State lines. Thus far in our history as a people we have been content, mainly, to develop only the elements of strength to be found in the Federal Government and in the States, acting separately. Now we want to develop the almost unsuspected resources of the States, acting each one in its own field, but acting together. There are many matters as to which each State's interests are peculiar to itself; and, as to these, each State will naturally act from its own point of view alone. But there are also many matters which concern equally the people of other States, and as to these, it is full time that each State should habitually legislate, to use Senator Root's happy phrase, "as one of a family of States."

There are some subjects, like Uniform Bills of Lading, for example, in which the people of all the States are interested and all in the same way. There is no reason why a statute regulating Bills of Lading, which is good for one State, should not be good for all. A statute on this subject, which is the same in all the States, is better for everybody than an ideally more perfect statute that should differ in important particulars in many States. Uniformity means that shipper, receiver, and common carrier, all have the same rights everywhere; while diversity in the law means that everywhere one must make a special study to know his rights and be prepared to make special efforts to maintain them, if they are exposed to differ- ent dangers in different communities.

There are other subjects in which groups of States have such a predominant interest, that common action by the States of this group is all that is essential. Such a subject is the proposed change in the theory of the laws of negligence, which would substitute workmen's compensation for employers' liability. This change has been made in every country of Europe as a result of modern industrial conditions. It is not without importance to all of the States; but it is of vital importance to the group of industrial States. Uniform legislation on this subject by the States of the industrial group would probably make it possible for these States to adopt the more modern system safely, while a single State, moving alone, might incur grave danger to its industries in acting by itself. In other words, uniform legislation does not mean in every instance that every State should act on all subjects. In many cases, action by groups of States will be as effective as action by all. If uni- form action by the States, in groups or as a whole, can become habitual as to matters affecting the com- mon life of the people in whatever State they live, there is no reason why there may not be added to all the other advantages of our federal system this new element of strength, that we may enjoy the ad- vantage of legislation in common such as the common interest may demand, without forfeiting that in- dividuality of legislation as to interests purely local which the federal system aims to preserve.

Uniform legislation is the equivalent in legislation of standardization in mechanical construction. Form- erly, there were broad gauge railroads and railroads with a narrow gauge. Broad gauge railroads and narrow gauge railroads could not connect. At last the gauge of all railroads was standardized, that is to say, made uniform, and now the cars of every railroad can be used on the tracks of every other railroad, and no one would think of going back to the old system. The broad gauge, as a mechanical proposition, had some advantages over the narrow gauge; but these were wholly insignificant compared with the advantages resulting from standardization, that is to say, from uniformity of gauge. Difference in gauge did not make railroading impossible, but the did make it inconvenient, costly, and slow. Similarly differences in laws relating to the common life o the people do not make business impossible; but the do hamper business relations by causing inconven ence, expense, and delay.

The lack of uniformity in the legislation of th States as to the law of Negotiable Instruments, fo example, makes inconvenience, because trade affectin two States with different laws upon this subject hampered by the necessity of complying with both it makes expense, because the necessity of complyin with different laws makes it necessary to secure lega advice often in two States; and it makes delay, o loss of time, because the different requirements o two States have to be met, instead of the same re quirements in both States. Uniform legislation o such subjects, for this is only a type of many sub jects where the common interest altogether outweigh the individual point of view, is, in a word, like th standardizing of parts, which is one of the most no able methods by which, under modern manufactur the convenience of the public has been advance This is well illustrated by the standardizing of th size of screws, nails, bolts, and other objects of tha sort; so that the size needed can be obtained ever where. It is, in fact, one of the great industrial a vantages which this country enjoys over Europ which is broken up into small countries, that he standardization of parts has taken place on a larg scale, while there it has been possible to adopt only in a limited way.

If the States can be induced to standardize the laws by making them uniform as to matters tha affect the interest of all the people in common, n one can overestimate the advantages that will accru to the people of each State and of every State. Th standardization of statutes will make intercourse an business transactions easier, in a great many field and will increase such relations indefinitely; and a these advantages can be had, if the States pleas without hazarding a single attribute of sovereignt or limiting, in any way, the right and duty and op portunity of each State to legislate from its own poi of view alone upon subjects that are purely local.

Happily, the instrumentalities are at hand for secu ing uniformity of legislation by the States on a great a scale as public opinion will support. Twent years ago, more or less, the American Bar Associa tion called attention to this subject; and, as a resu of the action taken by it, many of the States hav already appointed Commissioners on Uniform Law This movement has, in fact, proceeded so far th Commissioners on Uniform Laws have been appointe by forty-four States, by two Territories, by the Di trict of Columbia, and by the Government of th Philippines. These Commissioners organized them selves into a National Conference on Uniform Legi lation a number of years ago, and last Autumn the held their nineteenth annual conference. In the nineteen years, this conference has perfected five law which it has recommended to all the States for ado tion. These laws are:

1. The Negotiable Instruments Act.
2. The Warehouse Receipts Act.
3. The Sales Act.
4. The Bill of Lading Act.
5. The Stock Certificates Act.

I believe also an act on divorce which was pr pared by the National Conference on this subje and which has been approved by the Commissione on Uniform State Laws.

The careful procedure, the systematic confere with all associations that may be interested, the peated study and examination by the best legal min of the country, to which these have been subject will be explained to you more at length during t progress of this conference. It is only necessary, this time to point out that machinery already exis by virtue of the action of almost all of the Sta themselves, for the careful preparation of unifo legislation as to any subject on which such le lation may be generally desired.

Fortunately, during this same week, the confere of Governors which was initiated in 1908, by the vitation of President Roosevelt to the Governors of the States to meet in the White House to consider Conservation of our Natural Resources, is also to m in Washington. By the courtesy of Governor Will of Kentucky, who is the chairman of that con ence, and of the Committee on Program, of wh Governor Hughes, of New York, is chairman, an h has been reserved on the afternoons of the first second days of the Governors' conference, that is January 18th and 19th, during which communicat from this conference on Uniform Legislation wil received. It is hoped that our conference will see way clear to recommend to the organizations represented that they urge the passage in all of States of the uniform laws already approved by National Conference of Commissioners appointe the States. If so, it is proposed that a repor this effect be made to the Governors on the after of Tuesday, January 18th. It will be developed, ho over, in our conference, that there are many sub

upon which uniform legislation is desirable which are not yet ripe for action, such as railway regulation, corporation regulation, workmen's compensation, pure food, pure drugs, good roads, vital statistics, insurance and many other matters. It is hoped that this conference will take the necessary steps to have these different subjects studied into and submitted for action, in due course, to the State Commissioners on Uniform Laws. Some of these subjects, at least, may well be brought to the attention of the Governors on the afternoon of Wednesday, the 19th inst., with a request that the Governors take such steps as they may deem proper to secure consideration of these subjects by the people and legislatures of their respective States. It is believed that, if this course is followed, public opinion in all of the States will be educated to a better understanding of these subjects, and will be likely to receive proposals for uniform legislation as to them, when they are ready to be made, in a hospitable spirit.

It is hoped that this conference will see its way to do several specific things:

1. To urge upon the States and Territories which have not already appointed Commissioners on Uniform State Laws that they forthwith appoint such Commissioners.

2. To urge upon all the States which have made no appropriations for the conduct of the work of these Commissioners to make a suitable appropriation which will enable the work to be carried forward more expeditiously and more effectively. It is estimated that $500 from each State would be sufficient.

3. To refer to suitable committees the drafting of laws on such subjects as the conference may determine, in suitable form to be passed by all the States; such drafts to be submitted to the National Conference of Commissioners on Uniform Laws for such action as they may see fit to take.

The coincidence in the meeting of these two bodies —the conference of Governors and this conference on Uniform Legislation by the States—is not simply a happy accident. It is due to the sagacious suggestion of the President of the United States, for which I am glad to take this opportunity, on behalf of this conference, to express our sincere thanks. The advantage to the cause, to be derived from the opportunity of placing immediately before the Governors the things that this conference wishes to call to their attention cannot be overestimated; for it means that information upon these subjects will be carried at once into almost every State of the Union by the Governor of the State himself. Public sentiment in all the States, therefore, should be immensely stimulated as a result of these two gatherings.

The President of the United States has consented to be here this morning because of his keen appreciation of the importance of this subject to all of the States and to the people of all the States. He knows by his experience as a lawyer, and upon the bench, the importance of such action in its legal aspects; and from his commanding point of view as the President of the United States, he is better able than any one else to understand its far-reaching possibilities for good. I have now, therefore, the very great pleasure of presenting President Taft, who has kindly consented to address this conference.

PRESIDENT WILLIAM HOWARD TAFT.

IN the first place I am glad to welcome the Civic Federation to Washington. I think the sun shines a little brighter in Washington than it does anywhere else along on the same latitude, and it is a very pleasant place either to live in or to be in; therefore, I congratulate the Civic Federation in having had the good sense to come here. (Applause.)

You are not the only citizens of the United States who look in this direction. I am glad that you came here at the same time that the Governors did, so that your deliberations and theirs in the same direction, and the right direction, as they doubtless will be, will have the weight of two great forces upon not only the National Legislature, but upon the State Legislatures, for from Washington everything radiates to the end of the country.

In the discussion of uniformity of legislation, when you take a man who has gotten out of the practice of the law, so that he does not remember with great exactitude those principles that are applied in actual cases, he cannot help falling back on a discussion of the Constitution. A constitutional lawyer is a gentleman who has gotten out of the practice and who has gone into politics. (Applause.)

Now my friend Senator Root, whom I am delighted to class with me in the same category, some years ago was greatly misunderstood with reference to his view of the Constitution and the trend under the Constitution towards centralization of government. If I understood him, his view was that, unless the States did their duty in the exercise of the functions which it was necessary they should exercise in the interests of good government, there would be a tendency toward the enlargement of the Government at Washington, and he uttered a warning to the States that if they would retain the power given to them under the Constitution in all its integrity, they must see to it that they exercise that power in the interests of the people and in the interests of the country generally. The misunderstanding led to ascribing to him views in favor of centralization that would certainly have been radical, but I am sure he does not have them.

We have a nation, and we have a centralized government, and the reason why we have it is because John Marshall was put at the head of the Supreme Court early, and exercised that power which a good judge always exercises with his colleagues. He did not minimize the power of the Supreme Court to construe that Constitution authoritatively. (Applause). And so construing it, he made this a nation with all the powers incident to a nation. And then when he left the bench, after that long period of useful service, he was succeeded by Chief Justice Taney and his associates, and at that time the trend toward a national power and authority of the party from whom Chief Justice Taney was selected led him right along in the same path that Marshall had marked out until we came to the war. And then, with the war amendments, the same tendency to make this Government a nation as distinguished from a federation continued to the present day. (Applause.)

Now it is said that we have centralized too much. There are jurisdictions that might be asserted under the Constitution that Congress has not asserted, notably in the jurisdiction of the Federal courts. So too in bankruptcy; so too in elections. With respect to the jurisdiction of the Federal courts there is a large measure that Congress does not assert which it might take away from that which the State courts now exercise. And so with respect to bankruptcy, it might be made much more exclusive of State jurisdiction in that regard, and with respect to elections, they have gone back entirely to the States.

There are other matters under the Constitution which I shall not stop to mention which show that all the power conferred upon the National Government has not yet been exercised, but the reason why it seems as if we were becoming a more centralized government is not because of a change in the construction of the Constitution, but a change in the importance of the power which was always given to the National Government under that Constitution, to wit: the Interstate Commerce Law. When the Constitution was framed the State traffic, as distinguished from the Interstate traffic was as 25 to 75, and now instead the Interstate traffic is to the State traffic as 75 to 25—a complete reversal of the amount of Interstate business done as compared with the State business, and that is the reason why the National Government's power seems to have grown so largely, because its power covers more volume than it ever did before. With respect to that, I am inclined to think that it will be found wise after a time to recognize those great organizations, concentrations of wealth, and plant, and capital, that do a country wide business, going into every State, whose business is almost wholly Interstate, to recognize them as instrumentalities of Interstate commerce and to incorporate them in order that we may get them more directly under the control of the National Government.

I admit there are grounds for dispute and I have only recommended this as something that I look forward to in the future, as a means of saving to the public what is valuable, and there is a great deal that is valuable in those trusts, and eliminating permanently that which is vicious and contrary to public policy. (Applause.) But you are not Congress and I did not come here to convince you on that subject. (Laughter). I only mention it in passing.

There has been, during the last ten or fifteen years, an earnest desire on the part of some people to minimize State power altogether. They say—I heard the distinguished Governor of Massachusetts say—the United States Government can better regulate child labor than can the States, so what's the use of talking! Why not put that power into the United States Government? And so with reference to every power, the suggestion is that the central government has more capital, being more centralized, its execution of the laws is more certain and less affected by the local conditions and therefore it is wise in the interest of effective government to put what we can in the central government, and so we invoke the old "general welfare clause." We have got the money in the treasury and we can spend the money, therefore, for anything we choose, because there is no court to prevent it. We cannot issue an injunction against the Secretary of the Treasury, dishonoring an appropriation of Congress, and when it comes to the expenditure of money, the history of the United States is full of appropriations and expenditures that cannot be explained on any ground except that of "old general welfare." (Applause and laughter.) And the way they propose to expend it when there is a particular subject that needs attention, is to organize a bureau and let that bureau occupy an advisory relation and an experimental relation to the States in the exercise of that jurisdiction which is undoubtedly theirs. They have got to a point where, just before I sent in my message, in the list of the bureaus that was asked for was a bureau on earthquakes. (Laughter.) I assume the argument was that as earthquakes did not know any State bounds, neither did the exercise of jurisdiction with respect to them know any State bounds.

Now the lesson that this teaches is that we have a Constitution in which the Government of the United States cannot accomplish all reform and that there is a burden and there is a heavy responsibility, eloquently described by Mr. Root, upon the States with reference to meeting the demands of those who call themselves progressive and who are in favor of the reform to uplift the people and to make the comfort of the individual greater.

In no department of the government, in no reform is this uniformity of legislation going to be more important than in the conservation of our resources. (Applause.) The Federal Government has no power to compel owners of forests to attend to those forests with a view to the welfare of the community of the neighbors who live there, or of those who are affected by the denudation of the land of the trees. That must be done through the State Government if it is done at all, and so with respect to many of the streams. Indeed, if one follows out legal reasoning, it will seem, I think, that there is more to be done by the States in the conservation of resources even than by the Federal Government—large an influence as that Federal Government may have by reason of its ownership of the public domain.

Now there are many other subjects that ought to occupy the States with reference to uniform legislation. If I had been a member of the Constitutional Convention, I would have voted to have included marriage and divorce in the Federal jurisdiction, but it will never get there now.

The theory upon which they put in bankruptcy was that where a man was declared a bankrupt it fixed his status and that status ought not to vary in one State from the status in another. But when a man is married he has established a status and certainly that status ought not to vary between the States, but as it is not possible to secure an amendment to the United States Constitution placing that subject within Federal cognizance, it certainly calls for uniform legislation on the part of the States. (Applause.) I state that because I think everybody will agree with me. Then I am not going on to say what kind of legislation there ought to be, because I am told that in that discussion, as yet, even the Civic Federation has not reached a result.

Then there is another subject upon which there may well be uniformity of legislation after we, in the Federal Government, have adopted a proper system, and that is with respect to judicial procedure. If there is anything in our whole government, State and national, that justifies an attack upon our present system of living, it is the delays in our judicial procedure, (Applause) and the advantage that wealth gives in the struggle in the courts against those who haven't the means to meet the expense that is now imposed on them. (Applause.)

Now, if we can do something in the National Government to introduce the simplicity of the English procedure in equity and in law, perhaps uniting them, that will be a model for State legislatures to adopt a uniform system.

I might go on with respect to other subjects; I have said a great deal more than I intended to, and I have only—so to speak—"shot on the wing," but if you had to write a message a week, perhaps you would only write when you have to.

HON. AUGUSTUS E. WILLSON.

Governor of Kentucky.

THE invitation to me is really extended to the Governors, and not to this particular member of the Governors' body. Almost by accident it fell to me to issue the call for the Governors, and that resulted in some correspondence with the president of the Civic Federation, and that has brought me here to-day. I am not directly authorized to speak for the Governors, but I know from the men who compose that body that they would not wish me to let this greeting pass without their earnest and sincere acknowledgement of the courteous consideration which is extended to them, and so, speaking for them and not assuming any authority, I thank you, Mr. President, sincerely, and I thank the conference, the Federation, for extending this courtesy.

I felt right keenly the President's welcome to Washington and perhaps I might be pardoned even in an open expression of a disappointment when he began a verse, "The Sun Shines Bright," and then ended up "in Washington." We know the sun shines bright, more or less, everywhere, but we don't think it is ever in its full glory anywhere except in the old Kentucky home. (Applause.) When I come to speak of the object of this meeting, I feel very much

n the predicament of a pretty grim old Kentucky awyer who was called upon at a Bar Association banquet to respond to the toast "How to Explain o Your Client How You Lost His Case." He began his remarks by saying very grimly, "I deprecate the dea that I have been assigned to this toast because f any special qualification." (Laughter.)

I deprecate the idea that I have been called upon here from any personal merit, and will only speak very briefly to express my earnest sympathies with his movement for uniform legislation. I have been deeply interested in what the President has so well said to us. I always look upon him as a very thoughtful man and it is a great pleasure to listen to his expressions, so sincere and earnest, and so happily made, without any formal writing or paper of any kind, but just the happy, serious thoughts of a serious minded man. One does not appreciate the wonderful balance, the thoughtfulness and wisdom of those expressions on every occasion, but I have already said more than I intended to say in his presence.

This subject, the condition of our laws in regard to uniform legislation, is almost incredible in the people of our stock, with their determination and their practical common sense and their readiness to meet every consideration, and I cannot get it through my mind how a thousand years have passed without believing that on these subjects, the every day life of the common people all over the world, the rules ought to be the same everywhere, thereby avoiding a multiplicity of rules, and an embarrassment of rights and endless expense. To think that a man hardly is sure of that status that the President speaks of; a man may be married all right in Illinois and may not be so sure of it when he crosses the State line into Indiana; to think that a man anywhere on earth has to consult anything but public tradition as to how to make a will. There ought not to be any difference as to how to make a valid will in any place on the earth; it ought to be the same all over the earth, not merely through the United States, but all over the earth, but I suppose there are forty-six different ways to make a will in the United States, and make it valid—perhaps not that many, but a great many.

Mr. Low has spoken very happily of standardization. All of us lawyers and a great many business men have come to appreciate the good qualities of a standard insurance policy, instead of having one for everybody. The great advantages of standardization of large and important subjects are just as obvious as the advantages of having standard sized bolts and nuts, but it is far easier to take a half bushel of nuts and find one to fit a given sized bolt, than it is to find the status of a contract in forty-six different States. We can all see the great advantage and the time saved by having standard sized nuts to fit given standard sized bolts, and how far greater and more important is it that we should have uniform legislation and standardization of large and all-important subjects with which every State in the Union is dealing every day in the year.

I am in most earnest sympathy and in hearty accord with your movement and especially in respect to these more urgent matters and I hope it will not be long before we meet with material progress; in Kentucky, we have progressed somewhat, and I want to say that the meetings of the Governors which we will hold in your city this week will afford an opportunity for us to present these more important features. We, in Kentucky, expect to present a message to our General Assembly, just as the President has presented one to you, and if necessary we will write one as often as the President of the United States says that he is writing one, and ultimately we can, by our action, have a great deal of force to bring a desirable result to pass.

With the most earnest good wishes for an interesting and prosperous meeting, and with the greatest gratitude for your kindness, I thank you.

ADDRESS OF HON. ALTON B. PARKER.

OUR honored and much-beloved President laid down one proposition, I think, in language quite too broad. He said in effect that no lawyer discusses the Constitution until after he has got into politics and out of the law. He cited an instance. (Laughter.) Now I am going to discuss very briefly to-day—at least I am going to refer to the Constitution in a written address which I make to you, and I promise at the beginning that it will be short, and yet, I assume, you do not need any assurance from me that I am still practicing law (Laughter and applause), and certainly you need none to the effect that I am not in politics. (Laughter and applause.) After nineteen years of judicial work I was in politics for a very few months, and then the people effectually put me out. (Applause), and I think laymen as well as lawyers should consider the Constitution, and I do not believe it is safe for us to leave that subject entirely to those who have gone into politics. (Laughter.)

In 1787 a convention was held, the declared purpose of which was "to form a more perfect union, establish justice, insure domestic tranquillity * * * promote the general welfare, and secure the blessings of liberty to ourselves and our posterity," and to-day we are in convention, in the hope that we may contribute, be it ever so little, toward the promotion of the aims which induced the creation of the Union. We are met to aid in an undertaking which gives promise of great public usefulness and may prove helpful in maintaining in all its integrity the Union as formed.

Our ancestors were moved by the spirit of freedom aroused by the galling yoke the dominant country would fasten upon them. Many now are not a little moved by the gradual encroachments of the Federal Government beyond the limits which were plainly set to it. Their belief is that because of State indifference to matters in respect to which each State is, and of right ought to be, independent of the central government, and through want of concert of action on the part of the States, Congress has been tempted to invade that sphere, undertaking to prescribe what it conceives to be right or wise and to forbid what it conceives to be wrong or unwise, with such vindicatory sanctions as it chooses to prescribe.

Action and reaction is the law of the universe, the ultimate effect of which, if wisely observed, is to purify the social, moral and political atmosphere. The extreme assertion of the doctrine of State rights reacted in the form of our great Civil War, and now a reaction, let us hope, is beginning against one of its extreme consequences, namely, paternalism or centralization. So much was accomplished by the necessary centralization of power during that fratricidal struggle that we have all but unconsciously come to regard the central power as the panacea for all the evils of diverse State policies and laws. And so it may be accepted in the end, unless there be harmony in respect, at least, to the general principles of legislation in the several States and uniformity in respect to formal matters.

Looking backward to the beginning, is it to be doubted that the Fathers appreciated the history of the republics that have come and gone, when they sat down to construct a government? A government which, so far as might be, should meet the ideal of a government of the people, by the people and for the people? Can we hesitate to believe that they sought understandingly to avoid the rocks upon which preceding republics had drifted to their destruction? Certainly any student of the history of their time must answer in the affirmative, as he must also acknowledge their wisdom when he considers the smoothness of the working for more than a century of the governmental plan formulated by them.

The people wished local government and local courts. The history of their ancestors made them afraid of entrusting the protection and enforcement of their rights and liberties to jurors who were strangers and to officials independent of local public opinion. So they conferred upon the Federal Government abundant power to maintain its dignity abroad, and for public defense, as well as power to regulate interstate commerce and affairs of national concern, but reserved by the very instrument creating the Federal Government all power which they did not grant.

Now this precaution was a vital part of the scheme of the Fathers to protect their cherished rights and liberties from governmental tyranny. To the State government was granted every needed power for local self-government, but not all the powers possessed by a free people by any means. Many powers were and are distinctly reserved from the State government and maintained in the possession of the people themselves—powers that may or may not be later surrendered to either the Federal or the State government as the people may will. The powers of the people, therefore, have been divided by them into three parts. The Federal Government possesses one, the State government another, and the other remains in the people. An attempt by either the Federal Government or the State to acquire by usurpation power withheld is an attempt to seize powers reserved by the people for the protection of precious rights and liberties, won only after centuries of effort. And there have been such attempts in both State and Nation, attempts participated in by both the executive and the legislative departments of government.

Many suggestions there have been of methods by which the citizen may be deprived of the protection of the Constitution and the law, but none more striking, perhaps, than the suggestion of the national executive at Jamestown, June 10, 1907, that a proposed Congressional Employers' Liability Law "should be such that it will be impossible for the railroad to successfully fight it without thereby forfeiting all right to the protection of the Federal Government under any circumstances." In other words, the proposition is to so penalize the victim of Congressional usurpation as will effectually prevent him from appealing to the judicial department of government for redress.

Mr. Bryce, in his Essay on Obedience, says:

"The greatest peril to self-government is at all times to be found in the want of zeal and energy among the citizens. This is a peril which exists in democracies as well as in despotisms. Submission is less frequently due to overwhelming force than to the apathy of those who find acquiescence easier than resistance."

It is only when some interest is attacked, and directly attacked, which is at the moment deemed of vital concern, that the people are aroused to defend their rights. Speaking to this proposition, Mr. Bryce in the same essay says:

"The English people were a people singularly attached to their ancient political and civil rights, yet Charles the First might probably have destroyed the liberties of England and would almost certainly have destroyed those of Scotland, if he had left religion alone."

One danger, then, is lest, in the absence of direct attack upon any institution deemed of great importance by the public, our protective measures—which consist in the division of powers between the Federal Government, the State government and the people, and the further division of the power granted to the Federal and State governments, between the executive, the legislative and the judicial departments of each—may in the meantime be insidiously weakened or obliterated.

The long strides that have been taken in this direction have apparently attracted but little public interest. This may be due in part to the reason assigned by Mr. Bryce, but in the main it is due to the belief that a remedy is needed, and the one proposed is accepted because suggested by one upon whose leadership the people for the time rely.

Latterly complaints have arisen of inefficiency resulting from the division of powers between the Federal and the State governments. It is said, depending upon the point of view, that some States grant charters which are far too broad, while others go to the opposite extreme. That in some States the law has not been enforced against disobedient corporations and their officers, while in others the tendency is to presume them guilty of a desire to violate all law, written or unwritten.

The public complaint for the present is more generally that the States have been lax in the enforcement of law, with most disastrous consequences. The charge of neglect must be admitted by all who appreciate that every one of the corporations now struggling for life was created in the face of the law under which they are now prosecuted,—a law which by reason of its deliberate non-enforcement was assumed by the corporation founders to be "more honored in the breach than in the observance."

This is not the time to consider whether the one government or the other is the more responsible for this condition. For the claim is that in an event efficiency is sacrified in the dual form of government, and that in the interest of business prosperity efficiency is of greater importance than all else.

This brings us to a consideration of the purpose of government. What is the object of government? Is it itself the end and the aim of its existence? If so then efficiency is the only criterion. To efficiency all must be sacrificed. There must be, in the language of mechanics, as well no friction as no lost motion anywhere in the government machine. *A despotism* more nearly approaches that standard than any other form of government, for it excels in mere efficiency of administration.

There is no political government on earth so efficient as the government of the United States Steel Corporation from a purely business standpoint. Every step it takes is in obedience to a master mind. Everyone connected with it must subordinate his ambitions and plans to that of the master. In times of business depression he must learn to live more prudently that loss of surplus capital may not affect the efficiency of the corporation. *But may safely be said that no one would be willing to have our government thus managed, however much national wealth might be augmented each year.*

We *are* ambitious, it is true, for wealth and the comfort it brings, *but we have not yet lost* our faith in the proposition that the object of government is the greatest good to the greatest number. It is desirable therefore *now*, as it was in the *beginning* that we should endure a less efficient form of government *in order to avoid* the greater evils which would otherwise arise.

But that is not to say that we should not bend our energies to make our dual government as efficient as may be. On the contrary, those who

(Continued on page 6.)

CONFERENCE OF GOVERNORS AT WASHINGTON

MEET AT CALL OF GOVERNOR WILLSON—OBJECTS OUTLINED BY GOVERNOR HUGHES—INTERSTATE RELATIONS, CONSERVATION OF RESOURCES AND UNIFORM LEGISLATION DISCUSSED—ENTERTAINED BY PRESIDENT TAFT

(Reading from left to right, lower row seated)—GOV. FRANK B. WEEKS, Conn.; GOV. JOHN FRANKLIN FORT, N. J.; GOV. JOSEPH M. BROWN, Ga.; GOV. SIMON S. PENNEWILL, Del.; PRESIDENT TAFT; GOV. AUGUSTUS E. WILLSON, Ky.; GOV. HERBERT S. HADLEY, Mo.; GOV. MARTIN S. ANSEL, S. C.; GOV. BRYANT E. BROOKS, Wyo.; GOV. JOHN E. SHAFROTH, Col. (Reading from left to right, row standing)—GOV. EDWIN L. NORRIS, Mont.; GOV. RICHARD E. SLOAN, Ariz.; GOV. ARAM J. POTHIER, R. I.; GOV. W. W. KITCHIN, N. C.; GOV. WILLIAM E. GLASSCOCK, W. Va.; GOV. JOHN O. DAVIDSON, Wis.; SECRETARY WILSON; GOV. JAMES H. BRADY, Idaho; GOV. JUDSON HARMON, Ohio; GOV. BERYL F. CARROLL, Ia.; GOV. ASHTON C. SHALLENBERGER, Neb.; SECRETARY HITCHCOCK; GOV. ADOLPH O. EBERHART, Minn.; GOV. GEORGE CURRY, N. M.; GOV. R. S. VESSEY, S. D.; GOV. JOHN BURKE, N. D.

THE second Conference of Governors was held in Washington at the same time as The National Civic Federation Conference on Uniform State Laws, January 18, 19 and 20, 1910. It was at the suggestion of President Taft that the two conferences were held simultaneously, and the wisdom of the President's arrangement was demonstrated to the satisfaction of everybody who took part in the two great national meetings.

Although President Roosevelt called his famous Conference of Governors in 1908, the gathering this year was the first meeting of the State Executives as a body, having been called by the chairman of its own committee, appointed in 1908, to provide for future meetings.

Governor Augustus E. Willson, of Kentucky, November 30, 1909, issued an invitation to the Governors of all the States and in the course of his letter he said "The President, on the Deep Waterways Excursion, told the Governors that while the laws prohibit arranging for the meeting at the public expense, the latch-string of the White House would be out, and he cordially wished and hoped for the meeting. * * * The National Civic Federation has changed its meeting to January 17, 18 and 19 to be in touch with the Governors and this will help to make the event one of exceptional interest and importance, probably greater than any meeting of the kind ever held in our country."

The Governors were requested to suggest to Governors Charles E. Hughes, of New York, Judson Harmon, of Ohio, and Thomas Marshall, of Indiana, any subjects which they thought would be useful for the Conference to take up, and the following topics were suggested by Governor Willson, as germane: Inter-State Relations, Taxation, Conservation of Natural Resources, Uniform Legislation, Extradition and the Constitutional Amendment. Governor Hughes, as chairman, and Governors Harmon and Marshall, were named to act as a Committee on Programme and Meeting with The National Civic Federation, and Governors Claude A. Swanson, of Virginia, Austin L. Crothers, of Maryland, and Edwin S. Stuart, of Pennsylvania, were requested to act as a committee on arrangements as to place, hours of meeting, reporting, etc.

The Conference of Governors, after its first session at the White House, was held at the New Willard Hotel.

President Taft welcomed the Governors at the White House Tuesday afternoon, January 18. He expressed his appreciation of the movement for co-operation and conference among the Governors, declaring his regard for it as of the utmost importance.

"I feel," said the President, "that this is the beginning of conferences which are certain to lead, in the end, to an adjustment of State legislation that should make our country capable of doing much more team work for the public good than we ever have before thought possible."

Governor Hughes, in his address, outlined the functions of the regular conferences of the State executives. "When President Roosevelt called a conference of Governors of the States to meet at the White House in May, 1908," said Governor Hughes, "he gave impetus to a movement which could not be confined within its original bounds. By the action of the Governors then present provision was made for a committee with power to arrange for a further conference, and this meeting is the result.

"The present Conference of Governors is held on their own initiative, and is not limited to any one subject. Great as will be the interest attaching to the question of conserving our natural resources, and to the other subjects which may be presented for discussion, the matter of fundamental importance I believe to be the consideration of the potential advantage of these conferences and the best means of securing the full benefit they are able to bestow.

"At the outset the relation and proper limitations of our efforts should be recognized. We are here in our own right as State Executives. We are not here, I assume, to deal with questions which are admitted to be of exclusively National concern. If Congress acts within its power as defined by the Constitution neither its authority nor the wisdom of its acts is the subject of challenge by State officers, as such. If Congress act beyond its authority its action is nugatory and the Supreme Court of the United States may so declare it.

"Whatever view may be taken of the advisability of extending Federal power or of a wider exercise of existing Federal power, it is manifest that the future prosperity of the country must largely depend upon the efficiency of State Governments. National activities inevitably will widen, and if we are to prevent an excessive strain upon national administration, we must develop our local agencies to their maximum efficiency within their proper spheres.

"The scope of these conferences may be deemed to embrace at least three groups of questions: The first relates to uniform laws, the second relates to matters of State comity where, if absolute uniformity may not be expected, causes of friction may be avoided and the general welfare may be promoted by accommodating action; the third relates to matters which, though of local concern, can be better treated in the light of the experience of other States. . . .

"The ancient jealousies that have divided us are now forgotten," Governor Hughes said in conclusion. "The sentiment of national unity has overcome divisive prejudices and the people of this great land, from one ocean to the other, are animated by a common patriotic impulse and intense devotion to the common interest, against which sectionalism will direct its attacks in vain. This sentiment of national unity, which is the outgrowth of an increasing intimacy of relation and facility of communication, should enable us the more easily to maintain and perfect, with wise and harmonious adjustment, the essential instrumentalities of State government, upon which, as well as upon our national activities, the welfare of the people depends."

President Low, of The National Civic Federation, followed Governor Hughes, presenting a report on the drafting of uniform laws, urging uniformity as to negotiable instruments, storehouse receipts, bills of lading, bills of sale, and divorce, and recommending the modeling of pure food and drug legislation after the national laws.

At the session January 19th, the Governors listened to a speech by Ambassador Bryce, the distinguished author of "The American Commonwealth," who said that he believed that the Conference would emphasize the importance of the Governorship, and that the chief executive of each State was coming more and more to be looked upon as the personal representative of the people of his State.

States' rights with especial reference to the conservation of resources and the regulation and supervision of public service corporations was the subject of most of the addresses delivered at this session.

Among the speakers were Governor Quinby, of New Hampshire, who made a plea for the conservation of forests under the direction of the Government. He was followed by Governor Willson, of Kentucky, on the right of the State to have control over water power, and Governor Carroll, of Iowa, who declared himself in sympathy with the movement for uniform laws in all the States. Governor Draper, of Massachusetts, advocated State ownership and control of the water power of streams. Governor Hughes considered the forests among the State's most precious possessions and said the State, so far as it could, should own and preserve them. He also advocated the development and State control of water power.

Governor Brooks, of Wyoming, and Governor

Shafroth, of Colorado, addressed the Conference on the subject of "The Value and Control of Water Power," Governor Shaforth contending that the ownership of land by the Federal Government in a State was a proprietary right and not political or governmental; that the United States holds the land the same as an individual, and that the government of the land rests in the State.

Governor Fort, of New Jersey, advocated State supervision of and regulation of quasi-public enterprises. He said that the authoritative right of the State over its public utilities companies was ample for the protection of the people. Governor Hadley of Missouri, spoke on the subject of railroad rate legislation, saying that the charges for the transportation of persons and property should not be left to the owners of the lines, but that control should be exercised by the Government.

Governor Draper, of Massachusetts, delivered an address on the regulation of automobiles. "The proper basis for automobile regulation is reckless driving," said the Governor. "Were it possible at all times to determine what reckless driving is, I should say speed limits were unnecessary, but in the present development of the industry, I believe it is necessary to have a proper speed limit established as prima facie evidence of law-breaking."

On the last day of their meeting the Governors were addressed by Governor Eberhart, of Minnesota, on the conservation of natural resources in Minnesota; Governor Shallenberger of Nebraska, on "Conservation," Governor Brady, of Idaho, on "Irrigation," and by former United States Senator Dryden, of New Jersey; Governor Carroll, of Iowa, spoke on "Divorce."

Permanent Organization.

A plan for permanent organization was unanimously adopted, the plan having been drafted by a committee headed by Governor Hughes. It provided for annual meetings at a State capital instead of at Washington, the next conference to be held between Thanksgiving and Christmas, 1910. A committee on arrangements was appointed to fix the exact date and place of meeting and provide a programme, the Committee of Three consisting of Governor Willson of Kentucky, Governor Hadley, of Missouri, and Governor Ansel, of South Carolina.

After considerable discussion the Governors decided to adjourn without passing any formal resolutions endorsing the many subjects before them, but the Governors, speaking each for himself, and without any formality, pledged themselves to an effort for uniformity and harmony in State laws for corporations, divorce, negotiable paper, and most of those things for which The National Civic Federation has contended. In planning for continuity of effort by themselves and their successors, the Governors had in mind, apparently, the purpose to compare notes and to take counsel one with another as to the State needs, with the common needs of all their people in view.

Social Events.

The Conference at Washington was marked by distinguished social events.

Mr. and Mrs. John Hays Hammond gave a dinner Tuesday evening in honor of the visiting Governors and members of the Executive Committee of the National Civic Federation at their home, 1500 Rhode Island avenue.

The guests were:

Governors Braxton B. Comer, Alabama; Frank B. Weeks, Connecticut; Simeon S. Pennewill, Delaware; James H. Brady, Idaho; Augustus E. Willson, Kentucky; B. M. Fernald, Maine; Eben S. Draper, Massachusetts; Herbert S. Hadley, Missouri; Ashton C. Shallenberger, Nebraska; Henry B. Quinby, New Hampshire; John F. Fort, New Jersey; Charles E. Hughes, New York; Martin F. Ansel, South Carolina; George H. Prouty, Vermont; William E. Glasscock, West Virginia; Robert S. Vessey, South Dakota; Richard Sloane, Arizona; William Spry, Utah; John Shafroth, Colorado; J. O. Davidson, Wisconsin; Alva J. Pothier, Rhode Island; Beryl F. Carroll, Iowa; Judson Harmon, Ohio; Joseph N. Brown, Georgia; Edwin L. Norris, Montana; George Curry, New Mexico; A. O. Eberhardt, Minnesota; John Burke, North Dakota; Walter R. Stubbs, Kansas, and Members of The National Civic Federation, Seth Low, August Belmont, Alton B. Parker, W. R. Willcox, Ellison A. Smyth, James Speyer, I. N. Seligman, Rollin B. MacVeagh, Samuel Gompers, John Mitchell, Timothy Healy, James O'Connell, John M. Glenn, Marcus Marks, V. E. Macy, R. M. Easley, Rollin Woodruff, Walter G. Smith, Lewis Parker, John F. Moulton, Dr. J. A. Holmes, Admiral Chadwick, and John Hays Hammond.

At the White House.

Wednesday evening, the 19th, President Taft entertained at dinner at the White House a company of more than seventy guests, inviting the visiting Governors, the members of their families who were with them in Washington, and including the officers of The National Civic Federation and members of their families. The banquet was held in the State dining room, which was beautifully decorated with tropical palms. The table at which the guests were seated, extending from end to end of the stately room, was a-bloom with pink carnations and maidenhair fern. As Mrs. Taft was ill and unable to be present, her sister, Mrs. Anderson, received with the President. The guests included:

The Secretary of War and Miss Dickinson.
Governor Pennewill, of Delaware, and Miss Burton.
Governor Fort, of New Jersey, and Miss Fort.
Governor Brown, of Georgia, and Mrs. Brown.
Governor Weeks, of Connecticut, and Mrs. Weeks.
Governor Draper, of Massachusetts, and Mrs. Draper.
Governor Ansel, of South Carolina, and Mrs. Ansel.
Governor Quinby, of New Hampshire, and Mrs. Quinby.
Governor Hughes, of New York.
Governor Kitchin, of North Carolina, and Miss Kitchin.
Governor Pothier, of Rhode Island, and Mrs. Pothier.
Governor Prouty, of Vermont, and Mrs. Prouty.
Governor Willson, of Kentucky.
Governor Harmon, of Ohio, and Mrs. Harmon.
Governor Comer, of Alabama.
Governor Fernald, of Maine.
Governor Hadley, of Missouri.
Governor Carroll, of Iowa.
Governor Davidson, of Wisconsin, and Miss Davidson.
Governor Eberhardt, of Minnesota.
Governor Stubbs, of Kansas, and Mrs. Stubbs.
Governor Glasscock, of West Virginia, and Mrs. Glasscock.
Governor Shallenberger, of Nebraska, and Mrs. Shallenberger.
Governor Shafroth, of Colorado,
Governor Burke, of North Dakota.
Governor Vessey, of South Dakota.
Governor Norris, of Montana, and Mrs. Arthur G. Coffee.
Governor Brady, of Idaho, and Miss Grade Dugger.
Governor Brooks, of Wyoming.
Governor Spry, of Utah.
Governor Mills, of New Mexico.
Governor Kibbey, of Arizona.
Hon. Seth Low.
Judge Alton B. Parker and Mrs. Parker.
Mr. and Mrs. John Hays Hammond.
Mr. and Mrs. Isaac N. Seligman.
Mr. Walter George Smith and Miss Smith.
Mr. James Speyer.
Mr. August Belmont.
Hon. George B. Cortelyou.
Mr. John Mitchell.
Mr. Samuel Gompers.
Mr. Ellison A. Smyth.
Mr. Lewis Parker.
Mr. Ralph M. Easley.
Mr. Nahum J. Bachelder.
Mr. William R. Willcox.
Mr. Marcus M. Marks.
Mr. Edwin R. A. Seligman.
Mr. Frank S. Streeter.

ADDRESS OF HON. ALTON B. PARKER.

(*Continued from page 4.*)

revere the wisdom of the Fathers should be most diligent in such effort, to the end that we may surely continue to enjoy the blessings of liberty as well as the advantages of prosperity.

If it be asked what necessary relation has efficiency of government with the perpetuation of the present form of it, *the answer* is that the charge of inefficiency is put forward to justify invasion by the Central government of home rule powers of the States. And such invasion has been apparently welcomed, rather than resisted, when it has related either to matters in which uniform legislation would the better subserve the common welfare, or to official neglect to enforce the law.

Indeed, it has been said by one of our leading statesmen that

"There is but one way in which the States of the Union can maintain their authority and power under the conditions which are now before us, and that is by an awakening on the part of the States to a realization of their own duties to the country at large."

We are in full accord with this admonition to the States of the *value and importance*, and, therefore, of the *duty* of reasonable co-operation. *As one great family* of sovereign States we ought always to work unselfishly together for the general good.

Animated by that spirit, the legal profession representing every State gave birth to what may now be called an institution of our country, the Commissioners on Uniform State Laws. That commiss was conceived by lawyers and brought forth by American Bar Association. The conception was of patriotism, of a genuine love of country,—a sire, absolutely free of selfish notions, to simpl the problem of life, to discourage legal strife a make smoother to the lawyer the pathway of u fulness.

One of the objects of that association, stated its constitution, is "to advance uniformity of leg lation." One of the first reports to that associati made in 1879, the year following its creation, reco mended co-operation to secure uniformity.

A Committee on Uniform State Laws was a pointed in 1889, consisting of one member fr each State. Subsequently it was decided to a each State to appoint three persons to represe it in the Commissioners on Uniform Laws. T meeting of the Commissioners was held in Detr in 1895, at which the first step was taken towa formulating what is now known as the Negotiab Instruments Law, which already adorns the statu books of thirty-six States, two Territories and t District of Columbia.

If time would permit, I would like to speak of t faithful and efficient service rendered by the Co missioners without other reward than the sense duty performed. The work covers other bills no ready for adoption, one of which has already m the approval of fifteen State legislatures.

Let me cite the action taken in preparing t Uniform Sales Act as an illustration merely of t method employed by the Commissioners in all the work. They secured the services of Professor Wi liston of Harvard to draft the bill. This draft w then considered in conference, section by sectio the author taking part. This draft, with explanato notes and citations of leading cases, was printe and sent throughout the country to legal author jurists, professors in law schools, judges, leadin lawyers, heads of business associations, and other for criticism. Later final action was taken on th completed draft by a roll call of the States, eac State casting one vote, resulting in unanimous a proval. After all of which it was approved by th American Bar Association, which has each year fo a long time back contributed liberally of its fund to defray expense of drafting, printing and distrib tion.

During twenty years members of the bar know for their attainment, their large and varied exper ence and high character, have given freely an cheerfully their energies and the best results o their study, observation and patiently acquire knowledge to the end of simplifying and makin common throughout the States of the Union th rules of law that should obtain for the best interest of all in the more important relations, such as are or should be, independent of local conditions; s that the lawyer in Maine may safely advise hi client of how he may deal in matters having thei consummation in Georgia, whether it concerns bill of exchange, a bill of lading, a conveyance o realty, a will, the formation of a corporation, trans action in stocks, or investment or transaction o whatever kind; and this without other compensa tion than the satisfaction of serving their country They have not accomplished all these things. On of the most marked characteristics of their labo has been the slowness with which they have mad haste, if I may so speak. They have demonstrate that the plan is feasible, as well as wise, and, there fore, worthy of the support which this convention can give.

We do not aim at absolute uniformity of law throughout the States, but a wise and conservativ uniformity. There is danger in pressing uniformit to extreme lengths. There are diversities of climate of production, of tradition, of heredity, of population of pursuits among the people of our several com monwealths which should be generally respected

Uniformity should be promoted along the line marked out by the Commissioners on Uniform Laws and as much further as the diversities to which have referred will reasonably permit. Other mat ters there are which it is most desirable shoul be the subject of uniform legislation, and some o them will be brought to your attention.

MR. WALTER GEORGE SMITH.

President Conference of Commissioners on Uniform State Laws.

I HAVE felt that it was of the utmost importance at the beginning of your proceedings that you should have an outline of the history of the conference of Commissioners on Uniform State Laws. Although very many of you are already Commissioners and what I shall say will be a twice-told tale I will ask you, none the less, to bear with me in order that you may know exactly what has been done. Many of you, perhaps, have never heard of the Commission before and do not know just wha

that body is and what it has done and what it will ask you to do.

On the 21st of August, 1878, there assembled at Saratoga Springs a number of representative lawyers from all parts of the United States, in response to a call issued under date of July 1 of the same year and signed by leaders of the Bar from fourteen different States. Thus was founded the American Bar Association, its object as expressed in Article I. of its constitution, being "to advance the science of jurisprudence, promote the administration of justice and uniformity of legislation throughout the United States, uphold the honor of the profession of the law, and encourage cordial intercourse among the members of the American Bar."

Annually since that time meetings of this organization have been held and its roll of membership now includes 3,748 members from all the States and Territories and insular possessions. The living and the dead members of this great organization include the very flower of the American Bar, and the records of their proceedings are filled with the most valuable contributions, not alone on technical legal subjects, but upon those affecting more especially the economic, social and, indirectly, political welfare of both State and nation.

It was not until 1889, however, that a special committee on the subject of uniformity of legislation was appointed. In that year the following preamble and resolution were adopted:

"Recognizing the desirability of uniformity in the laws of the several States, especially those relating to marriage and divorce, descent and distribution of property, acknowledgment of deeds, execution and probate of wills; therefore be it

"Resolved, That the President of this Association appoint a committee, consisting of one from each State, who shall meet in convention at a time and place to be fixed by the President, and compare and consider the laws of the different States relating to these subjects, and prepare and report to this Association such recommendations and measures as will bring about the desired result."

This action of the American Bar Association was followed in 1890 by an Act of the Legislature of New York, authorizing the appointment by the Governor of that State of three commissioners by the name and style of "Commissioners for the Promotion of Uniformity of Legislation in the United States," it being made their duty to examine the subjects of marriage and divorce, insolvency, the form of notarial certificates and other subjects; to ascertain the best means to effect an assimilation and uniformity in the laws of the States, and especially to consider whether it would be wise and practicable for the State of New York to invite the other States of the Union to send representatives to a convention to draft uniform laws to be submitted for the approval and adoption of the several States, and to advise and recommend such other course of action as shall best accomplish the purpose.

When notice of this action was brought to the attention of the American Bar Association, it was resolved to recommend the passage of a similar resolution by each State and by the Congress of the United States for the District of Columbia and the Territories, with the additional subjects for consideration of descent and distribution of property, acknowledgment of deeds, execution and probate of wills. From the impetus thus given to the movement originated by the American Bar Association and formulated by the Legislature of New York has grown the Conference of Commissioners on Uniform State Laws made up at the present time of commissioners representing forty-eight States and Territories, its object as set forth in the constitution being "to promote uniformity of State laws by affording the Commissioners on Uniform State Laws, appointed by the different States of the United States of America, an opportunity of meeting in annual conference for the better accomplishment of the work for which they were appointed."

Fourteen standing committees are authorized, viz.:

1. Executive.
2. Commercial Law.
3. Wills, Descent and Distribution.
4. Marriage and Divorce.
5. Conveyances.
6. Depositions and Proof of Statutes of Other States.
7. Insurance.
8. Congressional Action.
9. Appointment of New Commissioners.
10. Purity of Articles of Commerce.
11. Uniform Incorporation Law.
12. The Torrens System and Registration of Title to Land.
13. Banks and Banking.
14. Publicity.

these being the subjects for the most part susceptible of uniform treatment by the different States.

For nineteen years this Conference has proceeded with its work unostentatiously, but laboriously and effectively, first under the presidency of Hon. S. M. Cutcheon, of Michigan, from 1895-96; then the Hon. Lyman D. Brewster, of Connecticut, from 1896-1901; the Hon. Amasa M. Eaton, of Providence, R. I., from 1901-9.

The formation of the American Bar Association and the Conference of Commissioners on Uniform State Laws, which is, as we have seen, directly attributable to that organization, was in response to a feeling that had been gathering force for more than a generation. As early as 1851 in an address delivered by John William Wallace, for so many years the accomplished reporter of the Supreme Court of the United States, before the Law Academy of Philadelphia, some of the uncertainties, inconveniences and dangers arising from the divergencies of the commercial laws of the different States were pointed out; and as the volume of interstate business increased, these inconveniences became intensified.

Our dual system of government, under which there exist side by side courts of the United States and courts of the States exercising jurisdiction over many identical subjects, led naturally to a diversity of the law as expounded by the courts between the Federal and State jurisdictions in notable instances, while the State Courts of last resort on many subjects of commercial law differed from each other on fundamental principles. Added to these causes of divergency are the differing statutes, where statutes have been enacted.

Obviously, if our system of government is to be preserved, and at the same time the legitimate demands of the business world are to be heeded, there must be one law on those subjects that affect business interests for all of the States, or loss, irritation and serious injury to the prosperity of the country which have already ensued will be continued, and eventually the remedy, probably more fatal than the disease, will come in an all-embracing centralization of power in the Federal Government.

Again and again, in papers and addresses delivered by my distinguished predecessors and other able lawyers, the scope of the work of the Conference of Commissioners has been outlined and the evils that it has sought to overcome have been described.

"Uniformity of laws," says Henry C. Tompkins, of Alabama, in a paper read before the American Bar Association in 1890—"The Necessity for Uniformity in the Laws Governing Commercial Paper,"—"is not needed on all subjects. Though modern invention and discovery have done so much to bring the people of this great country together and make those residing in distant States near neighbors, in the large majority of matters that affect the daily life of the citizen it is not only not necessary that there should be uniformity in the laws of the different States regulating and controlling them, but, on the contrary, such uniformity is undesirable and absolutely impracticable. There is, and will continue to be, a difference in the character and surroundings of the people residing in different portions of the Union that will require a difference in the laws governing them; but, while this is so, it is equally true that the laws governing those matters in which the people of the different States are equally interested—those matters which arise daily in their business intercourse the one with the other—should be uniform, so that the citizen of one State may know the exact character of his act and contract, the full extent of the liability attaching to it, without regard to the locality in which the act is done or the contract made, and, without regard to the tribunal which passes upon it." (13 Rep. Am. Bar Ass'n, p. 247.)

The first efforts of the Conference were confined to matters of importance, but of minor importance as compared with those which subsequently occupied its attention. It was thought that until the movement gathered sufficient strength to be joined in by a majority of the States it would be better to consider the smallest matters and of obvious utility. So brief acts were drafted recommending forms for written instruments of title, a standard of weights and measures, the legalization of foreign wills and the abolition of days of grace.

In 1896 the first ambitious work of the Conference was completed under the title of a general act relating to Negotiable Instruments. This was followed by a Uniform Warehouse Receipts Act, a Uniform Sales Act, a Uniform Stock Transfer Act, a Uniform Bills of Lading Act, and in addition the Conference has adopted the work of the National Divorce Congress as formulated in a Uniform Divorce Act and Acts relating to Marriage and Divorce statistics. Besides this completed work the Conference has now under consideration the draft of a Uniform Act relating to Corporations, a Uniform Act relating to Marriage, a Uniform Act relating to Wife Desertion, and an Act relating to the Execution and Probate of Wills.

It will appear, therefore, that there is now in existence, and has been quietly at work for almost a generation, a body of lawyers endeavoring to attain the end for which this Conference, called under the auspices of The National Civic Federation, has been brought together to encourage. The limits allowed for the many subjects that will engage the attention of this Conference preclude an elaboration of the arguments in favor of attaining the necessary end demanded by modern conditions of business and social life through agreement by the legislatures of the States in the adoption of uniform laws. Excepting to the extreme advocate of a powerful central government such arguments are unnecessary, and even to thinkers of that peculiar school it must be apparent that the difficulty of securing the amendments to the Constitution, preliminary to vesting the general Government with the necessary power, is almost insuperable.

The Conference of Commissioners, therefore, does not concern itself with political questions, but accepting the view of the relations of the National Government to the various States set forth in the Constitution as expounded by the Supreme Court, addresses itself to the task of framing such legislation upon the subjects which it deems appropriate for uniformity as represents the sound, prevailing view of the community. A brief statement of the history and scope of the various bills already adopted may appropriately be presented, and first I take this occasion to say that the Conference has caused a pamphlet to be printed, containing a copy of each of the five commercial acts, with a history of each of the acts, and an annotation after each section which calls for annotation, explaining the reasons, where the statutes differ from the law in certain States. The Conference has adopted the decisions effecting the weight of authority, and in the course of the afternoon these pamphlets will be put in your hands. Those of you who are lawyers will receive them with keen interest, and after you have had opportunity to examine them, I believe in the very great majority of cases you will set the seal of approval upon them, and even where the law of your States has been changed, and where the Commission has been so unfortunate as not to convince you, you will see at least that in no one case have they acted arbitrarily, have they acted hastily, nor have they acted otherwise than with a strong weight of authority back of the conclusions that they have reached. It is hoped that a copy of this pamphlet will be put in the hands of every member of the judiciary committees of the various bodies, who after considering them will report in favor of them. And think, gentlemen, of what an advantage, what an enormous advantage that will be to the business world if there is the same law in Massachusetts and the same law in Oregon, the same in Texas and the same law in New Hampshire, governing these five important subjects.

The Negotiable Instruments Bill.

A full and careful account of the history of this act is given by the late Judge Lyman D. Brewster, for many years President of the Conference of Commissioners, in a paper read before the American Bar Association in 1898 (21 Rep. Am. Bar. Ass'n, p. 315). It appears that in 1878 a digest of the laws relating to bills of exchange was prepared by M. D. Chalmers, an eminent English jurist, who had been Parliamentary Counsel to the Treasury, Judge of County Courts and Law Member of the Viceroy's Counsel in India. In form, it was modeled after the Indian codes and the works of Sir James Stephen on the Law of Evidence, and Frederick Pollock on the Law of Partnership. In preparing his work, Judge Chalmers examined 2,500 cases on the subject, beginning with the first reported case in 1603, and where there was a dearth of authority he had recourse to American decisions, and to inquiry as to the usages among bankers and merchants. Two years later he discussed the subject of codifying the law of Negotiable Instruments before the Institute of Bankers, and, as a consequence, that body and the Associated Chambers of Commerce instructed him to prepare a bill on the subject. The bill was prepared and introduced into Parliament in 1881 by Sir John Lubbock, the President of the Institute. It was then referred to a select committee of merchants, bankers and lawyers, with Lord Herschell as chairman. Lord Herschell reported the bill with some amendments and it passed the House of Commons, and after a few amendments in the House of Lords became the law of England on August 18, 1882.

It was a practical enactment of Judge Chalmers's digest, and was epoch-making because it was the first important enactment of any branch of the common law in England. No material changes were made excepting where necessary to reconcile conflicting cases. It is not alone the law of Great Britain, but of all of her colonies. The whole of the general principles of the laws of bills, notes and checks are contained in a single act of one hundred sections. But few cases have arisen under the act in England, and where, by reason of omission, a new

question should arise not covered by the act, it is provided expressly that "the law of merchants shall govern."

After this act had been in operation for thirteen years the Conference of Commissioners employed John J. Crawford, of the New York Bar, to prepare a uniform act to be recommended to all of the States, based upon the English statute, and so well has Mr. Crawford done his work that, after careful revision by the Conference, it has met with acceptance in thirty-eight of the States, Territories and Federal districts. Among the many encomiums upon this monumental work, perhaps that of the late Professor Huffcut, of Cornell, may suffice. He says in his work on Negotiable Instruments, "It presents the best statement available of the results of the English and American judicial decisions."

As a result of the adoption of this law in so many different jurisdictions, merchants whose business extends beyond their own State lines need no longer apprehend the danger arising from divergent decisions and statutes, but have a reasonable certainty that the provisions of the law relating to commercial paper in all its forms are not alone identical in letter but are likely to receive substantially the same interpretation in case of litigation in an overwhelmingly preponderating majority of the American courts.

The next act which has received the largest acceptance, having been adopted in eighteen States since its completion in 1906, is

The Warehouse Receipts Act.

This act was drafted by Professor Samuel Williston, of the Harvard Law School, and Barry Mohun, Esq., of Washington, D. C., the author of a work on the law of Warehouse Receipts. The Commission was urged to draft this act by the American Warehousemen's Asociation, the best judges of the necessity of such legislation. Speaking of this act Professor Williston says:

"Warehouse Receipts and Bills of Lading have become very important commercial documents and merchants have developed a systematic theory in regard to them. This theory is based on the analogy of Bills of Exchange and Promissory Notes, the law of which also had its origin in the custom of merchants. If we examine the history of the law, we find that the courts did not readily adopt the custom of merchants as it extended to Bills of Exchange and Promissory Notes, and the further extension to Warehouse Receipts and Bills of Lading also met with opposition."

But, as he further points out—

"The fundamental doctrines of the mercantile theory, doctrines which are essential for the proper mercantile working of the system, are the complete assignability of the document if it runs to order, and the complete identification of the document with the goods which it represents. Both these doctrines are contrary to ordinary common law principles. As to the first, the common law doctrine is that choses in action are non-assignable. And as to the second, though the common law has recognized constructive delivery to some extent, it has never made much attempt to insure the goods themselves from being dealt with in the hands of the actual possessor directly after constructive delivery had been made by means of the document. Thus the constructive delivery might be deprived of any real value.

"The extent to which courts have adopted the mercantile theory varies. Probably no courts have gone so far as the suggested legislation in regard to Warehouse Receipts, unless a statute has been passed. The courts have to some extent, however, recognized the custom of merchants in regard to documents of title, though not to the full extent. An attempt has been made to meet the difficulty by legislation frequently, and this bill has the precedent of many statutes attempting to confer negotiability on Bills of Lading and Warehouse Receipts. These statutes have to some extent failed in their purpose, because they have failed to define what they mean by negotiability. In the nature of the case, there are some differences between a Bill of Exchange and a Warehouse Receipt."

Perhaps the most radical provision of the act is that section (Section 25) which provides that where goods are in the hands of a warehouseman, or have been put there by an owner, and a negotiable receipt has been issued, they cannot thereafter be attached in the hands of the warehouseman without first the surrender of the receipt to the warehouseman, or its being impounded by the Court. The effect of this will be to give full negotiability to these Warehouse Receipts, excepting that the title will not pass if they fall into the hands of a thief.

How important this act is will appear from a brief study of the statistics of the values of merchandise flowing into customs bonded warehouses. A leaflet prepared by the American Warehousemen's Association shows that in 1906 the average monthly value of such merchandise was nearly $60,000,000. "The grain, hay, sugar, cotton, whiskey, tobacco, rice, coffee, tea, pig iron, machinery and manufactured articles, etc., in other merchandise warehouses for the same period has been variously estimated at from $100,000,000 to $300,000,000. Taking a mean of these two extremes, we find that we have in bonded and general merchandise warehouses a value aggregating in round numbers at least $200,000,000."

It is then shown that the aggregate value of merchandise in cold stores at certain seasons of the year approximates $500,000,000.

"These enormous values are held in warehouses all over the country; in the cotton warehouses of the South; in the grain elevators of the West; in the cold stores of the North; in the customs and free stores of the Atlantic and Pacific Coasts, and in the yards and warehouses of the manufacturing centres of the Middle and Eastern States. Such, however, is the diversity and ambiguity of the legal enactments of the several States governing the use of these values as represented by warehouse receipts, that the larger portion of the investment in them is inert and a gatherer of expense rather than of profit as it should be. Through the Warehouse Receipts Act it is sought to remedy this evil by substituting uniformity and certainty for this diversity and uncertainty; to make the legal government of the warehouse receipt the same in all States and to thus give it the same value in the eyes of all men. By its general enactment it is hoped to make the receipts for goods warehoused in one section of the country good collateral for loans in all other sections. It is also hoped that in time under its influence the use of the warehouse receipt as bankable paper will become so general that manufacturers will be encouraged through it to produce their wares in times when demand is at the ebb as well as when demand is at the flood, thus keeping up a uniformity of output throughout the years at the lowest possible cost by the continuous and consequental economical employment of labor and machinery."

The beneficent effect of this act will be to unlock many millions of capital, because the banks will not hesitate to loan on receipts when the possession of the receipt is tantamount to possession of the goods with a title that cannot be disputed.

The prompt acceptance of this act in such great commercial States as Illinois, Louisiana, Massachusetts, New York, Ohio and Pennsylvania argues well for its passage by all of the States.

The next act of general importance formulated by the Conference is

Uniform Sales Act.

This act is based upon the English Sale of Goods Act, another monument to the industry and ability of Judge Chalmers. In the preface to the first edition of his work on the Sales of Goods Act, Judge Chalmers says of it:

"The bill was originally drafted by me in 1888. I then settled it in consultation with Lord Herschell * * * * In 1893 * * * * it was settled in its present form. * * * * it endeavored to reproduce as exactly as possible the existing law."

The act known as the Sales Act, which has come before the public with the weight of the authority of the Conference of Commissioners, was prepared in 1902-3 by Professor Samuel Williston, and after undergoing criticism until 1906 it was finally adopted in its present form. The arguments in favor of this act are thus summarized by its draftsman:

(1) That it is an advantage for any subject to be reduced to simple rules, as much of the mercantile law can be, and to have it in this form. It is convenient both to business men and to lawyers.

(2) This reason has been sufficient to induce England to pass codes in regard to negotiable instruments, the sale of goods and other matters. In this country the reasons are far stronger because of the peculiar conditions arising from our political system, which are themselves the controlling reason for this whole movement for uniform legislation.

As in the drafts of other acts, there is included in this no change in any principle where a uniform rule of law has been established, but where authority is divided upon a point, the weight of authority has generally been followed.

"If," he says, "a view though supported by fewer courts seemed better to conform to general principles or to commercial convenience, it was adopted. The most noticeable illustration of this is found in the sections relating to documents of title. The mercantile view of the document of title has been fully adopted by the bill, as opposed to what may be called the common law view. If the bill is enacted it will make no radical change in the law of any State. It will, however, make some minor changes probably in the law of every State which passes it, these minor changes being the concession which each State makes to secure uniformity. Probably the most noticeable change from a practicable point of view is that in regard to the Statute of Frauds. * * * *

"Thereby small sales, which are usually oral, will not be affected, but large transactions which by prudent business usage should be in writing, will be covered. It should be noticed that the English limit, ten pounds, which has been translated into fifty dollars in many American States, was fixed at a time when the value of a pound was much greater than it is now."

The provisions relating to negotiable documents of title, beginning at Section 27, have been necessary in order to cover the entire subject. It will be found that there is a close connection between these sections of the act and those of the Warehouse Act. They follow, in some respects, the analogy of bills and notes, with the important distinction that a negotiable receipt may not be negotiated by one who takes by trespass or a finder.

Although so short a time has elapsed since this act was formulated, it has already been adopted in the important States of Connecticut, Massachusetts, New Jersey, Ohio, Rhode Island and the Territory of Arizona.

Uniform Stock Transfer Act.

This act was also drafted by Professor Williston and was considered in committee and in convention of the Conference for two years prior to its final approval in August, 1909. In many of its provisions it is in advance of the existing law, but follows the thought already expressed in the Sales Act and in the Warehouse Receipts Act in the endeavor to make certificates of stock negotiable practically to the same extent as other commercial paper. If adopted, the transfer of the certificate will operate as a transfer of the shares represented thereby, changing the provisions of the common law which make a registry on the books of the company necessary for a complete transfer. The fundamental purpose of the whole act is to make the certificate to the fullest extent possible the representative of the shares of stock. Thus the transfer on the books of a corporation becomes like the record of a deed of real estate under a registry system.

If at first the provisions of this act seem radical, it will be found on examination of the reasons which influenced the Conference to formulate it that they are all based upon a clear, settled and intelligent purpose of protecting the innocent holders of certificates of stock from loss, and making shares of stock in corporations so easily transferable as to facilitate the use of them either as collateral security or as investments.

Uniformity upon this subject is obviously of great importance and the adoption of this act will be a great step towards obtaining uniformity of legislation on all subjects relating to corporations.

Uniform Bills of Lading Act.

This proposed bill comes also from the hands of Professor Williston. The first draft was submitted to the Conference in 1906. Subsequently it was under consideration at public sessions of the Committee on Commercial Law held in Philadelphia and Portland, Me., in 1907, and in New York in 1909, and was carefully considered, not alone by the committee charged with the responsibility of revising Professor Williston's work, but by representatives of various associations and corporations, including the American Bankers' Association, the American Warehousemen Association, the National Board of Trade, Merchants Association of New York City, the Chamber of Commerce of Richmond, Va., the National Industrial Traffic League, the National Manufacturers' Association, the Erie Railroad, the Pennsylvania Railroad, the New York, New Haven & Hartford Railroad, the Old Dominion Steamship Company, the Bills of Lading Committee of Railroads in Official Territory, representatives of the Harvard Law School and the Law Schools of Columbia University and the University of Pennsylvania.

Four tentative drafts were printed and issued, and finally, after the Conference, in accordance with custom, had carefully considered the act section by section it was recommended by them to the Legislatures of the various States for passage.

Subsequently at a conference called especially to consider this subject, held on the 13th of September, 1909, in the City of Chicago, under the auspices of the American Bankers' Association (there being present representatives of the most important interests) after a careful explanation of the provisions of the bill by Francis B. James, Esq., Chairman of the Committee on Commercial Law, the Conference unanimously endorsed the Uniform Bills of Lading Act.

We come now to a subject which will probably present greater difficulties than any of the others of which I have referred, and which may take years of effort before it is perfected in the form that shall be accepted by all of the States. I refer to a

Uniform Incorporation Law.

A draft of a Uniform Incorporation Law has been prepared and is now in the hands of a standing committee under the chairmanship of John C. Richberg, Esq., of Chicago, which it is hoped will be comple

SOME OF THE SPEAKERS AT THE TENTH ANNUAL MEETING, NEW YORK, AND THE UNIFORM STATE LEGISLATION CONFERENCE, WASHINGTON.

and ready for submission in a reasonable time. This subject presents difficulties of so many kinds that at first it seems almost hopeless to obtain uniformity in relation to it. It has engaged the attention of the best minds both in and out of the profession, and a just solution must be obtained and accepted at the peril of our cherished institutions.

The injustice arising under existing conditions to those who are entrusted with the management of corporate property, to those whose capital is invested therein, and to the wage earners whose livelihood depends upon such corporations, under existing conditions are becoming less and less tolerable. A temperate, patient and impartial examination of the various difficulties in the way of obtaining a reasonable uniform law it is hoped will bring about a solution acceptable to all of the States.

Such in brief is a history of the movement that has resulted in the preparation of uniform acts on six vitally important subjects. If the Conference had accomplished nothing further, these acts, it is submitted, would be a sufficient result for the labor of years. But to complete the record reference should be made to what has been accomplished in a totally different but even more important subject, the

Uniform Divorce Act.

The divorce problem, pressing for a solution, has been called the most difficult problem of modern civilization. It is but a narrow view of this subject to assume that it requires consideration only of the marriage relation after it has been entered into. In the judgment of the soundest thinkers the rules regulating the formation and recognition of the marriage contract and the mutual responsibilities of husband and wife under the status are all involved in a proper consideration of the subject. In no other instance, probably, has the difficulty of adjusting our constitutional system to the right living and right thinking of the community been more apparent than in this matter of divorce. The fact that, by reason of the divergence of the laws of the different States on the subject of jurisdiction, persons may be held as married in one State and unmarried in another, with the sorrowful consequences affecting the legitimacy of children and the many embarrassments relating to ownership of property, has been one but certainly not the only cause for the widespread dissatisfaction among the best elements of the community with the existing situation. So long as the attitude of a majority of the people favors divorce for any cause, statutes providing for it and regulating proceedings to obtain it will remain upon the books, and, necessarily, there will be much unhappiness and scandal associated with the subject. But there is no good reason why the laws relating to jurisdiction and the effect of decrees when granted should not be made uniform, or why the consensus of the community that divorce should not be granted excepting where intolerable conditions can be avoided in no other way, should not find expression in just and reasonable laws.

The provisions of the Uniform Divorce Act, which bears the stamp of the approval of the National Conference, were reached after careful, conscientious consideration by a body of reasonable men and women fully alive to the importance of the problem they were appointed to solve. These men and women, appointed by the Governors of all the States, the District of Columbia and one of the Territories, with the exception only of the States of Nevada, Mississippi and South Carolina, might well claim to represent the average thought of their various communities.

It has been suggested that the Conference should not attempt the solution of any sociological problem such as divorce, but confine its attention strictly to matters relating to business. It is submitted that this is a narrow view of the functions of the Conference. It has been well said by eminent authority that the family relation and its preservation and sanctity and permanence are of far greater importance than any laws relating to any other subject, no matter what it may be. Besides, the Conference has acted in obedience to one of the purposes for which it was organized in taking up this subject and pressing it for consideration. Perhaps the end will be obtained, however, by partial legislation on various matters included in the whole general subject, such as jurisdiction, the effect of decrees obtained in other States, etc., and it is the purpose of the Committee carefully to consider recommendations leading to that end.

The following general principles, having been approved by the Divorce Congress, are embodied in the uniform law recommended by that body and accepted and recommended by the National Conference:—

All suits for divorce shall be brought only in the State where the plaintiff or the defendant has a *bona fide* residence.

When courts are given cognizance of suits where the plaintiff was domiciled in a foreign jurisdiction at the time the cause of complaint arose, relief should not be given, unless the cause of divorce was recognized in such foreign domicile. The same rule applies when the defendant was domiciled in a foreign jurisdiction.

Where jurisdiction for absolute divorce depends upon the residence of the plaintiff or of the defendant, not less than two years' residence should be required where such plaintiff or defendant has changed his or her domicile since the cause of divorce arose.

The injured party, husband or wife, should have the option to apply either for an absolute divorce, or for a divorce from bed and board.

The causes for divorce should be restricted to offenses of so serious a character as to defeat the objects of the marital relation. They should never be left to the discretion of the court.

Causes for annulment of marriage and for divorce, both absolute and legal separation, are grouped into three classes. Those for annulment of the marriage are such as are usually recognized in all civilized communities. Causes for absolute divorce represent the prevailing sentiment in most of the States of the Union. They are as follows: Adultery, bigamy, conviction of crime in certain classes of cases, intolerable cruelty, wilful desertion for two years, habitual drunkenness; and the same causes are ground for legal separation with the addition of hopeless insanity of the husband at the suit of the wife.

When conviction of crime is made a cause, it must be followed by continuous imprisonment for at least two years.

Absolute divorce should not be granted for insanity arising after marriage.

Desertion, when a cause, should never be recognized unless persisted in for at least two years.

The defendant should have full opportunity, by notice brought home to him, to have his day in court if his residence is known or can be ascertained.

Any one named as a co-respondent should be given an opportunity to intervene.

Hearings and trials should always be before the court and not before any delegated representative of it, and in all uncontested cases, and in any other where the court may deem it proper, a disinterested attorney should be assigned to defend the case.

A decree should not be granted unless the cause is shown by affirmative proof, aside from any admissions on the part of the respondent.

A decree dissolving the marriage should not become operative until the lapse of a reasonable time after hearing or trial upon the merits of the case.

In no case should the children born during coverture be bastardized, excepting in the case of bigamous marriages or in the usual exception of impossibility of access.

A divorce obtained by an inhabitant of a State, in another State or country to which he has gone for the purpose of obtaining it, or for a cause which would not authorize a divorce by the law of the State of domicile, should have no effect therein.

Fraud or collusion in obtaining or attempting to obtain a divorce should be made statutory crimes by the criminal code.

It will be seen that these resolutions partly relate to matters of substantive law and partly to what has been called adjective law. No one of them is based on theory, but all have been tried practically in some jurisdiction. It is submitted that if divorce is to be tolerated at all, the adoption of a statute which embodies these resolutions will safeguard the trials, so that a minimum of injustice will be done both to the parties themselves and to the community.

The Uniform Divorce Law has been adopted in New Jersey, Delaware and Wisconsin and its essential features are already the law of Illinois, and many of its best provisions are based upon the existing law in other States.

It is too much to hope that the adoption of this law will stop the tide of divorce, but it will at least make it more difficult to obtain divorces which are fraudulent as between the parties and the community, who in theory of law have a right to be represented in every case.

The Uniform Divorce Act differs in structure from the commercial acts. Those commercial acts to which I have made reference are expected to be passed in each of the Districts in which they are represented. Not so with the divorce act. We will be pretty well satisfied if we can embody the principles which are given in the resolutions, and there will be this result: That each of the communities in accordance with the varying standard of average or morality, if you choose, will have its own laws. It is not for Pennsylvania to criticise South Carolina because South Carolina has no divorce law whatsoever, and it is not for South Carolina to criticise California because California has a divorce law, or if they choose to criticise them, not to influence public opinion, as they may by their criticism, but it is the business of each of those States to respond in their divorce laws to the tone of opinion of the subject in those States, and in that way the difficulty, which at first seemed absolutely insuperable, of obtaining uniform laws seems by the Commissioners to have been overcome in a perfectly specific

Therefore the conference of Commissioners, co ering all the principles that had been passed upon the American Bar Association, have embodied th principles in this law that came from the Natio Divorce Congress, and after full and careful consi eration have unanimously recommended it and put on a par with those acts which they originated then selves.

Uniform Marriage Law.

The National Divorce Congress recommended t the consideration of the Conference a Uniform Mar riage Law and, as it has already been stated, thi subject is now under careful consideration, as well a the cognate subject of a Wife Desertion Law. Tenta tive drafts have been prepared and are now before the appropriate committee.

It was at first with a feeling of surprise that the Commissioners learned that the National Civic Federation had called this conference to promote uniformity of legislation among the various States. When they ascertained that the purpose actuating the officers of the Federation was to arouse sentiment among all of the community in favor of the movement in which they had been the pioneers, and that, far from antagonizing, it was the desire of the Federation to strengthen and aid them in every possible way, their feeling of surprise gave way to satisfaction. This gathering, representing as it does almost every department of human activity, is perhaps more representative in its character than any which has ever assembled in the United States. Its conclusions must be of great weight.

I do not think I go beyond legitimate bounds when I assure you that the Conference of Commissioners for which I have the honor to speak will be found at all times responsive to any suggestion emanating from this conference or from any of the constituent elements that it represents.

HON. GIFFORD PINCHOT.

I WANT to say a word or two this afternoon about the first opportunity for legislation in conservation, something about uniform legislation among the States, and something about the situation in Congress and what may be done there. The policies that are now grouped under the name of conservation are various agencies. Some of them, like the policy of forest preservation, have been advocated by Americans for more than one hundred years. Some of them, like the control of power monopoly in the public interests, are younger than the present century; but all of them are to-day of equal importance and interest to the general welfare. We come last to the point that we have been seeking for years; we come at last to the point of action we have either got to go ahead or to fall back.

Now this conservation field is a mighty field uniform action between the States themselves between the States and the nation. If I had time this afternoon I should like to talk to you the immediate necessity of uniform legislation fire protection and for equitable taxation on forlands in the States. Fires, like a good many things, pay no attention to State boundaries, and operation between the officials under the same conditions across State lines is many times of the most importance in securing the protection of forests from fire. In the same way a uniform attitude toward the taxation of forest lands between States is now one of the absolutely essential indispensable conditions of forestry on private la

Private owners now control four times as timber land as do the States and the nation put together. Unless the private owner in one State, competing with a private owner in another State for production of timber, finds himself met and controlled by the same system of taxation, competition automatically wipes out many times the possibility of the practice of forestry and makes distribution of timber lands impossible to an equal degree. I should like to ask, therefore, that you will be kind enough to consider whether, among the vastly important subjects that meet you at this time, uniform laws on forest fires and forest taxes might not fairly come within the purview of this meeting.

The idea of uniform State legislation was large in the minds of the Governors when they met at the great conference in the White House two years last May, looking toward the appointment of a National Conservation Commission and a State Conservation Commission in every State, for the very purpose of reaching some uniform action between the States of the nation and the nation, and between the different States themselves. Forty-two of the States have already carried out this recommendation and you have now under your hand, ready for action, a most powerful weapon, a most powerful tool in the direction of uniform action between the States on all questions concerning conservation. Now, these conservation questions are to-day the overshadowing problems between the States, for

benefit of the general public. The manner of their solution, the direction in which we move, will affect every man now alive and every citizen of this country, and no question could be of more vital importance at this time or any other time, than that. The great principles we have been working for, for many years, may now at last, at this time, be enacted into law; an opportunity is before us and we may take advantage of it or the chance may pass. Public sentiment is controlling the way.

For the second time, a President of the United States has embodied in a message to Congress the principles for which the efforts of conservation have been at work for years. Most of those principles contained in the recent message are well-known to the friends of conservation, and well approved of. If it has omissions or passages with which I disagree, I have no concern with that to-day. Specific bills have been prepared embodying the recommendations of the message; when these bills are made public, as they have not yet been, they will be the legitimate subjects for approval, for condemnation, for criticism of various kinds and for careful scrutiny at every stage of their passage through Congress. If there is disagreement or criticism, all that will come at its proper time and in its proper place. To-day, the first consideration is this: That the friends of conservation must not allow themselves to be divided. The issues at stake transcend from no personal issues whatsoever. The plain duty of all the friends of conservation is to sink all their differences, to unite their efforts and agree on essentials, and to demand with a unanimous voice that Congress shall act on the recommendations of the President, act wisely and act at once. The President himself urges that his message be taken up and disposed of promptly without awaiting the result of the investigation which has been determined upon. There can be no reason to await the result of the investigation in order to gain the establishment of these measures; they stand by themselves, whatever the result of that investigation may be.

In the face of this great opportunity, let us go even farther than the President has recommended, and so far as these issues are concerned, let us disregard the controversy altogether in the general effort to attain what every good citizen so earnestly desires. To my mind it is clearly the object to look above the lesser subjects of contention whatever they might be. There are very many of these subjects ready to be acted upon, about which there can be no controversy whatever; for instance, the leasing of coal lands instead of virtually giving them away, the prevention of water power monopoly in the public interest, the conservation of our soils, the maintenance of the national forests, the protection of forests and of the woodlands at the head of navigable streams. All these things are ready, we know them to be ready, and they can be dealt with properly only in the light of the general welfare and for no other interests.

Now is the time for all good men to come to the aid of the conservation movement. Now is the time precisely, that without regard to party, or to prejudice, or to any personal considerations whatsoever, the public good comes first.

JOHN HAYS HAMMOND.

MINING is rated by insurance companies as an extra-hazardous vocation, and, in view of the mortality that obtains in this country in particular, justly so. While there are certain inherent trade risks, the industry in regard to the safety of its employes is susceptible of great improvement; and not only from an humanitarian point of view, which in itself is sufficiently potent, but even from the aspect of commercial advantage it behooves both the engineers and the statesmen of this country to improve the situation by their active co-operation.

The recent disaster at the Cherry coal mine in Illinois has cost the public for relief work upwards of $300,000, in addition to which it is estimated that the coal company's expenses will amount to more than $200,000, making a total cost of over half a million dollars as the direct pecuniary loss sustained in this disaster.

While there are no available statistics to admit of even an approximate estimate of the preventable deaths among the mine workers, I think it would be a conservative statement that the number of fatal accidents could be reduced more than thirty-five per cent by raising the standards of safety. In 1908 there were mined in the United States about five hundred million tons of coal at a cost of 2,450 human lives. There has been a steady increase during the past twenty years in the number of men killed in the coal mines of this country for each thousand men employed, and in 1908 it reached the figure 3.60.

A comparative summary extended over an average of five years, showing the number of men killed for each thousand employed in France, Belgium, Great Britain, Prussia and the United States, respectively, is instructive: France, .91 per thousand; Belgium, 1.00 per thousand; Great Britain, 1.28 per thousand; Prussia, 2.06 per thousand; United States, 3.39 per thousand. There has been, as I have stated, a gradual increase in the mine casualties in this country, whereas in Europe there has been a steady decrease.

Owing to increasing depths in the exploitation of coal mines, the fatality rate tends to increase, especially in those mining districts where fire-damp is prevalent. Therefore, under the conditions of mining obtaining at present, the outlook is extremely discouraging. The decrease in the fatality rate in Europe is obviously due to the introduction of better mining methods. Notwithstanding the greater amount of coal mined per man in the United States, the number of men killed for each million tons of coal produced is 5.57, compared with 4.31, 4.17 and 4.96 in Great Britain, France and Belgium, respectively.

It is a popular belief that the most important cause of the loss of life in coal mines is due to explosion from fire-damp. Such a dreadful catastrophe as that recently at the Cherry mine in Illinois, where three hundred miners were suffocated, serves to create this erroneous impression; but as a matter of fact not over ten per cent of the fatalities are due to gas and dust explosions, while nearly fifty per cent of the fatal casualties are due to the falls or cavings of roofs, etc. In the United States, deaths from falls of roof and coal, per thousand men employed, are about 1.10; in Germany, .92; in Great Britain, .64; France, .047, and Belgium, .40, less than twenty-five per cent of that in the United States. Accidents coming under this category result in the death of usually not more than two or three miners at a time and, therefore, do not attract the attention which they deserve because of the great number of fatalities in the yearly aggregate.

The same unfavorable, I may say humiliating, comparison exists in the case of fatal accidents due to explosion of fire-damp. Belgium, where fire-damp exists in greater quantities than in any other of the coal mining countries of the world, shows a loss due to mine explosions of but .039 per thousand miners—but little more than ten per cent of that in the United States, where the fatalities due to this cause amount to .37 per thousand. The figures I have given are certainly impressive and should suffice to enlist universal interest in this important subject, and yet I have not presented figures to show the number of casualties of a non-fatal character, nor have I discussed the excessive mortality due to unhygienic conditions. A consideration of these aspects would greatly emphasize the necessity of improving the present mining conditions.

Now, to what causes is this disparity to be ascribed? Certainly not to adverse physical conditions existing in the coal deposits themselves, for here, indeed, the conditions are more favorable for safe mining than in Europe. The plain, unvarnished truth is in the answer that Governmental control and regulation in this country are totally inadequate. In this respect we are far behind European methods in the safeguarding of the lives of the miners.

A case in point is the ruinous competition now prethe inordinate desire to obtain a maximum output so as to minimize working costs, and human life is consequently one of the sacrifices made for the attainment of that end. Not only is human life sacrificed in the pursuance of such a policy, but in coal mining in particular a great waste of the coal resources of the country results.

A case in point is the ruinous competition now prevailing in some of our important bituminous coal fields, where the operator, in order to mine coal—not to obtain profit, be it understood, but to prevent actual financial loss—is compelled to adopt methods not only dangerous to his employes, but also inevitably entailing an enormous waste of coal. It is estimated that not more than fifty-five per cent of the coal existing in the coal beds is at present being saved, from forty to fifty per cent being irretrievably lost because it cannot be mined at the present low market prices. Dr. Holmes, the chief of the technologic branch of the United States Geological Survey, estimates the yearly loss of coal resulting from such wasteful methods at two hundred fifty million tons.

Belgium has passed through a similar crisis with attending great loss of life and waste of coal. At that time the loss of life and waste of coal under the methods then prevailing were fully as costly as those in our country to-day, but the intervention of the State, whereby the coal operators were encouraged to enter into an arrangement which assured them a reasonable price for their product at the mines and at the same time protected the consumer from unreasonable prices, put a stop to this disastrous policy. The result of the establishment of a price which enables the coal operator to make a reasonable profit has been most gratifying in the introduction of methods which have very greatly decreased the mining casualties and at the same time have prevented a waste of the coal resources to the amount of from thirty to forty per cent. Coal in Europe costs from one and one-half to two and one-half times the cost in this country.

An increase of not more than twenty cents per ton would enable the coal operator to introduce improved methods of mining, thereby raising the standards of safety and at the same time resulting in the adoption of methods affecting an enormous conservation of our coal resources. This added cost would not be any considerable hardship on the consumer, as it represents but a very small percentage of the cost of coal when it reaches him. The added cost of the necessaries of life would be hardly appreciable in the case of the poor, the bulk of the coal being sold to large corporations.

The bulk of the bituminous coal which is sold at the pit's mouth for one dollar per ton, when it reaches the consumer in New England, for example, is sold for from five to seven dollars; therefore the extra cost to the consumer by the additional charge referred to of twenty cents per ton would not exceed from three to four per cent, and this sum should be saved by reduction of the transportation rates and of the profits of the middlemen who handle the coal. The assumption by the present generation of the extra burden of twenty cents per ton would, I believe, save the next generation more than fifty cents per ton in its coal bill. Such a course is dictated by the professed altruism of the great movement for the conservation of our natural resources.

The remedy of these conditions obviously lies in the improvement of the present methods of mining, and it is the function of the State to introduce such innovations. Uniformity in the mining laws of all the States is indispensable. It would obviously be unfair for a State to impose drastic legislation upon its mining industry, adding to the cost of production, where laxity in this respect prevails in neighboring sister States.

Another cogent reason is the fact that miners are more or less migratory and it is costly in life and in money to impose upon them the necessity of learning the new mining laws of the States to which they migrate. But there should be no ill-considered or drastic legislation, for unless the laws are rational they will inevitably be honored rather in the breach than in the observance of them. These laws must appeal to the intelligence of both the coal operators and the miners, for the benefit to be derived will depend upon their hearty co-operation.

There are many foreigners employed in our mines, our coal mines in particular, who have not only had no previous mining experience, but understand and speak English imperfectly. From these circumstances it is imperative that the State laws compel the mining companies to give such men at least an elementary education and training into methods of mining before placing them in any position where their ignorance might cause disaster to their fellow workmen.

But before remedial legislation there should be a thorough investigation into the causes of mine accidents and the proper remedies to be applied, by a corps of impartial and competent experts, such as has been making investigations of this kind under the direction of Dr. Holmes, of the United States Geological Survey. Much time and money could be saved the States by co-operating with the Federal Government in the solution of these important problems, after which the requisite laws should be enacted and a corps of State inspectors appointed to see that these laws are properly administered.

Accordingly, we would recommend that the Governors of the States in which mining constitutes an important industry, select some well-qualified mining expert to confer with the chief of the Technologic Bureau in Washington and to assist him in preparing a draft of a model mining law, to be submitted to the Governors for their recommendation to the legislatures of their respective States. The physical and economic conditions that obtain in the mining districts of the United States present no difficulties in the drafting of a model mining law of universal application.

To-day the supervision exercised in this respect in the States is altogether inadequate. For example, in the State of Illinois, which produces about fifty million tons of coal per annum, where fifty thousand miners are employed and where there are nine hundred mines in operation, there are only ten mine inspectors, who receive the meagre salary of $1,800 each annually. It is manifestly a physical impossibility for one inspector to supervise the operation of ninety mines.

It is most important that inspectors of a superior class be appointed and that a corps be established of the character of that of the United States Geological Survey, without the pale of political influence and composed of men of undoubted integrity and technical ability.

I have omitted discussions of the technical features of this subject, as to the uses of safety lamps,

es, etc., as those subjects are now being
d by Dr. Holmes, from whom detailed in-
can be obtained, but the committee wishes
e immediate installation in the mining dis-
he country of those appliances which have
ed effective and indispensable in rescue
in work of first aid to the injured.
liscussion of this subject I have referred
e coal mines; but in some of the important
ng districts of our country the rate of
considerably larger than that given as the
ate of fatality in the coal fields. For ex-

AUGUST BELMONT.

he conference held recently in New York by
e National Civic Federation on the subject
ef department funds of corporations, the
the speeches followed generally a description
various plans existing among the indus-
transportation companies and public service
ations providing for the health, safety and
te care of employes when injured or inca-
ed.
advantages of uniform laws on the subject of
lling corporations to make adequate and defi-
provision for the same was discussed and a
y of methods were advocated.
ery close and well-delivered argument was made
ubject of one of the speeches at the banquet
followed the conference, urging the compul-
use by law of insurance to cover liabilities in-
d through injuries to employes in discharging
duties. Unfortunately, some of the force of
ecommendations of the speaker was lost upon
earers from the fact that he was an insurance
rt and the earmarks of special pleading were
rent, but in the main it struck me as funda-
tally sound.
surance has the advantage of distributing the
s so that the less hazardous vocations may help
protect the more dangerous ones. The burdens
he end fall upon the consumer through the in-
ased cost of production, for the cost will finally
there through the inflexible laws of trade. To
e each industry bear directly its cost of relief to
loyes as a part of the cost of production, as ad-
ated by one of the ablest speakers of that even-
would make for hardship in many directions.
l mining, for example, is extra hazardous, but is
he part of wisdom to burden a necessity of life,
nufacture and transportation with full cost of its
ilities for injuries, if a system can be devised by
ch the less hazardous occupations may help bear
expense through a well devised application of
law of averages?
n advocating uniform laws to cover employers'
ilities through insurance, it must not be forgot-
that uniform insurance laws are necessary as
ll.
This entire subject is crying loud for solution—
bringing about of uniform laws throughout the
ates. It will take time, but from an economic
ndpoint this seems to me very clear that the
ates which have the wisdom to march in the van
this movement will enjoy a distinct advantage as
labor. Labor will be attracted to the States af-
rding them the fairest and safest protection, and
e employer will hail this, too, as an advantage to
nself.
Another consideration, and perhaps one of the
eatest, is the impediment to liberal treatment of
eir employes by corporations in the matter of in-
ries which unequal laws produce.
I have in mind, as an illustration, the National
arvester Company. Mr. George A. Ranney, of that
mpany, is quoted as saying:
"Any large company doing business in several
ates could be more liberal in its benefits, provided
e State laws were uniform and they knew the
aximum liability they would be called upon to pay
any one State."
This conference is affording the opportunity of
scussing the greatest question of the day. In it
es not only the solution of a great and unjust
rden on labor, but an escape from the dangers
overburdening our National Government with du-
es it could never perform with the same efficiency
s the several States, once at one in the character
f their respective laws.

ADDRESS OF HONORABLE ELIHU ROOT.

I HAVE come in to speak a few words this afternoon, rather to show my interest in the subject upon which you are engaged than with the idea that I can contribute anything of substantial value to the deliberations which are being enlightened by the gentlemen who have studied much more thoroughly than I have had the opportunity to do the subjects under discussion.

It seems to me that at this meeting all that you are doing now should be regarded not as the working of the perfected machinery for uniform laws, but rather as a part of the initial process by means of which a permanent and effective system shall be produced. I cannot doubt that what we are engaged in doing now and the many articles that have appeared in the press and the many speeches that have been made on various platforms upon this subject are testimony to a general sentiment among the people of the United States. You do not find conspiring views of people from different environments and differents parts of the country to any such extent as we have seen recently on this subject, unless there is a general sentiment on the part of the people. Every important movement has to pass through a period of incubation. The first proposition of a new departure ordinarily appears to receive but little attention, but it is repeated, it is duplicated, it is reduplicated, it gradually sinks into the minds of men, and after a long, and to a great extent, silent and unnoted process we ultimately find that if the proposition was one of sound merit it has won its way in the minds of the whole people.

Now I think that this meeting is an illustration of the fact that the proposed laws which are being advocated here have already taken their place in the serious consideration and the favorable consideration of our people. It is not necessary for us to discuss questions of jurisdiction under the Constitution as between the national government and the State government. It is quite apparent that there is a wide field of governmental activity which belongs to the States and which does not under any school of construction or upon any contention fall within the powers of the national government, but a field in which a great variety of most important legislation is necessary, affecting not alone the individual State which is legislating, but affecting a great number of the sister States, and it is upon that field that we are now looking for greater efficiency in law making and enforcement, and it is that field that we seek to affect by the propositions which are here made.

When our Constitution was made, of course we had a great number of comparatively separate communities, and the makers of the Constitution put in the hands of the national government a great number of things which occurred to them then as being of general importance concerning the general welfare of the people of this country, but the increase of communication and the bringing together of all those different communities into what is in many respects one great community has developed a great number of other things of general importance which clearly were not vested in the national government, but which rest with the States. How shall we deal with those other things? Is it necessary to revise the Constitution and put them all in the hands of the nation, or, on the other hand, is it necessary to have legislation regarding those subjects carried on as if we were separate and entirely distinct communities, having no regard each for the other, as if we were communities living in the old times, when the people of every other country were regarded as presumptively enemies? Are we shut up to those two alternatives? I think not; plainly not. We have abundant lesson from the method by which the sovereign powers of Europe who have no such intimate bonds of friendship and brotherhood as our States have with each other,—the way in which those countries have met on all matters of common interest. Since the Congress of Vienna in 1815, in which the powers of Europe for the first time undertook to deal with subjects of general interest to them, as distinct from specific situations which were the results of war—up to three years ago there had been over one hundred and twenty congresses or conferences of representatives of a considerable part, practically the whole of the civilized powers of the earth, and those conferences or congresses have accomplished a great variety of things. They have established an international postal union; they have agreed upon and put into force rules for the protection of industrial property, patents, copyrights, and trademarks; they have established rules for sanitation or control and to some degree the prevention of disease, under which each country binds itself to so legislate and so enforce its laws as to prevent its being a nuisance to the other countries with whom it is in conference. That was accomplished first by a series of conferences participated in by the great powers of Europe and by the United States, resulting in a convention at Paris a few years ago, and that was followed by another conference, which included all the American powers, and under a convention signed here in Washington three years ago substantially the same rules were adopted. They have united in measures for the abolition of the slave trade, for the abolition of privateering, for the establishment of agreement upon rules of the private international law, so that private rights depending upon the laws of different countries may be recognized and dealt with under uniform rules; they have in a series of conferences held at Geneva established rules for the enforcement of humane principles in the conduct of war, and by rules, adopted at The Hague, for the enforcement of humane rules in the conduct of war by sea; they have established for the greater part of the world uniform weights and measures; they have agreed upon rules designed for the prevention of the white slave trade; they have, by a series of conferences, agreed in Europe upon a number, as yet a comparatively small number, of provisions for the protection of labor; they have agreed upon rules for telegraphic communication, rules for the protection of ocean cables, rules for the government of wireless telegraphy.

As to certain special matters which have affected the states of Europe, in one congress sixteen powers united in providing for the abolition of the sound dues imposed by Denmark. In another congress seventeen nations united in getting rid, by means of an adequate payment, of the duties imposed by Hanover upon the navigation of the River Elbe. In another congress at Brussels twenty powers united in securing free navigation of the Scheldt. In a long series of congresses European powers united in the adoption of self-denying ordinances in relation to the payment of bounties for the production of sugar. Within the last year there have been deposited by fourteen European powers ratifications of conventions regarding the procedure of the civil courts of all fourteen countries. There has been agreed upon at a conference of all the great maritime powers held in London a series of rules settling long-standing discussions between international lawyers regarding the rights and duties of neutrals in naval warfare There has been a conference including all the pow ers having any interest in the Far East, a conferenc held at Pekin, at which resolutions were agree upon for the prevention and cessation of the traff in opium. There has been proclaimed by our Pres dent the sanitary convention establishing rules fo sanitation to twelve American countries, and in th City of Washington there has been agreed upon an promulgated a series of principles, or declaration principles, regarding the conservation of natur resources participated in by the United States, Mexico, Canada and Newfoundland, including t whole of the North American continent north Guatemala. There have been recently the great wor conferences at The Hague, with which we are familiar, dealing with a great variety of matte which are of the utmost importance to civilizati and to every political body within the limits civilization.

Now, it seems quite absurd that a body of forty- States, bound together by the ties of comm patriotism and a common interest, should not be a to do, regarding the matters that are entrus to their individual legislation and not commit to any superior power, the same sort of thing t all the civilized, the widely separated civilized pow of the world have been doing for almost a cent past. Observe that every one of these in national conferences has been attended by a orized delegates—delegates authorized to v as a rule to sign, sometimes absolutely sometimes ad referendum. So that the re of these conferences has been the production something in black and white; something that agreed upon to be done, and in the great mass of conferences the result which has been agreed has been done, has found effect in the affirma legislation of the different States, of the diffe countries that took part. Observe that in every of them—every country that took part wa sovereign country having no superior, just a regard to the particular subjects of legislation v I have been talking about, each State would a conference having no superior. Observe th these conferences there is no compulsion what It is the free action of each State respondi argument, to information, to discussion, to suasion, to enlightenment—but never to compu

Now, there is the model worked out by the pra experience of mankind; worked out by the civ nations, America being a part, and playing a part in a process, and in regard to all these m which are not committed to the national gover but are committed to the States, and in which ent States have a vital interest—an interest goes beyond their own boundaries—I can s

reason whatever why the same example shall not be followed.

Observe that there are a number of different kinds of subjects dealt with by these conferences. In the first place, there is a great variety of laws which may perhaps be put in one form or another equally well. Now that is so among our States. Take as an illustration the question whether there should be days of grace on promissory notes. Now it makes no earthly difference to any one whether there are days of grace on a promissory note or not, but it is important to an American business man that he shall know whether in another State with which he is doing business there are days of grace or not, that is, whether there are to be three days added to the period for which the note runs. I say it makes no difference which way you have it, only it ought to be the same as to all. (Applause.)

No two lawyers ever sat down each by himself to draw a paper without drawing the paper in a different form. It is impossible that they shall coincide, and we have a great variety of laws which differ merely because they were drawn by different men, and the differences in which are of no earthly consequence except that they are differences, and that is the first and the simplest body of laws to be dealt with and reduced to conformity, so that these more immaterial, unimportant and unessential differences shall not be a hindrance to our intercourse. As to those laws, the commissions upon uniformity of the laws have been doing most excellent work, and I take it that it is a kind of work which the commissions were expected chiefly to do; that they were not, when they were appointed, expected to deal with large questions of State policy. Their relations to the legislative bodies of the States have not been such that they would consider themselves justified in undertaking, when they get together, to act upon important questions of State policy.

Now, that leads me to a second class of cases, and that is cases in which the policies of the States differ, and intentionally differ, because people of one State have different views about what the law ought to be from the people in another State. That is quite distinct—a distinct class. The people in one State may think that there ought not to be any divorce except for adultery, and the people in another State may think that there ought to be divorce for incompatibility of temper. They differ as to their views, but it does not follow that they always must differ. And there is a great number of subjects covered by our State laws which are nobody's business but the business of the States, as to which a fair presentation of the inconvenience caused to other States by the policy followed by a particular State might lead to a change. If it is worth trying as between separate nations, is it not worth while to try it as between our States, and is it not worth while, instead of trying to get the Constitution of the United States changed so as to take away from the States their power over matters which are really essentially of local concern—is it not worth trying to see if the States cannot agree upon such modifications of their peculiar policies, of their individual policies, as to do the least possible harm and cause the least possible inconvenience to their sister States? (Applause.)

That is a subject which ought to be taken up by men delegated by the States, men of high authority recognized as having commanding ability, men who are forces in the communities in which they live, and delegated for the purpose of doing that thing. These conferences that have been held between separate and independent nations are attended by men of the first order of ability, men whose ability to present the views of their country creates confidence.

Then there is a third class of cases, and that is where there are things that ought to be done which are generally recognized as desirable, but the doing of which does not fall within the province of the national government and cannot be done by any particular State, and can only be done by the conjoint action of a number of States; for instance, the preservation of a forest area for the head waters of numerous rivers which water the soil of many States and where no one State has such an extensive ownership as to make it possible for it to do the thing that ought to be done. Clearly that is a case where all the States whose interests are concerned and whose ownership and jurisdiction give power, ought to come together and unite for their accomplishment of the purpose just as time and time and time again the nations of Europe have united for accomplishing such a purpose; just as they united to free the Danish sound; just as they united to free the Elbe and Scheldt from the duties that were imposed upon navigation of those rivers.

Now, all three of these different classes of cases ought to be taken up as between the States. It seems to me that the machinery has yet to be perfected for the doing of these things. The Governors' meeting, I think, must be regarded also as being merely evolutionary, for Governors are not elected by the people of their States up to this time, for the purpose of discharging such functions as have been indicated here. Commissioners to secure conformity of the laws have not been appointed for discharging such wide or important functions as we are now considering. It seems to me that every State ought to appoint men in such way as it sees fit, delegates to an interstate conference which should be held every year, authorized to enter upon the consideration and the discussion of these great interstate questions calling for the formation and the execution of a common purpose and authorized to sign—subject of course to the approval of the legislative authorities of their States—agreement upon the rules or the principles that are to be enforced. Of course, any agreement properly so called, to be binding upon the States would have to have the consent of Congress, but if the process is deliberate and considerate, so that the result is mature and represents the real opinions and desires of the States, I apprehend that there will be but little doubt of the free and cheerful consent of Congress to the great remedial measures that ought to be reached through such a process.

I have high hopes that we are on the threshold of a new departure in more effective legislation for the benefit of our States and the removal of many evils and abuses that undoubtedly do now exist because of the want of that kind of discussion and consideration and concentration of public opinion upon State legislation—including concentration of the public opinion of America upon State legislation that ought to be wiped off the statute books, which we would have through carrying out such a process as I have described. (Loud Applause.)

THE GENERAL PROGRAM.

GIFFORD PINCHOT, "Conservation of Natural Resources."

DR. W. J. McGEE, member of the National Conservation Commission, on "Uniform Laws Relating to the Use of Water."

CHARLES LATHROP PACK, "Conservation and Taxation."

ALLEN W. HOLLIS, "Uniform Taxation of Timber Lands."

J. HORACE McFARLAND, President American Civic Association, "The Protection of Vanishing Forests."

COLONEL J. A. DAPRAY, of the National Drainage Association, "National Drainage and the Interests of the States in that Subject."

GOVERNOR EBERHART, of Minnesota, "Conservation and Development of Resources in Minnesota."

RESOLUTIONS PASSED BY THE NATIONAL CONFERENCE ON UNIFORM STATE LEGISLATION.

ENDORSE BILLS PREPARED BY COMMISSIONERS ON UNIFORM STATE LAWS.

"*Resolved*, That this National Conference on Uniform Laws advise the Governors of the States now in session at Washington that it endorses the acts prepared under the direction of and recommended by the Commissioners on Uniform Laws as stated below, and that this body hopes that the States which have not already done so will without delay enact these measures into law, viz.:

The Negotiable Instruments Act.
The Warehouse Receipts Act.
The Sales Act.
The Bill of Lading Act.
The Uniform Divorce Act."

URGE SUITABLE APPROPRIATIONS FOR COMMISSIONERS ON UNIFORM STATE LAWS.

"*Resolved*, That every State and Territory which has made no appropriation for the work of the Commissioners on Uniform State Laws be urged to make suitable appropriations annually for the efficient conduct of that work."

URGE REMAINING STATES TO NAME COMMISSIONERS.

"*Resolved*, That the States and Territories which have not already appointed Commissioners on Uni-

EXECUTIVE COUNCIL.

SETH LOW, President.
SAMUEL GOMPERS, Vice-President.
NAHUM J. BACHELDER, Vice-President.
ELLISON A. SMYTH, Vice-President.
BENJAMIN I. WHEELER, Vice-President.
ISAAC N. SELIGMAN, Treasurer.
RALPH M. EASLEY, Chairman Executive Council.
WILLIAM R. WILLCOX, Chairman Welfare Department.
JOHN HAYS HAMMOND, Chairman Committee on Organization.
JOHN MITCHELL, Chairman Trade Agreement Department.
NICHOLAS MURRAY BUTLER, Chairman Economics Department.
AUGUST BELMONT, Chairman Committee on Industrial Accidents.
GEORGE W. PERKINS, Chairman Industrial Insurance Commission.
ALTON B. PARKER, Chairman Committee on Uniform Legislation.
SETH LOW, Ex-Officio Chairman Conciliation Committee.
MELVILLE E. INGALLS, Chairman Public Ownership Commission.
D. L. CEASE, Secretary.

EXECUTIVE COMMITTEE

On the Part of the Public:

WM. H. TAFT, President of the United States, Washington, D. C.
FRANKLIN MacVEAGH, Secretary of the Treasury, Washington, D. C.
ELIHU ROOT, United States Senator, New York.
ANDREW CARNEGIE, Capitalist, New York.
SETH LOW, Publicist, New York City.
NAHUM J. BACHELDER, Master of the National Grange, Concord, N. H.
JOHN HAYS HAMMOND, Mining Engineer, Gloucester, Mass.
BENJAMIN I. WHEELER, President University of California, Berkeley, Cal.
NICHOLAS MURRAY BUTLER, President Columbia University, New York City.
CORNELIUS N. BLISS, Ex-Secretary of the Interior, New York City.
ARCHBISHOP JOHN IRELAND, of the Roman Catholic Church, St. Paul, Minn.
ISAAC N. SELIGMAN, of J. W. Seligman & Co.
REV. JOHN WESLEY HILL, Methodist Episcopal Church, New York City.
JAMES SPEYER, of Speyer & Co., New York.
DAVID R. FRANCIS, Ex-Secretary of the Interior, St. Louis, Mo.
V. EVERIT MACY, Capitalist, New York City.
JOHN M. STAHL, President Farmers' National Congress.

On the Part of Employers:

HENRY PHIPPS, Director United States Steel Corporation, New York City.
AUGUST BELMONT, President August Belmont & Co., New York City.
W. C. BROWN, President New York Central & Hudson River Railroad Co., New York.
GEORGE B. CORTELYOU, President Consolidated Gas Co., New York City.
FRANK A. VANDERLIP, President National City Bank, New York City.
BENJAMIN F. YOAKUM, Chairman Executive Committee, Chicago, Rock Island & Pacific R. R. Co.
CLARENCE H. MACKAY, President Postal Telegraph-Cable Co., New York City.
MARVIN HUGHITT, President Chicago & Northwestern Ry. Co., Chicago, Ill.
SAMUEL MATHER, of Pickands, Mather & Co., Cleveland, Ohio.
CHARLES A. MOORE, Manning, Maxwell & Moore, New York City.
ALEXANDER H. REVELL, of A. H. Revell & Co., Chicago, Ill.
ELLISON A. SMYTH, President South Carolina Cotton Manufacturers' Association, Pelzer, S. C.
MARCUS M. MARKS, President National Association of Clothiers, New York City.
OTTO M. EIDLITZ, Former Chairman Board of Governors, Building Trades Employers' Association, New York City.

On the Part of Wage Earners:

SAMUEL GOMPERS, President American Federation of Labor, Washington, D. C.
JOHN MITCHELL, Former President United Mine Workers of America, New York City.
A. B. GARRETSON, President Order of Railway Conductors, Cedar Rapids, Iowa.
JAMES DUNCAN, General Secretary Granite Cutters' International Association of America, Quincy, Mass.
W. G. LEE, Grand Master Brotherhood Railroad Trainmen, Cleveland, Ohio.
WARREN S. STONE, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland, Ohio.
WILLIAM D. MAHON, President Amalgamated Association of Street Railway Employes of America, Detroit, Mich.
TIMOTHY HEALY, President International Brotherhood of Stationary Firemen, New York City.
WILLIAM J. BOWEN, President Bricklayers and Masons' International Union, Indianapolis, Ind.
W. S. CARTER, President Brotherhood Locomotive Firemen and Enginemen, Peoria, Ill.
JAMES O'CONNELL, President International Association of Machinists, Washington, D. C.
JOHN F. TOBIN, General President Boot and Shoe Workers' Union, Boston, Mass.
JOSEPH F. VALENTINE, President Iron Molders' Union of North America, Cincinnati, Ohio.
JAMES M. LYNCH, President International Typographical Union, Indianapolis, Ind.
DENIS A. HAYES, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia, Pa.
WILLIAM D. HUBER, President United Brotherhood of Carpenters and Joiners of America, Indianapolis, Ind.,
AND MEMBERS OF EXECUTIVE COUNCIL.

Broadening Work of the National Civic Federation.

The far reaching activities of the National Civic Federation are clearly illustrated by this number of The Review. In the report of the annual meeting is shown the vital importance of certain industrial questions which are forcing themselves upon the attention of the entire country. The immense and rapid industrial development of the United States has brought about conditions common to all institutions and affairs when they have outgrown their environment and working facilities, thus becoming subject to problems to be dealt with, not only by those involved personally, but by the public through its legislative machinery.

No longer can it be left to employers and employes to settle between themselves all that belongs to daily work in its surroundings, its machinery of production and the many questions and considerations that arise among workers and the employers of workers. Compensation for industrial accidents is now in the United States a burning question. At the annual meeting interest was shown in this matter surpassing that exhibited in any other connection. Closely connected with it—indeed, inseparable from it—is the subject of measures for safety appliances and all possible devices for the prevention of industrial accidents. It is argued that laws which place the responsibility for accidents and compensation for the same fairly and squarely upon industry itself will be strong influences for the prevention of injuries to workers by furnishing an incentive for a larger use of safety appliances in all mining and manufacturing plants.

The wisdom of the National Civic Federation's initiative for the conference on uniform State laws has been amply certified by the nation-wide interest taken in the great meeting, which included delegates from every section of the Union, representing almost every branch of useful endeavor. This great movement for State efficiency and interstate harmony will mark a new era in the history of the United States.

Through President Taft's suggestion, the conference on uniform laws was held during the same week with the Governors' conference at Washington, and with very beneficial results. According to the resolution passed by this large and truly national gathering, the National Civic Federation will organize in all of the States branches to urge legislative measures drafted by the Commissioners on Uniform Laws. The work of these commissioners will now go on with the prospect of intelligent support in all parts of the country, and as these commissioners, with their special ability and experience, are amply equipped for their task, they should be properly supported by the people of the States.

An important feature of such nation-wide gatherings as the Conference on Uniform Laws—though something aside from the main work and effort of the meeting—should be noted here. In such a conference men of similar activities in business, trade, industries and the learned professions are brought together socially as well as in convention assembled. They meet in committees, and on other occasions of consultation or of recreation and relaxation. Acquaintances and lasting friendships are so made, and inevitably prejudices and false notions, provincial and metropolitan alike, are effectively nipped and discouraged.

In such an immense country as ours it is unusual for people from the widely separated States to meet each other for some days in any save the excited partisan political conventions. Conferences on subjects of common personal, business, professional or occupational interests are especially useful, enlightening and inspiring even when not counting their main objects. The preconceived pictures conjured in the imagination, let us say, of the Connecticut man, as to the man from Texas, or by the Texan of the Yankee, melt away like the first frost before a September sun when the Eastern and Southwestern American of the same pursuits and aims meet in reality. Long harbored notions as to externals are routed, while the freed mind busies itself in marking how much alike, after all, are Americans from any and every quarter within the nation's great boundary lines.

Is the Boycott Legal?

A letter from one of our members asks if all boycotts are illegal and, if not, what are legal; also, has an employer the right to refuse to employ union men and has an employe the right to refuse to work with non-union men? All these questions are practically answered in language that a layman can understand by Justice Van Orsdel of the Washington Court of Appeals in the decision handed down in the celebrated Buck's Stove and Range case. Additional interest attaches to his utterance, because it was made in an opinion in which that judge decided against Messrs. Gompers, Mitchell and Morrison.

"The right of laboring men to organize into unions, and the right of these unions to conduct peaceable strikes, is justified because of their inability to compete singlehanded in contests with their employers. In this competition, any peaceable and lawful means may be resorted to, and it is only when the means employed become unlawful that the courts will interfere. The law recognizes the right of both labor and capital to organize.

"The contest between employer and employe is one which courts of equity should recognize as entitled to be fought out upon the basis of equality and the rule applied by the courts to the strike is based, I think, upon that principle. The fundamental principle underlying this contest is, that the employer who employs one thousand workmen is in possession of the same competitive power to force those workmen to his terms as the one thousand workmen, by the most powerful lawful organization have to force him to a compliance with their terms. The contest, therefore, opens with the one on one side and a thousand on the other upon a substantial basis of equality.

"The employer has a property right in his business which he asks the courts to protect, and which is entitled to protection. It consists, among other things, in his right to employ whom he pleases. That right extends to a discrimination against workmen of a certain class, or to men belonging to labor organizations. He may use in his business such types of machinery and appliances as he may think adapted to carry out his work most successfully, so long as they are reasonably safe and sanitary. The law protects him in these rights, and the courts will require others to respect them. On the other hand, the thousand employes have a property right in their labor, which is equally sacred with that of the employer. They have a right to engage their services wherever and to whomsoever they can secure the largest rewards and the fairest treatment. They have a right to cease working for their employer, with due regard for their contractual relations, when, in their judgment, they can better their condition by so doing.

"They have a right to organize for this purpose and they have a right to advise others to join their organization, and the law will protect them in the exercise of these rights equally with the rights of the employer. The refusal of the employes to work for the employer may result in his financial ruin but the loss will be no greater than the damage his refusal to employ the one thousand laborers may work in the aggregate upon them and those dependent upon their labor. In this contest between employer and employed, it should be remembered that the one who most strictly recognizes and observes the legal and equitable rights of the other, enters the struggle with tremendous odds in his favor.

"Applying the same principle, I conceive it to be the privilege of one man, or a number of men, to individually conclude not to patronize a certain person or corporation. It is also the right of these men to agree together, and to advise others, not to extend such patronage. That advice may be given by direct communication or through the medium of the press, so long as it is neither in the nature of coercion or a threat.

"As long as the actions of this combination of individuals are lawful, to this point it is not clear how they can become unlawful because of their subsequent acts directed against the same person or corporation. To this point, there is no conspiracy—no boycott. The word 'boycott' is here used as referring to what is usually understood as 'the secondary boycott'; and when used in this opinion, it is intended to be applied exclusively in that sense. It is, therefore, only when the combination becomes a conspiracy to injure by threats and coercion the property rights of another, that the power of the courts can be invoked. This point must be passed before the unlawful and unwarranted acts which the courts will punish and restrain are committed."

Important Meeting Executive Committee.

President Seth Low has called the Executive Committee of the National Civic Federation to meet March 3 to consider the subject of national incorporation of companies doing interstate business and related questions, and to determine what action, if any, shall be taken by the Federation.

Organization of State Branches.

In accordance with the resolution of the National Conference on Uniform State Legislation held last month in Washington, the Executive Council of The National Civic Federation has unanimously decided to form branches in all the States for the purpose of promoting uniform State legislation. The plan adopted provides for the work of organizing to be conducted simultaneously from five centres: New York, Chicago, Denver, San Francisco and Atlanta. Each State branch will be made up of the representatives of agriculture, labor, banking, manufacture, the bar, the colleges, insurance, commerce and transportation.

THE NECESSITY OF NATIONAL INCORPORATION OF COMPANIES DOING INTERSTATE BUSINESS

By SETH LOW.

I AM well aware that in many respects the division of powers under the United States Constitution between the Federal Government and the State Governments has worked exceedingly well, and no one, I suppose, would wish to break the division down and to reduce the States to impotency. I have myself just now returned from Washington, where I attended a conference on uniform State legislation, the whole trend of which was to urge the States to deal with the questions of common interest from the common point of view and by so doing to limit the tendency to centralization as far as possible. But this subject of interstate commerce is in a class by itself.

Two years ago, when The National Civic Federation attempted to secure the amendment of the Sherman Anti-Trust Act, I introduced the subject at the first hearing before the Judiciary Committee of the House of Representatives, with the statement that I thought national incorporation of companies doing interstate business was not above the horizon. These hearings continued many weeks and opened up the subject in every direction. At the last hearing, in summing up the impressions made upon me by the discussion, I expressed my belief that national incorporation of such companies was the next thing to be done. The detailed study of the same question by the present Administration at Washington has brought it to the same conclusion, as I think it would bring most people who would go with equal care into the question from all sides. This belief is strengthened by the fact that Mr. John C. Richberg, the chairman of the committee on a uniform incorporation law of the National Conference of Uniform State Law Commissioners, should have said in a recent address, "Congress should pass a national incorporation law for corporations engaged in interstate commerce, and the States adopt a uniform law for local corporations."

It may satisfy the critic to denounce this plan of national incorporation as unconstitutional; but that does nothing to relieve the intolerable situation which the plan is intended to amend. What the country needs is constructive statesmanship in this matter, and the critic should be turned out of court unless he can present a plan as good or better that will give the necessary relief. In case of need, the Constitution must be amended.

The intolerable situation to which I refer is this: That in the United States there is now no Government at all which controls both the company that does interstate business and, at the same time, the interstate business that it does. The State controls the corporation, because the State creates it; and Congress, under the authority of the National Constitution, controls the interstate business that the corporation does. For the purpose of emphasis, I ask again, therefore, that you notice what the real question is. It is not whether the Nation, rather than the State, or the State, rather than the Nation, should exercise this authority. The situation at the moment is, that neither the Nation nor the State does exercise at present such comprehensive authority both over corporations doing interstate business and over the interstate business that they do.

Evidently this is a condition of governmental feebleness that exists as to nothing else. How has it come about? By the growth of artificial persons called corporations, created by the States, since the Constitution was formed; and by the changes in business which have thrown manufacture and interstate commerce altogether, on a vast scale, into the hands of these new State-formed corporations. If manufacture and interstate commerce were now carried on only on a scale such as can be conducted by a partnership and with the private resources of one or two persons, very likely little trouble would have arisen; but the State-made corporation has changed all that, and in changing it has created conditions that were not contemplated when the interstate commerce clause of the Constitution was drafted. The result is the absence of any government at all in the United States, at the present time, with authority to control both interstate commerce and the agent that does it. If a narrow construction is given by the courts to the interstate commerce clause as regards the power of Congress to insist upon national incorporation of companies doing interstate business, no matter what else they do, to that extent the changes of time will have defeated the object of the interstate commerce clause.

If I interpret the National Constitution correctly, the so-called interstate commerce clause is to be considered in connection with the provision of the Constitution which, in effect, forbids one State from levying duties upon the products of another State. This latter clause was clearly the outgrowth of experience under the confederation of the States, which immediately followed the termination of the Revolutionary War. The framers of the Constitution, as I view it, deliberately determined to prevent one State from interfering with the business activity of another State. They embodied this purpose, according to my view, first, in the clause virtually forbidding the States to levy duties on the products of other States. They also perceived, however, that what the States could do directly, they could also accomplish indirectly and, therefore, they embodied the interstate commerce clause in the Constitution with the express purpose of putting under general control all questions relating to commerce between the States.

All the federal systems in the world, except our own, place the entire subject of commerce under the national government. These federal systems are Germany, Switzerland, Brazil, Mexico, Canada and Australia. If an explanation were sought of the reason why the federal system of the United States does not do the same thing, would not the probable reply be that our system was framed much earlier than any of the others and before the railroad and the telegraph had made it clear that commerce is inevitably a thing national in character?

The suggestion has been made that the only adequate relief for the present situation is the repeal of the Sherman Anti-Trust Act. In passing, I want to point out that, even if the Sherman Anti-Trust Act were repealed, such repeal would not provide a remedy for the difficulty which I have just pointed out, and the suggestion further assumes that the country can permanently develop its interstate business without having any government that controls both the corporation doing interstate business and the interstate business that is done. That I do not believe. I think that the reason why public sentiment placed such a drastic law upon the statute book as the Sherman Anti-Trust Act is to be found in the very fact that the national government, as things stand, is helpless in its relation to corporations doing interstate business. Prior to 1890 the people saw trusts, and combinations, and pools springing into existence on every hand and they feared the result; and because Congress was helpless to forbid such acts on the part of corporations formed by the States, the people demanded that Congress should do what Congress could, that is, strike out at the interstate business to be done, in the effort to avoid the effects of abuses that could have been much more easily avoided by preventing the abuses at their source.

But, assuming for the moment that the repeal of the Anti-Trust Act would meet all the requirements of the situation, let us face fairly and squarely the difficulties involved in the suggestion. Does anyone seriously believe that public sentiment would sustain the President in recommending the repeal, or Congress in repealing that act, at a time when the high cost of living is perplexing everyone and when multitudes believe that one factor, at least, in that situation is the arbitrary control of conditions by corporations created by the States, but whose interstate business the States cannot reach? If I am right, the demand for the repeal of the Sherman Anti-Trust Act, under existing conditions, would fall upon deaf ears. When the corporations themselves that do interstate business, are made subject to the same government that controls the interstate business that they do, it may be possible to modify the Congressional attitude, but, until this is done, any attempt to repeal this law or essentially to modify it appears to be idle, for such action, in substance, amounts to a claim that the corporations doing interstate business should be permitted in the future to do, uncontrolled, everything that has created the sentiment which put the Sherman Anti-Trust Act upon the statute book and which keeps it there. I can imagine that Congress may be persuaded to let bygones be bygones, if adequate safeguards are provided for the future. President Roosevelt was willing to do this. But adequate safeguard for the future against old abuses is, I think, a *sine qua non;* and I know of no form in which such safeguards can be so effectively, and at the same time so helpfully given as through national incorporation.

Is not the real problem this? Under modern conditions trade agreements that limit production and more or less affect prices are the only alternative in many kinds of business to ruinous competition. I have been out of business for a great many years; but I have an impression that at the present time there are few, if any, kinds of commercial business that can be conducted without resort to this method. If this be so, then, indeed, the dilemma with which business is confronted while the Sherman Anti-Trust Act remains on the statute book, is a serious one, and the question is highly important, what is the way out of the dilemma? I do not believe that the way lies in the direction of antagonizing the national incorporation of companies engaged in interstate business. I think it is rather to be found in subjecting the agents that do interstate business to national control, so that one law, which shall be the same from Maine to California, can prevent specific abuses on the part of the corporations doing interstate business, as the need arises. The national banks are incorporated under act of Congress. They suffer no inconvenience as a result of that fact; but, on the contrary, through governmental oversight the national banks as a whole are kept within the lines of legitimate business, and enjoy a very large measure of public confidence. You will observe that national control of the banks takes the form of regulation of the banking corporation and not of the business that it does. The national banking law does not prevent large aggregations of capital, but it does prevent the capitalization of wind and water. The national banking law does not pretend to regulate the rates at which money shall be loaned, but it does make unlawful certain practices by which individuals in control of the banks can make improper gains. I am aware that private commercial business differs from national banking in many respects; but these illustrations suffice to show that most of the abuses complained of in interstate commerce are easily reached by the government which creates the corporation without the necessity of touching the legitimate business that is done.

The question arises, why do not the States, which create the corporations that do interstate business, afford this kind of control? The evident answer is, because there are forty-six States and each State is unwilling, not to say afraid, to put itself at a disadvantage in comparison with other States by dealing strictly with such corporations, and because out of the forty-six States there are some States which act as if they do not care. It has been recently suggested that Congress by appropriate legislation can give to the States the same control over interstate commerce as has been recognized in the States in the matter of controlling the interstate sale of liquor, so that each State may defend itself against unwelcome legislation by another State by forbidding the right of entry into the State so legislating of merchandise manufactured or sold by any corporation that is feared. This would appear to me to be an excellent method of destroying interstate commerce; but not of promoting it, nor of regulating it so that it may grow with the country's growth. Upon the surface, it would violate the spirit of the federal Constitution, which deliberately places interstate commerce under national control.

So far as changes in the method of doing business, through corporations instead of by individuals, have tended to magnify the control of the States over interstate commerce and to lessen the national control, the modern development of business tends to nullify the purpose of those who framed the United States Constitution when they undertook to place interstate commerce under national control. These changes, which have substituted State-made corporations for natural persons, affect not only the scale upon which interstate business is done; but they have also often thrown manufacture and commerce into the same hands, with the result that it becomes increasingly difficult, when this is so, to discriminate between them. We, of the United States, may well ask ourselves why we should hesitate now to give to our national government the full control of interstate commerce which, as I have pointed out, every other federal system in the world, formed at a later period than our own, has deliberately lodged with the general government.

The choice must be made between three alternatives.

First—What we have now, with one government controlling the corporation that does interstate business and another government controlling the interstate business that is done, but with no government at all controlling both the agent and the business that it does;

Second—Through the contributory action of Congress to have forty-six States control both the agent doing interstate business and the business that it does, each State looking out for itself against all others;

Third—To have the national government, through the exercise of its power under the interstate commerce clause, incorporate companies to do interstate business, and thus control all over the Union both the agent doing interstate business and the interstate business that it does.

As between these three alternatives, is it not clear that the last represents the dictates of good sense, of our own experience, and of the general practice of commercial nations?

(Continued from page 13.)

form State Laws be urged to appoint such Commissioners as soon as practicable."

UNIFORM AMENDMENTS.

"*Resolved*, That, if any persons or organizations, after studying the laws submitted by the Conference on Uniform State Laws, think that any of them need amendment, such persons and organizations be earnestly urged to try to bring about such amendment through the National Conference of Commissioners on Uniform State Laws, to the end that, even in amendment, uniformity may be preserved."

COMMISSION FOR OTHER THAN TECHNICAL OR LEGAL SUBJECTS.

"*Resolved*, That in the opinion of this Conference it seems advisable that in the matter of a uniform tax law and in that relating to certain labor subjects upon which this Conference favors uniformity and upon other subjects not technically of a legal nature, it is the opinion of this body that the drafting of these laws may well be considered by Commissions specially appointed in the different States, the membership of which shall not be restricted to members of the legal profession, and that this action be communicated to the Governors."

UNIFORMITY BY GROUPS OF STATES.

"*Resolved*, That we commend to the attention of the administration of the various States of the Union, whenever a subject of legislation affects the interests of a group of contiguous States, the possibility of joint and uniform action upon such subjects by Interstate Agreement or Convention to become effective upon ratification by the legislatures of the States involved."

LEGISLATIVE REFERENCE BUREAUS.

"*Resolved*, That we recognize the system of Legislative Reference Bureaus as one of the important agencies to bring about greater uniformity of legislation, and that we urge the States which have established such bureaus to develop them further and those which have not yet done so to forthwith establish them."

UNIFORMITY IN LEGAL PROCEDURE.

"Whereas, the system in vogue for the trial of causes in the criminal, equity and law courts of the United States and of the several States is the subject of much current discussion, both lay and professional, and is severely criticised for its technicalities and its useless expense and delay; and

"Whereas, the matter of procedural reform is receiving the thoughtful consideration of the American Bar Association through a special committee created for that purpose; therefore be it

"*Resolved*, That this Conference recognizes the need for radical changes in the administration of the law both in criminal and civil action;

"*Resolved*, That a committee of fifteen on Reform in Legal Procedure be created and appointed by the Chairman of the Committee on Uniform Legislation of the National Civic Federation, and that such committee be instructed to co-operate with the Committee of the American Bar Association to suggest remedies and formulate proposed laws to prevent delay and unnecessary cost in litigation, and to use the influence and power of The National Civic Federation to simplify, cheapen and expedite judicial procedure."

PURE FOOD AND DRUG REGULATIONS.

"Whereas, Congress in June, 1906, passed the National Food and Drugs Act, which law has since been adopted in all substantial provisions by upwards of twenty-six (26) States,

"*Resolved*, That this Convention recommend the adoption of this model uniform statute by the legislatures of all States which have not already so acted, and urge upon the Governors and Legislatures of all States that they approve and pass only such food and drug laws, or amendments thereto, as are modeled after the provisions of the national law."

CONTROL OF SALES OF NARCOTICS.

"*Resolved*, That all States be urged to enact such uniform laws in regard to controlling the sale of narcotic and habit-forming drugs that the sale of these drugs will be confined to their proper channels and uses."

VITAL STATISTICS.

"*Resolved*, That this Conference recommend uniform State legislation on the subject of gathering and preservation of vital statistics."

REGULATION OF THE PRACTICE OF MEDICINE.

"Whereas, uniformity in regulating the practice of medicine is of the utmost importance to the public health of the Nation and to the peoples of the several States.

"*Resolved*, That it is requested of the Committee on Public Health, or other appropriate committee of the Commissioners on Uniform State Laws, that they cause to be prepared a model act for regulating the practice of medicine in the several States."

COMPENSATION FOR INDUSTRIAL ACCIDENTS.

"Whereas, the present remedies for compensation for industrial accidents throughout the various States are slow, uncertain, and wasteful, and

"Whereas, there is not, and cannot be, any equitable solution thereof, based only on the fault of the employer, and

"Whereas, twenty-three of the more progressive commercial nations abroad have bettered, and in some instances solved, the problem on the basis of Workmen's Compensation Acts, and

"Whereas, we believe that such acts can be adequately substituted for our present laws and applied to our institutions with equal satisfaction and profit,

"Now, therefore, be it

"*Resolved*, That this Conference recommend to the Governors of the several States now assembled in this city, and to the States, that workmen's compensation acts fair to the employer and employe and just to the State, be uniformly substituted for the present system of Employers' Liability for injuries received in and arising out of the course of employment."

BUREAU OF MINES.

"Whereas, the increasing loss of life in American mining operations and the enormous waste of resources essential to both the present and future welfare of the nation, plainly indicate the need of more uniform, rational, and enforceable mining laws and regulations in each of the several mining States; and

"Whereas, there is now pending before the Congress of the United States a bill to establish a Bureau of Mines in the Department of the Interior, for inquiry and investigation, to aid in the accomplishment of these purposes,

"*Now, therefore, be it resolved* by the National Conference on Uniform Legislation that we earnestly urge upon the Governors of the several States the importance of co-operating with the Federal Government to procure uniformity upon which intelligent State legislation may be based."

CONSERVATION OF AMERICAN FORESTS.

"*Resolved*, That this Conference endorses the Conservation of American Forests and

"Whereas, The effective handling of forest land in private ownership depends mainly upon uniform State laws, providing for right methods of forest taxation and for the effective protection of forests from fire,

"*Resolved*, That this matter be referred to the Commission on Uniform State Laws."

REGULATION OF WATER POWER.

"Whereas, the development of water powers is a subject of growing public importance, and the regulation looking to the uniform control of these powers by State and Nation is a matter of public concern.

"*Therefore, be it resolved*, That this Conference recommend to the Commissioners on Uniform State Laws of the respective States the importance of the consideration of this subject, with a view to securing uniformity of State Laws as to the regulation of water power on non-navigable streams, and the necessity of uniformity of State regulations as to water power on navigable streams, with the object of securing proper and uniform co-operation between each State and the Federal Government in the development and control of water power."

TAXATION.

"*Resolved*, That every State ought to have constitutional powers to classify property for taxation and that all the States ought to impose their taxes in conformity with such a system of comity between the States that there shall be no double taxation which shall be unfair or oppressive to any citizen."

UNIFORM INSURANCE CODE.

"*Resolved*, That we favor a Uniform Insurance Code for adoption in the several States."

CHILD LABOR.

"*Resolved*, That this Conference recommend to the Governors the adoption of uniform laws for the protection of children employed in industries."

EXECUTION AND PROBATION OF WILLS.

"*Resolved*, That we recommend to the Governors of the several States and to the Commissioners on Uniform State Laws—uniform State legislation on the general subjects of the execution and probate of wills and the form of acknowledgments; and the manner of the conveyance of real estate."

UNIFORM GOVERNMENTAL ACCOUNTING.

"Whereas, the National Municipal League, the League of American Municipalities, the American Association of Public Accountants, the American Economic Association, the American Statistical Association, the Association of Municipal Comptrollers and Accounting Officers, the Government Accountants' Association and various other national and State bodies have endorsed the principles of uniform governmental accounting and standard governmental reports, and

"Whereas, the States of Ohio, New York, Massachusetts, Indiana, Rhode Island, Colorado, West Virginia and Wyoming have recognized this principle and have enacted legislation establishing Uniform Accounting Bureaus or Boards of Control and similar legislation is under consideration in various other States,

"*Therefore, be it resolved*, by this Conference upon Uniform Legislation that the Governors and Legislatures of the several States are hereby urged to enact such measures upon conformitory lines, departing only so far as may be necessary from a standard form which shall thereby tend to become uniform throughout the country."

PUBLIC ACCOUNTANTS.

"Whereas, some twenty-one States have enacted laws regulating the profession of public accountancy, all of which seek to attain the same ends but differ in important particulars as to standards and requirements, and

"Whereas, the proper regulation of the profession of accountancy is a subject of rapidly growing importance to the business community, therefore be it

"*Resolved*, that this Conference heartily commends the principle of uniformity in certified public accountancy legislation, which should in every case require adequate standards as to education and training for admission and should provide suitable punishment for unprofessional conduct."

WHITE SLAVE TRAFFIC.

"*Resolved*, That this National Conference on Uniform Legislation recommend to the Governors' Conference that efficient and uniform legislation should be adopted to suppress and prevent the procurement of women for immoral purposes—known generally under the name of the White Slave traffic; and that the Commissioners on Uniform State Laws be requested to draft a bill which will carry into effect the foregoing recommendation."

"*Resolved*, That The National Civic Federation be requested to promote State organizations for the advancement of uniform legislation and that it be also requested, if deemed advisable, to arrange for annual national conferences upon the same subject to the end that the work may take more definite and concrete form."

"*Resolved*, That this Conference on Uniform State Legislation offers its thanks to the President of the United States for his deep interest in the objects of this Convention, and to the Governors and commercial and civic organizations who have appointed delegates to this body; and,

"*Resolved*, That this conference offers its thanks to the Conference of Governors now in session in Washington, for their courtesy in giving a place upon their programme for the purpose of receiving reports from this Conference; and,

"*Resolved*, That the thanks of the Conference be also offered to Senator Root, of New York, for his instructive and valuable address."

NOTE—Neither the States nor the organizations represented at the Conference are committed by the action of the Conference; but the action taken does represent the judgment of the Conference itself.

FOR GUARDING LIVES AND SAFETY OF WORKERS

LABOR'S NEEDS CONSIDERED—EMPLOYERS' LIABILITY AND PREVENTION OF ACCIDENT LAWS DEMANDED—BRILLIANT DINNER AT CLOSE OF ANNUAL MEETING OF THE NATIONAL CIVIC FEDERATION

THE tenth annual meeting of the National Civic Federation, held November 22 and 23, 1909, at Hotel Astor, New York, was devoted to the discussion of wage-earners' insurance affecting public as well as private employes.

The official commissions appointed by the Governors of the States of New York, Minnesota and Wisconsin and several voluntary commissions studying the same subject were the special guests of the Federation.

The dominant ideas at the tenth annual meeting were that the present antiquated State Employers' Liability laws must give way to a system of compensation, and that there is immediate necessity of increasing means for preventing industrial accidents.

At this meeting leading employers, with humane inclinations, and national labor leaders, with the needs of their followers in mind, were agreed that a system more in accord with an enlightened policy must be secured. There were clearly brought out what is being done abroad, modern improvements in the United States in the way of initial efforts involving progress in the last five years, and what is lacking to lessen hardships from the hazards of industry. The evils of the present system of employers' liability, its weakness, and the foreign substitutes for it were fully presented, all agreeing that the present system is intolerable. Thus there was furnished information upon which to base efforts toward securing sane and practical means of relief. Progress, at the best, must be slow, but the Federation desires, if possible, to avoid prolonged experiments, which it is hoped this full consideration of the subject may obviate.

The immediate outcome of the annual meeting has been a program of actual work resulting in the appointment by President Low of the following four committees:

Committee on Prevention of Mining Accidents.

MR. JOHN HAYS HAMMOND, Mining Engineer, Chairman.

To investigate the causes of accidents in mining;

To collect information relative to safeguards against mining accidents;

To look into the need of improving State laws and unifying such laws requiring mine owners to introduce all reasonable means for ventilating and otherwise safeguarding the lives of miners;

To investigate means of saving life after accidents have happened and advocate the provision of such apparatus as is now used in Germany and France by rescue crews and the training of such rescue crews;

To publish and widely circulate illustrated literature showing safeguards which may be advocated in mining, and apparatus to safeguard rescue crews; and

To work for the establishment of a Federal Mining Bureau to encourage the introduction of life-saving devices.

Committee on Wage-Earners' Insurance.

MR. GEORGE W. PERKINS, Chairman.

To promote employers' voluntary relief associations; and

To investigate the need for uniform legislation covering such employers' voluntary sick, accident, pension and death benefit associations.

Committee on Compensation for Industrial Accidents and Their Prevention.

MR. AUGUST BELMONT, Chairman.

To inquire into the need of amending State laws on employers' liability, with a view to securing uniform provisions looking toward compensation for industrial accidents; and

To look into means of preventing accidents in all commercial and manufacturing enterprises.

Committee on Pensions for Public Employes.

HON. WILLIAM R. WILLCOX, Chairman.

To investigate existing and proposed plans for old age retirement funds for civil service employes; and

To look into the need for municipal, State or Federal legislation to provide for such public employes.

In this issue of the REVIEW will be found in full or in brief several of the addresses delivered at the annual meeting. Limitation of space prevents the printing here of some of the most important contributions to the discussions of this great gathering.

While the complete addresses of speakers at the annual meeting and annual dinner are to be found in the published report of the proceedings, we give below abstracts from some of these valuable papers. At the opening session, November 22, Hon. Seth Low, president of The National Civic Federation, presided and in the course of his report of the activities of the Federation the past year, said:

"It is a matter of common observation that such a rapid industrial recovery from a great panic has never been witnessed before in the United States. It is also true that after no other panic have employers so uniformly maintained the rates of wages prevailing before the panic. Many have criticized this policy as contrary to sound political economy. The question may well be asked, however, whether the rapid recovery from the industrial depression is not partly due to this change of attitude toward labor. The country has been entirely free from labor troubles incident to an attempt to reduce wages. More men may have been thrown out of employment than had a different policy been pursued, but the purchasing power of the vast body of men that remained in employment was not cut down. I do not know whether this maintenance of wages is related to the rapid industrial improvement, as cause or effect, or whether they coincide only accidentally. One thing, however, is certain, that both capital and labor have been spared the costly losses that result from the prolonged struggles incident to a reduction in wages (I mean, of course, a widespread reduction), and they are now being spared again the losses incident to the prolonged struggles to regain the old standards of wages that usually follow the return of prosperity.

"The National Civic Federation, through its entire membership of employers, workingmen and the general public, is keenly interested in everything that relates to the question of compensating workmen for loss of limb, life or health in the pursuits of modern industry. Several of the States have appointed commissions to study into this subject and to make recommendations. The National Civic Federation is co-operating with all these commissions and I have the pleasure to-day, on behalf of our members, of welcoming them to our annual meeting, which is wholly given up to this subject. The papers and discussions are being prepared along lines suggested, in part, by members of these commissions, and it is hoped that both the papers and the discussions will have practical value, by reason of the presence of these commissioners—even greater than otherwise might follow. It goes without saying that a subject which is of vital interest to the entire industrial community is a subject the importance of which cannot be exaggerated. The opinion is almost universal in well-informed circles that some change of system in the United States is greatly to be desired. The best direction in which to move is the thing to discover. It is greatly to be hoped that the discussions of our present meeting will throw valuable light on many aspects of this question."

In enumerating a few of the important subjects upon which uniformity of State legislation is desired, President Low said:

"The great movement for the conservation of our natural resources inaugurated by President Roosevelt cannot be carried to its perfect consummation until the States adopt, with considerable uniformity, laws upon the subjects of forestry, water power and reclamation of land by irrigation. In the effort to propose suitable amendments to the Sherman Anti-trust Act, our committee was not unmindful of the fact that, if satisfactory amendments were finally made, their effect would be nullified in many important instances unless the anti-trust laws of the various States were made, substantially, to conform. Probably no better illustration could be given than that of railway regulation. The Interstate Commerce Commission, of course, can deal only with interstate, while the States can deal only with intrastate traffic. The confusion and conflict, without uniform action, can readily be imagined. Each State has its own railway commission. These State commissions, slowly learning it was essential to have some uniform principles of regulation, organized the National Association of State Railway Commissioners, inviting first the co-operation of the Interstate Commerce Commission, and, afterward, that of the railway managers' associations and the shippers' organizations. These four elements, which may well be taken to represent everybody, have substantially agreed upon a number of important regulations which, to become effective, will require action by all the State legislatures.

"The National Association of State Bank Supervisors and the American Banking Association have come to agreement on certain propositions upon which they desire uniform State legislation. In the matter of insurance, both life and fire, national associations have been organized, and, in the latter case, are working with the State Supervisors of Insurance in an effort to secure State uniformity. The agricultural organizations, the wholesale grocers, the wholesale druggists and a number of other national organizations are working for uniform pure food laws. The labor organizations want uniform workmen's compensation acts, uniform legislation as to guarding dangerous machinery, factory inspection, convict made products, regulation of the employment of women and children, etc. The American Medical Association desires uniformity on registration and preservation of vital statistics. The National Grange, the American Automobile Association and the American Roadmakers' Association have united in the demand for uniform State legislation on the regulation of motor vehicles and the building of good roads throughout the country.

"The question which has been selected for discussion at this annual meeting is employers' liability, as it is called, an old law of master and of servants, and of negligence in the several States and in the United States. Naturally, we in the United States want to know what has been done in other countries. Our problem is a more complicated one, growing out of our Federal system because, as the annual report, to which you have just listened, has pointed out, to get complete results we must secure co-operation, not only between, at any rate, the industrial states, a good many in number, but also as between the States and the Federal Government. It, therefore, becomes a matter of immense importance, if we are going to change old conditions in any respect, to take whatever step we do take in the right direction. We, very likely, shall have to proceed slowly, but we do not want to retrace our steps after we get under way."

WORK IN THE WELFARE DEPARTMENT.

By HON. WILLIAM R. WILLCOX,
Chairman Public Service Commission.

THE remarkable impetus which has been given to welfare work through the efforts of the Welfare Department is not only indicated by requests for assistance in installing such work, but also by accounts and illustrations of new welfare enterprises which constantly come to us as the result of inquiries. One company in New Hampshire, employing twelve thousand operatives, is now introducing a comprehensive plan for housing and recreation, an improvement upon anything which has yet been undertaken in the United States. The mills of this company are already models of cleanliness and appliances for good ventilation and sanitation.

The Welfare Department, in three ways, has secured unique co-operation by:

(1) Addressing letters of information and inquiry to employers in fifty different industries;

(2) Securing the consent of employers' associations to arrange programmes at their annual meetings on the welfare work in their respective trades; and

(3) Asking trade journals to collect and publish illustrated accounts of welfare work in the industries covered by their periodicals.

In this way, the theory of working along non-aggressive lines with emulation for the spirit of the movement has proven its worth.

The most important undertaking at the present time is to issue small leaflets illustrated twice a month to engineers and architects throughout the country, calling especial attention to welfare devices. It is hoped thus to secure improvements at the time of the erection of new buildings, the cost being very slight then as compared to installing conveniences in old shops. The chairman of the Industrial Employes' Welfare Committee, Mr. Charles A. Moore, has been in a position to influence owners of buildings in process of erection to plan thorough schemes of welfare work for them. This is equally important with reference to public

Up to the time that I took up officially, , utilities instead of public buildings, I many Government buildings and many as postmaster, and I say emphatically e yet to see a Government building in y that is properly constructed for the which it is used.

IT OF THE CORPORATION TOWARDS ITS EMPLOYES.

HON. GEORGE B. CORTELYOU.

ent of the Consolidated Gas Company.

nsolidated Gas Company manifests an in- in its employes in three ways:
y assisting them in maintaining an em- society;
by providing annuities for superannuated and
y making allowances for vacations and

vitable tendency of the future is toward better relations between the corporate and employe, wherein the principle of their y of interest will be recognized and o its full development. If these relations on right lines there will be none of the ling that is engendered by a patronizing y on the one hand and of sullen aloofness her, but there will be a mutual recognition ct that the welfare of each is bound up, or ill, with that of the other. The employer ive that the highest efficiency of the em- attained only when he is fairly remunerat- is labor, when the conditions under which is performed are sanitary and wholesome, n the mind of the employe is freed, as far le, from apprehension as to what will hap- im in case of accident, and as to what will o his family in case of his death. The em- ll perceive that it is his duty to give his the best service of which he is capable romote his interests loyally and faithfully as the employment lasts. When this relation- been fully established, when there is this d sympathetic understanding between em- nd employe, then we shall have not only a improved social order, but we shall have becoming more and more a necessity under ss of modern business competition—a great- ased efficiency of labor.

all very well to offer employes opportunities usement and improvement, as by building s and furnishing means for recreation, but t system for securing loyalty and efficiency that leaves both the corporation and the with their self-respect intact. And the best is that, too, which secures to employes fair by means of which they can of their own provide properly for themselves and their s, both for mere material wants and for needs.

conduct of a corporation upon this basis in- he developing of a spirit among its workers ue of which cannot be calculated in dollars nts, and furthermore the workers so recog- nd so treated become its best guarantors be- e public of the integrity of its management its realization of its duties to its stockhold- l to the public.

ENSATION FOR VICTIMS OF INDUSTRIAL DENTS, THE EMPLOYER'S VIEWPOINT.

By GEORGE M. GILLETTE,

Minneapolis Steel and Machinery Company, resident Minnesota Employers' Association, nnesota Employes' Compensation Commission.

necessity of a change in or from our ex- sting system may be assumed as a fact. In n State of Minnesota, the State Bar Associa- ie representative employers and the employes ives, both by organic expression and by the of their leaders, have in equally strong and tic manner declared in favor of such a change. l bring the existing system before the bar of opinion and charge it with: First, disturbing ations between employer and employe; second, g perjury; third, failure to prevent or de- accidents; fourth, uncertainty; fifth, inhu- , and, sixth, waste.

he initial legislation by any State which un- es it, I believe it will be necessary to make mpensation moderate, to pay no compensation e first few days of disability, not to pay for tional diseases, and, even then, in my opinion, st will be such that it will be necessary for nployes to contribute toward the fund out of these compensations are paid. Either this or part of the compensation must be adjusted e the cost to the employer not exceed the t cost. Personally, I am in favor of a more scale of compensations to the employes than would be possible if the total cost under the competitive conditions between our States was all to be borne by the employer. And why should not the employe bear a part? Not only in the State competition would it safeguard the interests of the employer, but it would make the employe himself interested in safeguarding the cost, in the prevention of maimgering. It would forestall all the attempts of agitators at every succeeding session of the legislature from attempting to increase the compensations, as the excess cost would have to be borne in part by the employes themselves.

The result of imposing excessive burdens on the employers of one State as compared with those of another State, I am afraid is not generally appreciated. The necessary legislation must be accomplished by the uniform action of forty-eight different States. Each State is justly jealous of its rights.

The transition to the compensation principle is sufficiently revolutionary in itself, so that in its carrying out, in my opinion, additional revolutionary elements should not unnecessarily be added. It should be an insurable proposition, first for the reason that no foreign act has been successful which was not accompanied by an insurance scheme, and, second, by reason of our commercial and financial system it would be practically impossible for new industries to be established, or those owned by moderate means to be carried on unless these undertakings could be insured against the liabilities of such an act. Insurance is equally essential to safeguard the interests of the injured employe, to make sure that the compensations named in the act will surely be paid to the injured or his dependents, regardless of the ability of the employer to respond in large sums and, further, to insure the employe against the employer's insolvency. What sort of insurance should be provided? In my judgment not the existing kind. It should be provided by existing agencies and existing companies, but not by a plan under which but 25 or 30 per cent of the premiums collected will be paid out in compensation.

I would favor the abolition of our present system and the substitution of one which, conservatively begun, would ultimately develop into a system under which every branch of industrial enterprise should reasonably compensate, care for and protect the victims of such enterprise.

"BUY A HOME WITH RENT MONEY," OR INSURANCE MONEY.

By D. A. TOMPKINS,

Director of the Equitable Assurance Society and of the National Manufacturers' Association.

THE weaknesses of industrial insurance, as at present handled, would seem to be, first, a very high rate of insurance made necessary to carry collection of premiums by canvassing agents, and second, the number of insured who drop out and forfeit their policies. Mr. Paul Morton, of the Equitable Society, conceived the idea of issuing an industrial policy which reduces both these faults to a minimum. If industrial policies should be issued, according to his idea, the amount for which a policy is sold would be loaned in cash on proper security to the insured to build a home. Thus the borrower would have an incentive to pay his premium, voluntarily, without cost of a canvasser to collect it and he would also have an incentive to keep up his payments to the end of the contract. The premium might have to be a little more than those of the regular life, but not approximately as expensive as those of the usual form of the industrial insurance.

Loans would generally be made on a basis of 66 2-3 per cent of the valuation of the entire property. Thus if a man had a lot worth $1,000, the loan to him to build a house would be $2,000, the total value of the house and lot being $3,000. In the case of farmers, the ratio would be entirely different. The mechanic makes his living outside of his house and lot and his trade constitutes an asset independent of his house and lot. The farmer must have his farm to make a living. The farm is the asset which offsets the mechanic's trade. Therefore, the loan to a farmer to build a home should not exceed 20 per cent of the value of the farm. The average borrower would be delighted to pay six per cent interest, and it would be cheap for him to do so. Besides good management of the society's business, a sufficient interest rate to make the borrower always absolutely safe is essential.

The fact of ownership of a home is not all the advantage that the borrower gets. The ownership of the home is a foundation upon which he can build other advantages for himself, material and moral. It stands to reason that the average workingman stands a fair chance of getting his wages bettered, but, without regard to better wages, there are many little betterments and improvements that a family can make about a home that they would not be disposed to make about a rented house.

By selection of term of policy any one may buy a home with rent money and get a life policy thrown in. If the premium and interest for ten years is too much, he can choose a 15-year policy, and if this is still too much, he can still choose a 20-year policy.

Such a plan gives philanthropy without charity. It gives the best economic use of money as a means of home building and its most frequently repeated use for that purpose.

THE BENEFIT PLANS OF THE INTERNATIONAL HARVESTER COMPANY.

By GEORGE W. PERKINS,

Chairman Finance Committee, International Harvester Company.

IN all the inventions and ingenuity that have been brought to bear on business affairs in the last quarter of a century, nothing has been found to take the place of the human mind. Nothing has been found to take the place of individual incentive to accomplish results. Nothing has been found to take the place of a man's ability to do—with a proper incentive behind that ability—and no such substitute ever will be found. It is, therefore, of the utmost importance to American business interests of to-day and to-morrow that every man in any given concern be so associated with that concern that he will give the best there is in him to the performance of the duties assigned to him.

If profit-sharing means anything, if providing for old age means anything, if caring for those who become ill or injured while in the service means anything, it should mean the fostering of the interest of men in their work, whether that work be sweeping out the office, shoveling coal or presiding over a great commercial company. In short, it should mean real co-operation between stockholders, managers and employes.

The management of the International Harvester Company, its subsidiary and affiliated companies, believing in the above theories, set out several years ago to see how nearly it could come to applying them practically to its business. As a result, it has devised and put into effect plans covering the following:

First—Profit sharing.

Second—Insurance covering sickness, accident and death.

Third—Old age pensions.

The company is also doing other welfare work. It is called "welfare work" for lack of a better name. It is as much a business branch of the company as any other division. The important features of this work are protection against injury, sanitation, health, educational work, charities, recreation, etc. The welfare work is controlled by an advisory board composed of the superintendents of all the "works," who, through an executive committee, dictate the welfare activities of the company.

Special attention is given to protection against injury and to sanitation. The accident hazard can never be removed because of the human element—that is beyond the realm of possibility. Therefore, the company is trying to arrive at the point where the occupation is surrounded with every known safeguard and only the man is the hazard. In all parts of its business, at home and abroad, in the office force, in the factories, in the sales department—everywhere, the average interest of the individual in the business is greater than formerly. The saving of the waste here, there and everywhere is noticeable. The employes throughout the organization are vying with one another more and more to improve their respective branches of the business. This means profits for the stockholders, means extra compensation in various ways for the employes—in short, means co-operation that is real, and that is beneficial to one and all.

DOES LIABILITY INSURANCE COMPENSATE EMPLOYES FAIRLY?

By LOUIS B. SCHRAM,

Chairman of the Labor Committee, United States Brewers' Association.

THE workman, under our laws, assumes practically all the risks of his employment. The employer is required to furnish adequate tools, a safe place in which to perform his work and to exercise reasonable care in the selection of those men who direct the workmen in their work; and when he has done that he is absolved from further responsibility. All the risks inherent in the nature of the employment fall upon the workman.

It has been suggested that insurance against accident, and perhaps old age disability as well, could be provided through the existing liability insurance companies. This means that the employes would be insured in liability companies against all accidents, premiums to be paid by the employer, or jointly by the employer and employe. An arrangement of that kind would, in my judgment, prove entirely inadequate and unsatisfactory, the reasons being:

First, its high cost necessitated by the heavy expenses of administration and profit to be paid to the liability companies' stockholders;

Second, the great delay involved in the settlement of claims (long experience warrants us in making this statement), and

Third, the fact that the workman would ultimately receive but a portion, and sometimes a small portion, of the amount awarded to him because of the necessity of employing lawyers to look out for his interests.

If it is true, then, that the present system of liability insurance does not furnish the workman the protection which we all believe ought to be provided; that compensation dependent upon the initiative and volition of the employer can never be adequate, because it would never be universal; and that accident and old age insurance through liability companies would not meet the case, what is left?

Evidently there remains one solution of the question: Compulsory provision by legislation. I maintain that it is entirely feasible and, if worked out by a commission consisting of employers, workmen and public spirited citizens of ability, would result in systematic, practical protection of the workman, and this, in turn, would make for higher efficiency and the eradication of a host of evils that invariably follow where the bread-winner of the family is prematurely disabled.

THE FEDERAL LIABILITY LAW AS APPLIED TO NAVY YARD EMPLOYES.

By Admiral J. B. MURDOCK,

Commandant Brooklyn Navy Yard, New York.

THERE seem, apparently, to be three ways of treating this question of indemnity to employes. The first, and unquestionably the best, has just been dealt with at considerable length. If the work is done by the employers for and in the interest of the workmen, it is certainly more effective than any other method can be. The second seems to be to do nothing at all. That calls for the third, which is regulation by law.

The indemnity law for United States employes has now been in effect since August, 1908. It applies to all mechanics and artisans in the employ of the United States arsenals, navy yards, Panama Canal and in other public works.

The first section provides that payment shall be made in case of injury to men working under these conditions. The payment is to be limited to twelve months and no payment is to be made for a disability extending over a period of less than fifteen days. The only proviso is that there shall have been no negligence or misconduct on the part of the workmen. The Government takes the responsibility in full for all accidents which may occur. This, of course, is very different from some of the laws of the States, in which indemnity is sought which has to be secured by legal process. There is nothing of the kind here. The Government acknowledges responsibility at the very beginning.

The second section of the law provides for beneficiaries in case of death, or in case of a man who dies during the year from the effect of injuries received. This extends to the limit of a year's pay—that is, the pay that the man would have received if he had continued at the work he was doing at the time of the accident. It varies for different men, of course, as their daily wage differs a very great deal. The procedure is very simple for a Government law.

The Civil Service system is, of course, very complex. Our labor organization is something which, occasionally, seems designed to prevent any work being done at all. We are not allowed to do as we wish for fear we shall favor somebody. We are tied up quite rigidly, and under these circumstances it is certainly very pleasant to find that a law can be made for indemnity which is as clean and sharp-cut as this.

PREVENTION VERSUS CURE IN THE INDUSTRIAL WORLD.

By HENRY R. TOWNE.

President Yale & Towne Mfg. Co.

PENSIONS and old age insurance are designed to be a partial remedy for the disabilities and needs of old age. Anything tending to prevent or to delay the advent of these disabilities should certainly be recognized and encouraged. If effective, it not only defers the time when aid may be needed, but prolongs the period of activity and usefulness of the individual.

In considering the pension problem we are sometimes apt to forget or overlook the large expenditures which are being made continually for purposes tending to prolong the period of usefulness of employes and to delay the advent of disability. These expenditures relate to the following:

Heating and ventilating;

Sanitation, drainage and water supply;

Effective lighting, by day and by night;

General cleanliness of premises;

Wholesome drinking water, filtered if necessary and properly cooled;

Comfortable and sanitary lavatories;

Locker rooms, with individual lockers for each employe;

Emergency service; provisions for first aid to injured;

Removal of dust and noxious fumes, where these are incident to manufacturing processes;

Safety appliances on machines, to prevent or minimize danger of accident; and

Libraries, reading rooms and lecture rooms, where these exist.

In considering the broad subject of industrial insurance and pensions, it is pertinent to keep in view the character and influence of the expenditures thus made by the employer, especially in modern plants of the best type, and to recognize the substantial contribution thus made for the benefit of the employe.

In like manner, those who are active in forwarding the movement for industrial insurance and pensions, recognizing these facts, should make it part of their work, when studying individual plants, to note the extent to which welfare work of all of the classes above specified has been carried, to award praise where it is justified and to stimulate improvement where it is needed, especially in plants of the older type and of minor character and in localities where effective inspection and supervision have not yet been undertaken by the State.

NEW DEVELOPMENTS IN INDUSTRIAL LIFE INSURANCE.

By HALEY FISKE,

Vice-President Metropolitan Life Insurance Company.

I AM here to give you an account of one or two new developments in industrial life insurance. The first is what is known as "group insurance." The plan is that, if under the law a hundred or more can be gathered together who will take those policies, who will themselves attend to the collection of the premiums and pay them to us in bulk, a new table of benefits will be used, and that table as published—and I won't detain you by reading it—gives benefits from 25 to 33 per cent larger than the benefits given under our ordinary policies. This is a subject which may well interest you as an association composed of employers and employes. We are ready to co-operate with you to procure for the workingman life insurance in small amounts at cheap rates.

I may say that our regular individual insurance policies since your last meeting have been increased ten per cent in amount for the same premium. I pointed out to you last year that we were endeavoring to cut down the expense of industrial insurance. We have succeeded so well that, in July this year, we increased the benefits on the policies ten per cent and then made them retroactive on all policies issued on the plan adopted when the Armstrong Law went into effect, two years and a half before; and we even went back to all death claims that had been paid in the two and a half years, and sent an additional check for ten per cent to all death claims we had previously paid. The amount this cost us was $250,000.

The other subject I am asked to speak to you about is "welfare work." The company which I represent has in its employ about 14,000 people. We have been accustomed for years to take care of those who had been in our service for any length of time and became incapacitated. We find that among our policyholders about eighteen per cent die from tuberculosis. We are trying to help in the work of eradicating that disease. We have had three or four millions—three millions, I think, but it may be more—of pamphlets on tuberculosis delivered to our policyholders; an illustrated treatise showing how to prevent and how to cure it. If we can build a sanatorium, we propose to take care of our tuberculous agents and clerks, of whom there are no doubt hundreds in our employ. It is obvious that the question of taking care of policyholders is a difficult one. We have associated with us in this tuberculosis work various dispensaries throughout the United States, and we invite correspondence with any policyholder who is afflicted, and give him advice, and then refer him to the nearest hospital or dispensary.

In New York, Boston, Baltimore, Washington, St. Louis, Chicago and Cleveland we are trying, experimentally, the system of having bed-ridden policyholders visited by trained nurses. We are trying it as an experiment on the theory that we may help our mortality record and, I may say too, on the ground that a company which has under its care and contributing to its income 7,000,000 of workingmen owes some duty beyond the mere contractual relations which exist between a policyholder and his company.

SHOULD THE INDUSTRY BEAR THE BURDEN INCIDENT TO INDUSTRIAL ACCIDENTS?

By LEWIS W. PARKER.

President Columbia and Victor Mills (S. C.).

THE doctrines which have prevailed, heretofore, in our courts relating to accidents, viz., the doctrines of contributory negligence, of fellow servant and of assumption of risk, are legal principles which were honest, fair and properly applicable in the years in which they were adopted but, in the progress of industry, in the enlargement of industry, the time has come when there must be some change from these principles.

But whilst we may believe this, we must further recognize the fact that it is much more easy to abolish than to establish and that simply to abolish the defences previously recognized, as is constantly sought, simply to declare that the doctrines of fellow servant, of contributory negligence and assumption of risk, should no longer be fair defences, does not meet conditions. We must not only abolish but, in the very act of abolishing, conceive a new principle.

What is that new principle? It is that whilst the burden of the accident is no longer to be cast solely upon the employe, it must be brought home to the employe himself, not only that it is his duty to prevent the accident if it be within his power, but that he will suffer to some extent, at least, if this duty be not carried out, that it is his duty to co-operate with the employer in prevention of accidents and, if he does not exercise that duty, that there is, at least, a limit beyond which he may not go in seeking relief from the employer? The employer must be required to carry insurance in the interest of the employe, but the employe must be required to contribute to the cost of this insurance and permit be granted to the employer to deduct from the wages of the employe a proportionate part of the cost. As a matter of fact, I know that, in the end, the employer will practically pay, in the way of an increased wage to the employe, the amount which is deducted from the employe as a consequence of the cost of insurance, but by the deduction there is brought home to the employe the fact of the cost of the insurance, which must be determined by the number and character of accidents, which vary in reverse proportion to the degree of care that is exercised by the employe himself.

Co-operation between employer and employe is essential to reduce the proportion of accidents which certainly in America is astonishingly large. It matters not how earnest an employer may be in his effort to prevent accidents, this prevention can only occur when the employe is filled with the same desire and is earnest in co-operation with the employer. While the burden of compensation to the employe, if insurance be carried, may not be very great, yet it is to be recognized that this burden would put to disadvantage the industries of one community if the same burden is not to be cast upon like industries in other communities.

It is not sufficient that any one State or community provide for compensation to injured employes. We must bend our energies to seeing that provisions of similar character are made throughout the whole United States.

Other speakers at the annual meeting were:

A. H. GILL, Member of Parliament, of Bolton, England, and Secretary Operative Cotton Spinners' Association—"The Workmen's Compensation Act in England; Is It Just to Labor?"

A. E. PIORKOWSKI, Representing the Friedrich Krupp Company, Essen, Germany—"Workmen's Insurance of the German Empire."

LEE K. FRANKEL, Head Industrial Department, Metropolitan Life Insurance Company, New York City—"Insurance Plans in Foreign Countries Other than Germany and England."

LAUNCELOT PACKER, Attorney at Law, Washington, D. C., retained by Federal Government to Investigate English Compensation Act and Conditions in the United States—"Workmen's Compensation vs. Employers' Liability."

F. W. RAMSEY, Cleveland Foundry Company, Cleveland, Ohio—"Employers' Obligation to Safeguard Machinery and the Compensation Plan of the Cleveland Foundry Company."

W. G. COWLES, Secretary, Liability Department, The Travelers' Insurance Company, Hartford, Conn.—"How to Avoid Accidents More Important Than Compensation."

JOSEPH P. COTTON, Jr., Counsel for the Commission on Employers' Liability and Causes of Industrial Accidents in New York State, New York City—"The Work of the New York State Commission on Employers' Liability."

H. V. MERCER, Chairman of the Minnesota Employers' Compensation Commission, Minneapolis, Minn.—"Practicability of Workmen's Compensation Acts," "Constitutional Phase of Compulsory Compensation for Accidents."

(Continued on Page 22.)

NNUAL MEETING WOMAN'S DEPARTMENT THE NATIONAL CIVIC FEDERATION

THE Woman's Department of The National Civic Federation held its annual meeting at Hotel Astor, New York, November 22, 09, there being two sessions.

RS. HORACE BROCK, of Philadelphia, the chairman, presided. There were reports from tions and standing committees, and officers for ensuing year were elected.

RS. SAMUEL SPENCER, of Washington, D. C., chairman of the District of Columbia Section, of work being done in the Government offices re. She stated that a committee had been per- tted to go over the plans for new buildings and been able to suggest many improvements in the of rest, recreation, first aid to the injured and cheon rooms, a roof garden, lighting, sanitation other matters pertaining to the health and com- of the employes.

RS. B. FRANK MEBANE, of Spray, N. C., chair- man of the North and South Carolina Section, orted that through the influence of the Spray nmittee the mill owners have established a day rsery for the children of the operatives and a me for the young women employed in the fac- ies, to supplement other welfare work in opera- n, including a reading room, skating rink and usement hall.

RS. FRANCIS HIGGINSON CABOT, of New York, chairman of the New York and New rsey Section, reported the existence of four stand- committees, namely, Press and Publication, mbership and two working committees, one for Welfare of Industrial Employes and the other the Welfare of Government Employes. She gave complishments of committees on Cigar Factories, tionary Firemen, Recreation, Garment Trades, w Buildings, Printers and Lithographers, and action Employes, as well as committees on City spitals, Navy Yard Lunchrooms and New Govern- nt Buildings.

RS. WILLIAM H. CROCKER, of San Fran- cisco, is chairman of the California and Ne- da Section. The report of that section was sub- tted in the form of a communication by Mrs. John ns, secretary of the section, who reported the d of proper and pleasant homes for working girls, rents and boarding since the fire have increased, outlined a plan to meet the situation.

RS. J. BORDEN HARRIMAN, chairman of the National Committee on Welfare Work for In- strial Employes, reported that the members of her nmittee had visited factories and mines in the ghborhoods in which they live and that she had sonally visited, in the preceding six months, nty-one mills in New Hampshire, Massachusetts, ginia and North and South Carolina. Mrs. Harri- n stated that, inspired by the Garment Trades -Committee, the Industrial Employes Welfare nmittee is now engaged in collecting instances fine welfare work in cotton mill villages and min- for illustrated literature, to be circulated among ployers.

(Continued from page 21.)

E. McEWEN, Commissioner of Labor, State of innesota, and member Minnesota Employes' ompensation Commission, St. Paul, Minn.—"Rea- ons for Changing Existing System of Employers' iability."

LLIAM C. HANSON, State Board of Health, Bos- n, Mass.—"Dusty Trades in Massachusetts."

ORGE A. RANNEY, Chairman Advisory Board Welfare Work, International Harvester Com- any, Chicago, Ill.—"The Welfare Work of the In- rnational Harvester Company."

EPH A. HOLMES, Expert in Charge Technologic ranch, United States Geological Survey, Wash- gton, D. C.—"Coal Mine Accidents and Their Pre- ntion."

B. GARRETSON, President Order of Railway onductors, Cedar Rapids, Iowa—"The Operation the Federal Liability Law—Has the Railroad an Been Adequately Compensated?"

. CLYNES, M. P., Secretary Gas Workers' and aborers' Union, Oldham, England—"Present Pen- on System in England."

N WILLIAMS, Commissioner of Labor, State of w York, Albany, N. Y.—"The Need of Adequate ctory Inspection and Trained Inspectors."

DERICK L. HOFFMAN, Statistician, Prudential surance Company of America, Newark, N. J.— What Has Been Done in Foreign Countries to Pre- nt Industrial Accidents."

UST BELMONT, Chairman Board of Directors, terborough Rapid Transit Company, New York "The Insurance Plan of the Interborough Rapid ansit Company."

ARTHUR WILLIAMS, New York Edison Company, New York—"Industrial Insurance Funds—Do They Adequately Compensate?"

J. G. PANGBORN, Special Representative, Baltimore and Ohio Railroad Company, Baltimore—"Organized Relief."

WALTER S. MAYER, Post Office Inspector in Charge, New York—"Retirement of Superannuated Employes in the Federal Classified Service.

WILLIAM BUTTERWORTH, President Deere & Company, Moline, Ill.—"The Mutual Benefit Plan of Deere & Company."

W. H. MOULTON, Welfare Manager Cleveland-Cliffs Iron Company, Ishpeming, Mich.—"Compensation for Injured Workmen in Discharge of Their Duty."

R. W. CORWIN, M.D., General Manager Sociological Department, Colorado Fuel and Iron Company, Pueblo, Col.—"Prophylactic Suggestions."

J. N. REDFERN, Superintendent Relief and Employment Departments, Chicago, Burlington and Quincy Railroad Company, Chicago.—"Railroad Relief Departments."

EDWARD A. MOSELEY, Secretary Interstate Commerce Commission, Washington, D. C.—"Federal Employers' Liability Law."

W. L. SAUNDERS, President Ingersoll-Rand Company, New York.—"How to Save Human Lives in Mines."

T. P. O'CONNOR, M. P., England—"Free Discussion and Self-Government."

ANNUAL DINNER.

THE annual dinner of The National Civic Federation is an occasion whose opportunities lift commercial, political and economic questions to a broadly human and social plane. There the labor leaders, the financial and industrial captains, the political magnates and the university dons and doctrinaires meet in friendly spirit at the common table. Aloof from the heat and clamor of the daily struggle and grind, after a season of debate and discussion from opposing sides during the preceding meetings, the dinner guests take counsel together and with friendly voice talk over the issues in which they are interested.

The tenth annual dinner was pre-eminently of this type, and it stands alone among public occasions in its thorough representation of every phase of the intelligent life of the American nation. Attended by nine hundred men and women, with all its magnitude as to numbers and the brilliancy of surroundings, in the beautiful new ballroom of Hotel Astor, it was genuinely informal in its spirit and in all of its manifestations. As an indication of the representative nature of the occasion the names of a few of the Federation members and guests are given below.

President Seth Low, in calling the company to order to listen to the speeches, was warmly applauded when he said: "Here are representatives of the great captains of industry, as they have been called; here are representatives of the great legions of American industry who have achieved greater victories than the legions of Rome ever sought, and here, also, are representatives of the public, like myself, that sometimes finds itself ground between the upper and the nether millstones—that public which supports the industries and is supported by them."

Fresh from a two days' discussion of the pressing and insistent problems of industry and labor, and saddened by contemplation of the cruel toll of life and limb and health which is paid year by year by the nation's toilers, sobered and thoughtful after the plans and suggestions and difficulties voiced over ways and means to lift from labor the dangers and the burdens under which its men and women bravely live and work, the members of the Civic Federation sat down with their guests and the themes of the day's speeches—wage-earners' insurance and compensation for injuries—were first the subject of conversation at the tables and then most of the after-dinner addresses.

Mr. Darwin P. Kingsley, President of the New York Life Insurance Company, was intently followed as he spoke upon the moral obligation of employers under modern conditions, and as, commenting with severity upon the life insurance legislation of New York and of other States, he closed by declaring for the placing of interstate life insurance under Federal control.

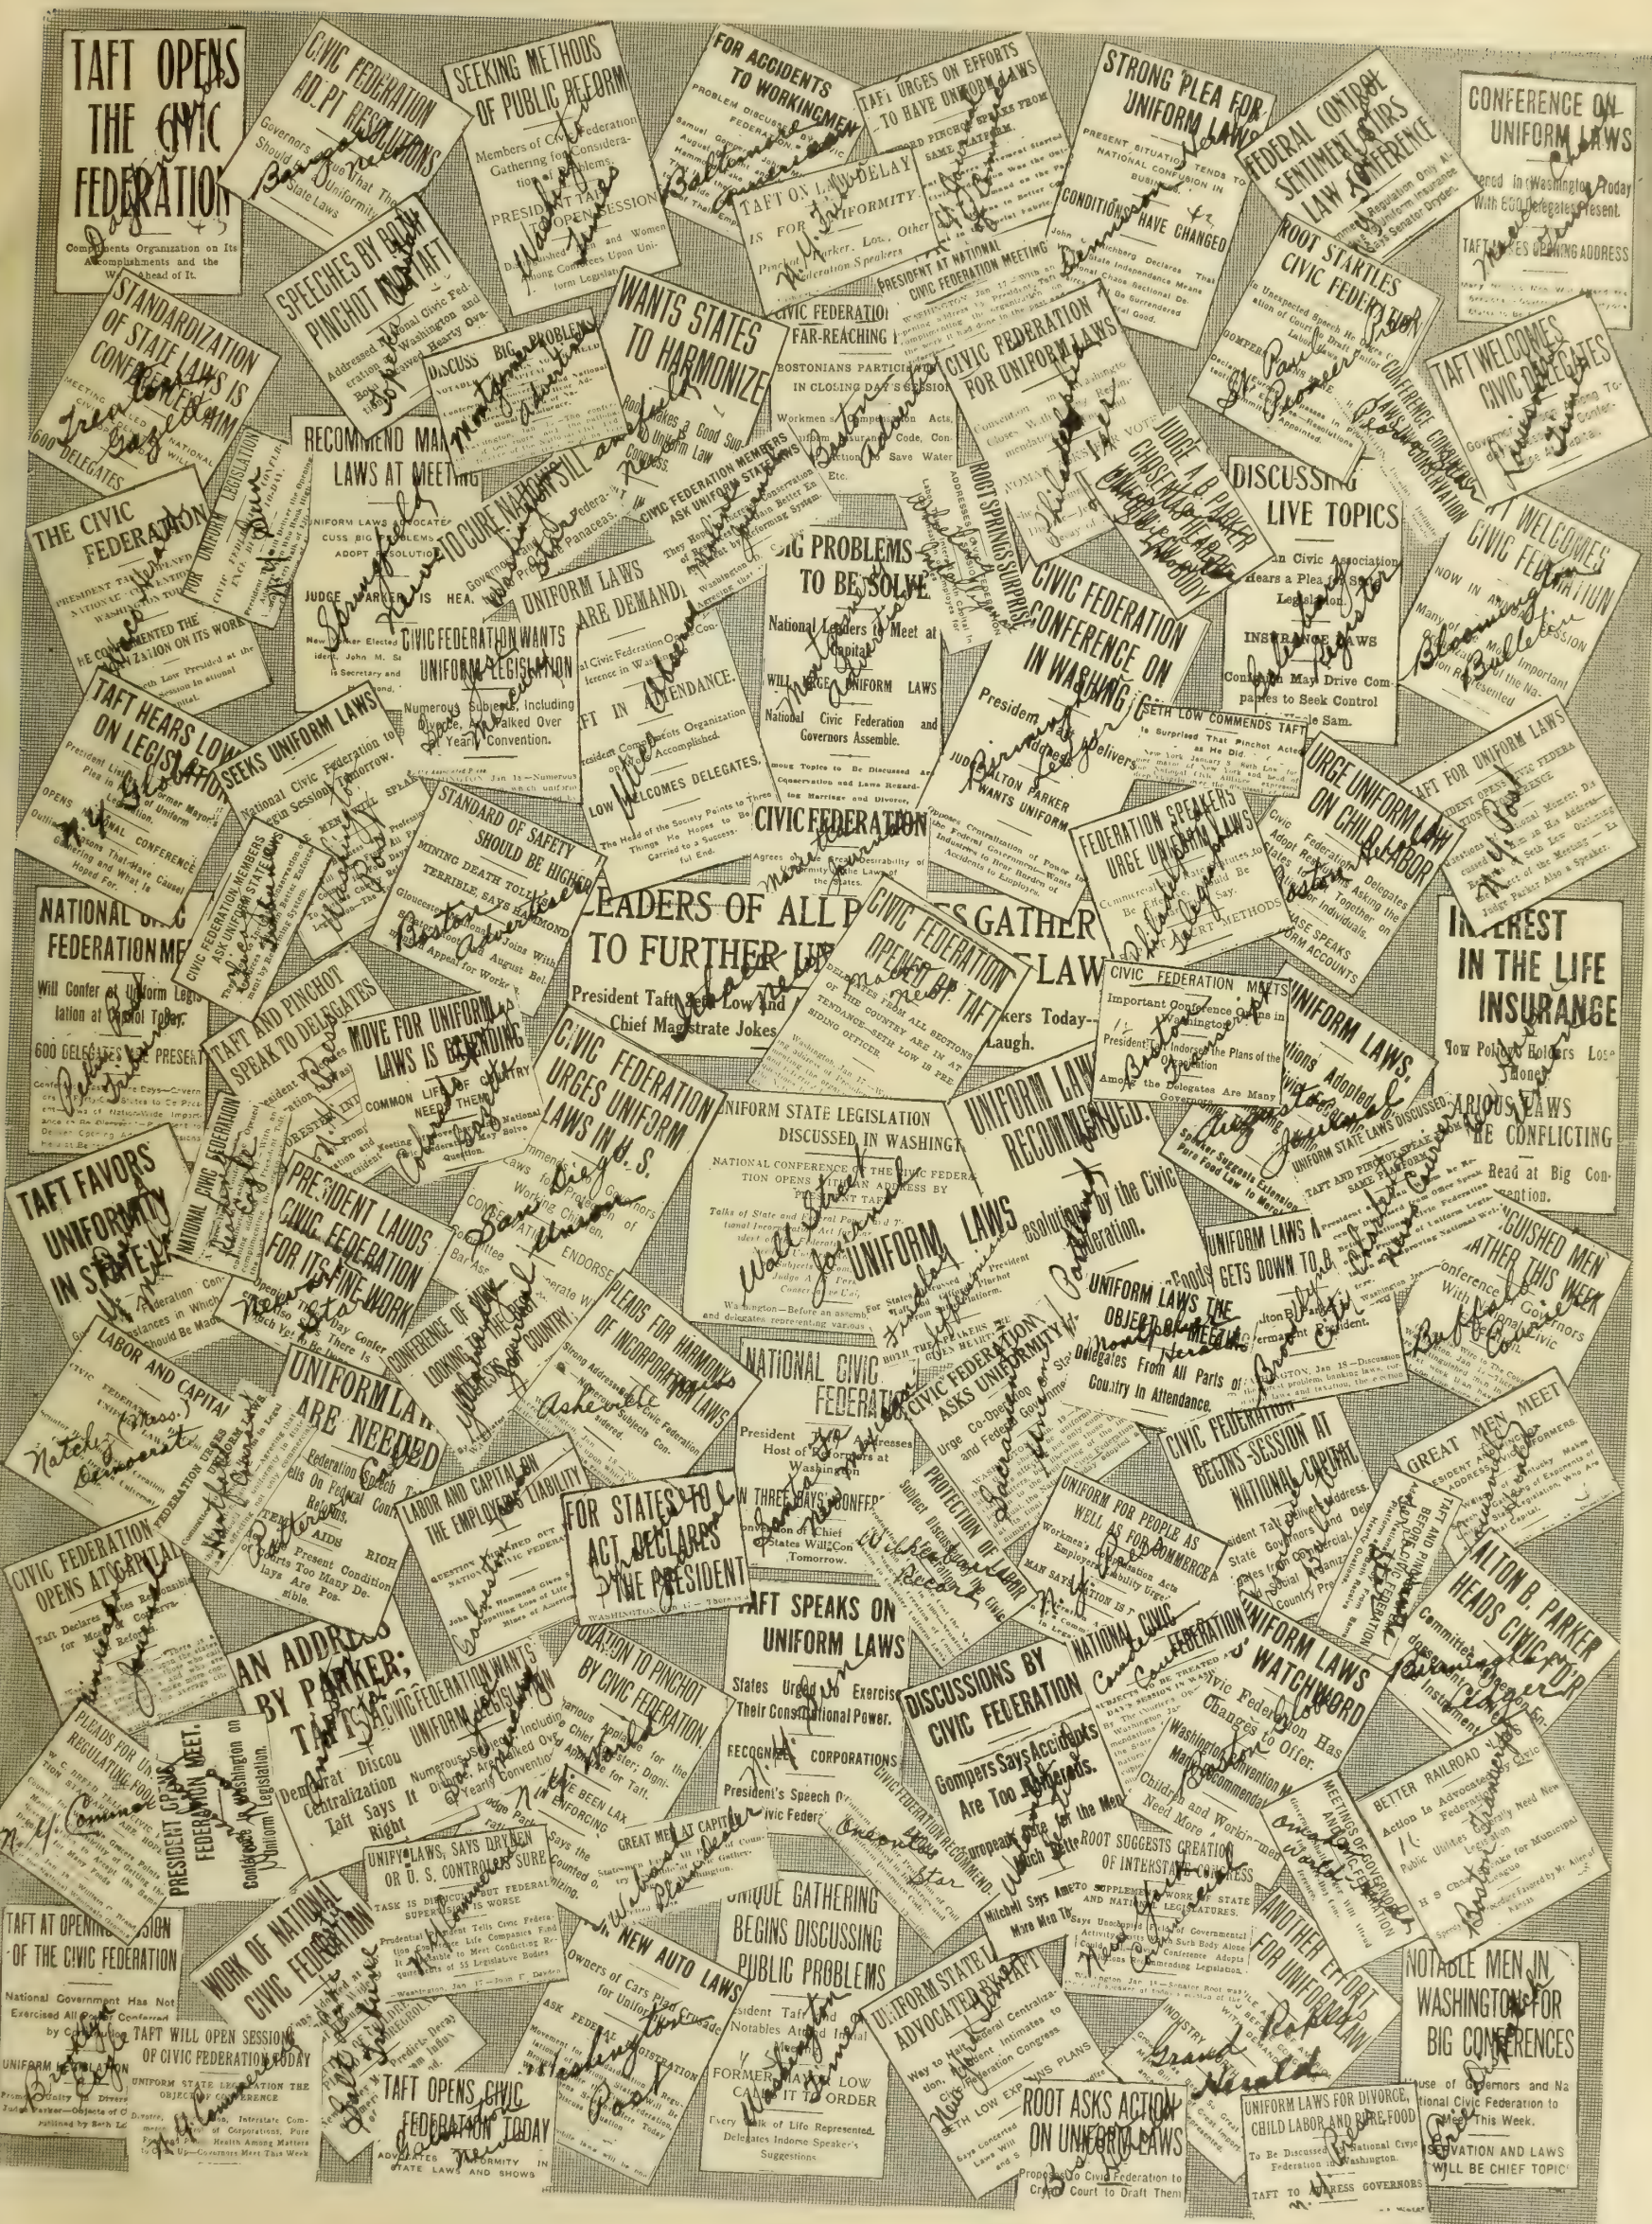
Mr. Samuel Gompers, in his talk upon his recent trip to Europe, was applauded by the entire assembly when he spoke of the disability under which Europe labors by reason of its everlasting preparation for war, its numerous customs barriers and difference of tongue, and said that the great advantage of America lay in the absence of caste. His earnest manner, as well as his words, again stirred the audience when he said: "I never felt how much I loved America until after my trip to Europe. To me it seemed a home-coming and the song, 'My Country, 'Tis of Thee,' had a new meaning."

Senator Elihu Root was the next speaker after Mr. Gompers. Referring to Mr. Low's suggestion that he speak only five minutes, Mr. Root took the diners into his confidence as he complained that the limitation was in "violation of the Sherman act to restrain" his output. He paid a tribute to The National Civic Federation as affording the very useful means of full and free discussion of difficult problems. Continuing, Mr. Root expressed sympathy with the prevailing opinion in the Federation upon the subjects under discussion. He declared our present system of dealing with those injuries that come to employes in our industrial life to be foolish, wasteful, ineffective and barbarous. "The cost of support," he said, "which is made necessary by the injuries suffered in a business is just as much a part of the cost of the business as the tools that are worn out and the material that is consumed. It ought to be paid for by the business as a part of that cost. * * * It ought to be paid for so that the man who has spent his life and his strength and his limbs as a necessary part of doing the business will feel that he has been paid in a way that preserves his manhood instead of being thrown upon charity in a way that destroys it."

Mr. John Mitchell spoke emphatically in criticism of the present employers' liability law and made a passionate plea for safeguards in all industrial enterprises. His hearers endorsed his appeal when he declared: "It is high time for the American people to stop and think. Is it to their credit that there are more men killed here in industry than in any other country in the world? In my trade not less than twenty men must die to-morrow. Every day from ten to twenty men who go down into the dark and damp of the mines never return home to their wives. This is the problem that cries aloud for solution." In conclusion he urged that some system of workmen's compensation be worked out by which compensation be paid, automatically, immediately after the accident and not from two to five years later.

T. P. O'Connor, M. P.—the well-known "Tay Pay" of the English-speaking world—enlivened the evening by his witty and sympathetic address. After his opening sentences he spoke earnestly and seriously, and, commenting on Senator Root's observations upon The National Civic Federation as a forum for public debate, Mr. O'Connor said: "No other country is like this. I do not know any country in the world where discussion is so free, so tolerant, so good-tempered as in America." As regards Ireland and England, he declared that while there has grown up in the last thirty years a new Ireland, it would not be candid of him not also to say that there has grown up a new England as well. The brilliant Irishman's talk was received with much favor.

Another Member of Parliament, A. H. Gill, one of the labor members of the House of Commons, was the last speaker of the evening. He spoke upon the Workmen's Compensation Act of Great Britain, saying that it applies, practically, to every worker in every occupation in the United Kingdom. This speaker commended the National Civic Federation's efforts to promote co-operation and understanding between employers and employes, and said: "There is no labor leader who is worth his salt who will have a strike if he can possibly avoid it, if he can get a satisfactory settlement by peaceable means. That is the position of our country. I believe that it is the position of all the reasonable men in your country. * * * So far as I can see the meetings of your Civic Federation tend to promote peace in industry. I believe they will tend to promote peace also nationally and internationally."



After this speech from one of our English cousins the chairman declared the dinner adjourned. Thus closed, in attendance, interest, enthusiasm and resolve for future practical effort, one of the greatest of the annual dinners of the National Civic Federation.

IMPRESSIONS GATHERED DURING EUROPEAN TRIP.

By SAMUEL GOMPERS.

THE reference of our honored president to myself in introducing me to you, suggesting that I might relate some of my impressions of the recent trip I made to Europe, caused me to wonder whether possibly he did not have in mind that I might expatriate myself. I have had many impressions abroad. I would prefer to deal, however, if I dared, with circumstances and conditions here; for, after all, that which I may have observed in Europe can have only a relative importance to our own activities at home. Before going further, I might say that I found myself in exceeding good company upon returning within the sight of these shores. I never felt how much I loved America until after my trip to Europe. To me it seemed a home-coming and the song, "My Country, 'Tis of Thee," had a new meaning.

During my journeyings I was carried to Great

Ireland, France, Holland, Belgium, Germany, Bohemia, Hungary, Italy and Switzerland. some of the principal industrial cities of those countries beside attending several es of labor. I had many consultations with esentatives of the wage-earners, and with and file, as well as the representatives of al class, and with the inquiring spirit of our not only looked around, but also tried to see the surface.

tes taken while abroad on that journey have on record, but on this occasion it is fitting ition should be made of some of the broad and lasting impressions made upon me, on king back over those weeks and weeks of traveling.

nited States is, both through fortuitous cir- ces and its civic and industrial development, ead of the world. Indisputably our people do d under the dreaded shadow of war, which ase constantly in the countries having large armies, with aristocracies of officers as- with the classes to whom war might be ly or politically profitable. The incessant ions for war and the ever-present possibili- ar in Europe only result in retarding human . The burden of standing armies especially n the wage-earners.

ave within our borders the largest area of de in the civilized world. The continual nterruptions to commerce by the tariff walls divide Europe—the limitations of tariff sys- thin the boundaries of cities in the same as well as the boundaries of each country— onsequent detrimental effects upon the pro- of farm and factory, entail national losses rred by us in anything like the same degree. cores of languages spoken on the continent e are obviously a hindrance to economic and intellectual development. Where a commer- in Europe spends years of his youth in the schools, acquiring perhaps three foreign lan- nder the delusion that it is education, ener- ung America goes to work, moves about in ntry, picks up the necessary qualifications for callings, and either as journeyman or in any sition takes his place among the big machines e complicated organization of a large industry ps turn out a product the cost of which, in ment and in transportation, is the lowest in ld.

European country are our common schools in their opportunities for education, in their siveness to the pupils, and in their quality as ry of wholesome, manly and womanly senti-

aring the railway systems of Europe with f America, the traveler is obliged to look rd and backward, for in that respect Europe century behind time.

product of the American press, taken in its cope, its magazines, its newspapers and its s a marvel to Europeans in output and cheap- price, as well as in richness of interest to all s of society.

he least difference by far lies in the rejection f the idea of caste. We have innumerable ircles, but none are secure in hereditary titles r settled exclusive privileges by which they manently take precedence of the people in rcles. We have done with kings and czars oles. Our heroes are men and women. In ublic gathering of our citizens the great ma- resent rejoice that the hard work of their ers helped to build up this representative tic Government. It is this democratic senti- at makes our republic possible and progres- d that regards the relation of our people to s as equals. We may be unequal in physique, al gifts, in acquirements and character, but stence is among us—I repeat—before the law equals. In Europe the higher orders of caste, nily prerogatives and privileges of property aw, form a power as well as social standing emocracies deny.

erica, also, the full scope of political rights is ed in our fundamental legal principles and ly in their practice. These are the right of by us of lawmakers and administrators, the f petition, of assembly, of freedom of thought eligion, of free speech and a free press. Pro- exists for a test under our Constitution of ne of these rights, as they may not yet be ely defined in every aspect of our rapidly de- industrial society.

clash of interests it may become the duty of the standard bearers of certain groups of zens to set out to ascertain the truth with re- what they and their fellow members believe e rights of those groups under the law and stitution, and, if they act under the advice of o in consequence of their legal training, prob- character have won the respect of the Nation, ecially, if they find division of opinion upon the questions at issue among the judges upon the bench, these standard bearers have no choice but to state and to restate their opinions, respectfully, yet firmly and even spiritedly to their fellow citizens, and to carry the issue on to the court of last resort. We protest against the conception that a law is broken until it is finally and fully decided what is the law.

Those who contribute to making the law clear, definite and settled, perform a public service, and in the meantime, if the clamor and misrepresentation of opponents put them in a false position before the general public, they must wait in patience and fortitude until the day when the Nation has spoken the last word, either through the highest judicial tribunal, where bias or prejudice or misconception is not to be expected, or through a change by legislation affecting the points at issue.

In some countries of Europe, and particularly in Germany, a wilful, and I might say a malicious, misrepresentation has been made of the purposes of this Federation. There it is charged that this Civic Federation has been organized to antagonize every effort of the working people of our country for their protection or for the material improvement of their condition. Digressing for a moment, I may say that in Germany there exists an organization known as the Reichsverbund, an imperial band or society, composed of military and naval officers, captains of industries and intellectual opponents to the organized labor movement of that country, and in order to throw odium upon the American labor movement, in order to misrepresent the Civic Federation and the association of labor men with the Civic Federation, the statement has been made that this National Civic Federation is the prototype of the Reichsverbund.

I am sure it is unnecessary and superfluous for me to explain to you who are assembled here to-night how the Civic Federation is organized, that its constituent parts bring together equal representation of employers of labor, of representative workmen and representatives of the general public, and that its primary purpose is, as its first law provides, to try to establish better relations between workmen and their employers. The history of the Civic Federation is its greatest asset, its helpfulness in the endeavor first to avoid rupture and to bring about amicable adjustment of contests which have arisen. Great contests have been prevented and other great conflicts have been brought to an amicable close. So I may say, even here, some selfish employers of labor are thus in exact accord with pretended friends of the toilers in denunciation of what we aim to do.

In The National Civic Federation no one surrenders his convictions. It is a forum where each contends for the principles and the faith and the hope that is within him. Though conflicts may arise among the members of its component parts, it has been helpful to a better judgment in the ennobling purposes of organized labor, and has never in its history done one act which has been or was calculated to be, or might tend to be, detrimental to the rights and the interests of the working people of our country.

In Europe the germ of a great awakening is evident on all hands. Much is going on there among the nations which will contribute to their own and our higher attainment. Industry, commerce, the means of transmitting information and enlightenment, and the intermingling of peoples coming from their country to ours, and moving from one European land to another, are making and will continue to make a broader and deeper fraternity than has ever transpired in the history of man.

As for our own people, the men of labor have always stood for home and country. They have done their share in bearing the burden and doing yeoman service in defense of liberty and justice. In return, they ask for and insist upon that justice, that equality before the law, without which a republican form of government is impossible. Organized labor is in accord with the fundamental principle of the Declaration of Independence—that all men are entitled to life, liberty and the pursuit of happiness.

IMPORTANCE OF SEEKING REFORM THROUGH STATE GOVERNMENTS.

By HON. ELIHU ROOT.

I HAVE a decree by the president of The National Civic Federation limiting my hours of labor on this day to five minutes and a contract in violation of the Sherman Act to restrain my output. I have come here welcoming the opportunity to express my sympathy with the purposes and my belief in the usefulness of this organization. The essential process of free government is free discussion. Discussion confined to people of the same way of thinking, with the same interests, the same purposes and prejudices, tends only to strengthen their common difference from all others and to increase the divergence between different groups of our people, but discussion, information, sincere and earnest attempt to get at each other's minds and to learn as well as to teach among people with different environments, different specific interests and different points of view leads to that common public opinion whose expression in the end comes the nearest to being the voice of God that man has ever attained. The essential quality of that discussion which makes a free people competent to govern itself is self-restraint, respect for the opinions and the wishes, aye, for the prejudices and the mistakes of others, a sincere desire for harmony of view, for reconciliation of difference and for the reaching of the right and just conclusion. As between individuals, as between groups of citizens, as between nations, isolation is the parent of misunderstanding, of hatred and of strife. Conference, mutual knowledge, the softening that comes from meeting our fellow men face to face—that is the process by which good citizenship and sound and rational judgment results.

I wish, also, to express my sympathy with the prevailing opinion that I perceive here upon the specific subject of your recent discussion. It seems to me that our present system of dealing with those injuries that come to the employes in our great industrial life is foolish, wasteful, ineffective and barbarous. To have a great enlightened nation ignoring the fact that in all industries there are accidents and that every crushed foot, every broken arm, every ruined life, is expended in the business, is a part of the cost of doing the business, is discreditable. All accidents, all injuries are subject to the law of average. The cost of support, which is made necessary by the injuries suffered in a business, is just as much a part of the cost of the business as the tools that are worn out and the material that is consumed. It ought to be paid for by the business as a part of that cost and not left to the charity of the Nation at large. It ought to be paid for so that the man who has spent his life and his strength and his limbs as a necessary part of doing the business will feel that he is being paid in a way that preserves his manhood instead of being thrown upon charity in a way that destroys it. I hope we have begun on the pathway that will lead to more reasonable and rational treatment of this subject.

I cannot altogether agree with the view taken by Mr. Kingsley as to throwing the burden of dealing with insurance upon the National Government. I have long thought that in the case of Paul and Virginia, which decided the question to which he referred, the Supreme Court of the United States was right. If, however, there were no other question but the question whether the National Government or the State Government should deal with insurance, it might not be so important and I might feel willing to say, as Mr. Jefferson suggested when he bought Louisiana, that the advocates of his view of constitutional interpretation ought to be willing to suspend their views for a little while for a particular and useful purpose. But you cannot confine the proposal to insurance alone. The framework of our Government aimed to preserve at once the strength and protection of a great national power, and the blessing and the freedom and the personal independence of local self-government. It aimed to do that by preserving in the Constitution the sovereign powers of the separate States. Are we to reform the Constitution? If we do it as to insurance, we must do it as to a hundred and thousand other things. The interdependence of life, wiping out State lines, the passing to and fro of men and merchandise, the intermingling of the people of all sections of our country without regard to State lines, are creating a situation in which from every quarter of the horizon come cries for Federal control of business which is no longer confined within the limits of separate States. Are we to reform our constitutional system so as to put in Federal hands the control of all the business that passes over State lines? If we do, where is our local self-government? If we do, how is the central Government at Washington going to be able to discharge the duties that will be imposed upon it? Already the administration, already the judicial power, already the legislative branches of our Government are driven to the limit of their power to deal intelligently with the subjects that are before them. This country is too great, its population too numerous, its interests too vast and complicated already, to say nothing of the enormous increases that we can see before us in the future, to be governed as to the great range of our daily affairs, from one central power in Washington. After all the ultimate object of all government is the home, the home where our people live and rear their children, with its individual independence, its freedom; and I am not willing, for the sake of facilitating transaction of any kind of business, to overturn limitations that have been set by the Constitution—wisely set—between the powers of the National and State governments. Great is our Nation. Let it exercise its constitutional powers to the fullest limit, but do not let us in our anxiety for efficiency cast away, break down, reject those limits which save to us the control of our homes, of our own domestic affairs and of our own local governments. For there in the last analysis under the protecting power of our great Nation, there must be formed the character of free, independent, liberty-loving citizens upon whom our republic must depend for its perpetuity.

PREVENTION OF INDUSTRIAL ACCIDENTS.

By JOHN MITCHELL.

IF The National Civic Federation had rendered no other service to the people of our country, it would have won a place of distinction because it has brought men and women together holding divergent views upon great public questions and enabled them to present their views and often to reconcile their ideas. For the past two days members of the Civic Federation have been discussing the subject of "Industrial Insurance" and incidentally the subject of "Prevention of Industrial Accidents." I am not at all sure that I am at this time in a frame of mind to discuss impartially and dispassionately the subject of industrial insurance. Within the last ten days a terrible disaster overtook many of my old friends and neighbors—men with whom I worked in the mines—and perhaps, more than others here, I have been shocked at that awful calamity.

There was a time when the criminal law was a matter of private settlement, when a man could relieve himself of responsibility for the murder of his neighbor by making a blood payment of so much money to the kinsmen of the murdered man. Our attitude toward preventable accidents is still much the same. If an employer pays a ludicrously inadequate sum to a workman who has been injured, or to the kinsmen of a workman who has been killed, society assumes that he has discharged his full obligation and that his concern in the matter has ceased. It seems to me that this is an entirely wrong attitude. It seems to me that the first consideration of society should be the protection of the men who are least able to protect themselves. The recent President of the United States—Mr. Roosevelt—in a letter to the Society for the Exposition of Safety Devices and Industrial Hygiene, made this very significant statement: "As modern civilization is constantly creating artificial dangers to life, limb and health, it is imperative upon us to provdide new safeguards against the new perils. In legislation and in our use of safety devices for the protection of workmen, we are far behind European peoples and, in consequence, in the United States the causalities attendant upon peaceful industries exceed those which would happen under great perpetual war. Many, even most of these casualities are preventable and it is not supportable that we should continue a policy under which life and limb are sacrificed, because it is supposed to be cheaper to maim and kill men than to protect them."

And what is probably more important, the deaths that result from violence constitute only a small proportion of the industrial casualties. The slow death that comes from working in a vitiated atmosphere, from breathing the fine, sharp dust of metals, the death that comes from working in constrained and unnatural postures, and the slow death that comes from over-exertion, or from under-nutrition, swell beyond computation the unnumbered victims of a restless progress.

Is it not high time that we should stop and think? Is it not high time that the American people should recognize and assume the responsibility that rests upon them? It is not to our credit that in America, in this country we all love, more men are killed in industry, more men, both in the aggregate and in proportion to the number employed, than in any other country in the world. In my own trade four men are killed for each one killed in other countries. In my trade, to-morrow, not less than twenty men must die. Every day the dawn breaks, from ten to twenty men who enter the darkness of the mine return no more to their wives and loved ones. This is a problem—a living problem that cries aloud for solution, and I am pleased to say that The National Civic Federation, denounced as it is by the extremes of labor and capital, is doing its full share to bring about an intelligent understanding of the requirements of the occasion and the means of prevention.

I am heartily in favor of workmen's compensation. I believe that our laws should be so amended, or that such contracts should be made between employers and workmen, that when a man is injured or a workman is killed, the money needed for the relief of the injured workman or for the relief of the family of a workman who has been killed, should be available at once, not five or ten years after the death or accident occurs. Only a short time ago I was reading in a magazine an article regarding an accident that occurred in Chicago some twenty-one years ago. A cargo of cotton was being taken through the Chicago River and an accident resulted—an explosion occurred in which a large number of sailors were injured and killed—and twenty-one years after the explosion occurred a commission made a preliminary report as to the cause of the accident. That is, of course, an exceptional case, yet every day accidents occur, the settlement for which takes place from two to five years later. A workman's compensation act or a compensation agreement that would work automatically is what we need—one that will give relief immediately when the accident occurs.

A great philosopher once said that a free man was one who lived in a country where there were no slaves and I believe that a happy man is one who lives in a country where there is no avoidable misery. I do not believe that a person has a right to happiness if there is avoidable misery which it is within his power to relieve.

It seems to me that in our mad rush for wealth and power, for idleness and leisure, we are not properly regardful of the interests and the happiness of our neighbors. It seems to me that no country is really and truly great that is not concerned about the welfare of the humblest of its citizens or the least of the little children in the factories.

And, ladies and gentlemen, so far as the men and women of The National Civic Federation are arousing people to the necessities of the occasion, so far as The National Civic Federation is bringing men and women of divergent views together, enabling them to unite on a sane constructive program looking to the betterment of all the people, The National Civic Federation deserves the support and commendation of all right thinking people. I think that among its many achievements the one of which it can be most proud is that it has won the condemnation of the extremes on both sides. When the extremists on the side of capital and the extremists on the side of labor can find nothing to commend in the work of The National Civic Federation, it is a pretty good guarantee that it is doing useful service. It still has much to do. There are great problems to solve; there are great achievements to accomplish; and if The National Civic Federation is supported as it should be and as it has been, there is no doubt in my mind that it will continue to render to our country and to all our people a useful and beneficial service.

"LIFE INSURANCE AND THE MORAL OBLIGATION OF EMPLOYERS TOWARD THEIR WORKINGMEN."

By DARWIN P. KINGSLEY,

President of the New York Life Insurance Company.

THE growth of life insurance and the development of a deep sense of responsibility on the part of employers of labor toward their employes are contemporaneous and kindred phenomena. They represent a better knowledge of the value of human life and a recognition of the increasing demand now fairly made on the controlling forces of society by age and industrial misfortune as well as by infancy, congenital incapacity and weakness. There are sound reasons why corporations should avail themselves in this work of the highly developed system of insurance and annuities presented by the responsible insurance institutions of this and of other States. Any effective system, if established by corporations independently, will be based on the principles and methods used by the insurance companies, and, therefore, the work for obvious reasons is in the end likely to be more effectively and more economically done by men who are experts and specialists than by men who undertake it with no special training and with minds chiefly occupied by the demands of other lines of work.

The energy of life insurance management, in other words, and the obligation which the laboring man feels toward his family, have in their development far outrun the sense of obligation of the employer. We have now reached the point when the employer is beginning to do his part, but as yet he has only made a beginning. That he will do more is certain; that he will do much is almost equally certain. That existing insurance institutions will be utilized is, I believe, a necessity. But if this is to be done there are certain interfering conditions which must be dealt with before any such plan, however desirable, complete and beneficent, can be carried into effect.

First, insurance—and other business, too—must be relieved of the annoyances and burdens which attach to compliance with the behests of forty-six sovereign masters—forty-seven now, since the general government has decided to create a Federal Insurance Bureau for purposes of taxation only. Business is faced by the reactionary effect of having within our own country to deal with forty-six different frontiers, and is being paralyzed by the fact that the individual States are attempting to supervise affairs that comprehend and relate to all the States. In other words, under the plea that States' rights must be preserved, the States are invading the national domain and are enormously retarding national development.

The possibilities of social betterment which lie in a wise joinder of the function of insurance in its various activities on the one hand and the moral obligation of the employer of labor on the other are substantially unlimited, and as yet have been barely tested. But before any such joinder can be made in any effective way, interstate insurance must be placed under Federal control, and some so-called reform insurance laws in this and in other States must be revised and rewritten by fair-minded men

---

Among those present at the tenth annual dinner of the National Civic Federation, held Tuesday evening, November 23, 1909, at Hotel Astor, were:

Hon. Seth Low and Mrs. Low.
Hon. Elihu Root.
Mr. Samuel Gompers.
Archbishop John Ireland.
Mr. and Mrs. William R. Willcox.
Mr. Isaac N. Seligman.
Hon. George B. Cortelyou.
Mr. James O'Connell.
Mr. and Mrs. Darwin P. Kingsley.
Mr. and Mrs. John Mitchell.
Mr. and Mrs. John Temple Graves.
Mr. Benedict J. Greenhut.
Mr. and Mrs. Robert L. Parrish, West Virginia.
Mrs. B. Frank Mebane, North Carolina.

"WOMEN LEADERS OF WASHINGTON UPLIFT."

(From the New York World, February 14, 1910.)

WHILE statesmen wrangle on Capitol Hill, these Washington women are effectively doing whatever they put their hands to:

Mrs. William H. Taft, mistress of the White House; Mrs. Richard Wainwright, wife of the admiral; Mrs. John Hays Hammond, wife of the mining engineer, who is confidential adviser to President Taft and head of the National League of Republican Clubs.

These ladies are members of the Welfare Committee of the National Civic Federation, for Washington, and more particularly members of the Sanitation Committee. In that capacity they reformed the sanitation in the Government Bureau of Engraving and Printing. The process was simple. They appealed to the director, who said he would be glad to make any improvements necessary, but he didn't have the authority. He got it, almost immediately, from the White House.

Then the committee discovered that the ventilation of the Census Office, where 1,500 men and women are employed, was bad. Again the director agreed with them. Mrs. Taft took the matter up with the President and again the authority came at once. Fans, insuring purer air, will now be put in.

Next, the committee will take up the Treasury Department and it seems probable that conditions in all the bungalows and catacombs called public buildings in Washington will be improved in the course of this administration, if the committee retains its enthusiasm.

Much of the credit for the reforms effected is due Mrs. Wainwright, who, as chairman of the Committee on Sanitation, has been quietly conducting a far-reaching campaign for the betterment of the sanitary conditions surrounding women workers in Washington. She has visited the Government departments, the department stores and private offices in which women are employed.

The project of a lunch room for the women employes of the Washington Navy Yard has been a favorite one with Miss Anne Morgan, daughter of J. Pierpont Morgan, and one of the most enthusiastic workers in the Federation. Miss Morgan believes that Uncle Sam should be a model employer.

The Treasury Department, which employs a larger percentage of women than any other department, will absorb a large share of the attention of these Federation women. Like the work they have accomplished elsewhere, it will be done on the "gumshoe" plan and without any fanfare of trumpets. Feminine diplomacy and tact will have their share in the work and the sympathies of high officials will be enlisted whenever possible.

The Federation is counting much on Mrs. Taft, whose practical common sense and knowledge of Washington conditions is much valued by her associates. During her husband's term as Secretary of War, Mrs. Taft's name was enrolled among those of the founders of the Women's Welfare Committee of the Federation, which numbers among its members Mrs. Hanna, widow of the Senator, who founded the Federation; Mrs. Samuel Spencer, widow of the president of the Southern Railway; Mrs. John B. Henderson, one of the most progressive women of Washington; Mrs. Larz Anderson, Mrs. Archibald Hopkins and other women equally well known throughout the country.

While the work in Washington will be concentrated on the departments, private employers will receive attention. For weeks the committee has been gathering statistics relating to conditions surrounding the women and girls in department stores.

The Federation believes that Washington is an ideal city for this reform work, for the reason that its feminine population outnumbers the masculine by 16,000.

LABOR'S DANGERS AND TRAGEDIES TOLD

INDUSTRIAL ACCIDENTS, THEME AT ANNUAL MEETING OF THE CIVIC FEDERATION OF NEW ENGLAND—SETH LOW, FREDERICK P. FISH AND JOHN MITCHELL SPEAK

(From Boston Globe.)

THE annual meeting of the Civic Federation of New England was held in Boston January 26, there being present about 400 members and guests, including some of the most prominent business men and representatives of labor in this section of the country. There were also present in the gallery a number of women.

After the business meeting the question of "Industrial Accidents," which is engaging the attention of the national association and all of the industrial States, was discussed by John Mitchell, ex-president of the United Mine Workers of America; Hon. Seth Low, president of the National Civic Federation, and Frederick P. Fish, ex-president of the American Telegraph and Telephone Company.

All the speakers deplored the present system of laws by which employes recover, or seek to recover, damages for injuries or accidents, because of the time it takes to get a trial and judgment, and the small portion which eventually goes to the victim or the family of the victim. Of the $100,000,000 paid out for accidents in the United States in 1907 only $22,000,000 went to the victims. The balance went into costs of litigation, etc.

President Tuttle, of the Boston & Maine, who is also President of the Federation, presided. Previous to the discussion there was a business meeting, at which officers were elected.

Frederick P. Fish.

Mr. Fish believed that in any solution of the problem care should be taken that the fundamental principles of the present liability law be not materially changed, especially the feature which requires reasonable personal responsibility. During his speech he said:

"If it is true that we are behind the times in this country in the number of accidents we have, isn't it our first duty to find the cause and then the remedy? I don't know the cause, but I believe that if the Civic Federation will take hold of the matter in a scientific manner, if found it will be corrected. I think the laws regarding employers' liability never go as far as the circumstances demand. If proper attention were given to the making of machinery and conditions of work as safe as possible many accidents would be prevented.

Workmen Careless.

"Workmen themselves are a very careless crowd, and that in a way is very much to their credit. I have little respect for a man who is always looking out for his hide; but on the other hand recklessness is to be deplored. I believe rules should be made and enforced to prevent employes from being careless.

"Something should be done so that money paid in injuries should go to those who are hurt. I think the law of Massachusetts pretty good as it stands, and think some things in it should never be changed. I think no man should be compensated for injury due wholly to his own fault. What we need is a new kind of a scientist who can go into the future from the present and past, analyze facts, go forward to the future and see how to shape the development of known facts for the best interests of the human race.

"Hitting the Wrong Target."

Hon. Seth Low, President of the National Civic Federation, said in part:

"I think the trouble with the employers' liability law, though aimed well, is that it hits the wrong target.

"A few years ago I built a house in the country, and it pleased me to do it by day labor, employing the men myself. I realized that my liability as an employer was very direct under these conditions, so I took out employers' liability policies of different sorts. Happily the only serious accident was the loss of a finger on the left hand by a carpenter. That accident happened about the beginning of September and the work closed the first of November. With great difficulty I persuaded the insurance company to let me keep the man on my payroll as long as my work lasted. I wanted to pay him until he was able to begin his work again in January, but that they absolutely declined; they would not let me pay him without forfeiting my insurance and it cost me a great deal, and that is what led me to say that the policy which I had taken out because of the employer's liability that exists under this law protected me, but it did not go to the fellow that was hurt.

"That is not the conception behind the law in my judgment. I then began to look into the question and I discovered what Mr. Fish said he learned in Washington—that out of a sum of $25,000,000 believed to have been paid in 1907, 20 per cent was paid to brokers, 20 per cent to insurance companies and 20 per cent for litigating claims, leaving 40 per cent for the person hurt. And the general belief is that that is usually divided half and half. So that out of this vast sum, which is already paid out of the business to save the employer from his liability for the workman, only 20 per cent reaches the person who is hurt. That is the reason why I say that the law as it stands to-day hits the wrong target."

John Mitchell.

The German and English systems of compensation for injuries were referred to by several speakers as examples to be studied in seeking a solution of the problem for this country. Mr. John Mitchell also suggested State bureaus of safety devices and hygiene, which should secure drawings of safety devices from all over the world and furnish these to manufacturers and employers generally, thus affording all classes an opportunity to learn about such devices. He said:

"It is all very well for a man to receive $1,000 or $2,000 for the loss of an eye or a leg, but it is much better for the man, as it is for society, that the eye or the leg be not lost.

"It is true, as has been said by Mr. Fish, that many accidents are due to carelessness, but I dare say that if the American workmen were to propose in a formal and definite way to exercise all the precautions exercised by the workmen of other countries the employers of the United States would not be willing to make that sort of contract with them.

"If the American workingmen could have their present wage scale for one-third less work they would be perfectly willing to exercise all the care that is exercised by the workmen of the old world. The American bricklayer lays one-third more bricks than does his brother across the pond. The American miner mines one-third more coal than does the miner of other countries, so that the carelessness which the courts declare has been responsible for the large number of casualties is as a matter of fact carelessness which we cannot control. I have found from investigation I have made and information that has come to me that where workmen are members of trades unions accidents are not so numerous or so serious as where the men are not organized."

Whole Principle to Be Changed.

"I am thoroughly convinced that we must change the whole principle of responsibility for industrial accidents. As has been pointed out by Mr. Fish and Mr. Low, we are wasting 80 per cent of the money now paid by employers.

"I have made some study of the German system and of the English system, and I believe that the English system of compensation would be most practicable in our country. In Germany they have developed the most comprehensive system of workingmen's insurance and compensation that is known in the world. What we ought to adopt is a system which will give us immediate relief, that will place upon employers no greater responsibility and no greater burden than we can help putting upon them; but we ought to place the burden on the industry, that is, place it on society, because when you put it on industry you have in the last analysis put it upon society.

"I believe in connection with your State factory department or your labor department you should establish a bureau of safety devices or industrial hygiene, that you ought in that bureau to collect from every country in the world the drawings of safety appliances, and that these safety drawings and appliances should be sent out to your railroad managers, to your factory managers and to your mill managers in order that they may know what safety appliances have been adopted in other industries and in other countries. If the State would supply that information to every employer it would enable the employer to put on his machines protective devices which he is even now anxious to use if he only knew about them and their value."

Letters from Friends of Cause.

Secretary Henry Abrahams read letters of regret from prominent men that contained matter pertinent to the subject discussed. The first of these was from Charles P. Neill, United States Commissioner of Labor, in which he said: "Our present laws, both Federal and State, are thoroughly unsatisfactory, alike to employers, to wage-earners and to the thinking public. The principle embodied in our statutes dealing with remuneration for industrial accidents is a principle which has been discarded by practically every other industrial country to-day."

W. S. Stone, Grand Chief of the Brotherhood of Locomotive Engineers, in his letter said: "This is something that has not been given the attention it should, and something that the laboring classes must look to in the future for some remedy."

Archbishop's Letter.

In his letter Archbishop Ireland said: "The number of industrial accidents annually occurring in the country is appalling. Something should be done, if America be worthy of its fame as a civilized country, to reduce in number those accidents, and, when accidents do occur despite all reasonable precautons, to alleviate the remediable consequences resulting from them.

"All things considered, the simplest and fairest solution is to place the responsibility of compensation for accidents upon the industry within the sphere of which they have arisen. Those who are impoverished through industries cannot be left to starve, and it is not those who did not profit by the industries who should be called upon to make compensation for damages caused thereby."

Officers Elected.

The officers elected at the business meeting were as follows: President, Lucius Tuttle; Vice-Presidents, Frank H. McCarthy and Louis D. Brandeis; Treasurer, John Mason Little; Recording Secretary, Henry Abrahams; Secretary, John B. [illegible] Executive Committee:

On the part of the public: W. Murray [illegible] Dalton; Henry L. Higginson, Boston; Bishop William Lawrence, Boston; William J. Tucker, Hanover, N. H.; Louis D. Brandeis, Boston; John Mason Little, Boston; William A. Gaston, Boston; William F. Henney, Hartford, Conn.; Thomas I. Gasson, S. J., Boston; Frederick P. Fish, Boston; W. H. P. Faunce, Providence, R. I.; Charles S. Hamlin, Boston; Alvah W. Sulloway, Franklin, N. H.; Hayes Robbins, North Adams.

On the part of employers: Lucius Tuttle, Boston; William L. Douglas, Brockton; Amory A. Lawrence, Boston; Charles H. Taylor, Jr.; J. L. Richards, Boston; T. E. Byrnes, Boston; C. L. Edgar, Boston; J. H. Hustis, Boston; P. F. Sullivan, Boston; Garrett Schenck, Boston; Arthur T. Lyman, Boston; W. C. Winslow, Boston; James Logan, Worcester.

On the part of wage-earners: Frank H. McCarthy, Boston; John Golden, Fall River; Henry Abrahams, Boston; P. F. McCarthy, Barre, Vt.; Samuel Ross, New Bedford; Francis J. Clarke, Brockton; Dennis D. Driscoll, Boston; Thomas F. Kearney, Providence, R. I.; Edmond F. Ward, Boston; John J. Connolly, Boston; P. F. Sheehan, Brockton; William H. Frazier, Boston; Arthur M. Huddell, Boston; Thomas P. Curtin, Boston.

WELFARE WORK METROPOLITAN LIFE

(Continued from page 28.)

duty ten hours, being relieved for two and one-half hours by fifteen minutes' recess.

The clerks in the home office are provided with little metal lockers in which to keep the towels furnished. They are washed and laundered free of charge. There are automatic soap-holders attached to each marble washbasin, and all the mirrors, marble floors and sanitary arrangements are kept scrupulously clean, matrons always being in attendance. Large metal lockers and showers are provided for the stationary firemen and engineers.

There are also medical rooms furnished, with couches, for the use of sick employes, and competent physicians are in attendance.

All apparatus throughout the building, such as those used for carrying cool air into the boiler room, and for filtering drinking water, are of the most modern type.

To ensure efficiency, the com- ed it good policy to provide nourishing food h of its employes. This luncheon is not con- a gratuity but rather as a supplement to the which are as high if not higher than wages offered in the same line of work. There is on large waiting list of applications for employ- t the company.

There is a gymnasium for the use of both men and women employes, equipped with all the latest appliances, including lockers and shower baths. A physical instructor attends each afternoon to coach clerks. The men even find sport in having racing and hurdling contests, and many of them have joined the Metropolitan Basket Ball and Baseball Teams. As the office hours are from nine to four-thirty, and nine to one on Saturdays, there is ample time for clerks to take advantage of the gymnasium before or after hours. Certain days in the week are set aside for the men employes and others for the women employes.

The employes are, also, allowed a large portion of the roof for recreation, such as running contests and other athletic diversions.

The assembly hall is used by the women clerks during lunch hour and after office hours for amusement, particularly for dancing. From time to time the newly organized but already famous Metropolitan Glee Club, to which all men employes may belong without charge, holds its concerts in this beautiful hall, which seats over one thousand. Tickets for these concerts are distributed to the office staff without cost. The demand, however, has been so great that it is frequently necessary to repeat the concerts in order that all the employes may have the opportunity of attending.

Employes, Metropolitan Life Insurance Company, Exercising on Roof Home Office Building.

The company, for a number of years, has maintained a staffs' saving fund, to which the employes may contribute. The funds thus obtained are invested by the officers so as to bring the largest return. The fund is administered by a board of trustees, of which some of the officers are a part, and some of the men from the field are members. The company agrees to add 50 per cent. to the contributions of the members of the staff, either in the field or in the home office. One may withdraw from the fund at any time and for any cause. If voluntarily retiring, an employe takes out of it all the money put in, plus all interest accumulations, varying between 5 and 7 per cent., except in the unexpired year of withdrawal, when it is 3 per cent. from the last interest day to the date of withdrawal. Where an employe stays in the entire fund—that is, contributions, interest earnings, the company's contributions of 50 per cent., and the interest earnings—on that, are all, in one sum, paid to the widow in case of death or to the disabled person in case of invalidity. According to the last report there were 4,433 members, of whom 1,918 are agents, 1,051 of the clerical force and 1,464 superintendents and assistants. The average rate of interest earned has been over 10 per cent. and the fund amounts now to $628,000. As an illustration, there is one employe whose deposits amount to $1,390 (he is a home office clerk), and with the company's subscription and interest he now has in the fund $2,282; there is one superintendent who has deposited $1,200, and the additions to that have been $900; there is an assistant who has deposited $802 and he has to his credit $1,395; there is an agent who has deposited $689.81, and with the company's subscription and interest there is to his credit in this fund to-day $1,273. It is a system by which invalidity and physical incapacity may be provided against by the clerk or agent or assistant who is an employe.

Each employe, including the stationary firemen and engineers, receives a vacation of two weeks each Summer at full pay. As the years of service in the company increase, so does the duration of the vacation until finally, at the end of twenty years an employe receives a vacation of one month at full pay. Vacations in the shape of an occasional day off are allowed to the elevator men, porters and scrubwomen at full pay.

The elevator men work in ten-hour shifts, the first shift starting at 8 in the morning and remaining

The National
Civic Federation Review

Vol. III NEW YORK, JULY 1, 1911. No. 11

A BROAD PROGRAM OF CONSTRUCTIVE WORK

LEADERS OF AMERICAN THOUGHT AND ACTION ARE GRAPPLING WITH GREAT PROBLEMS THROUGH THE NATIONAL CIVIC FEDERATION—SCOPE OF ACTIVITIES IS COMPREHENSIVE

THE past year has witnessed a great extension of the influence of The National Civic Federation through the organization of State Councils in twenty-seven States. The meetings held for the purpose of organizing these Councils were, as a rule, held in the State House, the Governors rendering great assistance, and in most instances presiding at the meeting.

The purpose of the State Councils is to urge uniform State legislation on those matters that are intrastate: to work for the co-ordination of State with Federal legislation where conflict now exists and to aid in securing Federal legislation on interstate matters that are concededly in the interest of public welfare.

The more important subjects which will be considered by the Councils are:

"Regulation of Industrial Corporations;"
"Regulation of Railroads and Municipal Utilities;"
"Banking and Currency;"
"Taxation;"
"Insurance;"
"Reform in Legal Procedure;"
"Pure Food and Drugs;"
"Workmen's Compensation;"
"Industrial Mediation and Arbitration;"
"Good Roads and Automobile Regulation;"
The Commercial Measures Drafted by the Commissioners on Uniform State Laws ("Negotional Notes," "Bills of Lading," etc.)

The importance of this movement to all business and commercial institutions is clearly recognized, when we consider that our larger corporations—such as the railroads, telegraph, insurance, banking and trust companies and, in fact, so far as taxation is concerned, all manufacturing concerns whose plants are in different States—are subject to forty-six masters, each with a mind quite different from that of the others. The "interminable" law's delay, the clashing of the States upon the question of regulation of corporations and combinations, the diversity of State laws on ordinary commercial matters, such as warehouse receipts, bills of lading and negotiable notes, the urgent need for a uniform bill on compensation for industrial accidents, all give emphasis to the seriousness of our present chaotic legislative situation.

Governor Hadley of Missouri well voiced the views of Governor Marshall of Indiana, Governor Davidson of Wisconsin, Governor Deneen of Illinois, Governor Shallenberger of Nebraska, Governor Draper of Massachusetts and Governor Stuart of Pennsylvania when he endorsed the movement in the following language:

> "There is no one topic proposed for discussion by the Federation that has any political bias. They are all of the utmost importance, and should be studied and acted upon from a non-partisan point of view. One reason why the uniformity of laws throughout the States is difficult to secure is because political parties rule them. The question is not what are the merits of the proposition we put forward, but what are the politics of the man who puts this proposition forward. Measures are favored or opposed according to the political complexion of the proponents and of those to whom they are proposed. This is a mischievous system which should be put out of existence in connection with such laws as those contemplated by the uniform law movement, and such a body of representative men from all classes as you have here to-night can, working together, bring about a great reform in this matter. I hope to co-operate with the organization that has been formed here in placing uniform laws on the statute books of Missouri."

REGULATION OF COMBINATIONS.

The regulation of corporations and questions dealing with the limitations of combinations in restraint of trade, whether in manufacturing, finance, labor, agriculture or in other fields, have been considered by the Federation at two national conferences, each of which was attended by over five hundred delegates appointed by the Governors of the various States. At the Chicago conference in 1907 resolutions were unanimously adopted urging a thorough inquiry into the advisability of inaugurating a system of Federal license or incorporation as a condition for the entrance of certain classes of corporations upon interstate commerce, and also into the relation to the public interest of the purchase by one corporation of the franchises or corporate stock of another. The resolutions also recommended that any proposed legislation should include modification of the prohibitions now existing on the following subjects:

1. National and local organizations of labor and their trade agreements with employers relating to wages, hours of labor and conditions of employment.
2. Associations made up of farmers, intended to secure a stable and equitable market for the products of the soil, free from fluctuations due to speculation.
3. Business and industrial agreements or combinations whose objects are in the public interest as distinguished from objects determined to be contrary to the public interest.

No one was in favor of the repeal of the Sherman Act, however drastic its enforcement might seem, and it was declared firmly that "On none of the subjects mentioned must what has been gained be sacrificed until something better appears for enactment."

At the eleventh annual meeting of The National Civic Federation in January, 1911, the subject in all its aspects was again considered, and in pursuance of a resolution adopted, President Low has appointed the following committee to consider the subject of State and Federal regulation, the principles underlying each being practically the same.

Seth Low, Chairman; E. A. Bancroft, Illinois; William Dudley Foulke, Indiana; Frederick P. Fish, Massachusetts; James R. Garfield, Ohio; J. W. Jenks, New York; Charles L. Jewett, Indiana; Frederick N. Judson, Missouri; H. B. F. Macfarland, District of Columbia; Theodore Marburg, Maryland; G. H. Montague, New York; George W. Perkins, New York; John C. Richberg, Illinois; W. Z. Ripley, Massachusetts; Leo S. Rowe, Pennsylvania; C. A. Severance, Minnesota; F. L. Siddons, District of Columbia; Reuben D. Silliman, New York; J. J. Spalding, Georgia; Walter George Smith, Pennsylvania; Frederic J. Stimson, Massachusetts; Henry W. Taft, New York; Frank Trumbull, New York; Samuel Untermyer, New York; A. Leo Weil, Pennsylvania; Talcott Williams, Pennsylvania.

The above committee met in New York April 21, and authorized Chairman Low to name a sub-committee to outline a policy and mode of procedure looking to uniformity in State legislation on the regulation of combinations and trusts; to make a digest of all the trust laws of the States and the decisions on the subject to date for the service of the State Councils of the Federation; and to propose legislation along Federal lines should such action at any time be deemed wise.

NEED FOR UNIFORMITY IN THE REGULATION OF RAILROADS AND MUNICIPAL UTILITIES.

The proper regulation of railroads and municipal utilities is a subject in which The National Civic Federation has been deeply interested since the inquiry made by its commission into the relative merits of private versus public operation of quasi-public utilities in this country and in England.

That commission, presided over by Melville E. Ingalls, former chairman of the Executive Board of the Big Four Railroad, was composed, as will be recalled, of officers of representative public utility corporations, leaders of movements advocating municipal operation of such utilities, and leading publicists and labor officials who were variously described as neutrals.

This commission, after spending many months with engineers, accountants and experts selected by the "Antis" and the "Pros," respectively, unanimously agreed upon a number of recommendations. That referring to regulation follows:

> "First, we wish to emphasize the fact that the public utilities studied are so constituted that it is impossible for them to be regulated by competition. Therefore, they must be controlled and regulated by the Government; or they must be left to do as they please; or they must be operated by the public. There is no other course. None of us is in favor of leaving them to their own will, and the question is whether it is better to regulate or to operate."

The commission then declared for adequate regulation by a competent public authority, with power to require for all public utilities a uniform system of records and accounts, giving all financial data and all information concerning the quality of service and the cost thereof, which data should be published and

distributed to the public like other official reports, and also recommended that no stock or bonds for public utilities be issued without the approval of some competent public authority.

While this commission dealt entirely with the regulation of municipal utilities, railroads, telegraph and telephone companies, both interstate and intrastate, are equally concerned in the question: "What is adequate regulation?" or in other words, "How far can regulation go and be efficient without unreasonably interfering with management?" The Interstate Commerce Commission, of course, has only to do with interstate railroads, telegraph, telephone and express companies, but many of the forty-one State railroad commissions regulate both the intrastate railroads, telephone companies, etc., and the municipal utilities in such States. In New York State, the State Commission has more power over the railroads running into New York City than has the Interstate Commerce Commission.

With public sentiment practically unanimous in favor of the proper regulation of all public utilities, whether State or interstate, and with forty-one different State commissions making as many dissimilar rulings, serious conflicts can readily be imagined, not only between the States themselves, but also between the State and the Federal Commissions and courts.

There are many questions which in their consideration involve identical principles, whether in relation to interstate railways or to quasi-public utilities, not the least important of which is the method of valuation of the property as a basis for rate-making or cost of service to the public.

President Low has appointed a national committee, representing all the interests of society affected by such regulation, to study this subject in all its phases and report recommendations. The personnel follows:

FRANKLIN K. LANE.....California
Interstate Commerce Commission.
B. H. MEYER.....Wisconsin
Interstate Commerce Commission.
WILLIAM R. WILLCOX.....New York
New York Public Service Commission.
ARTHUR W. BRADY.....Indiana
President American Electric Railroad Company.
MARTIN S. DECKER.....New York
New York Railway Commission.
F. E. BARKER.....Massachusetts
Chairman Mass. Gas and Electric Light Commission.
CHARLES F. BROOKER.....New York
Director N. Y., N. H. & H. Railroad Company.
EMERSON McMILLIN.....New York
Pres. American Light & Traction Company.
ROBERT R. PRENTIS.....Virginia
Pres. Nat'l Ass'n State Railway Commissioners.
MILO R. MALTBIE.....New York
New York Public Service Commission.
B. A. ECKHART.....Illinois
Chairman Illinois Railway Commission.
JAMES CAMPBELL.....New York
President North American Securities Company.
JOHN C. BELL.....Pennsylvania
Attorney-General of Pennsylvania.
ROLLIN S. WOODRUFF.....Connecticut
Former Governor of Connecticut.
CHARLES R. CRANE.....Illinois
Crane Valve Company, Chicago.
MYRON T. HERRICK.....Ohio
Railroad Director, Banker.
THEODORE N. VAIL.....New York
President American Telephone & Telegraph Co.
DAVID R. FRANCIS.....Missouri
Railroad Director, Banker.
WILLIAM C. BROWN.....New York
President New York Central Lines.
GEORGE B. CORTELYOU.....New York
President Consolidated Gas Company.
GEORGE W. PERKINS.....New York
Railway Director, Banker.
DANIEL WILLARD.....Maryland
President Baltimore & Ohio Railroad Co.
SAMUEL INSULL.....Illinois
President Commonwealth Electric Company.
JAMES SPEYER.....New York
Railway Director, Banker.
ROBERT WINSOR.....Massachusetts
Banker, Director Public Utility Companies.
AUGUST BELMONT.....New York
Chairman Board Directors Interborough Railroad Company.
FRANK TRUMBULL.....New York
Chairman Board Directors Chesapeake & Ohio Railroad Co.
H. M. BYLLESBY.....Illinois
Electrical Engineer (Chicago).
TIMOTHY S. WILLIAMS.....New York
President Brooklyn Rapid Transit Co.
ROBERT MATHER.....New York
President Westinghouse Electric and Manufacturing Company.
DR. ALBERT SHAW.....New York
Editor Review of Reviews.
WARREN S. STONE.....Ohio
Grand Chief International Brotherhood Locomotive Engineers.
V. EVERIT MACY.....New York
Director Queens Borough Gas & Electric Company.
A. B. GARRETSON.....Iowa
President Order of Railway Conductors.
TIMOTHY HEALY.....New York
Pres. International Brotherhood Stationary Firemen.
W. W. FREEMAN.....New York
Pres. National Electric Light Ass'n.
CHARLES L. EDGAR.....Massachusetts
Chairman Committee on Public Policy, National Electric Lighting Association.
FRED. G. MOFFATT.....Colorado
Banker (David N. Moffatt & Co., Denver).
FRANKLIN Q. BROWN.....New York
Railroad Director, Banker (Redmond & Co.)
BLEWETT LEE.....Illinois
General Solicitor Illinois Central Railroad Co.
W. J. CLARK.....New York
General Electric Company.
W. Z. RIPLEY.....Massachusetts
Professor Political Economy Harvard University.
Railway Expert.
W. W. FINLEY.....Washington, D. C.
Southern Railway Company.
ALLEN B. FORBES.....New York
Banker, Director Public Utility Companies.
JOHN H. GRAY.....Minnesota
Professor Political Economy, University of Minnesota.
H. U. MUDGE.....Illinois
President Chicago, Rock Island & Pacific Railroad.
CHARLES A. STONE.....Massachusetts
Stone & Webster Management Company.
P. H. MORRISSEY.....Illinois
Ex-Grand Master Brotherhood Railroad Trainmen.
LEO S. ROWE.....Pennsylvania
Professor University of Pennsylvania.
JAMES J. STORROW.....Massachusetts
Banker, Director Public Utility Companies.
OSCAR S. STRAUS.....New York
Former Secretary of Commerce and Labor.
GEORGE F. SWAIN.....Massachusetts
Professor Political Economy, Harvard University.
S. C. WOLCOTT.....New York
Banker (W. P. Bonbright & Co.)
C. E MERRIAM.....Illinois
Professor Political Economy, University of Chicago.
JAMES H. McGRAW.....New York

COMPENSATION FOR INDUSTRIAL ACCIDENTS AND THEIR PREVENTION.

The Federation's Department on Compensation for Industrial Accidents and Their Prevention is composed of employers, representative labor men, members of the ten official State Commissions and the Federal Commission, members of the National Association of Uniform State Law Commissions in thirty-eight States, members of the Compensation Committee of the American Bar Association, attorneys who have specialized upon workmen's compensation, insurance experts, economists, State officials and others concerned about this great problem.

This department drafted a bill for compulsory compensation, with definite rates, as a sketch model and submitted it to the Legislatures of the thirty-three States which met during the past Winter. The principles of this bill have been adopted in a number of States. One important feature is a clause permitting voluntary agreements between employers and employes. The act simply stipulates that such schemes shall not be less favorable to the workman than the plan embodied in it.

The American Federation of Labor sent out to its local unions throughout the country, with its endorsement, twenty thousand copies of The National Civic Federation's bill on Workmen's Compensation.

The Workmen's Compensation Department of the Federation has sent to the Governor of each State recommendations for improvement in State inspection of factories in the interest of prevention of accidents. Mention of this department's recent activities will be found elsewhere in this issue of the Review.

Pensions for employes is a topic co-related to workmen's compensation in that disabled employes may become pensioners. The Federation's Department on Wage Earners' Insurance encourages employers to start proper voluntary relief associations, which include sick and death benefits as well as pensions for aged employes in commercial enterprises; and the Committee on Pensions for Public Employes has for its purpose the securing of proper legislation for retirement funds in the Federal classified service and for State and Municipal employes.

To become incapacitated and have no earning capacity after years of loyal service, with no means of support, is the dread of every thinking wage worker. The main problem involved in pension plans, especially for public employes, is the question, "Shall employes contribute to retirement funds?" From the public standpoint it is of serious moment that the work of the Government, whether Municipal, State or Federal, should not be hampered by retaining in the service employes incapacitated by age. Until a proper pension plan is worked out, public machinery will be clogged, as no official has the heart to throw out upon the world those who have devoted their lives to the service of the Government. The "common surfman" in the Life-Saving Service, who has an enforced vacation of two months in the year without pay, and makes only $65.00 a month, presents one of the many types in the employ of the National Government appealing for its consideration. To urge legislation on pensions for public employes, fair to the State and to the employe, is the object of the Federation's movement. The entire subject of wage earners' insurance for Government and industrial employes, including accident, sick, death and pension funds, touches the whole social fabric.

NEED FOR REFORM IN LEGAL PROCEDURE.

President Taft said at a recent meeting of The National Civic Federation:

> "The greatest question now before the American public is the improvement of the administration of justice, civil and criminal, both in the matter of its prompt dispatch and the cheapening of its use."

The National Civic Federation has appointed a committee on this subject which is co-operating with a similar committee of the American Bar Association. This joint committee is trying to secure, through Congressional action, a simplified practice act for the Federal courts which can be used by our State Councils as a basis for a reformed practice act in the several States.

This bill passed the House at the last session of Congress, but there was not time for it to be reached in the Senate. It is hoped that public attention will be focalized on this measure sufficiently to secure its enactment into law at the next session of Congress.

The two committees forming the joint committee referred to are:

For the American Bar Association—Everett P. Wheeler, chairman; Roscoe Pound, Chicago; Charles F. Amidon, Fargo, N. D.; J. H. Beale, Jr., Cambridge, Mass.; Prof. Frank Irving, Cornell University; Samuel C. Eastman, Concord, N. H.; H. D. Estabrook, New York City; Charles S. Hamlin, Boston; W. L. January, Detroit; Charles E. Littlefield, New York City; Arthur Steuert, Baltimore; Samuel Scoville, Philadelphia; Edward T. Sanford, Knoxville.

For The National Civic Federation—Ralph W. Breckenridge, Omaha, chairman; Morgan J. O'Brien, New York City; William E. Chandler, Washington; John B. Sanborn, Madison, Wis.; Selden P. Spencer, St. Louis; Stephen H. Allen, Topeka, Kan.; Charles L. Jewett, New Albany, Ind.; Thomas W. Shelton, Norfolk Va.; Stephen S. Gregory, Chicago; Willard Saulsbury, Wilmington, Del.; A. M. Eaton, Providence, R. I.; J. F. Vaile, Denver; W. I. MacIntyre, Thomasville, Ga.; C. La Rue Munson, Williamsport, Pa.; Lawrence Cooper, Huntsville, Ala.

Our people generally do not realize the importance of this subject because it impresses them as something purely academic. The joint committee, however, says:

> "The miscarriage of justice in criminal cases is generally due to the defective administration of the law and the technicalities which arise in criminal trials. *Ninety per cent* of the proverbial 'law's delays' are due to the system under which the law is administered, rather than to the intention of the lawyers interested in delaying suits or the benefit resulting to either side from delays."

The injustice to the workingman in the law's delay is so great that he can scarcely avail himself of the courts to bring a suit in any matter. This is particularly true in cases resulting from injuries through accidents. By the time the injured man receives a verdict, which he does after many delays and reversals for technical reasons, the court costs deprive it of much of its value.

According to the statistics of the American Bar Association, *new trials are granted in forty-six per cent of all the cases in our courts involving a penitentiary offense.* And in sixty per cent of this number the new trial is granted, not because of a question affecting the possible guilt or innocence of the prisoner, but *because of a purely technical point of dispute in the conduct of the case.*

In nearly half of the criminal cases in American courts it requires two or more trials to convict the prisoner. And in sixty per cent of these cases his guilt is plain. He is given a new trial because the higher court holds that there has been an error of "pleading and practice," either on the part of the lawyers or the judge.

Illustrations can be taken from any State. Hugh Weir, giving examples of the technical rulings, practice and abuses in our courts, says:

> "Here are two cases from Alabama and North Carolina which sound almost incredible. Indeed, were they not matters of court record, the average American citizen would dismiss them with a shrug as sensational journalism:
>
> "In the former State, a man charged with murder went free, because the Clerk of Courts, in writing the word 'malice' in the indictment, left out the letter 'i.'
>
> "In North Carolina an enraged citizen shot a neighbor through the breast, inflicting a wound which resulted in the latter's death and his own arrest for murder. A short time later, however, he was released from custody. In the indictment the clerk had spelled breast as 'b-r-e-s-t.' The court held that this misspelled indictment was not legal and freed the prisoner."

NEED FOR UNIFORMITY IN STATE TAXATION.

In scarcely any domain of social life have the difficulties arising from lack of uniformity made themselves more apparent than in the field of taxation. Professor E. R. A. Seligman, Chairman of the Department of Taxation of The National Civic Federation, than whom there is no greater authority in the United States, describes these difficulties in the following language:

> "Laws which were devised for an economic stage which has long since passed away can no

longer work efficiently; a system which was designed to secure justice, and which did roughly attain justice, breeds to-day, under entirely diverse conditions, inequality and injustice. It is this practical injustice of the working out of an antiquated fiscal system which cries for remedy. . . .

"When we deal with personal property we are entering upon a very troublous sea of difficulties. Personal property is of two kinds, tangible and intangible personalty. So far as the personal property is tangible it might be said that the same rule ought to apply as in the case of real estate, and that a man's property ought to be taxed where it is situated. But in modern times, with the moving of individuals from place to place, from State to State, this rule becomes difficult to enforce, and has been largely supplanted by the other principle that movables follow the person. Unfortunately, however, there is no agreement among our tax jurisdictions as to the precise principle to be followed in any particular case. In some places tangible personalty is assessed to the owner; in other places tangible property is assessed where it is situated. The consequence is that on the one hand we have instances of double taxation, where one State taxes the owner and the other State again taxes the property, while in other cases we have a complete exemption of the taxpayer, the one State absolving the taxpayer under the assumption that the property itself is taxed in the second State, while the second State pursues the reverse policy and exempts the property on the assumption that the owner is taxed elsewhere.

"These difficulties connected with tangible personalty are, however, after all, relatively slight when compared to the complexities of the taxation of intangible property. . . . A man lives, let us say, in New York, and owns securities of a corporation whose head office is in Chicago, whose chief tangible property may be in a group of New England States and whose business is carried on or whose products are sold primarily in a group of Southern States. Where shall the man be taxed? Shall he be taxed by New York, where he lives; by Illinois, where the interest and dividends are distributed; in Massachusetts, where the factory is situated, or in Mississippi, where the goods are sold? Or shall he, as sometimes actually happens, be subjected to a quadruple taxation, New York taxing the personal property in the shape of bonds, Illinois taxing the corporation on its capital, Massachusetts taxing the tangible property, and Mississippi levying a license tax on the sales? The situation would not be so bad if the individual knew beforehand exactly what to expect; for one can adjust oneself even to quadruple taxation, provided he knows that every other man is similarly treated. The irony of the situation consists in the fact, however, that scarcely any two States pursue the same policy: that the fortunate corporate investor in one State may go entirely free, as in New York State, where the owner of corporate shares in domestic corporations is exempt, and where the domestic corporation may also be expressly free from the State tax and corporate franchise, and where there is no tax at all on sales. If, however, the investor lives in Masachusetts, he is legally taxable on the securities of a foreign corporation, and it depends entirely upon the chances of the particular case as to whether he is subject to a double, a triple or a quadruple tax. . . .

"The same story would be true of the new item in our list of State and local taxes, namely, the inheritance tax. Whole books have been written on the difficulties and complexities of this newer system. Suppose in the case of a man who has lived all his life in Pennsylvania, and who happens to die in New York; his business interests are in Ohio, and most of his securities are in a safe deposit company in New Jersey. Where shall he be taxed and how? Shall he be taxed by New York, by Pennsylvania, by Ohio, or by New Jersey? Shall he be taxed in part by each? Shall be be taxed in whole by all? Or is it perhaps possible that he has been occupying a Summer villa at Newport, and thus escapes taxation entirely, on the ground that he votes in a State where there is no inheritance tax? All degrees of complications are possible, actually ranging from unjust tax dodging to double, triple and quadruple taxation of more or less unfortunate decedents. . . . We may conclude, therefore, that the situation is one which cries aloud for immediate remedy. It is not so important that any particular theory be adopted and realized in principle, as it is that the theory, no matter what it be, be followed with some degree of uniformity in the various States. Just as a business man desires above all things stability rather than high prices suddenly followed by low prices, so the taxpayer, in his quest of equality, desires above all things uniformity. With every year's progress in the national consolidation of economic interests, the present conflict of tax jurisdictions becomes more and more anomalous and produces greater and greater hardships. . . .

"Let the States look to it that they agree no longer to disagree, and that they effect some working method of uniform and equitable action. Otherwise there is grave danger that what they declare themselves unable to accomplish will be carried through by some form of pressure from above. To those who really have at heart the maintenance of State autonomy, and of independent commonwealth activity, I would say: 'Do your housecleaning yourselves, before some one else steps in to do it for you.' The achievement of a reasonable uniformity in tax legislation is one of the most insistent demands of this housecleaning that cannot much longer be deferred."

The New York *Evening Post* recently gave the following illustration:

> "If a resident of New Jersey should die leaving $2,000,000 of bonds of a Wisconsin corporation in a safe deposit vault in New York City, and by his will bequeath this property to his nephew, the New York tax would be nearly $420,000, the New Jersey tax $100,000, the Wisconsin tax nearly $300,000, making a total of over $800,000. Before he had any enjoyment of his property, except the pleasure of paying these taxes, suppose the nephew died and in turn left his property to his nephew; it would be again taxed, so that the estate which the second nephew received would be brought down to about $700,000, the different States having absorbed the balance in the guise of taxation."

In quoting the above illustration, *Life*, a humorous paper, makes the following very pertinent statement:

> "That looks to us like excess of zeal in inheritance tax legislation. The State that has the first right to pick the bones of a decedent must find some means to defend the carcass against the exactions of other State claims."

PURE FOOD AND DRUGS.

There is no subject of greater interest to the American people than that of pure food and pure drugs. The wealthy are able to pay the highest prices and are less liable to be imposed upon by the sellers of impure or adulterated foods and drugs, but the masses have no other protection than that which is granted by the Federal Pure Food and Drug Act and the various States' acts which are to a great extent in conformity with the Federal Law.

While a great improvement has been wrought in the situation since the passage of that act in 1907, yet the administration of the law by the Federal, State and Municipal authorities is greatly hampered by the lack of sufficient inspectors and effective machinery to detect violations and in some cases by corrupt alliances between the officials and the manufacturers and sellers of rotten food stuffs.

The recent exposures in New York, Philadelphia and Chicago indicate the magnitude and far-reaching character of the violation of the food and drug laws. Not only were the poor defrauded by adulterated and impure food, but they were also cheated as to measurements and weights. It is a situation which calls for drastic treatment. The monthly bulletins issued by the United States Department of Agriculture describe hundreds of convictions secured annually by that Department (generally on the confession of guilt by the manufacturers or dealers) which are enough to arouse the indignation of all good citizens.

The whole situation in regard to the enforcement of Pure Food and Drug laws is thus stated in the American Year Book for 1910:

> "Many food reformers make the mistake of attacking the national food law, when they mean to attack the departmental interpretation of the law, erroneously believing that the interpretation put upon the law by officials is the law itself. It is also important to note that in many cases brought under the food and drugs act the law has been greatly hampered by the laxity of the courts. In one case in which it was found that milk was adulterated, in that it consisted in whole or in part of a filthy, decomposed, and putrid animal substance, a fine was imposed of $10. Again, an infant soothing syrup, said to contain no morphine, and guaranteed to be perfectly harmless, was found to contain morphine, the label containing false and misleading statements intended to mislead and deceive the purchasing public. In this case the firm was fined $10.
>
> "Where tomato ketchup was found to consist wholly or in part of a filthy, decomposed, and putrid vegetable substance, and to contain a large number of bacteria and molds, which rendered it unfit for food, the fine was $50. In another case of adulterated milk the fine was only $5. A coffee firm found guilty of coating coffee with lead chromate and other poisonous and deleterious substances, which rendered the coffee injurious to health, was fined $10. In short-weight cases the fines have run as low as $1.
>
> "Many cases are on record of the adulteration and misbranding of drugs, headache powders, drug-habit-forming medicines, maple syrups, flavoring extracts, and condiments, for which the penalty was too small to deter the adulterator from continuing his fraud in comparative peace. It should not be overlooked that the law also provides for prison sentence.
>
> "A conscience that would poison a baby's candy, paint it with varnish to make it look like chocolate, pollute the infant's milk with formaldehyde, dope it with chloroform and other opiates, and embalm other products with aniline dyes, salicylic acid, sulphate of copper, and all manner of chemicals, is not going to be troubled over a nominal fine. The national food law, however, is not to blame. It affords adequate punishment if properly enforced.
>
> "There exists, however, a provision that permits of great harm, which is one shortcoming of the national food law. The law permits the sale of imitation and other juggled foods if their manufacturers label them 'imitations,' 'compounds' or 'blends.' The jobber or retailer thus buys them as 'imitations' or counterfeit foods, but, unless they are contained in 'original packages,' they are invariably sold to the consumer as real, genuine foods. Thus bakery products are in large part made of spoiled eggs, shipped in carload lots and deodorized with formaldehyde. Pie fillings are sold in wholesale lots to restaurants and bakeries, which are indescribably nauseous. Tarts, jams and ice creams are made of fictitious foods. In fact, an entire meal was recently prepared in a chemical laboratory without a particle of real food in it—a repast that had all the appearance of wholesome dishes, but was entirely substanceless. Such is the magic power of chemicals!
>
> "The hotel or restaurant proprietor, the bakery owner or the grocer may distinguish the fictitious foods he buys by the words 'imitation,' etc., printed on the label, as required by the law, and also by the low price he pays for them. But the consumer never has a chance to see these labels, and under existing conditions it is difficult for him to tell whether he is eating real or imitation foods. Likewise many things we buy in bulk in grocery stores may be nothing but synthetic, substanceless foods, or worse.
>
> "Thus it is plain that, without the aid of honest and efficient State and city food laws and food officers, the national food law can be greatly crippled. This fact the food adulterator seems to have discovered, and in some directions it now looks as if he had really transformed the national law into a tool to aid him in exploiting, robbing and poisoning the public. If the city and State food officers would do their duty, such conditions would not exist. If they would be as strict as the national authorities, they would see that the 'State' foods are as pure as those that enter into interstate commerce, and that the consumer be permitted to know when he buys 'imitation' foods as well as the grocer or baker. Hence, with State and municipal enforcement, even as efficient as the national enforcement, America's dream of pure foods would be nearly realized."

The press of the country was recently filled with the sensational account of the seizure of carloads of adulterated frozen eggs, the product consisting in part of (to quote from the judgment of the court) "a filthy, decomposed and putrid animal substance absolutely unfit for human consumption."

The New York *World*, during an investigation two months ago, had 300 prescriptions filled by big and little pharmacists in all parts of Manhattan, and then had them analyzed by noted chemists, with the result that, as charged by the *World*, 50 per cent of the preparations were found to be positively harmful or worthless; where some of the remainder were correct in strength and purity, they were short as to weight or measurement.

In connection with this investigation, one of the proprietors of a large pharmacy on Broadway made the following emphatic statement:

> "There is no doubt that the lives of the people are greatly jeopardized whenever a prescription is filled, and every possible protection should be afforded.
>
> "I am sorry to say that there are too many unscrupulous men among us in the drug busi-

ness, men who do not hesitate to substitute one drug for another and take chances they have no right to take.

"There are certain sections in this city where I would not think of having a prescription prepared for a member of my family. I would as soon think of giving them poison."

The Federation will soon have a National Committee on Pure Food and Drugs and a sub-committee on the same subject in each State, the chairmen of the State committees also being members of the national committee.

One of the important features of the work of this committee will be to make evident to employers how their employes are imposed upon in this matter.

The public need only be clearly informed of true conditions to put an end to the sale in this country of impure and deleterious drugs and adulterated and rotten foodstuffs.

INDUSTRIAL CONCILIATION DEPARTMENT.

While the questions discussed above are all legislative, the following paragraphs briefly describe other activities of the Federation:

The Conciliation Department deals entirely with strikes and lockouts. The services of this department have been enlisted in over five hundred cases, involving every conceivable phase of a problem interwoven with or underlying an industrial controversy. Its membership includes representatives of leading organizations of employers, of wage-earners and of the general public.

Wherever it is possible to do so, the Federation co-operates with the State Boards of Mediation, supplementing their efforts by bringing to bear through its members the weight of its influence as a disinterested volunteer force.

This department is urging an amendment to the State arbitration laws which seeks to prevent strikes and lockouts on quasi-public utilities.

INDUSTRIAL ECONOMICS DEPARTMENT.

The Industrial Economics Department, of which Nicholas Murray Butler is Chairman, was formed to promote discussion of practical economic problems. Its membership is composed of leading economists, including the heads of the departments of political economy in universities, lecturers and economic and legal authors; editors of the daily press, of politico-social magazines, of trade papers and of labor journals; representatives of the pulpit; large employers and representatives of labor.

Under the auspices of this department there have been discussions by the ablest experts to be procured upon many of the vital and frequently irritating questions that arise in the Conciliation Department in connection with the prevention or settlement of controversies.

These questions include such subjects as: "Government by Injunction," "The Boycott," "The Right to Strike," "The Trade Agreement," "The Union Versus the Non-Union Shop," "The Shorter Work-Day," "Restriction of Output," "The Minimum Wage," "Piece Work Versus Day Work," "Scientific Management."

One session of the recent annual meeting was devoted to a discussion of the last-named topic, the efficiency engineers speaking in favor of "scientific management" and the labor representatives opposing it. As a result of this discussion, a commission will be appointed to make a thorough study of the subject and report to the Federation at a later date.

EMPLOYERS' WELFARE DEPARTMENT.

The Employers' Welfare Deparment of the Federation is composed of 500 leading employers and public officials throughout the United States. Its work is the humanitarian phase of the Federation's activities. The methods employed are educational, the effort being to prove its value by holding up as good examples employers who have successfully introduced Welfare Work for the benefit of their employes.

Some of the subjects involved in Welfare Work are:

Sanitary Work Places: Systems for providing pure drinking water; for ventilation, including the cooling of superheated places, and devices for exhausting dust and removing gases; for lighting work places; and for safeguards against industrial accidents; wash rooms with hot and cold water, towels and soap; shower baths for moulders and stationary firemen; emergency hospitals; locker rooms; seats for women; laundries for men's overalls or women's uniforms; the use of elevators for women, and luncheon rooms.

Recreation: The social hall for dancing parties, concerts, theatricals, billiards, pool or bowling; the gymnasium, athletic field, roof garden, vacations and summer excursions for employes, and rest rooms or trainmen's rest houses.

Educational: Classes for apprentices; in cooking, dressmaking, millinery; first aid to the injured; night classes for technical training; kindergartens and libraries.

Housing: Homes rented or sold to employes, and boarding houses.

Provident Funds: Include employers' plans for savings or lending money in times of stress, as well as all forms of industrial insurance.

WOMAN'S WELFARE DEPARTMENT.

The Woman's Welfare Department is composed largely of women who are themselves stockholders or who, through family relationship, are financially interested in industrial organizations (including railroads, mills, factories, mines, stores and other work places) and who, therefore, should be interested in the welfare of workers in enterprises from which they draw their incomes; there are also, among other influential members, the wives of public officials.

Types of employes whose conditions have been improved through its efforts may be found in Federal and Municipal Departments such as the Treasury, the Bureau of Engraving and Printing, the Census Bureau, the Post Office, the Pension Office, the Interior Department, Navy Yards, City Hospitals, Public Schools, and, in industrial concerns: stationary firemen, hotel employes, wage earners in dangerous and unhealthful industries affected by mercurial poisoning, particularly in the manufacture of felt hats, and employes in cotton mills; and there is a movement for recreation and vacation resources in connection with summer outings.

WORKMEN'S COMPENSATION THE KEYNOTE

ABLE ARGUMENTS FOR CORPORATE REGULATION AND UNIFORMITY IN LAWS—INDUSTRIAL CONCILIATION WORK EXTENDED—A PURPOSEFUL GATHERING OF THE NATION'S LEADING MEN

THE eleventh annual meeting of the The National Civic Federation, which was held at Hotel Astor, New York City, on January 12, 13 and 14, 1911, was characterized by a purpose, fullness, dignity, authority and brilliance that surpassed even previous gatherings of this great representative body of the employer, the wage earner, and the general public.

Probably the dominant note of the meeting was the deep and earnest discussion of the effort to effect in this country a system of just compensation for industrial accidents, a boon to employer and wage-earner alike, and the reports of progress shown in this direction.

Scarcely less impressive was the announcement, by PRESIDENT SETH LOW, of the formation of twenty-four State Councils, including the District of Columbia. The value of these in furthering uniform legislation in the several States, along lines laid out by the Federation, can scarcely be exaggerated by the most optimistic. This is one of the biggest constructive moves ever made by this organization.

The addresses were notable, among other things, by reason of the prominence of the speakers, and further, because they represented all classes.

In the course of the deliberations, the former President of the United States, Theodore Roosevelt, expressed his satisfaction with The National Civic Federation, saying that in it he realized his desire "to see radicalism prosper under conservative leadership."

As verbatim proceedings of the annual meeting are published in pamphlet form, an abstract only will be given in these pages.

First Day—Morning Session.

FEDERAL AND STATE REGULATION OF CORPORATIONS FIRST CONSIDERED.

The first general topic of consideration at the meeting was "Federal and State Regulation of Corporations."

SAMUEL UNTERMYER, Esq., of the New York Bar, who made the opening address on "Combinations and Trusts," discussed the alternative of their extermination or regulation. He announced his opinion that the Supreme Court of the United States, in two pending cases, will emphasize the principle announced by the lower courts so as to hold unlawful "every form of combination the direct purpose and effect of which is to hamper or limit competition." But he declared also his belief that such decisions will have no result beyond possible changes in forms of organization, unless the combinations are attacked under the criminal section of the Federal statute. There is no thought of confiscation; to resolve combinations into their constituent parts appears impossible, as those have lost their identity. Even a decision of these cases for the Government would be an academic victory, and the property of the trust would probably meet such disposition as would enable the same interests to continue the same business, under the protection of a judicial decree.

Mr. Untermyer laid down six propositions, which may be summarized: 1, The attitude of the courts during the first ten years of the Anti-Trust Law, rendering its enforcement then almost impossible, is largely responsible for the development of existing Trusts; 2, the Government having tacitly assented to the legality of the most vicious of them, it would cause now almost financial and industrial chaos to exterminate them, even if that result were possible; 3, The Constitution forbids the destruction or confiscation of property rights; 4, abortive attempts at extermination are of questionable advisability; 5, The present activities of the Government will not imperil the existence of the combinations most inimical to the community, and no attempt has been made at criminal process against individuals.

The only criminal prosecutions of recent years have been directed against pools or trade agreements for regulating prices and production. These were clearly illegal, but resulted mainly from ruinous competition among many small concerns, and touched almost every field of industry. But the most effective price arrangements are known as "gentlemen's agreements," both unlawful and dangerous, but not prosecuted. The Government enjoined sucessfully the Railroad Association from a conspiracy to increase rates, but no person was prosecuted. Uniformity of prices and restriction of production in coal, iron and steel are immune. The action of the Government has caused a feeling that officials are unable to reach the big offenders and try to appease public demand by proceeding against smaller ones. These problems are essentially national and cannot be dealt with by the States. There is little to be expected from them, so that it is fortunate that the subject is beyond their jurisdiction. The only solution is rigid regulation under Federal law, which is practicable where permissive Federal regulation would answer every purpose. It would involve no discrimination. Regulation would preserve such economic benefits as the elimination of destructive competition. The real problem is how to prevent the evils of overproduction and at the same time protect the public against the dangers of combination between competitors. It would be necessary to recognize that tolerated combinations owe duties to the public; that the protective tariff is based upon the theory of home competition; and that combinations impairing home competition must submit to Government supervision. There must be power to prevent summarily the creation of excessive profits, through the power to limit prices. The difficulties are more imaginary than real. The judicial power of regulation would be invoked only where a responsible complaint was lodged of undue profits or unfair methods. A tribunal in fixing a maximum price would not go further than to protect the public against extortion Changes of conditions could be met by reviews of judgments at stated periods. Mr. Untermyer concluded his paper with a review of the laws applicable to the subject in Germany, Austria, France and England.

AN HISTORICAL VIEW.

MR. WILLIAM DUDLEY FOULKE emphasized as one of the radical changes in history the transformation of the industrial system from competition to co-operation and monopoly. He declared that there is now an acknowledged effort to create "an oligarchy

in place of a democracy." The peril to free institutions in this tendency he illustrated by the commercial rise of Carthage only to fall before the assault of then sturdy Rome, by the decadence of Rome from the Republic to the Empire, accompanied by the growth of great fortunes and the beggary of the multitude until the ruler of the world became the prey of the hordes of Germany and Scythia by the successive prosperity and ruin of Florence and Venice. "Now our turn has come," declares Mr. Foulke. The wealth of the richest nation on earth is in the hands of the few. There are private fortunes in the United States greater than the world has ever known before, fortunes that control legislation, so that there has become necessary "an insurgency against the thraldom imposed by our political masters." Hence, in his view, the issue is present, whether the Government shall control the power of wealth or organized capital shall rule. The emergency is national and demands national measures. The remedy lies in more thorough Governmental control of corporations. He found in Canadian and German legislation a possible solution of the problem which, he declared, was past the academic stage and demands a practical remedy for "the most threatening evil of our modern institutions."

LABOR AND THE LAW.

MR. SAMUEL GOMPERS, President of the American Federation of Labor, declared as to the trust question that it made little difference to the wage-earner whether wealth is in the hands of an individual or of a combination of individuals. The corporate or individual position of the employer mattered little. Wages, hours and conditions of labor were the questions confronting the wage earner. The demand to curb evil practices of great corporations found expression in the Sherman anti-trust law of 1890. Leading Senators gave assurance that labor would not come under the operations of that statute. The combinations of wealth have gone on, and it might not be desirable to stop them, since "industry must continue to develop into the highest and best forms and upon the most economical basis and results." But under the Sherman anti-trust law the Supreme Court of the United States has decided that workmen, as individuals or in organizations, may be sued by any one and may be prosecuted criminally. Wage earners are in accord with the proposition that we must have equality without favors. Labor insists upon equality in the law. But is it right that a combination dealing in oil, steel, pork or beef should be placed in the same category legally with an association of shirtwaist workers who strike against sweatshop conditions? Yet, under the law as interpreted by the Supreme Court, labor organizations, engaged in no enterprise in which they own or control products, are classed with those combinations which deal in the products of labor. Mr. Gompers pointed out that in history, when popular assemblage had been denied, the first act of the combinations of wealth that had ruined republics was to attack combinations of the working people. In this country a similar attempt had been made. Through interpretation of the courts there had been constant extension of the jurisdiction and power of the Sherman anti-trust law when applied to the organization of working people. The Canadian act to regulate industrial combines excludes from its operation organizations of workers, and Parliament in 1906 exempted labor organizations from the operation of a similar law. The same exemption American organized workers have asked from Congress in the Wilson bill, urged especially since the decision mulcting hatters in Danbury $222,000 with fees and costs, and since workmen have advised co-operative action in New Orleans to withhold labor in support of strikers, and since shirtwaist workers and their sympathizers have been sued for about $150,000. Such suits are a constant menace. Organized labor will not exist merely at the sufferance of any administration or of any party. In the old days, when courts decreed or tribunals ordered their dissolution, the organizations of working people dissolved. But the labor organizations of America have done so much for the working people, to improve their moral and social and political condition, to bring light into their homes and hope into their hearts, that they would not be driven from existence. "The economic power vested in the hands of the working people is the most potent check to capitalist aggregation." We shall work to the end "that a law shall pass the Congress of the United States that shall not throw in the same category human hearts and men and blood with a ton of coal or a barrel of pork." The production of wealth should go on, with the maintenance of an American standard of life, and "we are contributing in the great struggle, having always before us the ideal of a greater and a better and a more human system of society and government and fellowship."

THE CANADIAN PLAN.

An explanation of the "Combines Investigation Act" of Canada was presented by W. L. MACKENZIE KING, Minister of Labor in the Dominion. The act was passed at the last session of Parliament and its first application, an inquiry into the operations of the United Shoe Machinery Company of Canada, is pending before the Superior Court in Quebec. The legislation was in response to the outcry against the increased cost of living. The Minister held that there were many causes, but this act recognizes that consumers and producers are alike entitled to the fullest protection from the State. The benefits of organization are fully recognized. The purpose is to secure to society at large some measure of the advantages derivable from combination. The remedy for enhancing prices or restricting combination is expressed by investigation, publicity and penalty. To secure an inquiry, application must be made to any High Court Judge by six resident British subjects, who must present to his satisfaction reasonable ground for believing (1) that a combine exists injurious to trade, or (2) which has operated to the detriment of consumers or producers, and (3) that an investigation would be in the public interest. Expenses are borne by the State. An order for investigation is communicated at once to the Minister of Labor. It is provided that each interested party be represented on the Board of Investigation, of which the third member is chairman, and must be a judge of a court of record and appointed by joint recommendation of the other two members, or by the Minister of Labor. The Board is vested with all the powers of a court of record in civil cases. Such investigation is expected to get at facts and make them public, recognizing the moral sense of the community as a compelling force. But provision is made also for penalties, when required. If it be shown that a combine as to any article is facilitated by customs duties, the Governor in Council may reduce or remit the duty. Where it is established that rights under the Patent Act are used to monopolistic ends, the Exchequer Court may revoke the patent. If a company operating under the Inland Revenue Act attempts to establish a monopoly, the Dominion Government may revoke its license. For similar reason, bounty or subsidy may be withdrawn.

TRUST STATUTES AND THE COURTS.

Legislation and judicial decisions were the methods of regulation of trusts discussed by GILBERT H. MONTAGUE, Esq. Legislation had been in response to the demands of consumers against exorbitant prices and of business men against oppression by rivals.

Anti-trust legislation should determine what acts interfere with competition, and then define those acts. The motive for trade competition is the enjoyment of temporary relief, through success, from its struggle. But defeat of one competitor cannot be extended to all so long as the field is open. The mere largeness of a business does not make it a monopoly. Statutory regulation of public service companies has succeeded because they enjoy powers conferred by the State. They are natural, as well as legal, monopolies. The State can enforce upon them the duty to serve all, adequately, without discrimination and upon reasonable terms. The evil lies in the misuse of the means of competition. The legitimate competitor seeks to excel his rival in efficiency. The illegitimate competitor employs instead threats and other unlawful means. There were suggestions as to definition in the language of court decisions. The effectiveness of definitions would prohibit improper interference with free competition.

First Day—Afternoon Session.

CORPORATIONS AND CIVILIZATION.

In taking the Chair at the afternoon session of Thursday, HON. OSCAR S. STRAUS emphasized the importance of the topic as one affecting the life of the people in all civilized countries. In such a body as The National Civic Federation the question could be discussed with a freedom of thought and of expression which would instruct public opinion and guide legislation. It was through his association with this organization and through the advantages of its discussions that he had perceived the breadth and the several sides of the subject; and such, he thought, had been the effect upon many minds. Mr. Straus called upon Mr. Edgar A. Bancroft, General Counsel of the International Harvester Company.

SUPERVISION AND PUBLICITY.

The regulations of the Sherman act were analyzed by EDGAR A. BANCROFT, Esq. He considered that the attempt to regulate railroad rates by compulsory competition should be abandoned. Rates should be based, not upon cost of service alone, but upon the character and value of the articles carried. The present need is authority to enter into agreements toward uniformity in classification and rate-making, subject to the approval of the Commission. The need is to prohibit any consolidation having for its purpose issues of new securities rather than increased transportation efficiency, and also against engaging in other business. For industrial and commercial corporations, competition must be preserved. The two points to be secured are fair prices and fair dealing toward competitors. The scope of manufacturing and trading corporations is national. The provisions of the Sherman act are appropriate for constitutional rather than for practical application. It is a masterpiece of prohibition rather than a remedy. He cited the Canadian act as pointing to the need of a Federal incorporation act. Uniformity in State laws as to corporations seems doomed to failure, as local sentiment diverges. Whether incorporation under Federal law should be voluntary or not is debatable. The benefit of Federal supervision is shown by the National banks. Publicity is needed, which should be prompt and automatic. If all other methods prove inefficient, then the State will attempt positive regulation of methods, prices and profits. "There is ground for this assurance: the corporation which conducts its business honestly and fairly, with a scrupulous regard for the moral rights of the public and of competitors, is not in serious danger of destruction or injury, but the ruthless, unfair and oppressive corporation will surely come to grief."

THE ECONOMIC ASPECT.

PROFESSOR JEREMIAH W. JENKS, of Cornell University, chose as his topic "The Economic Basis of Corporation Law." He declared that economists, while not questioning the legal learning and patriotic good faith of the Supreme Court in its early decisions under the Sherman Anti-Trust Act, thought it clear that the Court had not recognized the benefits as well as the evils that might come from the business conditions under which great corporations and combinations had grown up. Early decisions of both Federal and State courts had taken as precedents the English common law, precedents of a time when the so-called national monopolies of the present day were non-existent. The principles then laid down would need to be modified when applied to modern conditions. Even under the English common law, contracts in restraint of trade, if clearly in the public interest, were enforceable. It is now recognized that in natural monopolies there can be no competition. Economic conditions as to legislation regarding great corporations are substantially the same throughout the country. Different types of legislation are not needed in different sections Under the Constitution most of the corporation laws must be those of States. Many of these laws have been made so drastic that in blocking possible evil they have killed certain good, by driving capital, enterprise and some business brains out of the State. More careful study of economic conditions might make it possible to prevent the evil while retaining the good. In other instances, the desire to attract capital has caused States to permit companies to incorporate upon such terms as to injure other States. Congress cannot act to restrain evils in interstate business to the best advantage unless it keeps business conditions always in the foreground. "If there were uniformity of our State laws we could easily control the capitalization of corporations." Promotors of corporations could be controlled in their acts, directors could be held to proper responsibility; the interests of stockholders could be guarded by requiring reports accurate and sufficiently complete; mergers could be regulated or prevented in accordance with public policy; unwise double taxation could be prevented. Under certain circumstances, we should not be afraid even to legalize monopoly, putting it positively under public control. Under other circumstances, by recognizing conditions we shall know how to block monopoly that is injurious. In all cases, conditions must be recognized.

A BUSINESS MAN'S PROGRAM.

"A Business Man's Program of Government Regulation," was the title of a paper by JAMES T. YOUNG, director, Wharton School of Finance and Commerce, in the University of Pennsylvania. He considered that the difficulties warrant the formation of a new group of legislative committees from the business associations, which should agree on fundamental principles for a program. It is necessary for the great industries to educate the people upon the industrial needs and facts of the time. Prices should be fixed by combinations and agreements between producers. That is contrary to present Government policy, but is essential to business progress and stability. Steady prices are more essential than low prices, else fluctuations in cost of production must be increasingly harmful to all business enterprise. But there must be Government supervision and control of prices and combinations. There should be enforced strict rules of credit and protection against fraud.

SCIENTIFIC MANAGEMENT—EFFICIENCY.

"Justice, Common Sense and the Pay Roll," was the subject of Mr. HARRINGTON EMERSON, introduced as an expert upon economy. He proposed a scheme that he claimed would mean higher earnings, lower labor cost, increased output and employment for more workers. He declared that "piece work is so bad in practice that I have yet to see a single good example of it." Piece work speeds men and women beyond endurance, and he had seen girls overwork until vitality was sapped. His scheme involved "time equivalents for all operations," just as dairymen determine the yield and cost of each cow, or a liveryman keeps a separate account for each horse. Promotion should go to workers according to efficiency. One who exceeded the standard fixed by those qualified should be promoted. Thus he would stimulate production by rewards for increased individual effort, a plan which he presented in detail and which was regarded as another plan for "speeding" workers.

WORKING TO CAPACITY.

Mr. H. L. GANTT, industrial expert, presented a paper upon "Industrial Efficiency." He asserted that the unions had increased generally the price of labor without increasing the output. In manufacturing, the plan of Mr. Gantt involved keeping an individual record of each worker. Machines should be arranged so that a foreman could supervise a group and the work of each man. Then he would pay a bonus to each man who did the full task called for in any day, and a bonus to the foreman, or "speed boss," for each man under him that performed the required task. To quote: "If the work is done within the time allowed by the expert, and is up to the standard for quality, the workman receives extra compensation in addition to his day's pay. If it is not done in the time set, or not up to the standard for quality, the workman receives his day's pay only." Still another feature is that a further bonus is paid the foreman if all the men under him make bonus. Thus, to quote again, "A foreman having ten men under him would get 10 cents each, or 90 cents total, if nine of his men made bonuses; but 15 cents each, or $1.50 total, if all ten made bonuses. The additional 60 cents * * * made him devote his energies to those of his men who most needed them." As a result, a superintendent reported, "We have furnished the automatic incentive for men to work up to their capacity." This Mr. Gantt terms "intelligent selfishness." The "task setter" teaches the workman "to do the work in the time and manner specified," otherwise, no bonus for him nor for the workman. An additional bonus for performing the work in less than the given time places before the workman "an incentive to do as much work as possible." The bonus to the foreman "made him devote his energies to those of his men who most needed them."

THE LOCOMOTIVE ENGINEER.

Mr. WARREN S. STONE, Grand Chief of the International Brotherhood of Locomotive Engineers, spoke upon the efficiency system from the point of view of a "graduate of the school of hard knocks," having spent twenty-three years in the cab of a locomotive. He declared that his Brotherhood stood for efficiency, as proved by its record during forty-seven years, a statement that would be corroborated by the management of the railroads throughout the country. The Brotherhood would fight against the bonus system. On a limited passenger train, the piston packing blows out, the engineer is required in a cloud of steam to make time. The trouble was that the machinist who put in that packing was working on a bonus. If he could put it in in twenty minutes, instead of thirty or forty minutes, he would get a premium, but would have slighted the work. The traveling public is interested, because sometimes the engineer who is hurt takes some of the passengers with him. Engineers want the best work possible; they do not want piece work and they do not want some man to be paid a bonus to slight his job. The labor union does not oppose efficiency of the man. In all of these efficiency and bonus systems, one contends with the fact that men are not all alike. There is somewhere a point where men reach the maximum of output. There is no business in the world managed upon so close a margin as that of the American railroads and yet we are told by Mr. Brandeis that they could save a million dollars a day! But he never designed a locomotive. He never shoveled coal into a locomotive, and yet he says that half that coal could be saved. "Who's Who in America" states that Mr. Brandeis is a very able, highly accomplished attorney of Boston, who gives his talents and services free to help the downtrodden and oppressed, but he appeared in Washington as the attorney for the Shippers' Association. Does he think the shippers are oppressed? They are the people who have been reaping the benefits of rebates while they themselves do not pay a dollar of the freight. Any one who comes before the bar of public opinion should come with clean hands. Justice is the cornerstone of the Brotherhood of Locomotive Engineers. It has no strife with the employer and it is opposed to the bonus system.

BONUS PLAN DENOUNCED.

Mr. JOHN MITCHELL expressed his belief that any system claiming the title of "Efficiency" should be presented undisguised. He doubted a theory claiming to increase wages and production at the expense of less work. The purpose of such a system should be frankly stated to be the increase of profits; but the working people would have something to say about an alluring plan that promises less work and more wages. He had read a prediction by Mr. Taylor, the father of this system of efficiency, that the wage-earners would drop the labor union for the plan of a bonus, but he declared this prophecy groundless. The bonus was but another form of the piece-work system. Working people of experience had rejected it. Mr. James Hill, President of the Great Northern Railroad, after experience called the plan "bosh." The attraction of additional pay is an incentive to overwork, but under this system the bonus is divided between foreman and worker, so that it is to the interest of the foreman to drive the worker. But there is a fundamental objection. The worker needs no initiative, no exercise of intelligence. He simply becomes part of the machine. To substitute monotony for pleasure in work makes work drudgery and means deterioration both of worker and of work. The employer may determine for himself the basis, moved by the desire to pay as little wages as he can. The better way is for employers and wage-earners, individually or collectively, to determine mutually the wages, hours and conditions of labor. The best condition of industry is that of agreement by mutual consent and not dictated by one or the other. The assertion that the railroads of the country could save a million dollars a day was as absurd as was the statement that the Government by scientific management could save $300,000,000 in one year, when it was discovered that the Government did not spend that amount in the departments where it was to be saved. "The working people will reserve to themselves the right of having something to say in determining what conditions of industry are good for them; and we suggest that the advantages of the new theory of efficiency be presented not in the name of the wage-earners, but in the name of the manufacturers, because the system is not acceptable to the wage-earners and should not be put forward as their friend."

Second Day—Morning Session.

UNIFORM LEGISLATION.

The sessions of the second day were devoted to "Need for Uniform State Legislation," upon "Taxation," "Banking," "Insurance," "Pure Food and Drugs," "Reform in Legal Procedure," "Regulation of Corporations," and the "Commercial Bills of the Uniform State Law Commissioners." The opening address was made by the Hon. ALTON B. PARKER, who emphasized the common interest that binds together the family of States. There was no reason why the citizens of one State should try to take advantage of the citizens of another. The highest interest of all requires working together for the common good. When the American Bar Association years ago took up the subject of uniformity of law they had in mind, not local questions, but commercial paper, for example, as to which the law should be the same in every State. The first work of these patriotic men was the negotiable instruments law. They succeeded in creating the Commissioners of Uniform Laws, made up to-day of three representatives from each State. The work which they did, in connection with a committee of the American Bar Association, was stupendous and was performed solely with the purpose of doing their duty as citizens. There should be a uniform corporation law in the United States. There is no reason why a few States, for the selfish purpose of local revenue, should be permitted to authorize corporations with charters so broad that the great majority of the States would not think of granting them. This subject was considered at several meetings and it was determined that The National Civic Federation should aid the American Bar Association through the momentum of public attention and interest. One result was the great convention at Washington, where about 600 delegates, representing State and National organizations, held an interesting meeting of three days. Its effect was to arouse interest, not alone in the importance of the questions discussed, but in the practicability of the movement, and there was laid the foundation of accomplishment. After that convention there was devised machinery for effective organization, consisting mainly of State Councils composed of public-spirited men, in thirty-five States, representing every interest; and he predicted that a State Council in every State would make it clear that there would be efficient and generous support of the movement.

REFORM IN LEGAL PROCEDURE.

The next topic of consideration was "Reform in Legal Procedure," and the first speaker was Ralph W. Breckenridge, of Omaha. He reviewed in detail the discussions between the committees of The National Civic Federation and of the American Bar Association in New York City, May 31 and June 1, 1910, and at Chattanooga August 29, 1910, and placed upon record the principles there formulated. He thought that some of these principles might in certain jurisdictions require constitutional amendments. He declared that the proportions of the task should not be underestimated. It encountered both the spirit of conservatism and unwillingness on the part of lawyers to make criticism of a system that might be construed as criticism of the courts. There was no intention to provoke expressions of disrespect for the judiciary, but to magnify the law and to do away with hindrances and embarrassments to its administration, and which themselves provoke popular dissatisfaction with the administration of justice. He considered that when a system of procedure should do away with technicalities of practice and useless appeals, the people will recall with wonder and disgust the chains they wore under the present system.

COMMERCIAL BILLS.

Hon. AMASA M. EATON, of Rhode Island, former Chairman of the Commissioners on Uniform Laws, discussed the project of Commercial Bills, formulated by that Commission. He explained the method of work. The Commissioners meet in conference each year, when the American Bar Association is in session. All are lawyers, but they employ upon each particular subject the most competent expert they can find. Each expert takes years to prepare a draft of a bill, with a study of the law on that subject in each State; a study of decisions under those respective laws; weighing of the principles involved in conflicting decisions and embodying the best of them in an act. Each Summer a draft of the act is submitted in the rough, with annotations. Each section is discussed in committee of the whole. By argument and amendment each section is made more nearly final. The committee of the whole reports each section to the conference and then a vote is taken, usually by States, each State having one vote. Nearly always the final vote is unanimous. During successive years editions are printed and distributed widely among representatives of all interests affected. The acts that have been framed are upon Uniform Negotiable Instruments, which have been adopted in thirty-eight States and Territories and in the District of Columbia; upon Uniform Sales, adopted in eighteen States; upon Uniform Bills of Lading, involving many different and conflicting interests, a subject upon which the Interstate Commerce Commission has arrived at some conclusions, and the act on Partnership, which has been six years in moulding and is not finished yet. Unexpected phases develop and unanticipated difficulties are encountered in the work. During eight years, as President of the Commissioners, Mr. Eaton delivered an annual address, including a summary of decisions in all the States under the Uniform Negotiable Instruments Act. These show the necessity of uniform decisions, for which it is necessary that the judges of the different States must familiarize themselves with the decisions of other States under the same law. This has not been done, particularly in the State of New York. It is necessary that counsel study this law and the decisions, thus aiding the Court to rise to the new jurisdictive conception of uniform legislation. There are cases under this act in which no reference whatever is made to it. In other cases, judges have cited old cases instead of the provision in the statute book before them. There is need that lawyers awaken enthusiasm for this new kind of common law, common to all States.

INTERSTATE INSURANCE.

The topic of "Insurance," and its need for uniformity in legislation, was announced by the Chairman, who introduced ROBERT LYNN COX, President of the National Association of Life Insurance Presidents. Mr. Cox pointed out that every correction of a great evil was of slow growth. The present serious consideration of uniformity in State laws is caused largely by changing social conditions and material surroundings. A man in Chicago may direct branches of his business in Kansas City and in New York. State lines still exist, as they should, technically and for governmental purposes, but from a practical and business standpoint, they should not. To make laws uniform is like opening gateways in a wall, to the obvious advantage of those on both

sides. The problem in the insurance business is merely a part of the great problem confronting business activities generally. The highest court of our land has held that insurance is not commerce. Essential to the interest of policy-holders, one-fifth of our population, is that the business extend, limited only by strict State supervision. Insurance should cover many occupations and classes, and a large number of individuals, so as to make an uncertain ratio a certainty. Companies should extend their business to cover many localities and a variety of living conditions. It is important that companies shall be allowed to extend their fields of investment, so that calculations shall not be disturbed by local losses. Large companies can be created only by insuring a larger number of people than can be obtained by one company in one State. Life insurance is interstate business, and life insurance companies are interstate institutions. Economy of administration would be increased by uniform laws. It has been calculated that in one life insurance association compliance with conflicting State laws costs policy-holders more than a million dollars each year.

FACTORY AND LABOR LAWS.

HON. JOHN WILLIAMS, Commissioner of Labor in New York, was introduced to speak upon "Need for Uniformity in Factory and Labor Legislation." He pointed out that legislation affecting labor, when not uniform, might affect unfavorably an industry in one State in competition with the same industry in another State. Thus restriction of hours of labor might impair productivity as compared with the result of less restriction in another State. There should be uniformity in the requirements for safeguarding of life and limb. But statutes requiring the safeguarding of machinery in some States are conspicuously absent in others. Then there are differences in administration and in application. It is essential to make a serious attempt to secure uniformity that shall guarantee equal safety to the operative in every part of the Union, making an equal condition in competition. New York has as good a code of labor laws as can be found in any other State. But they are not perfect; there is no inclination to stop and we hope that The National Civic Federation and kindred bodies will continue to urge upon legislatures uniform enactments.

UNIFORM LAWS ON DRUGS.

Uniform Legislation for the Drug Trade was the subject discussed by WILLIAM J. SCHIEFFELIN, President of the National Wholesale Druggists' Association. The two phases of this topic of interest to the public, he said, are the quality of the drugs sold and the restriction of habit-forming drugs. The use of opium in the United States is as great per capita as in the Chinese Empire. The importation is probably eight times as much as can be used legitimately. Opium and morphine are more prevalent than is cocaine. More stringent regulations as to cocaine are needed. Even five offenders out of 2,200 druggists in New York City can do much harm. When such men learn that they are watched they will import cocaine from other States. To stop this the Foster bill in Congress requires every dealer in morphine, opium or cocaine to take out a license, and that an internal revenue stamp be put upon every package sold and an accurate record kept of every sale and purchaser, so that the drug can be traced. For all this uniform State legislation is needed. The National Wholesale Druggists' Association has for years favored uniform State food and drug laws. These should not vary from the National law, which does not require the weight or measure to be stated on labels on packages of food, but only that if stated they must be plainly and correctly stated. A manufacturer cannot tell where the goods he sells will be eventually retailed. This subject affects the interests, not only of manufacturers and dealers, but also of consumers, since the latter have to pay the cost of conforming with conflicting State laws.

PURE FOOD AND DRUGS.

DR. HENRY H. RUSBY, Dean of the School of Pharmacy, Columbia University, discussed "Some Obstacles to the Purification of Our Food and Drug Supplies." The present condition of these he described as far from satisfactory, but hopeful to the degree of assurance. The objection to an impure food or drug may lie against its being used at all, or only against a particular use. For example, polluted food or a drug that has lost activity or that has acquired an undesired activity should not be used at all. But in a shipment of sugar with 50 per cent of clean sand, it would be morally wrong to waste the sugar. The sand can be removed, a perfect product resulting. To sell the mixture for sugar would be as wrong as to waste it. From belladonna leaves containing only half the percentage of atropine required by the legal formula, the atropine may be extracted, thus preventing the total loss of that crop. But what means is there to determine that the importation will be so used? The fact that an article differs from the standard may be "plainly stated" upon the label, but in language utterly meaningless to the consumer. This may apply to food as well as to drugs. An important contention over this principle is pending in Pennsylvania, where the statute requires that the "plain statement" be fully intelligible to the consumer, while the Federal statute imposes no such requirement. An importer may obligate himself under bond to restrict an article to its proper use. But when the goods are in his possession he may evade in various ways. An importation, once it has reached the State where it is to be consumed, is beyond Federal jurisdiction. The result as to its use will depend upon the local law, which varies and also differs in administration. It is a general, but vital mistake, to assume that physicians are qualified for this work, when, in fact, they know little more about drugs than men in other professions. The study of drugs in medical schools has been practically abandoned. Pharmacy should be accorded a much higher position. Not all pharmacists, however, are unworthy of their trust. Competent pharmacists can be found to co-operate with physicians upon boards of drug control. When fraudulent products, excluded from one State, are dumped into others, the percentage of injury will rise in the latter communities.

UNIFORM COURT DECISIONS.

The reform of pleading and of judicial procedure is a subject that the HON. THOMAS W. SHELTON, of Virginia, considered of interest to the people who are taking the last interest, the business man. The day has passed when one State can be a law unto itself. A man in New York may transact business intimately connected with industries in West Virginia, or Carolina, or Vermont. But any law in one State affecting wages is bound to affect the ultimate cost and output and so becomes a factor in competition. If uniformity of law is important, uniformity of court decisions is of greater importance, since pleading and practice are the vehicles of enforcing law. It is the spigot that determines the quantity and quality of the water drawn from a reservoir, of whatever size and quality. To-day, every representative of human endeavor has left pleading and procedure to the lawyers. It is absolutely unjust to say that lawyers stir strife. But if they are able to gain ground, even through technicalities, it is their sworn duty so to do. The time has come to be fair. The plan suggested here is good, and it is no departure from general principles. Our forefathers adopted the common law of England, and that law has watched over the liberties of America. Procedure in England, modified to this date, is as old as English civilization, and as new as the latest idea. It were better to follow that plan rather than a new code. Let the Court of Appeals prepare this system, or let the Supreme Court of the United States prepare it during the coming Summer.

Second Day—Afternoon Session.

WORKMEN'S COMPENSATION.

The fourth session of the meeting, on Friday afternoon was devoted to compensation of workingmen injured in industrial accidents. The Chairman of the committee delegated to draft a bill upon this subject, for the promotion of uniformity in legislation, opened the program.

RELIEF FOR INDUSTRIAL ACCIDENTS.

P. TECUMSEH SHERMAN, ESQ., presented an explanatory statement upon a draft bill reported by the legal committee, the scope of which he defined to be to "provide prompt, certain and just relief to the victims of industrial accidents and their dependents, without unnecessary hardship to employers, and, if possible, to reduce the economic waste and public burden of accident litigation." The problem was to present a practical measure which, if put into effect in the immediate future, "would do the most good with the least incidental harm and serve as a basis for future progress and development." He enumerated as essential to a correct conclusion "the history and principles of our law of master and servant, of the various forms of compensation law and of our constitutional law, the status of public opinion as to the justice and necessity of a change to compensation or insurance, and the industrial conditions upon which the practicability and desirability of each particular form of compensation law depends." In accordance with that analytical outline, Mr. Sherman observed that, stated broadly, the common law involves the rule of the assumption of risks and assumes that wages in hazardous employments are higher in proportion to the hazard, so as to compensate for such risks. But it is now recognized generally that both of these premises are economically false, and consequently that "the assumption of risks rule, along with its corollary the fellow-servant rule is unjust." To remedy this injustice the common law has been modified by statutes which limit those rules and impose upon the employer uncertain or impossible duties. Their practical effect has been to increase uncertainty and expense to employers, and to waste in legislation the money paid, leaving relief to the injured as slow and uncertain as before. "The law seeks concrete rather than abstract justice * * * and should therefore seek a rule which, however comparatively less just in theory, will result in a higher average degree of concrete justice in practice. That rule is to be found in the basis of the compensation laws of Europe." Mr. Sherman reviewed the form of compensation law, applying only to the most dangerous industries, and in the majority of European countries and in Great Britain and its colonies; discussed compulsory insurance, taking the German system as the best so far devised, but as not feasible in the United States because of its paternalism, which is forbidden by our constitutions. Yet it were well to have in mind an approximation to the German system, as an ideal. But as a practical first step, it is necessary to turn to the simple compensation laws, of which system the English is the best example. The English compensation law has been extended, in the act of 1906, to cover practically all employments, not casual. This action was in response to general public belief; and the extended liability to employers became a subject of insurance. The law has worked satisfactorily, in general, but it has led to discrimination in employment against the aged, infirm and defective and those of unknown health and habits. The better opinion is that the extent of this evil is serious. A doubtful constitutional question, underlying all forms of compensation law, is whether it is "due process of law" to impose upon an employer a predetermined liability for the consequences of an accident beyond his reasonable powers of prevention.

It is a great constitutional risk to make the employer liable presumptively for compensation for all accidents in the employment. But the great constitutional difficulty, about which there is most divergence, is whether it is safer to restrict compensation for injuries to the more dangerous industries. The employer must be made liable only pursuant to some reasonable public necessity. The greater the evil, the more justifiable is the exercise of the police power. But among the objections is that a law limited to the more hazardous industries would be held to offend against the constitutional prohibition of "unreasonable discrimination between persons or classes." Mr. Sherman cited decisions in support of this view, but pronounced the weight of opinion to be "strongly in favor of the proposition that incidental and unavoidable discriminations resulting from a reasonable and correct classification by industries do not constitute *unreasonable* discriminations." It is to be assumed: (1) that those who have studied the subject are generally in favor of some change in existing law in the direction of compensation or insurance; (2) that the general public are not yet familiar with the subject; and (3) that the demand for immediate relief is acute only in the great dangerous industries, there being no pressing demand from such classes of employes as clerks, stenographers, domestic servants, salesmen. To these conditions, the draft bill here submitted is the answer proposed. "The bill contains the outlines and essential provisions of a *simple compensation law*, without compulsory insurance." It applies only to the more dangerous industries enumerated; only to workmen earning less than $1,800 a year; excepts injuries shown to be due to certain moral faults of the injured workmen; provides that for an accident due to the personal fault of the employer the injured workman may either accept compensation or sue the employer for damages at common law. The provision for compensation aims to pay approximately one-half the estimated loss of wages, with limitations dictated by public policy. For fatal injury, dependents are to receive a lump sum equal to four years' wages, but never to exceed $3,000. The payment of one-half wages is not to exceed $10 a week or to continue more than ten years. The employer is required to furnish medical and surgical service as necessary, not to cost more than $100. The employer may attend the physical examination of claimants. In this bill, the English rates of compensation are about doubled. The exclusion of small employers, as in Massachusetts, is objectionable because it has no relation to danger and because it imposes a fact hard to prove. Mr. Sherman summarized the reasons for the procedure. He regarded the best method of accomplishing the purpose to be voluntary benefit associations, established and maintained in whole or in part by the employer or associations of employes. Mr. Sherman specified the principal differences between this bill and the New York Compulsory Compensation Law of 1910. Mr. Sherman explained that no member of the committee was prevented from dissenting from the bill in general or particular. It is offered merely as a sketch model from which to frame a law. Mr. Sherman concluded: "We must make a move toward compensation soon. Otherwise we will continue, with ever-increasing impetus, down

the broad way of the Employers' Liability laws, which lead to social destruction."

ANDREW CARNEGIE FOR COMPENSATION.

In response to the request of the Chairman, ANDREW CARNEGIE declared that no proposition could be sounder than that injuries occurring in dangerous pursuits should be considered a part of the cost of production. The lawyers may perfect the details of such a law, but employers should know the practical effect. Insurance against accidents is a step in the right direction in the relations between employer and employed, and it is a proof of progress and of improvement in the relation between capital and labor, of which it is to be said: "The more the employer does for labor, the more profit he makes." The evidence that the employer has a heart and recognizes what he owes to his workmen means that in time of trouble employer and employe are devoted friends. The foundation of nine out of ten strikes is not wages, but that the right man is not in the right place. The employer ought to know his men, or at least their leaders, and when he sits down with them and wants to do the fair thing there is little trouble. When a man knows that he will be cared for in case of accident in the service of an employer, and all the men know the same thing, and the law is there to enforce it, all that is more beneficial for capital than for the working man himself. Employers cannot go too far in this direction, even from the economic standpoint. Uniform legislation is desirable, yet Mr. Carnegie believed that the employer who paid for accidents when others did not is not at a disadvantage, because of his finer relations with the men. Nevertheless, it is well to strive for uniform legislation. He thought that the United States Steel Company, from which he is retired, had acted with great liberality. Of the five millions of dollars that he left to the workmen when he retired, four millions were for pensions for old persons when they had to retire. Recently the company, in accordance with the suggestion of Mr. Carnegie that the idea be extended, had added eight millions of dollars to the fund, so that there are now, at 5 per cent, two thousand dollars a day to pension the old men who have served faithfully and must retire. They have also provided against accidents on a scale that they are not compelled to follow. Any general law upon the subject would of course make it necessary to adjust present arrangements. Mr. Carnegie gave the measure under consideration his hearty approval.

PRESIDENT ROOSEVELT ON AUTOMATIC INDEMNITY FOR INJURY

The former President of the United States, THEODORE ROOSEVELT, upon being presented by Chairman Low, declared that this organization realized his desire "to see radicalism prosper under conservative leadership." He felt it absolutely essential to the welfare of this country that there should be progressive action among the people and government. To stand still is to go backwards; but to go off in a spiral, to one side, is not going forward at all. He would see progress made in the spirit of Abraham Lincoln, who was a radical progressive compared to the schools of Buchanan and Fillmore, but who was denounced as a timid conservative by those who denounced the Constitution and who described Abraham Lincoln as the "slave hound of Illinois." Mr. Roosevelt would have the great movement for betterment go forward so that no step need be retraced. He would see labor legislation undertaken always in consequence of a good understanding between the wise leaders of labor and men who favor what is good for any of the people of our common country. He cited an address upon Conservatism in which Dr. Eliot had said in effect that not only must government in this country do more compared with what is left to be done by the individual than formerly, but it must work more often on a national scale. Increase in collective activity must take place notably in two ways, first in the attitude of the public toward the aggregations of wealth used in business. The man who, in conjunction with others, enlarges his business from that of a retail butcher or grocer so as to deal in railroads or whatever it is on a scale that covers States becomes too big for any one to deal with in his individual capacity. We must ship and travel by his trains. Therefore, we face a situation where the other man has the entire power and yet where our need of dealing with him is absolute. This situation was utterly unknown a century and a quarter ago. There is only one popular artificial entity able to deal on behalf of all of us and that is Uncle Sam. He must have the power to guarantee the corporation against injustice and to exact justice in return. It must be to the interest of the corporation to do business, not merely for its sake, but for ours, and on the other hand we must have power to see that the corporation does justice to us. The use of the collective power of the people through the Government is more necessary than ever in dealing with great corporations, alike from the standpoint of the general public and from the standpoint of the employes of corporations. Changes in modern industrialism are most evident in the relations between employer and employed—first in the power of the employer and in the knowledge that one has of the other; and second, in the connection between the men serving together under the employer. A century and a quarter ago, an employer could not be very harsh, because the employe could easily go elsewhere; he could go and take up a farm for himself. Moreover, there was an intimate personal relationship between the employer and employe which usually made any interference beween them by the law unnecessary. Second, very little analogy can be drawn beween fellow servants under the old system and under the present system, and legal decisions, which follow Eighteenth rather than Twentieth Century precedent, enforcing a line of action which works cruel injustice at the present time. So the misused doctrine of liberty of contract exhausts patience. A wage-earner may face the necessity to work or starve; then it is right that the State shall decline to recognize a liberty that is merely fictitious and to recognize any contract made under such conditions against his welfare. In legislation as to compensation to the injured, America has lagged behind every nation of any size of the industrial type in the world. In industry we face the same certainty of loss of life and limb as in war. The chance of loss of life to the workman in putting up a steel building is greater than it was to any soldier in a battle in the Spanish war. As in war, the burden of injury should not fall wholly upon his wife and children. The whole public should pay and the payment will be distributed if we make the employer responsible for the loss to the man. The right to sue is not just either to the employe, to whose lawyer the chief benefit may go; it is not just to the employer because the jury, through sentiment, may award excessive damages. The workman should receive automatically indemnification for injury, at once, and the business should be able to tell in advance its liability. The loss should be treated as part of the risks of the trade. The Nation should take care of all its employes who are maimed in its work. An alien employed in Panama was crippled for life and was actually shipped to his own country because he had lost the power of self-support. Such an incident must cause indignation. The work on the canal, the way the men have been housed and looked after as to amusement may give us national pride; yet we are powerless to do justice in such a case. Let us then endeavor to secure just workmen's compensation acts, which shall affect all Government employes no less than those in private enterprise."

Second Day—Evening Session.

A SYMPOSIUM AT ANNUAL DINNER.

In opening the discussion following the annual dinner of the Federation, on the evening of January 13, PRESIDENT LOW spoke of the addition of strength resulting from the organization of twenty-four State Councils. The other great movement had been for compensation for injured workmen. He introduced UNITED STATES SENATOR CUMMINS, of Iowa, who spoke upon "The Regulation of Interstate Commerce," basing his discussion largely upon competition as fixing prices and limiting profits. The question was whether some other force for the distribution of profits and wealth should be substituted for competition. If competition is to give way it must be to altruistic co-operation. Nothing could be more naturally selfish than combinations of both corporations and wage-earners. The result of these conditions must be that "in capital, monopoly will become complete," but that will not be so with labor, because of its immediate necessities. It is clear that labor unions are not a menace, because they will never obtain more than their just share of the fruits of toil. Hence he believed that the sole regulation of labor organizations should be to prevent interference with the rights of others, as is recognized by none more completely than by the laboring men themselves. Mr. Cummins summarized the passing of competition as a controlling factor and the arbitrary fixing of prices subject only to the homely idea of not killing the goose that lays the golden egg. But now and in the future the many will not be slaves to the few. "The sooner we recognize the imperative warning that we must have universal competition or that we will have universal co-operation, the more certainly will we avert the disasters which always follow universal discontent." The Anti-Trust law is not to be disparaged. But he favored a direct regulation of those engaged in interstate commerce, which should provide a Federal tribunal with power to limit the capital employed. Thus would be introduced into every field of production and sale the competition which the Anti-Trust law is powerless to preserve.

COMPENSATION AND PREVENTION.

The chairman introduced AUGUST BELMONT, who spoke upon the work of the Department on Compensation for Industrial Accidents and their Prevention. He explained the processes of gathering information in order to formulate recommendations. The work as to Compensation was referred to a Legal Committee, with instructions to draft a tentative bill, and also to a Committee on Statistics and Cost. The question of the Prevention of Industrial Accidents was referred to a third subcommittee, whose work has been primarily in the direction of factory inspection. He emphasized the purpose, as to Compensation, to form a bill likely to meet with favorable attention in State Legislatures. He summarized the reasons for restricting the bill to hazardous industries, and pointed out that it would not interfere with existing agreements, provided they do not prescribe rates less than those of the bill. The measure is not intended to be academic, but purely practical. He pointed out that if the measure should prove invalid, the State would revert automatically to the old liability and common law provisions. The committee offers an entering wedge, subject to the processes of time and further consideration.

LEWIS PARKER, Chairman of the State Council of the Civic Federation in South Carolina, emphasized the absence of sectionalism. He recognized that accidents in industry are inevitable, and he believed in fair compensation and in the exercise of all proper means of prevention. By such a method he had reduced the cost of insurance. Due attention to prevention of accidents would lessen the number of injuries. He believed that every employer having a sense of duty considers what he may do that is best for those of whose welfare he should think. He believed that accidents could be largely reduced by the exercise of proper care. In his own experience, with a pay-roll of over $300,000 per pear, compensation for the injured had never exceeded $1,000 a year. The amount was charged to the account of ordinary costs.

MYRON T. HERRICK, former Governor of Ohio, and Chairman of the Federation's Ohio State Council, expressed his belief that proper compensation of the injured workman is a need more pressing than ever in the history of this country. Mr. Herrick referred with force to the influence that members of The National Civic Federation had had in the past in bringing about a better understanding between capital and labor, and expressed the opinion that the Federation would be equally successful in the present matter of compensation.

SAMUEL GOMPERS, called upon as a representative of labor in The National Civic Federation, declared that there is no other factor so powerful in the discussion of great problems as these regular gatherings. The complete address made by Mr. Gompers appears on page 11.

GEORGE W. PERKINS, of New York, thought it a pity that this audience could not step out and look at itself, for it was an inspiring and representative gathering. He paid a tribute to the memory of Senator Hanna. He thought the relation between labor and capital to be a very live issue, and one that demanded serious consideration. Agitation would lead to popular enlightenment. This is a get-together period throughout the world. Competition has become a deadly game. He believed that the strict application of honesty would make practical the substitution of co-operation for competition. The completion of the Panama Canal will place this country at the center of commercial development. He could not see how unregulated competition could go on. He thought evolution from competition to co-operation would be certain.

PRESIDENT LOW pointed out that the question of co-operation could not be limited to the United States, but involved foreign commercial relations. He called upon CHARLES L. JEWETT, of Indiana, who declared the question of industrial compensation to be urgent. In these days compensation by process of law was awkward and cumbersome. The principle is that who gives limb or life has contributed to production and is entitled to a return upon the investment.

OSCAR S. STRAUS, upon request of the chairman, said that it was simply his function to say the benediction. He thought that this representative gathering, in this banquet hall, showed a spirit of endeavor to bring about a fair understanding between capital and labor. All should look forward to equity, was his parting word.

Third Day—Morning Session.

INDUSTRIAL MEDIATION AND ARBITRATION.

At the opening of the sixth session of the meeting, January 14, PRESIDENT LOW called to the chair FREDERICK KLUMP, of Michigan, and chairman of

(Continued on pages 11 and 12)

ORGANIZED LABOR AND THE NATIONAL CIVIC FEDERATION

By SAMUEL GOMPERS

From the March AMERICAN FEDERATIONIST

THE eleventh annual meeting of The National Civic Federation, held in New York in January, gave the Socialist leaders one of their annual occasions to howl a howl concerted, deliberate, theatrical, manufactured. The normal state of the Socialist writers and public speakers is the howling dervish state, but in certain circumstances they all get together and make their howl unusually loud, long and cantankerous. Moreover, the tactics of Socialists require that their howl should be extraordinarily vicious, a howl of scorn and derision, on seeing representative labor men meet representative employers in conference. In order to serve up their dish of scorn and derision to the taste of the ignorant, the Socialist leaders have thrown into it as constituent elements bitter misrepresentation, the heat of hatred, and the ginger of opprobrious epithet.

SOME SOCIALIST "LITERATURE."

Max Hayes, in a syndicate letter on "That National Civic Federation," indulges in this classic language:

"In a special parallelogram via leased atmosphere we learn that one man suggested to the convention bosses that he be permitted to discuss the subject why every laboring man should have a home and a job of his own, but Ralph Easley, the chief manipulator, nearly threw a fit, saying that such foreign matters had no place in the august assemblages of The National Civic Federation.

"Subsequently a statement was handed to our correspondent declaring that the great men who come to the annual gathering to get their names and pictures into the papers are too unselfish to discuss such common, everyday questions as workingmen's homes, working hours, wages and things to eat and wear," etc. . . .

"Among the other men of labor who will be duly classified in the papers under the sub-head 'those who also spoke' are Samuel Gompers, who is nicely sandwiched in between August Belmont and our own Myron T. Herrick; John Mitchell, who is placed between W. C. Brown, railway magnate, and Samuel Untermyer, corporation lawyer; James Duncan, who is honored in the midst of George B. Cortelyou and John Hays Hammond; James O'Connell, who is flanked by those celebrated votaries of open shoppery, Marcus M. Marks and Otto Eidlitz."

EXHIBITS PEVERTED INTELLECT.

We commend to our readers, as people of common sense, a careful reading and consideration of this best that is in Hayes. Really, is there in it anything of truth, anything of the dignity of a serious subject, anything which shows care for the power of his readers' thought or the least feeling of respect for their manhood, or anything to satisfy the desire to learn on the part of the sincere and studious wage-worker? What can be the effect of such writing, except to exhibit the perverted intellect, the resentment, the venom, the abandonment of sincerity and truthfulness on the part of the writer?

Loeb DeLeon's comments ran thuswise:

"'Yellow' labor in America enjoys an advantage not enjoyed by the 'White.' What may that advantage be? The advantage lies in the non-existence of the 'Yellow' scab-herder; in short, the non-existence of 'Yellow' Civic Federationized American Federation of Labor officers.

"The cry implies that the American Federation of Labor is a labor organization—the affiliation of its leading officers in their official capacity with the Civic Federation of Capitalist magnates and more recently its admission to its national conventions of clergymen as delegates of 'Councils of the Churches of Christ' and as delegates of 'Federations of Catholic Societies,' notedly large property interests—all this demonstrates the American Federation of Labor to be an anti-labor, anti-proletarian, and pro-capitalist concern. . . .

"Down or up the line, the history of Tobin's fellow American Federation of Labor officials is the history of scabbery against the working class. Such is the law of their existence. Accordingly, Farleyism is nothing peculiar to Tobin; it is the specialty of Gompers-Mitchellism; the specialty of all organization of workers that is officered by the Civic Federation. . . .

"Haywood next hastily sketched the evolution of an American Federation of Labor 'labor leader,' from a well enough intentioned young man accepting treats at a strike conference to the stage where 'today John draws $6,000 yearly as chairman of the Trades Agreement Department of the Civic Federation, and wears on his finger a diamond big as the Cullinan, presented to him by the mine operators.'" . . .

JOHN MITCHELL LIBELED.

The assertion that Vice-President Mitchell received a diamond ring as a present from the mine operators is the sort of statement the Socialist leaders can make without wincing when denouncing trade union representatives. The whole world at all interested in this matter knows that the ring in question was presented to John Mitchell by the members of the Mine Workers' Union as an expression of their appreciation of the great services he has rendered to them, and not by the mine operators. This piece of baseless vilification in Loeb DeLeon's paper is a key to the probable truth in any other assertion that paper has made or may ever make.

Day by day during The Civic Federation sessions, the *New York Call* treated its readers to a wild and whooping war-dance, with the meeting as its subject. The premeditated scream of derision and scorn reached the top note in every issue. Some of the headings in its articles were:

"Everybody Saved by Civic Federation;"
"Wolf and Lamb Lie Down Together;"
"Look Them Over;"
"Stone Defends Bosses;"
"Oh Joy! Labor Puts on its Dress Suit;"
"Andrew Carnegie and Theodore Roosevelt Josh the Noble Workingmen."

In the Call's descriptive matter of the meetings occur such passages as these:

SNEER AT WORKMEN'S COMPENSATION.

"Testimonia's about this compensation specific will be given by the celebrated African traveler, Theodore Roosevelt, who is looked upon as a young man with a future, and is even mentioned in certain circles as a likely incumbent for a certain wide, oh very wide, chair that might be vacated in Washington during the winter of 1912-13.

"Andrew Carnegie, famous in most American libraries, and also famous in certain Pittsburg slums, will also have a word to say in behalf of Dr. Belmont's specific for workingmen who lose a hand or foot, and sometimes their whole blamed life, in factory accidents." . . .

"Haven't you got a picture of Tim Healy and John Mitchell sitting down to a love feast with August Belmont and Marcus Marks?" . . .

"P. Tecumseh Sherman opened the afternoon session with a valiant effort to convince everybody that a workingmen's compensation law, built along the lines of the one which Belmont and John Mitchell had modelled for their guidance, would provide many immediate blessings and open the way for other and more 'progressive laws.'" . . .

"Chairman Straus, of Macy's department store, introduced Mitchell as 'a member of The Civic Federation who graduated from a labor union.' It looked like a big advance to Straus, who probably knows better than the general public all that it entails." . . .

"Marks here let the cat out of the bag by saying that at no time and in no instance have employers found strikebreakers profitable. The fact is, he said, the employers have as much abhorrence for a strikebreaker as the employes, because strikebreakers are expensive. The only way to do away with the strikebreakers, he thought, was mediation whenever a dispute between employers and employes arises."

"President Gompers said he didn't care who owned the trusts so long as they were run in the interest of the workingman—that is, partly in the interest of the workingman—far be it from him to interfere with dividends or anything else which Belmont and Straus are interested in." . . .

But it is the dinner of The Civic Federation which gives the Socialist leaders a toothache. The introduction to the *Call's* two column article of ripping, tearing, slashing, howling sarcasm descriptive of this function is as follows:

"The starving strikers of Tampa and Chicago, the merciless persecution sustained by organized labor in Los Angeles, the crushing of the men on August Belmont's subway five years ago, the thousand battles which labor has fought to wrest from capital a living by which it could maintain even decency were forgotten Friday night when the leading officials in America's biggest labor organization came in evening clothes, glistening white shirt fronts and silk hats to one of the huge and luxurious dining rooms of the Hotel Astor, there to sit down, laugh and feast with the richest nabobs and capitalists in the world. It was the annual dinner of The National Civic Federation." . . .

And, again:

"But why mention these depressing things? Let us rather think of the splendid Broadway hotels, the fine dinners, the luscious music, the well-groomed men and women, and above all, the truly noble, humanitarian and Christian sentiments flowing as freely as the imported wines."

SOME SOCIALIST CONSISTENCY.

That sort of writing has its uses to an intelligent mind in betraying the estimate entertained by its authors of the grade of intellect and character of the readers to whom it is addressed. It is, in short, contemptible, because insincere and designed to stir up those meanest of passions, envy and the malice arising out of envy. This demagogy is inconsistent. That radicals may sit at the tables of the rich every day in the year is illustrated in the lives of a number of American Socialist leaders, whose incomes from their own labor are of the slenderest description; whose incomes, in fact, so often come from their wives. That Socialists may dine sumptuously while starvation plagues the poor is a spectacle to be seen wherever the Socialists have the price. Here is a touch of description (from the *Literary Digest*) of the concluding scenes at the World Congress of the Socialists at Copenhagen last December:

"At the conclusion, however, all shook hands and held a great reception. 'In short, it was a congress of compromise which ended in a dance.' Mr. Bourdeau thinks there was something droll in the sumptuousness of the supper given by the delegates at the 'magnificent town hall' of Copenhagen. He says the German Socialist paper *Vorwaerts* described 'the Pantagruelic sideboard,' on which figured 'hams and scarlet lobsters, and various choice dainties and delicacies which stood amid long-necked bottles.' 'We saw nothing of the cabbage-soup which Proudhon served out to his guests.' *L'Humanite* (Paris) protests against such luxury. 'To tell the truth,' cries Mr. Jaures in his paper, after sharing the good thing of 'the Pantagruelic sideboard,' 'I was ashamed to indulge in all this fine fare.' The innocent orgy, says this writer, concluded with a dance. To quote his words:

"'To the voluptuous measures of Viennese waltzes and couples joined arms and hands; round and round they whirled, and the god Cupid was one of the party. The congress ended in delight, for the most celebrated Socialists were to be seen and admired circling in the most frantic of farandoles. A fine comment on Bernstein's dictum "congresses are all humbug."'" . . .

So it is seen that all this Indian war dance, this tomtom beating, these shrieks of horror, these imprecations, this attitudinizing by the Socialist leaders, is a hollow travesty on bad acting. It is the veriest and most transparent demagogical rot. It is politics run mad—untrue, unsound, insincere, contemptibly bad tactics supported by acting execrable to the last degree. What manner of man can be caught by it all?

HANDS CLASPED WITH UNION HATERS.

But why should C. W. Post and the other radicals of the Manufacturers' Association rail at organized labor and The Civic Federation? The Socialists are doing their work in this respect most faithfully. There is a striking similarity in the tone and phraseology in the attacks on the trade unionists and The Civic Federation in Post's advertisements and in the similar attacks of the Socialists. There are the same bitterness, the same baseless assertion, the same unreasonableness of attitude. Post, on inditing his most furious articles against the employers and organized workers who believe in systematized methods in endeavoring to maintain all possible industrial peace, might count with certainty on having them inserted without charge if he were to send them in some Socialist's name to the *Chicago Daily Socialist*, the *New York Call*, the *International Socialist Review*, the *Milwaukee Democratic Herald*, and the *New York Volkszeitung*, or the *New York Vorwaerts*. Post and the Socialists are in this instance the proverbial "strange bedfellows" that are made by politics, for in both these parties the animus of their onslaughts is a base form of politics which includes the weakening, if not the destruction, of the two institutions which stand in the way of their designs, namely, the trade union movement as governed by its present principles and The Civic Federation. It is really a fortunate thing for the trade union men in The Civic Federation that they can point on the one hand to the venomous Post and on the other to the bitter-tongued Socialists and direct the attention of the country to the resemblances between them, which are the reverse of flattering to either.

RADICAL EMPLOYERS' VIEW.

John Kirby, Jr., President of the National Association of Manufacturers, recently denounced The Civic Federation because Samuel Gompers and John Mitchell were "not only participants, but moving spirits in the movement as well as officers in good standing," and because of the "doctrines they preach." Kirby hoped the day was not far distant when The Civic Federation would "clear its literature of the union label." He quoted a manufacturer as telegraphing to him: "I am opposed to our sending delegates to Gompers' convention"—the annual meeting of The Civic Federation—and another as saying: "I agree absolutely with your action in declining to appoint delegates to The National Civic Federation of Gomperism," and another, "There ought to be some way to enlighten the innocent or assumed innocent members of The Civic Federation that they are the tools of organized labor." C. W. Post had the following, August, 1909: "*The Square Deal* has persistently called attention to the fact that The National Civic Federation has almost uniformly lent itself to the support of the 'Labor Trust' in its attacks on the industry of the country and the general welfare of the people. We can recall no instance in which it has failed to obey the wishes and behests of Gompers and Mitchell," etc. *The Square Deal*, the official organ of The National Association of Manufacturers, has this in an editorial, July, 1909:

"Mr. Mitchell, after having held on to his lucrative position as president of the Mine Workers' Union as long as he could, was taken to New York and given a six-thousand-dollar-a-year job with The National Civic Federation. It would not be at all surprising if, through the efforts of The Civic Federation, he were nominated and elected to Congress by one or other of the corrupt rings which control the political parties in New York City."

If either the Socialists or Kirby, Post and Company, were actuated by common sense and sincerity or even by the aim of getting at results equally desirable to both their organizations, they might well agree that one of them should carry on the work of smashing the trade unions and The Civic Federation. Each of them wants to do so, and both are carrying on their attacks with equal rancor. A trouble which both have brought upon themselves, however, is that the big general public clearly sees that both of them cannot be right in their charges at the same time, since the two sets of charges are contradictory in the extreme, and that hence there is but one motive—that of unworthy partisanship—at the bottom of the ravings which render the Socialists and the Post-Kirby combination equally ridiculous.

NO SACRIFICE OF PRINCIPLE.

Now, let us look for a while at The National Civic Federation as an established American institution. It has finished a decade of work in the national field. It is proper—it would seem to be a duty—of the average citizen of honest intentions to review the character of the work performed by that Federation and ask himself questions pertinent to its character as a useful agency in promoting the public welfare. Has it in any case betrayed public confidence or perverted the usefulness of trade unionism? Has it called on any representative of labor to sacrifice any of his principles, even the most radical? Has it made any stipulation to a labor man except that he should represent a bona fide labor organization? Has it or has it not the support of the body of representative labor men who joined it at the beginning? Have its enemies ever been strong enough to bring out a vote against it at any of the annual conventions of the American Federation of Labor? Has it or has it not confined itself in its general character to the work planned for it from the beginning? Has it gone into partisan politics? What has it done not in keeping with the character of a helpful remedial institution, within its proposed sphere of activity? Such questions as these outline the test by which its usefulness is to be measured.

The answer to these questions is to be found in the very columns of the Socialist newspapers reporting The Civic Federation conference. In its news matter, unavoidably interlarded with the screams of contempt and of objurgation injected by the biased Socialist reporters, the *Call* itself was obliged, notwithstanding the bad faith of its descriptions in general, to take notice, even if the briefest possible notice, of the various measures of helpfulness undertaken under the auspices of The Civic Federation.

Let us merely state some of the timely questions of national import and of import to labor, discussed at this January meeting, of which Governor Herbert S. Hadley, of Missouri, truly said: "There is no one topic on that list which has any political bias." Here are the subjects as contained in the circular announcing the meeting this year:

"The State Councils of the Federation, organized the past year in thirty-four States, will be represented by delegations. The importance of these State Councils is indicated by the fact that in nearly every instance the Governor presided over the initial meeting and nominated the members of the Council. At the annual meeting these councils will decide upon the subjects on which they will concentrate their efforts for uniform State legislation and their method of procedure. While at the National Conference on Uniform Legislation, held under the auspices of the Federation, uniformity was urged upon over fifty important subjects, the discussions at these meetings when the State Councils were organized centred largely around ten subjects, to wit: 'Regulation of Combinations and Trusts,' 'Regulation of Public Utilities,' 'Taxation,' 'Insurance,' 'Banking,' 'Compensation for Industrial Accidents,' 'Reform in Legal Procedure,' 'Pure Food and Drugs,' 'Uniformity in Good Roads Building and Automobile Regulations,' and the commercial bills of the Uniform State Law Commissioners." . . .

"The subjects for special consideration at the annual meeting will be 'Compensation for Industrial Accidents,' 'Regulation of Corporations, State and Federal,' 'Industrial Mediation and Arbitration.'"

A SAFEGUARD TO LABOR.

Is there any other national voluntary agency in the United States which has in hand the most difficult and complicated question of compensation for industrial accidents? Could it be possible that the interests in this matter of immediate importance to the working classes could be placed in more faithful and competent hands than those of John Mitchell, a Vice-President of the American Federation of Labor? At a time when there are specious and treacherous efforts being made by agencies inimical to trade unionism to divert compensation from a plane on which the best results may be obtained for all our workers, is it not well to have a man like John Mitchell always on guard to protect the interests of our wage-workers? It is to be kept in mind that the United States is behind all other civilized countries on this question; that an enormous amount of suffering is occasioned every day in America by reason of not having a compensation law. When compensation was up for discussion in Germany, were not the trade unionists as well as the Socialists of that country on hand to guard the interests of the working classes?

The "regulation of corporations, State and Federal," is at present in a state of chaos in this country. It would seem to us that, if Socialist programmes were to be supported intelligently, before the national ownership of monopolistic corporations could be brought about a large amount of work for the purposes of control must in the nature of things precede the wiping out of private ownership—if that is ever to come about. What practical efforts in this direction are the Socialists of this country making? Irrespective of radical reversals of ownership in railroads, is it not well that men representing all phases of opinion should come together and discuss this subject in its present situation? The Civic Federation furnishes the means of such discussion.

But what of The Civic Federation's attitude in the industrial field? Let its own declarations serve as the best answer. They are as follows:

"TO PROMOTE INDUSTRIAL PEACE."

"The scope and province of this department of The Civic Federation shall be to do what may seem best to promote industrial peace; to be helpful in establishing rightful relations between employers and workers; by its good offices to endeavor to obviate and prevent strikes and lockouts; to aid in renewing industrial relations where a rupture has occurred.

"That at all times representatives of employers and workers, organized or unorganized, should confer for the adjustment of differences or disputes before an acute stage is reached and thus avoid or minimize the number of strikes or lockouts.

"That mutual agreements as to conditions under which labor shall be performed should be encouraged and that when agreements are made the terms thereof should be faithfully adhered to, both in letter and in spirit by both parties.

"This department, either as a whole or a subcommittee by it appointed, shall when requested act as a forum to adjust and decide upon questions at issue between workers and their employers, provided in its opinion the subject is one of sufficient importance.

"This department will not consider abstract industrial problems.

"This department assumes no powers of arbitration unless such powers be conferred by both parties to a dispute."

A CHALLENGE TO CRITICS.

These declarations of purpose are submitted to the judgment of thoughtful, sincere trade unionists and others. We challenge the criticism of any one to point out wherein it offends against trade unionism; wherein the interests of the workers are not advanced.

One step has been gained which can never be lost; that is, the largest representative employers of America have met, and in their meeting declared that it is the duty of all employers to confer with workmen to avoid conflicts; or when conflicts have occurred, conferences should be had to restore peace. It is a declaration in fact that employers no longer regard themselves as possessing the sole right to determine what wages, hours, and other conditions of labor are just; that workmen have the right jointly to have a voice in the final settlement of the conditions under which they shall labor.

The American Federation of Labor as such has taken no part at all in The National Civic Federation. The fact that a few of the officers of the American Federation of Labor are members of that body does not commit the American Federation of Labor to that movement. The men of labor have simply taken advantage of a circumstance and an opportunity to bring about some advantage to labor without in the least impairing either the efficiency or the militancy of the labor movement. On the contrary, the organizations of labor have not only as strongly but more strongly than ever maintained that idea since the formation of The Civic Federation.

And next as to industrial mediation and arbitration, assuredly deliberation participated in by all the elements of our citizenship is most desirable.

The opportunity presented to the non-partisan-political organized wage-workers of America to present their views on many propositions, public or otherwise, through The National Civic Federation, has a value past estimate. When the spokesmen for organized labor in general are unable to reach the employing classes, they have their time taken up with incidents of the struggle leading up to a possible but perhaps remote stage in which the employers will at last be made to listen to the demands of the workers. Meeting this situation, in The Civic Federation have been massed a very large body of employers who profess a willingness to listen to organized labor, to permit their own representatives to meet those of organized labor, and in council settle by reasoning questions of difference which otherwise might provoke endless strikes or lockouts. In a word, then, to the extent of the efforts exerted by employed and employers thus brought together, industrial peace may minimize industrial war and advantage accrue to labor. In these circumstances there arises no wrong or damage—except to the Socialist politicians.

IMMENSE LOSSES PREVENTED.

The trade unionists struggle on and yet want to get whatever of advancement can be had by treaties, trade agreements, with employers. The Civic Federation performs in this situation when requested the office of intermediation, ascertaining which of the trade unions are willing to meet employers to discuss questions of differences upon a reasonable basis, and in turn which employers are willing to meet trade unionists. When a man like President Seth Low, of The National Civic Federation, who for a quarter of a century has systematically given time to this work, comes forward and lends his influence, his honored name, his experience, his judgment, his character, to this purpose, the act to our mind should command the respectful attention of the entire American public and when the history of the last decade shows that The National Civic Federation has, time and again, by bringing together the representatives of the employing class and of the employed class, prevented losses amounting to millions that cannot be calculated—and when any such conference has been held due to the efforts of The Civic Federation the results have ever been to the advantage of labor—it seems to us that this fact should further arrest the attention of the public and insure commendation of the movement. There is a field for the work of such an institution. It is a specific field. We do not exaggerate its social comprehensiveness or its importance. We do not place the institution as one sufficient to cover all industrial and social demands. And, of course, we recognize differences in the ideals of some of the employers in it from the prevalent ideals of the organized labor movement.

But these clashing ideals relate to the constitution of society as it is to be at a time remote from the present or to matters not directly involved in Civic Federation proceedings. Any agreement between the employers and the employed in The Civic Federation is upon practical matters now. Both parties recognize the necessity of substituting wherever possible the methods of conference for the methods of the strike and the lockout. Both parties are acting according to the dictates of common sense and a common social obligation instead of indulging in blind prejudice, class rancor, and individual antipathies, and yet always having in mind the rights and interests of labor. An opportunity has been

given in The Civic Federation to the leading capitalists of the country to show that their professions of square dealing are more than hollow promises, and many of the best known among them have responded to the call. They have taken hold of several of the most pressing wage-workers' questions of the day and are endeavoring through study and conference to reach conclusions regarding them that will help labor to bring the United States in these respects up to the level of other nations, and even to surpass them. The more active among these capitalists in The Civic Federation have now faithfully adhered to their self-imposed task for a time sufficiently long to demonstrate a sustained sincerity. Several of the most prominent including the first President, steadfast to the last in their duty, have died since The Civic Federation was established. The employers and the representatives of the public in the organization bring to the working out of its problems a body of legal and other expert talent, and resources in general, which labor if working alone could not command. Beyond this, the labor representatives participate fully in the work at every stage and defend in each particular the interests of all the wage-workers.

We believe that this is an accurate description of the situation in The Civic Federation of to-day, and it would be cowardly and criminal in us not to stand up for the truth in this respect as it has been evolved in the course of time and trial.

LABOR'S DUTY TO CO-OPERATE.

We deny that there has been any deleterious effect on the trade union movement, or on the general social movement of the workers, through the existence and operations of The Civic Federation. In another part of this issue of the *American Federationist* appears the address delivered by President Gompers before The Civic Federation upon the Sherman Anti-Trust Law and the application of that law by the courts to organized labor. On that occasion the opportunity was seized of bringing to the country the conclusions of organized labor as to the operations of that statute. To the Socialists it may be a matter of utter indifference that the courts have held that the organized effort of the workers comes under the provisions of the Sherman Anti-Trust Law, but to the trade unions it is of vital importance. It is essential for organized labor to obtain relief now from such a legal status. The only way that it can be secured is through Federal legislation. If the representatives of organized labor can gain the assistance of many influential men to arrive at that result, is it the part of wisdom to repudiate association with them? Is it not rather the duty of organized labor's representative men to co-operate to the attainment of that end?

Upon any matter in which the interests of labor conflict with the interests of others in The Civic Federation, there comes the parting of the ways, and upon such differences the men of labor clash with those who are opposed to them, working together with them only upon those measures of policy upon which agreement may be had.

We append the following record of sentiments which we uttered at the dinner at the recent meeting, and challenge critics, Socialists or otherwise, to find in it the flaw that is shown either by the suppression of our convictions or by an exaggeration of the performances of The Civic Federation, or through any blinking of the fact that in radical matters most employers may reject working-class ideals:

STRIFE HAS BEEN AVOIDED.

"The men of labor realize that while in this forum are men who strongly differ on matters of interest, of policy, of philosophy, of principle, and who may all strongly contend for the faith that is in them, no man surrenders his point of view by his association in The National Civic Federation. I imagine that many of you ladies and gentlemen who are here this evening have participated in other meetings and I believe that you will agree with my statement when I say that the representatives of labor have not been mealy-mouthed in the assertion of the faith which they hold, and we are not going to be so to-night. I am ready to acknowledge, and I do gladly acknowledge, that by reason of our coming together much strife has been avoided, and many reconciliations established where the relations between employer and employe have been ruptured. There is now, due to the organized effort of the working people and of our Civic Federation, a better general concept among all the people of this country of the duties we owe to one another. For instance, there is a better understanding and a more ready acquiescence in the thought that the labor of children must be restricted, and we are united in the common effort to so restrict it. And as to the discussion of these past few days, and particularly to-day, of the question of compensation for accidents and their prevention, I ask our hypercritical friends where on earth they can find a body of men in which large employers of labor, great captains of industry, sit in counsel with the representatives, and true representatives, of labor, to try and devise ways and means by which injury and accidents may be prevented and compensation given where accidents are unavoidable.

"I shall not attempt an encomium of The Civic Federation; that is not my function. But may I trespass upon your time for a few moments to say that no one appreciates more than I the good work done and the good work attempted by this organization? I have heard propositions submitted for greater production, for more efficiency in labor, for bonuses and profit-sharing, industrial education, vocational education, welfare work, and kindred matters with much of which I am in entire accord and from some of which I strongly dissent; but let me say this to the advocates of any of these suggestions, that any one of them which undertakes to eliminate the organization of the working people will reckon without its host. We trade unionists stand for the best in all our people; we believe in the joint bargain, in the trade agreement; we believe in working by concerted effort for industrial progress and industrial peace. I want to join in the expression of great appreciation for the splendid address of Senator Cummins. I would like to supplement a thought or two to some of his references to the organizations of labor. Substantially I claim no credit for verbal accuracy. He said that the organizations of labor will never secure for the working people adequate wages. Now the question reverts to what are adequate wages? What were adequate wages a decade ago are inadequate wages to-day, and what may be regarded as adequate wages to-day will be inadequate wages to-morrow. The fact of the matter is, I doubt that so long as there shall be a divergence of interests between employers and employes there ever will be such a thing as adequate wages. The men and the women of labor are somehow constituted like other people, and that is, that inasmuch, as the Senator so well said, as most people are striving for more money, greater possessions—and he said that he did not know that he wanted to be differentiated from those who tried to get more profits, more acquisitions—so with the working people. Whatever they have, poor as it is and fair as it may be, they have this common aspiration for more, and when they secure more the common attribute of their natures will still be in activity, and they will strive for more. And I trust that the time will never come when they will fail to aspire for still more. Surely this fact is self-evident, that if it were not for the labor organizations of our country the aspiration for more through joint effort would die in the laborer's breast.

"I was pleased to hear the Senator speak of the Sherman Anti-Trust Law, and its application as now interpreted by the courts to the labor organizations, and his belief that they should be taken out of the operations of that act. He added that they should be dealt with independently. I will stand here for myself, speaking only for myself, gladly meeting that issue. Let the Congress of the United States differentiate between combinations organized for profit and dealing in the products of labor from the organizations of the working people who are engaged in the effort to promote their own interests by the exercise of their personal activities, not for profit, and we shall meet the subject of independent legislation upon that question.

"Just a word of reference to the right of workmen when non-union, when unorganized, to dispose of their labor as they will. This is a self-evident proposition from which no earnest thinking man can dissent, but in the assertion of that principle it carries with it also this logical conclusion—the right of the union workmen to dispose of their labor as they will.

"I fear I have trespassed beyond the ten minutes allotted to the speakers. I shall not detain you longer—much as some thoughts are pressing upon my mind for expression. I merely want to close with the expression of my hope to be of some service to my fellow-men. This I believe is the mainspring of the best thought of the best men and women, and in that spirit, and in that thought, I close in the hope of success of the great work of our National Civic Federation."

WORKMEN'S COMPENSATION THE KEYNOTE

(*Continued from page 8.*)

a body of representatives of State Commissioners on Arbitration. Mr. Klump introduced EDWARD W. FROST, of Wisconsin, who compared the wars of industry to those between nations in their waste and suffering. He thought that the Erdman Act should be extended to industrial troubles. A way must be found to lay down the weapons of strike and lockout. Boards of arbitration have power to judge industrial disputes only upon request of both parties. Moreover, they rarely heard of a conflict until it was started. There is needed power to investigate and a method of notifying the State Board of impending trouble. The law should be uniform in those respects. The people should have the right to set in motion the arbitration machinery.

UNIONS A FACTOR FOR PEACE.

HARRIS WEINSTOCK, of San Francisco, discussed the question, "Will Trade Unionism Endure?" which he regarded as worthy of the same answer as "Has Corporate Wealth Come to Stay?" Each is an integral part of modern civilization. Neither can ignore the other. It is the economic interest and corporate wealth shall carry on great industrial and commercial enterprises. Else would labor return to a miserable daily existence on a handful of barley. Such a condition would imperil free government. Man can govern himself successfully only when fairly protected against hunger and suffering. Otherwise he relapses into savagery. Whatever tends to give him more leisure for intellectual development tends to make him more fit for self-government. The Orient to-day shows conditions of workers before the time of corporations. Great combinations have brought blessings to the worker and strengthened civil liberty. But they have brought responsibility that the worker can not meet individually and alone. The world never abandons any power for its betterment, therefore both organized labor and organized capital are here to stay. These two camps can be hostile, or can work together for common good. Wherever employers are organized to fight unionism, there follow loss of millions of wealth and consequent suffering. England prospers because of collective bargaining, with resultant strengthening of industrial peace. The Civic Federation has done much for the promotion of peace by bringing together employe and employer. It has much more work to do and deserves encouragement from labor, capital and the public.

COMPULSORY INVESTIGATION.

CORNELIUS J. DOYLE was introduced as Chairman of the State Board of Arbitration of Illinois. The causes of strikes and lockouts he defined as three: The question of open or closed shop; wages and working conditions. The method of dealing with them should be uniform. During the past year some $50,000,000 has been added to the payroll of the railroads, benefiting more than 300,000 workers, with only two incidental strikes, and those were mistakes. Intelligent administration must have a law to administer. The railways and the railway brotherhoods each deserve credit for regard for the public welfare. He would advocate compulsory investigation, as in Canada. He quoted the Illinois statute as an advanced measure, though imperfect. Investigation and publicity would avert many strikes. Neither corporation nor labor union would fly in the face of enlightened public opinion. It had been shown repeatedly that so to do meant failure. The Erdman Act should be strengthened by making compulsory the investigation of threatened trouble. Both employers and employes hesitate to submit their differences to men looked upon as politicians, even though well qualified for their duties. The main purpose will be attained when in every State there is a Board of Arbitration with the power of investigation under a uniform law.

STATE CONCILIATION BOARDS ADVOCATED.

PRESIDENT SETH LOW said that he was in accord with the suggestion that the next step forward should be based upon publicity, as precedent to uniformity. He called attention to the importance of the work being done in the State of New York under present law and officials. The express strike was the only open breach that had gone beyond their control. He read this letter that he had received from Mayor Gaynor: "I should be glad to attend the dinner of The National Civic Federation, but the plight I am in with my throat prevents me from doing so. I desire to thank the Committee of the Federation for the assistance they gave to the Mayor in settling the express strike some weeks ago." Many agencies contributed to that result, and all of them illustrated the force of public opinion. That opinion should be focused, as were the searchlights of American men-of-war upon the exit from Santiago Harbor. Public opinion in the United States would not accept the provisions of the Canadian Act. The Erdman Act recognized the right of organized labor to be represented officially when a labor dispute comes within Federal jurisdiction. The law of the United States recognizes such a right the very moment a railroad comes under its control through a receivership. He offered an amendment for consideration.

ARBITRATION DELAYED.

The First Vice-President of the American Federation of Labor, JAMES DUNCAN, declared that organized labor had made much advance during the past twenty-five years. Then the newspapers gave

the movement scant notice. But the press first discovered that organized labor represented a good cause. In time the church awoke and the congregations asked for more representative labor men to address them. In the boot and shoe industry in Massachusetts, the State Board of Arbitration is overworked, and its decisions are delayed. Hence it is agreed that pending the decision of any dispute the status quo shall remain. Mr. Duncan narrated his experience at the house of Oscar Straus, where Mr. Carnegie had called the Massachusetts plan "first class." He thought the whole trend of the discussion pointed toward an enlargement of Federal authority. Such discussion as this shows that evolution is at work. The Briton goes at the subject more directly, upon the proposition that the workman or the employer must be right or wrong. He dwelt upon the impossibility of compulsory arbitration, and urged the extension of the practice of the trade agreement.

JUSTICE, NOT MIGHT.

MARCUS M. MARKS, prominent in the National Association of Clothiers, emphasized the importance of settling industrial disputes upon the basis of justice, not of strength. He would extend the Erdman Act so as to give the right to intercede without the request of either party. Thus would be avoided the interpretation as a confession of weakness of first asking for a conference. The little flame easily becomes a conflagration. He would extend the idea of the Erdman Act to the States. He believed that the principles of the Canadian Act could be applied in the States as to public light upon labor troubles. He quoted some of the results of his inquiries in Quebec. Any man who takes work for a public utility goes into a quasi-agreement not to strike without a statement of grievances. It should be understood that employers do not want strike breakers, who are both expensive and inefficient. In Canada, out of eighty-two boards of arbitration in the last three years, seventy-six agreed in decisions that were accepted.

PRACTICAL WORK FOR PEACE.

W. C. ROGERS, of the New York State Board of Mediation and Arbitration, explained that arbitration is permissive by either the State or a local board. The investigation is prompt. The law is better than the Erdman Act, as an investigation may be made without application by either party. There is in this country a growing sentiment to prevent interruption by strikes and lockouts in public service corporations, but not by compulsory arbitration. A decent regard for the public should require that the reasons for interruption should be presented to the State Board of Mediation early enough to permit an effort at conciliation. Public opinion, rightly informed, will exert a pressure that cannot be overcome.

NEW MEMBERS NATIONAL EXECUTIVE COMMITTEE

ANNUAL MEETING WOMAN'S WELFARE DEPARTMENT

REPORTS OF THE TWO NATIONAL COMMITTEES ON WELFARE WORK FOR INDUSTRIAL AND FOR GOVERNMENT EMPLOYES——WORK OF SECTIONS OUTLINED

ADDRESS OF MRS. HORACE BROCK, THE CHAIRMAN.

THE annual meeting of the Woman's Welfare Department of The National Civic Federation was presided over by the Chairman, MRS. HORACE BROCK, who opened the meeting with an enthusiastic report upon the results thus far attained by "women in the department, whose training, leisure and feminine qualities permit them to do valuable investigation work, and who, by educating themselves as to comparative conditions in the various industries, may encourage employers to improve such conditions where necessary." She stated: "I feel more and more that no work for our country can be of greater importance than that which we have undertaken—the amelioration of the conditions of those who labor and the promotion of better understanding between employer and employe. The work in the Employers' Welfare Department is conducted on a large and general scale, good examples being held up for emulation and the encouragement of others in the same line of industry, and large enterprises apply to it to obtain advice in caring for their employes. Both lines of work are of far-reaching importance and supplement each other without overlapping.

"The seeming indifference of men and women to labor conditions is largely due to ignorance, and not to hardness of heart or conscience. The rush and strain of modern business leave the employer, the head of the corporation, and even his subordinates, little time to look into such conditions, and there is not always a woman in the establishment to bring abuses to his notice. The Woman's Welfare Department seeks to supply that influence by bringing woman to her rightful place as the inspirer and helper of man in his work.

"Reference to a few specific instances of splendid endeavor must include mention of the continued interest of our honorary Chairman, Mrs. William Howard Taft, whose great help on many occasions has especially aided in obtaining improvements for Federal employes."

After commenting on matters of organization and policy and complimenting the Chairman of the Ways and Means Committee, Mrs. Augustus P. Gardner, upon her valiant service, Mrs. Brock called attention to the work in Pennsylvania, where recreation and amusement centres were investigated, particularly in Philadelphia, where it had been possible, through friendly influence, to call the attention of manufacturers in various districts to the need for suitable places of amusement. Mrs. Samuel Spencer was pointed to as the generous and gracious member of the District of Columbia Section, whose beautiful home on two occasions had been the centre for educational meetings. The New York and New Jersey Section, of which Mrs. Francis McNeill Bacon, Jr., is Chairman, was especially congratulated upon its work in connection with new buildings, where provision for the comfort of employes had been ensured before the erection of such structures, and special reference was made to the valuable report on "Dangerous and Unhealthful Industries." Attention was called to the status of the work in other districts, as reported by Mrs. B. Frank Mebane, of North Carolina; Mrs. Roger Wolcott, of the New England Section, and Mrs. John K. Ottley, of the Georgia and Florida Section.

Mrs. Brock stated that "from the cleaning of the windows in the Printing Office at Washington, to save the eyesight of the employes, to the report upon mercurial poisoning in New York seemed a long step, but that both are in the right direction, and that when a woman is once aroused and her sympathies enlisted the difficulty is to make her add knowledge to her zeal and, above all, to cultivate patience and a willingness to wait, essential to accomplishing good work.

"In the extension of this work it is to be kept in mind that conditions vary in different States in response to the nature of the industries, climatic conditions and the character of the population. Moreover, what is useful in a city may not be practicable in a country town, and what is applicable in a large establishment may not always be possible or desirable in a smaller one.

"Such provisions for comfort and pleasure as lunch and reading rooms may not be advisable in all instances, but there is a great general principle which applies everywhere, namely, wholesome conditions of work based upon a living wage and reasonable hours.

"Foundation stones are not showy and are forgotten when the building is erected, but if not well laid the structure, however beautiful, suffers from the neglect. I feel that we have accomplished much in the past year, in that our foundations are well laid. In retiring I feel warranted in the confident hope that the next Chairman will be able to build upon them a noble structure which will be a credit to the American women, a tower of strength and a beacon light for the nation."

Mrs. Bayard Henry, holding the dual office of Secretary and Treasurer, reported upon the routine business of the year.

NATIONAL COMMITTEE ON WELFARE WORK FOR INDUSTRIAL EMPLOYES.

CHAIRMAN, MRS. J. BORDEN HARRIMAN, OF NEW YORK CITY.

The past year's record of the National Committee on Welfare Work for Industrial Employes made by the Chairman, MRS. J. BORDEN HARRIMAN, of New York City, includes announcement of the publication of a pamphlet on "Examples of Welfare Work in the Cotton Industry," which has been distributed among employers in cotton manufacturing. The information was gathered in person by members of the Committee during visits to mill towns in New England and the South. With the purpose of spreading knowledge of welfare work, Mrs. Harriman has delivered addresses by invitation, during the past eight months, in and near New York City and in Long Island, Connecticut and Massachusetts, emphasizing always the importance of women's influence toward educating employers and the preventive nature of welfare work. In detail, the report gives accounts of welfare work in cotton manufacturing towns, and is to be followed by a like investigation of the mining industry and the issuing of literature concerning mining camps. Such pamphlets will not only be informatory to members as to the welfare work expected in factories and mines in which they are financially interested, but also may be used by them to extend interest among employers generally in such improvements.

The members of the committee are:

For the Cotton Industry—

Mrs. Cyrus Pitman Orr, Birmingham, Ala.
Mrs. Lewis W. Parker, Greenville, S. C.
Mrs. Thomas F. Parker, Greenville, S. C.
Mrs. A. F. McKissick, Greenwood, S. C.
Mrs. W. T. Harris, Danville, Va.
Mrs. John K. Ottley, Atlanta, Ga.
Mrs. Frederick A. Flather, Lowell, Mass.
Mrs. Edwin Farnham Greene, Boston, Mass.

For the Mining Industry—

Mrs. R. L. Parrish, Covington, Va.
Mrs. Arthur Lee, Elkins, W. Va.

In her introduction Mrs. Harriman states:

The exercise of care for the welfare of employes is becoming more and more scientifically understood and extensively practised. One of the earliest problems in the development of factory life was that of the housing and of the social environment of the inhabitants of mill towns. Such towns were, at the outset, of artificial creation. Their location was determined by that of the new factory, which was, in turn, dependent upon circumstances of power and transportation. A century ago, therefore, the management of such a mill was confronted with the question of how to build houses for the workers at a cost which would afford a return for the investment while keeping the rent within its proportion of the cost of living of the wage earners. Accompanying this question of housing there was then, as there is now, the necessity of providing for these communities schools for the children, and churches, which should in some measure be the social centres of the towns, in addition to their moral influence and training.

Some of the first efforts in the United States to introduce welfare work were begun by manufacturers of cotton goods. One "corporation boarding house," as it was called, at Lowell, Mass., afforded evidence, not only of the employers' interest in regulating the price of board, but of the necessity of housing in order to secure the necessary operatives.

The growth of the municipality and the introduction of electric rapid transit, making possible homes in the country, have now rendered unnecessary some of these corporation boarding houses. The five corporations that manufacture cotton goods in Lowell still contribute toward the maintenance of a hospital and a technical school. Mrs. Frederick A. Flather, whose husband is treasurer of the Boott Mills, has initiated a rest room for the women operatives, a novel arrangement in that locality.

The Pacific Mills, of Massachusetts, Mr. Edwin Farnham Greene being the treasurer, were pioneers in this field, but gradually their activities, such as a free library, benefit associations, etc., have been taken over by the municipality, or by other organizations in the city of Lawrence.

As the manufacture of cotton goods has extended to the South, mill villages in several notable instances have there been developed along broader lines than in the cotton mill towns of New England. The surroundings of the mills and the houses are beautified, flower seeds are distributed annually, and prizes are awarded for the most attractive and best kept gardens. There are emergency hospitals, kindergartens and classes in domestic science to teach the proper preparation and serving of food, how to buy groceries, the desirability of cleanliness in the home, and how to make comfortable and economical clothing. It goes without saying that a good, wholesome meal will make a more healthful body and that the disappearance of slovenliness from the household will make the fireside an attractive and winning competitor to the saloon when the day's work is over.

The question of recreation also receives consideration, and opportunities for enjoyment, through athletic sports, indoor games, stereopticon lectures, and other methods are opened to the operatives.

Examples of Welfare Work.

Amoskeag Manufacturing Company.

The report in detail first invites attention to the plan for village development—designed by Loring Underwood, landscape architect—for the Amoskeag Manufacturing Company, at Manchester, New Hampshire, where there are 12,000 employes in the cotton mills. The treasurer of the company, who expressed enthusiasm in showing the tract to be devoted to this scheme, is F. C. Dumaine, of Boston. The plan is adaptable to similar applications elsewhere by other manufacturing concerns, and includes radial streets starting from the athletic field. One feature is that no two houses actually face each other, thus affording open views in front and rear. A large depression in the ground, with an adjacent supply of fresh water, provides an inexpensive swimming pool. Water mains and sewer pipes are at the rear of dwellings to prevent the tearing up of streets for house connections. The style of the cottages, as well as the plans for shrubs to conceal back yards and tree planting for the streets and circles, are unique and attractive.

Monaghan Mills.

Among the features described at Monaghan Mills, Greenville, S. C., is the night school, which affords instruction regarding the processes in which the operatives are occupied during the day, and also the opportunity to learn the elementary branches of common school education. The employes' annual fair, held two days in October, is commented upon, the programme for which includes exhibits in cooking, sewing, fancy work, live stock, vegetables and mill products, with the awarding of prizes, and outdoor sports and music.

Dan River Power and Manufacturing Company.

Mrs. W. T. Harris, whose influence and guiding hand are manifested in the village of Schoolfield, situated about two miles from Danville, Va., reports:

"The streets are electrically lighted, the water filtered, schools partly supported by the company and an assembly hall, hospital and day nursery are included in the welfare work.

"The methods here are ideal as to management, embodying the direct interest of the employer in the employe. This interest is manifested personally and enlists specialists under the direct supervision of the employers and their wives. The president and secretary of the mills receive a weekly report, and they know as well how the welfare department is progressing as how much cloth they produce."

Olympia Mills.

The visiting nurse, Miss Clara H. Kenyon, writes concerning activities under her direction: "I began work by getting acquainted with the people, mostly by house to house calling. We have 500 houses, 300 in one village and 200 in the other. The Medical Dispensary contains a large club room, operating

EXECUTIVE COUNCIL.

SETH LOW, President.
SAMUEL GOMPERS, Vice-President.
NAHUM J. BACHELDER, Vice-President.
ELLISON A. SMYTH, Vice-President.
BENJAMIN I. WHEELER, Vice-President.
ISAAC N. SELIGMAN, Treasurer.
RALPH M. EASLEY, Chairman Executive Council.
JOHN HAYS HAMMOND, Chairman Committee on Organization.
WILLIAM R. WILLCOX, Chairman Employers' Welfare Department.
ALTON B. PARKER, Chairman Department on Uniform Legislation.
NICHOLAS MURRAY BUTLER, Chairman Industrial Economics Department.
AUGUST BELMONT, Chairman Department on Compensation for Industrial Accidents and Their Prevention.
GEORGE W. PERKINS, Chairman Wage Earners' Insurance Department.
SETH LOW, Ex-Officio Chairman Conciliation Department.
MRS. JOHN HAYS HAMMOND, Chairman Woman's Welfare Department.
E. R. A. SELIGMAN, Chairman Taxation Department.
D. L. CEASE, Secretary.

EXECUTIVE COMMITTEE.

On the Part of the Public:

WILLIAM H. TAFT, President of the United States, Washington, D. C.
FRANKLIN MacVEAGH, Secretary of the Treasury, Washington, D. C.
ELIHU ROOT, United States Senator, New York City.
ANDREW CARNEGIE, Philanthropist, New York City.
JOHN IRELAND, Archbishop of the Roman Catholic Church, St. Paul, Minn.
JAMES SPEYER, Speyer & Co., New York City.
CORNELIUS N. BLISS, former Secretary of the Interior, New York City.
WALTER GEORGE SMITH, President Conference of Commissioners on Uniform State Laws, Philadelphia, Pa.
ALBERT SHAW, Editor "Review of Reviews," New York City.
V. EVERIT MACY, Philanthropist, New York City.
THEODORE MARBURG, Political Economist, Baltimore, Md.
JEREMIAH W. JENKS, Political Economist, Ithaca, N. Y.
FREDERICK N. JUDSON, Attorney, St. Louis, Mo.
TALCOTT WILLIAMS, Economic Writer, Philadelphia, Pa.
CHARLES STELZLE, Secretary Commission on Church and Social Service, New York City.
JOHN M. STAHL, Farmers' National Congress, Chicago, Ill.

On the Part of Employers:

WILLIAM D. BALDWIN, President Otis Elevator Co., New York City.
WILLIAM BARBOUR, President the Linen Thread Co., New York City.
WILLIAM C. BROWN, President New York Central Lines, New York City.
GEORGE B. CORTELYOU, President Consolidated Gas Co., New York City.
FREDERICK H. EATON, President American Car and Foundry Co., New York City.
OTTO M. EIDLITZ, Building Trades Employers' Association, New York City.
DAVID R. FRANCIS, President Laclede and Mercantile National Bank, St. Louis, Mo.
MARCUS M. MARKS, President Association of Clothiers, New York City.
SAMUEL MATHER, Pickands, Mather & Co., Cleveland, Ohio.
CHARLES A. MOORE, Manufacturer, New York City.
EMERSON McMILLIN, President American Light & Traction Co., New York City.
GEORGE M. REYNOLDS, President Continental and Commercial National Bank, Chicago, Ill.
FRANK TRUMBULL, Chairman of Board, Chesapeake & Ohio Railway, New York City.
THEODORE N. VAIL, President American Telephone and Telegraph Co., New York City.
HARRIS WEINSTOCK, Weinstock-Nichols Co., San Francisco, Cal.

On the Part of Wage Earners:

SAMUEL GOMPERS, President American Federation of Labor, Washington, D. C.
WARREN S. STONE, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland, Ohio.
JAMES M. LYNCH, President International Typographical Union, Indianapolis, Ind.
A. B. GARRETSON, President Order of Railway Conductors, Cedar Rapids, Iowa.
JAMES DUNCAN, General Secretary Granite Cutters' International Association of America, Quincy, Mass.
W. G. LEE, Grand Master Brotherhood Railroad Trainmen, Cleveland, Ohio.
WILLIAM D. MAHON, President Amalgamated Association of Street Railway Employes of America, Detroit, Mich.
TIMOTHY HEALY, President International Brotherhood of Stationary Firemen, New York City.
W. S. CARTER, President Brotherhood Locomotive Firemen and Enginemen, Peoria, Ill.
DANIEL J. TOBIN, President International Brotherhood of Teamsters, Indianapolis, Ind.
D. L. CEASE, Editor "Railway Trainmen's Journal," Cleveland, Ohio.
JOHN F. TOBIN, General President Boot and Shoe Workers' Union, Boston, Mass.
JOSEPH F. VALENTINE, President Iron Molders' Union of North America, Cincinnati, Ohio.
DENIS A. HAYES, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia, Pa.
WILLIAM D. HUBER, President United Brotherhood of Carpenters and Joiners of America, Indianapolis, Ind.

AND MEMBERS OF EXECUTIVE COUNCIL.

PRACTICAL EFFORTS FOR VITAL REFORMS.

This issue of the REVIEW is devoted to a description of the various activities in which The National Civic Federation is now engaged. We think our readers will agree that these reforms are vital and that the methods pursued in the attempt to secure them are practical and promise to be effective. It would be idle to attempt in this space even to outline the whole work of the Federation, but there are five movements, involving large legislative programs, to which we especially desire to call attention as being typical of the work of all its departments. The two on the Regulation of Combinations and Trusts, and on the Regulation of Railroads and Municipal Utilities, deal with large business problems. The other three, on Compensation for Industrial Accidents and Their Prevention, on Pure Food and Drugs, and on the Reform of Legal Procedure, deal with labor and humanitarian interests. All concern the varied classes of membership in the Federation.

As explained in this issue, the Federation has been for years interested in the effort to secure an effective and practical regulation of industrial corporations, including combinations of manufacturers, agriculturists and workingmen. It has held two national conferences on the subject, to which delegates were sent by Governors and by national organizations of manufacturers, farmers, workingmen, economists, merchants, bankers, lawyers, and other associations. At the last annual meeting of the Federation one day was devoted to this subject and there was adopted a resolution which authorized President Low to appoint a national committee representing the various interests concerned, to consider the question of drafting a proposed model bill for the regulation of such combinations by the States and to propose amendments or substitutes for the Sherman Anti-Trust Act, if deemed desirable, after the decisions of the Supreme Court on the Standard Oil and American Tobacco Company cases were rendered. This committee, as stated elsewhere in the REVIEW, has met and organized sub-committees on both Federal and State lines. The consensus of public opinion, as evinced by the discussions throughout the country since the decisions of the Supreme Court were made, seems to indicate that one of the most important questions now is: "Shall regulation of industrial corporations go to the extent of permitting the Government to fix the prices of commodities?" The statements of the president of the United States Steel Corporation and of the presidents of other large corporations, together with the article of Colonel Roosevelt in "The Outlook," all endorsing the idea of the fixing of prices by the Government, have given great prominence to this phase of the question. To the criticism of that idea, made by its opponents, which is that it would be the height of folly for a central government or for any government to go into the business of price-making for a million or two commodities, as eventually the fixing of prices would become a matter of politics, the answer is made, that that is not what is contemplated by the proposal to have regulation of corporations "similar to that of railroads." The Interstate Commerce Commission does not make the million and a half rates for the railroads. The railroads make their own rates and a hearing is given only when there is complaint, backed by sufficient evidence. Then a decision is rendered as to whether or not such rates are reasonable; if they are adjudged unreasonable, a new rate is named. It is claimed by many that the Canadian Act, regulating Trusts and Combines, points the way. This Act provides that, if any six citizens believe that a corporation is practising extortion, or is a monopoly, they may make complaint before a Supreme Court Judge and, if a *prima facie* case is made, the judge orders the empaneling of a Board, the applicants naming one member, the corporation one and, if they do not agree upon the third, the judge himself appointing him. This Board then makes a thorough investigation of the whole matter and, if it finds the prices unreasonable, fixes them. Those advocating that the Government should fix prices also point out that Germany has found a way to deal with the question, which is illustrated by its action in the Potash Case. In regard to the potash fields, of which the Government owned 10 per cent, the Government made an investigation, and upon finding that the competition was becoming ruinous, called the owners of the other 90 per cent to meet its representatives, and formed with them a syndicate or, as it would be termed in this country, a "pool," allotting to each one his proportion of production and shutting down certain plants. In such instances provision was made for the workmen thus thrown out of employment, either by securing employment for them or by giving them pensions until places could be obtained. This same principle is now being applied in Germany to the electrical industries and to what is known as the "whiskey trust."

This discussion also raises the question squarely: "Shall the policy of this country be to compel competition in industry, or shall it be to permit combinations under proper Government regulation?"

In many respects there is great similarity between the problems that arise in the attempt to regulate railroads and municipal utilities and those in regard to industrial combinations. The work of the Committee on the Regulation of Railroads and Municipal Utilities is described in this issue. The committee has already begun its inquiries into the question: "How far can regulation go to be effective without interfering unduly with management?" Of course, in this field the question of fixing prices does not exist controversially, as in the case of combinations, since there is a recognized difference between quasi-public utilities and private industrial corporations. Congress has settled the question of rate-making, so far as interstate railroads are concerned, and State commissions are rapidly being given power to fix rates for gas, electric lighting and street railway companies, the latter, generally, being through negotiations between the companies and the city governments. Complications, however, arise in this line of endeavor which do not appear in the other field. For instance, there are forty-eight State Railway Commissions, which have authority over intrastate railways, while the Interstate Commerce Commission has control only over the interstate railways. On account of the lack of uniformity of the regulatory laws within the States themselves, conflicts arise between the States, and on account of the lack of co-ordination between the State laws and the Federal laws, conflicts arise between the State and the Federal Commissions. The Public Service Commission of the State of New York has more authority over the New York Central Railroad Company than has the Interstate Commerce Commission. It controls all the terminals, the issuance of stocks and bonds, and hundreds of other matters that, under our present Constitution, must be handled by the States. The crying need is for uniform State legislation and co-ordination between the Federal and State governments.

A department which more directly affects employers and employes is that which is dealing with the subject of a model act for workmen's compensation.

To all employers of labor it is of the highest importance that a fair and equitable compensation law be placed on the statutes of our various industrial States in place of the present liability laws. If this is not done, the workingmen will insist on legislation which will sweep away all the defenses of the employer, leaving him at the mercy of jury decisions in suits pressed by shyster, ambulance-chasing lawyers. The leaders of labor in this country are fair in the matter, and prefer compensation laws with definite awards, enabling workmen to secure all that is legally due them *at the time they need it*, and without risking law suits finally resulting in no compensation, or if decided in their favor, from 30 to 50 per cent of the amount allowed by the verdict.

The Workmen's Compensation Department has had an appreciable effect in moulding sentiment in the several States and in influencing legislation during the past winter through its model bill for compulsory compensation to injured wage earners and through its recommendations for improved State inspection of factories relating to the prevention of accidents. A study of the new laws discloses many evidences of its helpfulness to the Governors, the State Commissions and State Legislative Committees dealing with the subjects.

The constitutional questions being raised in New York State as the result of the adverse decision of the Court of Appeals and in the various States where elective compensation laws have been enacted, are being studied by this department. Francis Lynde Stetson, who is one of the greatest constitutional authorities in the United States, is chairman of the committee authorized to recommend necessary revisions in the Federation's model bill for compulsory compensation, prepared by the best experts in this country who are familiar with practical conditions here and thoroughly informed upon the subject abroad. That bill, which was submitted to the various legislatures in January, will be introduced, with possible changes, in the legislatures convening next winter.

The Department also will press for the enactment of its bill which was introduced in Congress for interstate commerce by one of the Federation's members, Hon. David J. Lewis. The bill at present is before the Federal Liability Commission, the secretary of which, Launcelot Packer, is thoroughly versed upon the subject in European countries as well as in America. He is also secretary of the Federation's department. The report upon this subject will be made to Congress in January, 1912. The enactment of the Federation's bill, if sustained by the United States Supreme Court, would have great weight in influencing uniform State legislation providing for compulsory compensation.

There is no subject of greater interest to the American people than that of pure food and pure drugs. The wealthy are able to pay the highest prices and are less liable to be imposed upon by the sellers of impure or adulterated foods and drugs than the masses, who have only that protection which is granted by the Federal Pure Food and Drug Act and the various States' acts, which are to a great extent in conformity with the Federal law.

President Taft said at a recent meeting of The National Civic Federation: "The greatest question now before the American public is the improvement of the administration of justice, civil and criminal, both in the matter of its prompt dispatch and the cheapening of its use." The National Civic Federation has a Committee on Reform in Legal Procedure which is co-operating with a similar committee of the American Bar Association.

ANNUAL MEETING WOMAN'S WELFARE DEPARTMENT

(*Continued from page 13*)

room, sterilizing room and bath room and two large closets, one being used for the loan closet, which contains articles needed in the sick room for lending to any family in the village. Twice a week we have free clinics, and I keep office hours every day from 11 to 1, except Sunday. I found dental clinics to be greatly needed."

"Recently we kept open house and served tea to more than 150 men, women and children. The dispensary was transformed into a beautiful Japanese tea-garden, with vines, moss, purple wistaria hanging in the corners and over the window seats, and there were small tea tables, Japanese dishes, and the women were dressed in Japanese costume. Outside we had Japanese lanterns and window-bells and the beautiful moss that grows in the trees here. We served tea and rice wafers and had Japanese incense, candy, Japanese toys, tricks, flowers that open in water, and games for entertainment. We gave each guest a small Japanese parasol.

Greenwood and Ninety-six Mills, N. C.

A report of progress in welfare work at Greenwood, S. C., where are the Grendel and Greenwood cotton mills, and at Ninety-Six, S. C., for the Ninety-Six mill, is made by Mrs. A. F. McKissick. She oversees the educational system, carries baskets to the families at the Christmas season and generally guards the welfare of employes and their families in these remarkable sanitary villages, containing well-built, pleasant homes. Mrs. McKissick follows, in her work, the methods inaugurated by her father, Captain Ellison A. Smyth, at Pelzer, S. C., described in Mrs. Harriman's report last year.

NATIONAL COMMITTEE ON WELFARE WORK FOR GOVERNMENT EMPLOYES.

CHAIRMAN, MRS. JOHN HAYS HAMMOND, WASHINGTON, D. C.

In the absence of the Chairman, Mrs. Archibald Hopkins read the report of the "Committee on Welfare Work for Government Employes." In the review of the year's work, while a great deal was of an educational nature which could not bring results for some months, much practical work was accomplished. In the Federal Buildings, under the existing laws and with the small appropriations available, improvements in conditions can only be made slowly.

The Treasury Department.

In the Treasury Department, the hearty and intelligent co-operation of the Secretary and his subordinates has made the building a place where employes now work under better conditions than ever before. Pending further structural changes, the Secretary is causing many improvements to be made, such as better sanitary conditions, improved rest rooms and inspection of tubercular suspects.

The Bureau of Engraving and Printing.

All that could be done in the old building of the Bureau of Engraving and Printing was accomplished. The new building will combine every requisite for the most modern conditions for the health and comfort of more than 4,000 employes, including lunch rooms, rest rooms and adequate and convenient dressing rooms.

The Census Bureau.

The Director of the Census Bureau requested our Committee to assist in placing in proper lodgings the thousand women who temporarily were engaged in the new census work. With the consent of the Secretary of Commerce and Labor, all clerks who applied to us were placed in homes, moral, healthful and within their means. The conditions in the building, which is unfitted for the work and for the number of employes, have been made better as to dressing rooms, installing ventilation pipes and pure drinking water, thanks to the Director and Chief Clerk. Up to the time when we, with the assistance of the Red Cross Society, had rest rooms made possible, there was no spot to put a sick or fainting woman, except on a hard sofa in the toilet room or directly upon the bare floor if that sofa were occupied. Since our help has been made of use, in the rest room of the main Census Building over 2,000 cases have been handled. On one hot day alone of last August 80 persons were treated.

The District Jail.

While this work started in the interest of the employes' welfare in the jail, the committee found conditions so bad for the inmates that it waived the general rules of the Woman's Welfare Department and made no distinction between the employes and inmates. That this work was needed is shown by the following description:

The first person to visit the District Jail was Mrs. J. Ellen Foster, who was appointed by President Roosevelt to visit other Federal prisons as well, she having reported conditions to him. Nothing, however, was done to remedy the terrible state of affairs in the District Jail until the members of the Woman's Welfare Department personally went to verify the statements made and then reported the same directly to Attorney-General Wickersham. He then went himself to the jail, the only Attorney-General in thirty years who had made a personal visit there.

Under his direction the improvements herein detailed were effected by Warden McKee. In the men's department, a large doorway has been cut between every other cell, and instead of two men living, eating and sleeping in a cell, 8x5 feet, without proper toilet facilities, as was previously the condition, they have the use of two cells, one to live in and the other to sleep in, a toilet has been put in each of these latter. At the extreme end of the long row of cells are the new baths. Before the remodelling, there were two baths for six hundred prisoners; now there will be six shower baths, four tubs and one chemical bath and four dressing rooms, which was something unthought of before. Even the dungeon has received its share in the reconstruction and is now decent and rat-proof, but happily is seldom used, for the present warden rarely needs to resort to that kind of punishment.

In the central building the old cupola has been removed, as it was considered a danger and menace. In the long glass enclosed rooms outside the corridors are reading tables with books and periodicals. The men are allowed the use of these rooms three hours each day for exercise, recreation, smoking and card playing, but no gambling is permitted. Instead of having to eat their meals together, they have now a dining room for white and one for colored men prisoners, and they also have plates, cups, knives and forks to use. When the ladies of the Woman's Welfare Department first visited the jail the prisoners ate their food (which was shoved through the bars of their cells) out of tin basins and with their fingers.

The storeroom is a source of great pride to the warden on account of its wonderful transformation. It was, a short while ago, simply a dungeon under the kitchen; the only way of entrance was by means of a rope down a trap door. The warden has had put in a flight of stairs in one corner of the kitchen, and then had several windows and a door cut in the foundation wall, making a large, light, well-ventilated cellar and storeroom. He next had two immense refrigerators built in the room—and in passing I want to say that all work in connection with these improvements was done by the prisoners. The ventilation is extremely good; there is a flue high up in the wall with a fan inserted to carry off all the impure air that arises, and by holding a handkerchief in this opening you can readily see just what a strong current of air there is. The staple supplies are kept in lockers, and the vegetables are in three bins arranged around the walls.

Even the dispensary has had its share in the general improvements and now the instruments and medicines are supplied from the funds for the jail and not by the visiting physicians.

So taken all in all, if our Woman's Department had only accomplished the improvement of the conditions at the jail the past year it would have been a year well spent.

The Washington Navy Yard.

Bringing about the establishment in the Washington Navy Yard of a restaurant for the workmen, similar to the one successfully run in the Brooklyn Navy Yard, has the sympathy of officials and the hopeful expectation of more than 800 workmen.

Fire Drills.

A fire drill has been suggested for all Government buildings where present conditions in case of fire would menace many lives. Under present conditions there probably would be terrible loss of life, as the old buildings have dark, ill-lighted passages, many elevators and relatively few staircases.

In all the investigations in Federal buildings we have been received with the greatest courtesy and every facility was afforded us. Within the limits of the powers of officials and their appropriations they have endeavored to carry out our suggestions.

THE NEW YORK AND NEW JERSEY SECTION WOMAN'S WELFARE DEPARTMENT.

CHAIRMAN, MRS. FRANCIS M'NEIL BACON, JR.

The report of the New York and New Jersey Section covers the work of six standing committees—on Welfare of Government Employes, on Welfare of Industrial Employes, on New Buildings, on Press and Publications, on Lectures, and on Membership.

Government Employes' Welfare Committee.

City Hospitals.

The city hospitals have been studied from the point of view of the employe, and recommendations have been made to the hospital authorities and Board of Estimate and Apportionment concerning specific changes and urging certain appropriations. Replies show that these recommendations are receiving careful consideration. Discarded books from the Public Library and elsewhere have been obtained for the employes.

Post Office.

The Committee found upon examination, through the courtesy of Postmaster Morgan, that the plans of the new post office at the Pennsylvania Terminal show thought on his part for comforts for employes, including space above ground for the swing-rooms. The Committee recommended a drying apparatus for carrier's uniforms; provision for disinfecting mail bags, and drinking fountains in the building, instead of faucets. These recommendations, the Committee is assured, will be carried out so far as practicable, that for drying clothes being already in the plans. No recent visits have been made to sub-stations, as the Postmaster, who is in sympathy with the establishment of welfare features, states that where conditions are bad modern stations are being substituted as rapidly as possible.

Committee on Schools.

The formation of the Committee on Schools followed the assurance of the president of the Public Education Association that it would be of welcome assistance. Eleven schools have been visited and interviews held with principals and teachers. It is shown that new systems of ventilation have not always proved successful, because of unintelligent janitors. The majority of schools have no satisfactory arrangements for teachers as to restrooms, lunchrooms, toilet rooms and drinking fountains. Changes in plans of new school buildings will be urged.

Brooklyn Navy Yard Lunchroom.

The lunchroom at the Brooklyn Navy Yard has been in operation now over a year and a half. That it is appreciated by the men is proved by the attendance remaining practically the same as to number and personnel. The report of the fiscal year ending December 31, 1910, showed a deficit of $17.58.

Realizing that steady work, reasonable hours and an equitable wage are the first essentials to the welfare of employes, the Committee very carefully looked into the question of living expenses in Brooklyn, and as a result early in December increased the wages of the women employed in the lunchroom to meet their requirements. During the Summer they were given a day's outing at Coney Island, and the day before Christmas there was provided a tree with gifts for all in the lunchroom.

During the year the lunchroom was honored by a visit from the Secretary of the Navy, who, apparently, approved its method of operation. This sign of interest greatly encourages this section in the hope that similar plants may be established in other navy yards in furtherance of the idea uppermost in the minds of the members when this one was installed.

Industrial Employes' Welfare Committee.

The Industrial Employes' Welfare Committee has sub-committees on Stationary Firemen, Hotel Employes, Recreation and Vacation Resources, and Dangerous and Unhealthful Industries.

Stationary Firemen's Committee.

The Stationary Firemen's Committee has discontinued investigations for the present, but it keeps in touch with the president of their organization, who has interesting vacation plans in which the Committee may co-operate.

Hotel Employes' Committee.

A committee was formed, including wives of hotel owners and managers, which is investigating the conditions of living and work among domestic employes in hotels. It is hoped that the hotels where conditions are satisfactory may serve as an example to persuade others that good conditions are the most satisfactory, as well as the most economical.

Committee on Recreation and Vacation Resources.

A Committee on Recreation and Vacation Resources, formed last Spring in co-operation with another organization, has directed more than 500 girls to boarding houses where they spent happy and wholesome vacations. The work for the Winter will include the gathering of information through letters of inquiry to one thousand employers as to what they are doing in regard to giving vacations, with or without pay. The information will be used in promoting a public meeting.

Committee on Dangerous and Unhealthful Industries.

The Committee on Welfare of Industrial Employes, with the sanction of The National Civic Federation has taken up through a sub-committee the study of dangerous and unhealthful industries. This included a special study of industrial processes involving the use of mercury or its compounds; a published report upon mercurial poisoning in England, where the

danger has been reduced to a minimum, and a study of conditions in the local field.

Although the field of Phosphorous Poisoning has been covered, and various Commissions are working on Lead Poisoning, so far as we know, our Section is the first organization to take up the investigation of Mercurial Poisoning in this country.

Permission having been obtained from The National Civic Federation, a preliminary report was sent to the St. Louis Conference of the American Association for Labor Legislation, a portion of which is included in the following:

As neither Labor nor Health Bureaus, State or National, had any data, our investigation had to start with elementals. Processes in some fourteen industries were found to be involved, but the "felt hat" trade was the first taken up.

The search for statistics opened with an examination of the death certificates of Manhattan and Brooklyn. Owing to the fact that classification is not made according to occupations, it was necessary to examine each certificate separately, since Mercury is a toxicant which predisposes to other ailments, such as tuberculosis, gastric and kidney trouble. Its slower and subtler effect is merged in the more conspicuous affliction. This makes Mercurialism especially hard to trace. Hospital records were searched where permission could be obtained, and in connection with these records numerous physicians were interviewed. Professional secrecy debarred many from giving the history of cases without the patient's consent. In many cases it was impossible to obtain such consent, since men growing ill from Mercurialism in many instances leave the trade and move away. Even when located it is often exceedingly hard to get a recital of experiences. The fear of displeasing the "boss," of appearing disaffected to his interests and so of losing the chance to work—this is the living barrier between these victims of industrial disease and those who would, by revealing the true conditions, bring about protective legislation.

But beyond and above these impediments stands the unwillingness of most factory owners to allow any inspection of health conditions among their employes, and our Civic Federation, being unofficial, is dependent largely upon the good will and indulgence of employers. The New York State Labor Bureau, both through its Commissioner and its Medical Inspector—have been loyal and valuable allies. They are willing to assist in collecting data, but until the law (which we are all seeking) directing physicians to report all cases of industrial disease to a central bureau, is passed and gives them authority, they cannot themselves enter the factories to inspect workmen for diseases resulting from their occupation. The Medical Inspector will make, however, for our benefit, some air tests in factories to determine the precentage of mercury vapor in the atmosphere. From these tests we may deduce the degree to which it is getting in its poisonous work.

Every avenue of right and rational approach in this search is seen to be seriously blocked and our advances have been necessarily slow, toilsome and circuitous. The number of cases we shall succeed in tracing will be a very inadequate gauge to the amount of illness incident to the trades concerned. When, however, we can show after three months' work a record more or less complete of sixty cases of Mercury Poisoning, the situation begins to have meaning. In a report which the Chairman prepared upon Mercury Poisoning in English Industries, it is shown that in twelve years the total number of cases reported for all Great Britain is only ninety-four. The relative prevalence of Mercurialism would seem to justify our investigation.

The first action of Mercury Poisoning is mental. The subject becomes melancholy, morose and despondent, and among hatters there is a predisposition to suicide. An early effect on the body is shown in the mouth. The teeth become loosened and blackened and salivation sets in. The digestive tract and the kidneys are invaded and soon partial nerve paralysis shows itself in a tremor of the arm, hand, feet, facial and speech muscles. This tremor or "shake" is the destructive feature of Mercurialism in the hat industry, for as soon as the hands grow unsteady the man, however expert, must leave the most delicate processes, where he tears the soft hat bodies. Often he is docked $2.00 for each hat that he spoils, and the sums deducted, combined with his ever lessening earning capacity, too rapidly force him down. The melancholia and the ever present need for bracing the unsteady nerves unite to bring about a use of stimulants which only aggravates the disease. Notwithstanding this, the very worst cases of Mercurialism upon our list have no alcoholic history.

It is to be regretted that some of the cases cannot be detailed. The human story is often touching. The manful stand of the wage-earner against an onward creeping paralysis, the worry and despondency born of disease and the lowering income, the pressures which force the wife and then the children one by one into the labor market, these are the living, pulsing griefs.

The study of Industrial Mercurialism has thus far been confined to the hat industry, which is only one of the fourteen industries in which this poisoning is developed. That the remaining group are experiencing illness due in some degree to the use of the metal is inevitable, although the effects of Mercurial Poisoning are slower and more insidious than those of Phosphorus and Lead.

Committee on New Buildings.

The Committee on New Buildings, through the courtesy of public officials and private owners, examines plans for proposed buildings and makes suggestions for improvements before erection. The results are more healthful working conditions for innumerable men and women. Both the Government and Industrial Branches of this Committee have been very active in making such examinations, after acquainting themselves with the requirements which constitute a standard for the particular type of buildings to be constructed.

Press Committee.

Notices of meetings, lectures and special items of interest relating to the work are sent by the Press and Publication Committee to the daily papers, thus bringing the work of the Section to the attention of the public.

Lecture Committee.

The Lecture Committee has given each year for the benefit of the Section an instructive course of lectures touching important questions, realizing that our work is largely educational.

Informal talks are given after the regular monthly meetings on subjects relating to some phase of betterment work and the members are thus brought into a closer knowledge of industrial conditions.

Membership Committee.

The activity of the Membership Committee has resulted in tripling the number of members during the year.

DISTRICT OF COLUMBIA SECTION WOMAN'S WELFARE DEPARTMENT.

CHAIRMAN, MRS. SAMUEL SPENCER.

The District of Columbia Section of the Woman's Welfare Department made progress especially in the efforts to aid in improving conditions of Government employes.

Industrial Employes' Welfare.

As we have no large manufacturing plants in Washington, work for industrial employes is of lesser importance. In this connection it has been our policy to act in conjunction with other associations—the Red Cross, the Young Women's Christian Association and the Travelers' Aid Society.

Government Employes' Welfare.

As the report of the National Chairman of Government Employes' Welfare Committee has shown, our efforts lately have been especially directed toward the Census Building, Treasury Building, Winder Building (the headquarters of the Auditor of the Treasury), the Federal Jail, the Pension Office Building and the Interior Department.

ROOF GARDEN, LUNCH AND REST ROOM. GOVERNMENT BUREAU OF ENGRAVING AND PRINTING, WASHINGTON, D. C.

Luncheon and Rest Rooms.

The question of inadequate provision for luncheon and rest rooms in the majority of Government buildings is a very serious one. We have accomplished more in the way of suitable rest rooms than in helping toward securing proper luncheon facilities.

The rest room in the Census Building, provided through our efforts, assisted by the Red Cross, has cared for 2,000 persons since its opening. More than eighty were treated in one day alone during August.

Our National Chairman, before leaving Washington last Spring, made special recreation arrangements for those women employes.

Appropriations Needed.

Two large problems always confront us—one is the cry, "We have no appropriation from Congress for this;" the other is, "We are to have a new building before long, so there is no use doing much in this one, which will then be abandoned."

It can well be seen that buildings constructed for the work of a Government of nine millions of people, now used to administer the affairs of ninety millions, are packed beyond endurance. But, by patient perseverance, we are ameliorating conditions as to ventilation, overcrowding and uncleanliness.

City Market.

We are working to secure further improvements in our city markets, the large Center Market being in much better condition than when we began the investigation a year ago; the majority of the residents of Washington being Government employes, it is in their interest that this effort has been made. By interesting the President of the Market Company and the Board of Managers, who had never considered the subject, we have, through the commissioners who had appointed extra inspectors for all markets, secured changes in conditions everywhere—new standards of inspection, new stalls and new galleries overhead to hold the stock and keep it from being packed under the stalls. It is essentially work for employes from the President himself to the lowliest laborer, for all deal at the markets, and the food is now treated in a cleaner, more hygienic way.

Membership.

We have, through our members, direct affiliation with the Cabinet and Congress and can, therefore, frequently accomplish much by personal interviews.

Loan Shark Bill.

Our effort to stop usurious rates of interest, charged to all types of employes who need to borrow money, has been put in the form of a bill introduced in Congress, known as the Loan Shark Bill. The ladies of the Woman's Welfare Department appeared at the hearing of the bill in the District Committee Room, and their position in regard to it was stated to the members of the Committee by our vice-chairman. The bill was passed by the Senate and was favorably reported by the Conference Committee of the House.

Sanitary Inspection Bill.

We are especially urging what is known as the Sanitary Inspection Bill. It provides for the creation of a National Board of Sanitary Inspectors, composed of the Surgeon-General of the Army and Marine Hospital Service, the Chief of the Bureau of Medicine and Surgery of the Navy, and the Supervising Architect of the Treasury. They are to be assisted by retired officers of both branches of the service, who, without extra pay, will inspect all Government buildings *at least once* in three months and report to the Board as to their sanitary and hygienic conditions. The passage of this bill will mean wonderful improvement in the future as to segregating or eliminating tubercular cases in the various Government departments and as to general cleanliness.

NORTH AND SOUTH CAROLINA SECTION WOMAN'S WELFARE DEPARTMENT.

CHAIRMAN, MRS. B. FRANK MEBANE.

During the past year we feel that quite a gratifying amount of Welfare Work has been accomplished at Spray, N. C.

Club House.

The Spray Civic Association, which is composed of the managers of the mills, has the general welfare of the employes at heart and generously provides the money for putting into execution the ideas of the women forming our local Welfare Committee, in addition to its regular civic duties. During the year just passed the Association voted $20,000 for a club building for men and boys, under the management of the Y. M. C. A., which is most successful. Having more than 500 mem-

bers, it provides for them bowling alleys, billiard and pool tables, reading rooms, a gymnasium fully and perfectly equipped, and classrooms where night schools are held; also a large assembly hall, used for gatherings of all kinds, suppers every Monday evening and so forth, facilties being provided for serving seventy-five. The members pay the sum of $5.00 a year for men and $1.00 for boys. Possibly more enjoyed than all else are the shower baths, a large number being taken each day. During the months of October, November and December the attendance numbered 2,700. There were 9,800 who participated in the games and 114 in the classes and clubs. There are entertainments for mixed audiences. There is also in the building a medical room, where 288 school children were examined this autumn by the physicians, and there is a specialist for operations on eye, ear, nose and throat, all free of charge.

Dispensary and Emergency Rooms.

Through efforts of the women of the Spray Welfare Committee there has been equipped a dispensary, where the children needing treatment only (no operations) may be cared for by the District Nurse. There has been completed also an emergency room, used in case of accidents in or around the mills, and for operations where the patient has no facilities at home. By means of this emergency room we hope definitely to ascertain the need of a hospital at Spray. At present I am glad to say it looks as if the hospital will be unnecessary and that the emergency room will be adequate since the percentage of accidents is astonishingly low and the surgical cases for hospitals rare, and as it is almost an impossibility to persuade this class of people to go to a hospital for general illness unless it can be clearly proven first that it is a case of life and death.

District Nurse.

The work of the District Nurse has been most satisfactory, the health of the entire village, as well as the appearance of the outside and inside of the cottages, the streets and the gardens having been greatly improved. Keeping the premises in a sanitary condition requires constant and vigilant work. As there have been only fifty cases of fever among the 8,000 inhabitants of Spray since the Nurse began her visits, July 1, by beginning the precautionary measures in March this year we expect to reduce this number materially.

Girls' Home.

The Girls' Home is well established, and is managed by a competent woman. For the sum of $2.50 a week the girls are given nice bedrooms (two girls in a room, separate beds if desired), well-cooked food, three meals each day, a sitting room for receiving their friends, books and magazines for those inclined to literary pursuits, and each week we have an organ recital and club meetings at the Home, cooking and sewing being taught the girls by the matron.

Women's Club Proposed.

In April we expect to put in a petition to the Spray Civic Association for a sum to build, for the girls and women, a clubhouse commensurate with that already built for the men and boys, in which it is planned to have bedrooms, meals also to be furnished.

Day Nursery.

The need for a day nursery was evidenced by the shocking discovery one day of the half-charred body of a little child near one of the open fireplaces commonly used in that part of the country. The nursery, now thoroughly established, is a great success.

SANITARY AND LOAN SHARK BILLS ENDORSED.

It was determined that the Woman's Welfare Department should endorse the action of the District of Columbia Section; that there should be printed and distributed, among the members, cards giving the name and title of each bill, with its purpose and scope, and that the members should be asked to write personal letters to their Congressmen and Senators urging the passage of these bills.

It was voted that the Department should ask every woman's organization to use its influence for the passage of these Sanitary and Loan Shark bills.

The Chair announced as a committee to carry out these ideas: Miss Maude Wetmore, chairman; Mrs. Archibald Hopkins and Miss Anne Morgan.

NEW CHAIRMAN OF DEPARTMENT.

MRS. JOHN HAYS HAMMOND, who was elected National Chairman of the Woman's Welfare Department, is a Southern woman by ancestry. She was born in Vicksburg, Miss., of Virginia Colonial stock, and her people were among the pioneers of Mississippi. Her father, Judge J. W. M. Harris, was a lawyer in Vicksburg of high repute, and was one of the auditors in Richmond under the administration of Jefferson Davis. Her uncle was Brigadier-General Nat. Harris, whose portrait hangs in the gallery in Richmond devoted to Southern generals. Her great-grandmother, Letitia Gibson, after whose family Port Gibson was named, married Nathaniel Harrison at Natchez when that place was a Spanish fort. She was brought to New York by her parents as a child, and at fifteen was sent abroad to study languages and music. She met Mr. Hammond in Dresden, Germany. He was then studying in the Royal School of Mines in the adjacent town of Freiberg. They were married in America.

Her high intellectual ability and great personal charm have won for Mrs. Hammond a world-wide circle of friends. She is the mistress of a beautiful home and enjoys the personal friendship of rulers and men prominent in administrative and legislative circles, and of women engaged in educational activities in the principal capital cities of the world. She has the personal quality of a warm sympathy that manifests itself naturally. With her preparation of experience and natural gift of adaptability, she brings to her activities an enthusiasm that contributes to

MRS. JOHN HAYS HAMMOND.

her effectiveness. She is fortuitously equipped for the field of work to which she is called. Throughout all her experiences she has won the good will and cordial co-operation of both wage-earners and employers. She has been active, for example, in the life of mining camps for the welfare of employes of the companies with which her husband was connected. She is one of the founders of the Woman's Institute in London, which carries on work to improve the condition of women wage-earners in every branch of industry where they are employed. She has of late devoted increasing attention to improving the conditions of government employes, a field in which she has worked diligently. She has shared with her husband his travels and explorations in examining gold fields in California and Mexico, and when he was Consulting Engineer in San Francisco. Since her part in his career in South Africa, Mrs. Hammond has had the advantage of his continued work of examining mines.

The Woman's Welfare Department, of which Mrs. Hammond is Chairman, is composed largely of women who, as stockholders or through family relationships, are financially interested in industrial organizations, in factories, mines and other places of work. Among other influential members are also the wives of many men in public life, who are interested in bettering the conditions of the employes in government departments.

Mrs. Hammond made prompt response to the call to duty involved in her election. She had just returned from a journey with her husband in Russia, Germany and England, and as an initial step gave a reception at the Colony Club in New York City to meet the officers and members of the New York and New Jersey Section of the Woman's Welfare Department. The reception was voted as brilliantly successful, both socially and in its practical purpose.

In quick succession she turned her attention to organizing in new fields. At Atlanta, Ga., there was next held a reception at the Capital City Club, where she earnestly presented the desire to forward the welfare of industrial and public employes throughout that region. She was assisted by Mrs. John K. Ottley, Miss Jennie English, Miss Isma Dooly, Mrs. Walter Lamar and Mrs. Cyrus Pitman Orr.

There were approached most recently another group of Southern women at a reception given in Mrs. Hammond's honor at the Woman's Club, Richmond, Va. Mrs. J. Allison Hodges, Mrs. B. Frank Mebane and Mrs. W. T. Harris lent their efforts in promoting this endeavor.

Among visiting members of the Woman's Welfare Department of the Federation were: Mrs. Richard Wainwright, Mrs. Samuel Spencer, Mrs. James Pilling and Mrs. Robert S. Chew, National Secretary, of Washington, D. C.; Miss Maude Wetmore, of Newport, R. I.; and from the New York and New Jersey Section: Mrs. Francis McNeil Bacon, Jr.; Miss Maud Rives Borland and Mrs. Walker Smith.

OFFICERS AND EXECUTIVE COMMITTEE WOMAN'S WELFARE DEPARTMENT FOR ENSUING YEAR.

MRS. WILLIAM HOWARD TAFT, The Honorary Chairman.
MRS. JOHN HAYS HAMMOND, Chairman, Washington, D. C.
MRS. J. BORDEN HARRIMAN, First Vice-Chairman and Chairman National Committee on Welfare Work for Industrial Employes, New York City.
MRS. RICHARD WAINWRIGHT, Second Vice-Chairman and Chairman National Committee on Welfare Work for Government Employes, Washington, D. C.
MRS. JOHN K. OTTLEY, Third Vice-Chairman and Chairman Georgia and Florida Section, Atlanta, Ga.
MRS. HORACE BROCK, Fourth Vice-Chairman, Philadelphia, Pa.
MRS. B. FRANK MEBANE, Fifth Vice-Chairman and Chairman North and South Carolina Section, Spray, N. C.
MRS. EVA McDONALD VALESH, Sixth Vice-Chairman, New York City.
MRS. ROBERT S. CHEW, Secretary, Washington, D. C.
MRS. FLORA E. DURNO, Executive Secretary, Washington, D. C.
MISS MAUDE WETMORE, Treasurer, Washington, D. C.
MRS. AUGUSTUS P. GARDNER, Chairman Ways and Means Committee, Hamilton, Mass.
MRS. J. MEDILL McCORMICK, National Chairman Public Hospital Employes' Welfare Committee, Chicago, Ill.
MRS. FRANCIS McNEIL BACON, Jr., Chairman New York and New Jersey Section, New York City.
MRS. ARCHIBALD HOPKINS, Chairman District of Columbia Section, Washington, D. C.
MRS. W. T. HARRIS, Chairman Virginia and West Virginia Section, Danville, Va.
MRS. CYRUS PITMAN ORR, Chairman Alabama and Mississippi Section, Birmingham, Ala.

MRS. ROGER WOLCOTT	Boston, Mass.

BANQUET OF THE DISTRICT OF COLUMBIA SECTION AT WASHINGTON, D. C.

THE FEDERATION'S WORK ENDORSED BY SENATOR HENRY CABOT LODGE AND PRESIDENT TIMOTHY HEALY

THE first speaker at the banquet of the District of Columbia Section of the Woman's Welfare Department, introduced by Mrs. Archibald Hopkins, was the National Chairman, MRS. JOHN HAYS HAMMOND. She defined the organization, its purpose and its method of work.

UNITED STATES SENATOR HENRY CABOT LODGE, of Massachusetts, attributed the admirable work of The National Civic Federation to the spirit of its members in working together for one end and said that its most valuable feature is that it has interested representative people to do work themselves for the solution of great problems. The tendency to turn to the Government to do everything tends to sap the strength of individuality. But there is now realization that people make governments and laws, not the reverse. Hence, the Civic Federation is of very great value, in that it is composed of all sorts of people who have joined in the purpose of making things better. They bring employer and employed together as they should be in a land where there should be no feeling of class.

The President of the International Brotherhood of Stationary Firemen, TIMOTHY HEALY, declared that he was willing to give all that he could of effort and time to The National Civic Federation. The Socialists did not agree with him, nor with themselves. He said: "The Socialist movement is getting stronger, and they are making threats now that they will drive all our trades unions out of The National Civic Federation. Something has to be done to curb the Socialist movement in this country, and I believe that the Civic Federation, working along with the trades union men, is the greatest force that possibly could be brought against it. Washington's Birthday this year was not observed as a holiday in Milwaukee and the Socialist Mayor refused to display the Stars and Stripes on the public buildings. If they should be successful in this country, there would be no Stars and Stripes. The red flag would take their place. I am in The National Civic Federation because it is doing the same work the labor unions have been doing—uplifting humanity. Though the labor unions of this country and the world are often condemned, I never knew of any issue that the labor unions put forward that was not for the good of the greatest number. A generation ago, there was scarcely anybody outside the labor unions who had a word to say or bothered his head about how young the child went into the mill or factory and the mine, or how hard it worked there or how many hours it was kept inside. We want decent hours for our men to work. The Civic Federation want the same. They believe that we are right. We want healthful surroundings and living conditions for the workers, not only in the workshops, but in the homes where the wives and children can enjoy good conditions, too. We want sufficient wages to clothe, feed, educate and raise the children as American citizens should be raised. My friends, the wage earners, men and women, have been neglected in the mad rush to build up large fortunes and great enterprises. If the captain of industry had paid as much attention to his employes—of course there are exceptions—as he did to his machinery and his mules we would not have had so much trouble. And you, ladies and gentlemen, of The National Civic Federation, who are taking an interest in the down-trodden, are doing a great deal for humanity and for the future of this great country. The history of The National Civic Federation will never be known, because they act and work quietly, and you would be surprised if you were to know the labor troubles and strikes that have been avoided through its channels in getting employers and employes together. They are doing wonderful work, although they are not dealing with brass bands or getting into the newspapers. I believe that the Men's Department in the near future should establish a movement for systematizing wage scales of Federal employes. These people are not in a position to help themselves and are sorely in need of somebody to look after their interest. Right here in the city of Washington are men who can get no redress for injustice—the class of men that I represent—the stationary firemen. I find that men doing the same class of work are getting $2.25 a day in some departments, while others are getting $2.75, $3 and $3.25, all having the same hours. That is not just. It also is a shame that men doing such laborious work for 365 days in the year should get $720, the same as they worked for twenty or twenty-five years ago, when the cost of living has almost doubled. I believe that this country is rich enough and great enough to give a decent living to every workingman—every man that wants to work. He should have it. The fellow who don't want to work ought to be in jail."

MRS. WILLIAM HOWARD TAFT.

MRS. JOSEPH MEDILL McCORMICK narrated an experience in the stock yards where she addressed some working girls. One of the girls spoke up, saying: "What good does it do for you to come down here and talk? A great many have come down and talked. We don't want talk, we want something accomplished. Do you own any stock here?" Upon receiving an embarrassed, negative reply, she said, "There is no use in coming down here. If you can interest Mrs. Armour, Mrs. Swift or Mrs. Libby you can help us, but until then you cannot do any good." Mrs. McCormick felt that she was exactly right. This led to a conference with Miss Morgan and Miss Harriman, who were interested in the plans for organizing the Woman's Welfare Department and the determination that women who draw dividends from industrial concerns should know the conditions under which those dividends were earned. Mrs. McCormick said that the work had made such progress among employers that "now we have letters asking us to come and make suggestions."

MRS. ARCHIBALD HOPKINS spoke of the work of the Washington Section under her predecessor, Mrs. Samuel Spencer, praising the Government officials for their efforts to improve working conditions for their employes. She announced that a lodging house for working girls would be started in Washington by Mrs. J. Medill McCormick, explaining that the Woman's Welfare Section would act as an advisory board. No generation of women has ever had such an opportunity given as the women of the Twentieth Century to help the world on in the battle of life.

SEMI-ANNUAL MEETING WOMAN'S DEPARTMENT

MRS. TAFT'S GARDEN PARTY IN HONOR OF FEDERATION'S MEMBERS

THE most notable event in connection with the recent Washington meeting of the Woman's Welfare Department was Mrs. Taft's first garden party of the season, given in honor of the members of that department of The National Civic Federation. The President and Mrs. Taft received their guests on the White House lawn under the protecting boughs of the great old trees. The Springtime freshness of the verdure surrounding the playing fountain, with the great white columns of the official home for a background and set off by the red uniforms of the Marine Band, afforded a scene of rare beauty.

MRS. TAFT, the Honorary Chairman of the Woman's Welfare Department, attended the reception at the residence of Mrs. John Hays Hammond the same evening, and, as evidence of her great interest in the work, also lent her presence at the morning meeting when the following addresses were made:

MRS. JOHN HAYS HAMMOND: Do you realize that every morning an army of 7,000,000 working women march out to meet the day, an industrial army which is contributing its service to increase the material wealth and, in that way, the political importance of our country among the nations on the earth?

What are we doing—we women who are not in the wage-earning class, but who are enriched and benefited by our patient Sisters of Toil? This is a question we cannot ignore. It is your duty and mine, in the name of *humanity* and *patriotism*, to work to ameliorate the condition of the less fortunate of our community so as to remove any just cause of grievance that now exists against the more prosperous of the country. It is our peace mission to bring about a better understanding between wage-earner and employer.

Not more than three years ago The National Civic Federation—a body of influential men of earnest purpose—established a Woman's Welfare Department as an offshoot of their organization to provide a means to enable women to discharge such humane and civic duties.

1. What is the Woman's Welfare Department of The National Civic Federation?

An organization of women interested in the welfare of Government and industrial employes.

2. What is its object?

To establish committees in various sections of the United States for the purpose of furthering welfare work.

3. What is Welfare Work?

It is improving the working and living conditions of the employe by the employer. This includes the safeguarding from unnecessary risks in dangerous and unhealthful industries; the provision of good ventilation, light and sanitation; lunchrooms and restrooms; educational and recreation resources; good housing conditions; savings funds and benefit and loan associations; recognizing always that the first essentials to the welfare of employes are steady work, an equitable wage and reasonable hours of labor.

4. How can Welfare Work be accomplished?

By interesting employers in the special needs of their employes, and thus bringing about a better mutual understanding.

5. How do the methods of The National Civic Federation differ from other organizations engaged in similar work?

By using educational methods to demonstrate to employers what has been accomplished for employes by employers in kindred industries.

6. Is there need of Welfare Work in every community?

There is in every community where there are factories, stores, mines, railroads or public institutions, such as city hospitals, post offices, schools and other Government buildings.

7. What is necessary to start a Section of the Woman's Department of The National Civic Federation in order that Welfare Work may be successfully introduced into a community?

(a) A well-organized working committee composed largely of women, who, as stockholders or through family relationship, are financially interested in industrial organizations, in factories, mines and other places of work, or whose families have official relations with Governmental departments.

(b) A knowledge of conditions under which employes work and of the special needs of such employes; a conservative and non-aggressive method of making tactful and comprehensive suggestions to employers.

(c) A large membership, so that the interest of a great many women in the community may be enlisted.

(d) Lectures and informal talks on social and economic subjects to the non-working members, so that their interest may be kept alive.

Although barely three years old, this Woman's Welfare Department, through the efforts of my predecessors in office and their co-laborers, has achieved most gratifying results. We have already brought good ventilation, restrooms and lunchrooms into many of the obsolete Government buildings of Washington. And, perhaps, more far-reaching in future effect has been the result of our agitation, in that Congress has at last awakened to the realization of its responsibility—has formed committees to inspect these buildings and to report as to their proper sanitation—and will, we hope, shortly pass the bill appointing for all time a regular Board of Sanitary Inspectors. We have established night schools, dispensaries, medical clinics, visiting nurses, kindergartens, lessons in cooking, sewing and household economics in mill towns of the South.

No detail is too small for our care. We have dried the wet garments of the overworked postman—provided reading-rooms, local barber shops, baths, bowling alleys, pool tables, conducted without drinking and disorder; we have concerned ourselves with the grading of streets and lighting of towns by electricity, the planting of domestic gardens, and even the proper pasturing of family cows has been part of our work. In every case the most encouraging feature of our labor has been the ready realization by the employer of the great importance and value of our co-operation.

As I have said, the Woman's Welfare Department is as yet in its infancy; our work has been relatively local. Since I assumed office—a little over two months ago—we have formed a new Section each month—one in Atlanta, Ga., and one in Richmond, Va.—but it is our aim and expectation to extend this organization throughout every State and Territory of the Union. In the North, South, East and West, in every region of our great country where women are employed, there is work for us to do—intelligent, sympathetic aid to be given. We need workers. All of us can contribute in some way, whether by financial assistance or personal service. There is room for every kind of woman—the young women, with their splendid enthusiasm and energy, the middle-aged, experienced veterans of many hard-fought life battles—more tender because of their grim scars. We need wise, quiet council of the women who, from the twilight of their years, can speak rare words.

Will you come and join our ranks,—remembering those beautiful words of Portia?

> "The quality of mercy is not strained,
> It droppeth as the gentle rain from heaven
> Upon the place beneath; it is twice blest,
> It blesseth him that gives, and him that takes."

Mrs. Hammond then introduced the Chairman of the District of Columbia Section, Mrs. ARCHIBALD HOPKINS, who presided over the meeting.

ANNUAL COMPETITIVE DRILL, FIRST AID CORPS, PHILADELPHIA AND READING COAL AND IRON COMPANY.—Dr. J. B. Rogers Inspecting Dressings for Rating in Final Contest.

DEPARTMENT ON COMPENSATION FOR INDUSTRIAL ACCIDENTS AND THEIR PREVENTION

By AUGUST BELMONT, Chairman

IT is an especial matter of gratification to me to have watched the growth of the Woman's Welfare Department and now contemplate the magnificent future which is before you, because it was during my administration of The National Civic Federation as President that the Woman's movement started, having its inception at a meeting at Mr. Carnegie's, in the Winter of 1907. I congratulate you upon the growth of your numbers, the work you are accomplishing, and, finally, your good fortune in having Mrs. Hammond as your Chairwoman. Her well-known energy and active interest afford a source of great strength to you.

The Department of Compensation for Industrial Accidents and their Prevention has much in the character of its work which dovetails in with what you are and will be doing. Its tentative bill, which was presented for the Federation's consideration and adopted at the annual meeting, was, through various channels, submitted to the legislatures of thirty-three States during the past Winter. The principles of this bill have been adopted in a number of the States. The object of the bill was in the direction of compulsory compensation, based upon the police power of a State, and we believe it to be a reasonable step at the present time, providing for workmen injured under the conditions prevailing in modern industry. It follows the lines of those already pursued by substantially every industrial country of Europe so far as it goes, we having for reasons confined it to hazardous occupations. It abandons the old common law theory—that the employer is liable for injury only on the ground that the employer has done his workman a wrong; and follows a new theory—that under modern conditions industry should bear the charge of the damage caused to persons as it already bears the charge of damage to machinery and equipment. In the State of New York a law was passed last year, involving the principles of compulsory compensation, known as the Wainwright Act, and, so far as the State of New York is concerned, our bill depended upon the outcome of the test case involving the constitutionality of the Wainwright Law. The Court of Appeals declared the Act unconstitutional, but it does not follow that in other States the principle may not be sustained.

In spite of this, the demand for a workable compensation law is so universal that my department has redoubled its energies toward a solution of the question. A legal committee, with the Hon. Francis Lynde Stetson as chairman, has undertaken to redraft the measure to meet the new conditions arising in New York State. The Compensation Committee of the American Bar Association, and a similar committee of the National Association of Commissioners on Uniform Laws have tendered their assistance to Mr. Stetson's committee, as have also the attorneys who conducted the suits which resulted in declaring the Wainwright Act unconstitutional. It is impossible to forecast what the outcome of their labors will be. In New Jersey the constitutional question seemingly has been avoided by what is called an elective act. This provides that both the employe and employer, the first when entering the service of the employer, and the second in engaging his employe, without any written agreement, ipso facto enter into a contract to seek redress for accidents under a definite compulsory compensation law. But in case either one of the two does not wish to avail himself of the same but prefers to seek redress, in case of need, through the common law provisions governing claims for accidents, a definite notice in writing must be given by either one to the other that he will not avail himself of the compensation law. It is yet too early to pronounce upon its value.

To all employers of labor it is of the utmost importance that fair and equitable compensation laws should be placed on the statutes of our various industrial States in place of the present liability laws. If this is not done, the pressure from workingmen must ultimately result in sweeping away many of the defenses which the employer now has, and exposing him to jury decisions pressed by shyster lawyers and a class of harpies known as ambulance-chasers.

The Federation knows that labor leaders in this country are fair in this matter, and prefer compensation laws with definite awards, that the workmen may secure all that is legally due them and, moreover, at a time when they need it, without the risk of lawsuits which either in the end result in no compensation or, if decided in their favor, secure to them only a percentage of the award, sometimes not even 50 per cent., the rest going to their counsel for taking their case on a contingent fee. At the present time our liability laws tend to engender ill feeling between workmen and employers by reason of the character and outcome of much of the litigation. It cannot be hoped that any scheme will be devised nor is there any in existence in any part of the world, providing for full insurance in case of accident. The best that is now provided is one-half pay for certain specified periods.

While this work of the Federation is going on, it is also pressing through another committee for improvement in State Inspection of Factories and compelling the use of safety appliances. This committee is at work upon a model safety act, which, like the Federation's act for compensation, it hopes will form the basis for some uniform State legislation. This committee has done excellent work in the field of comparative study of statistics and statutory requirements as to accidents and their prevention. The report indicates a manifest absence of uniformity of law and of action in the various States and inadequate machinery for carrying into effect statutory requirements for the promotion of health, safety and comfort of wage-earners.

At a recent meeting of our organization in New York, the Hon. CYRUS W. PHILLIPS, a member of our Committee on the Improvement of State Inspection of Factories and Chairman of the Committee on Causes of Industrial Accidents of the New York State Commission on Employers' Liability, made the following statement relative to the Triangle Shirtwaist Factory's fire:

"The recent fire, by reason of the fact that the appalling loss of life occurred at one time and at the same place, aroused public attention to the dangers and hazards of modern industrial life. Yet this loss of life is but a small part of the mortality and bodily injuries due to industrial accidents which go comparatively unnoticed. More than twice

as many workers are killed each year in the factories in this State, while the number of railroad men killed in their work in this State, outside of the City of New York, reaches nearly twice the number of those who lost their lives in the fire."

This same ratio, it is fair to presume, would apply to the whole country. What a field is open to us all for the doing of good!

EMPLOYERS' WELFARE DEPARTMENT

By WILLIAM R. WILLCOX, Chairman

SO many ask me the question, "What are you doing through the Employers' Welfare Department?" that I shall, for the benefit of those who are not familiar with its work, open my remarks by stating that our efforts are entirely devoted toward interesting employers, whether public or private, in improving the conditions of employes in all occupations and industries.

The Employers' Welfare Department of the Federation is composed of 500 leading employers and public officials throughout the United States. Its work is the humanitarian phase of the Federation's activities. The methods employed are educational, the effort being to prove the value of Welfare Work by holding up as good examples employers who have successfully introduced such features for the benefit of their employes, as sanitary washrooms, factory lunchrooms, libraries, clubs, classes for technical education, homes rented or sold, and wage-earners' insurance.

To quote the growth of the welfare activities of several of the members of the Employers' Welfare Department is to show the impetus which has been given to Welfare Work through our efforts.

For example, a stereopticon address by one of our lecturers before two hundred manufacturers in a single industry, picturing fine washrooms and baths for men, lunchrooms, ventilation devices, drinking-water fountains, seats for women workers, men's and women's clubrooms and dancing pavilions, roof gardens, emergency hospitals and proper homes for employes resulted in the president of the largest factory in that trade sending to the Welfare Department for advice and expert assistance in providing separate artistic, yet practical, lunchrooms with food at cost for the men and women; and, in two of his villages, he has destroyed old houses rented to the people, after substituting modern sanitary dwellings surrounding social buildings. While this accomplishment was in the woolen industry in New England, a contrasting illustration is the demand upon this Department for information as the result of an address before an association of box manufacturers at its annual convention recently in one of the Central States.

The success of the Welfare Work in one great industrial organization, employing between twenty-five and thirty thousand wage-earners and clerks in its mines and plants in Michigan, Wisconsin, New York, Ohio, Illinois and other States, which was initiated by one of the members of our staff, is exemplified by a conference of more than one hundred welfare workers in its employ held within the last ten days. The fact that this company requires such a large corps of welfare supervisors, such as doctors, nurses, matrons, machinery safety inspectors and clubhouse managers, under the direction of an efficient welfare secretary, indicates the systematic conduct as well as the vastness of its Welfare Work. This company brought its welfare workers together from different States to make tours of inspection through three of its great factories to view safeguards for machinery, hospital arrangements, lunchrooms, clubhouses, ventilation devices and various other schemes for the benefit of employes. After inspecting the Welfare Work in Chicago plants, there was given a dinner at which there was an interchange of experiences, with addresses by the president and other officials of the company.

Another employer in Kentucky has given his men an eight-hour workday in three shifts, with the same pay that they had when on two shifts of twelve hours each. This affords them time to go home for meals, has greatly improved their health and affords opportunity to use their clubrooms in the mills, where they play billiards and other games.

One of the most comprehensive examples is that of one of our members manufacturing shoe machinery in the State of Massachusetts, where there are 4,500 workers, the majority highly skilled and receiving good wages, but the head of the company, who has progressed with us from the beginning of the organization of our Welfare Department, has incorporated in the work of that company all the underlying principles for which we have stood. In addition to a short workday (the hours being fifty per week) and high wages, there has been erected an industrial plant in a beautiful rolling country outside of Boston, the building itself having 75 per cent. of the wall space devoted to windows, and great fans being installed all over the plant to bring down inhalations of fresh air from the skies and send it throughout the workrooms. To quote from the report of an investigation: "Here is an industrial community where fathers, daughters, sisters and brothers are congregated under one great kindly administration; and the spirit of American chivalry, that the woman must be guarded and cared for, is fostered by the officials and perpetuated by the employes. The women begin their work ten minutes later than the men, and leave ten minutes earlier. They have their rest room in charge of the matron. It contains a piano, reading matter and comfortable chairs and couches. There are individual lockers, and adjoining are bath rooms with ample hot and cold water, where the shower baths are among the most popular of the many excellent innovations. 'We assume that they are all in good health when they come to us, and it is our duty to keep them that way,' said one of the officials. For instance, they must leave the atmosphere of the factory during the midday lunch time. They must either go to their homes, if not too far away, to the restaurant, where they may sit at separate tables, or to the restroom. This enforced relaxation keeps them happy and contented. The men also have excellent lockers, bathrooms and lunchroom. There are no annual "house cleanings." Men go about constantly, clearing away dust and litter, and not for an unnecessary minute is a mechanic allowed to leave a piece of machinery or tool lying about. In Massachusetts there are in force, according to the most recent report of the State Savings Bank officials, 2,521 savings bank insurance policies, and of this number about one-sixth, or 402 policies, are held by the thrifty employes at this Beverly plant. The limit allowed to each policy under this form is $500, and as the Beverly employes hold an aggregate of $201,000, it is a simple process of arithmetic to show that the average is over $490. Whenever one of the employes is stricken, he or she is quickly carried to the emergency hospital, one of the best equipped in the country, where prompt professional treatment is administered. The corporation has spent great sums in preventive measures. The dangerous sections are guarded by covers, and powerful fans drive the dust from the grinding machines upward and away from the worker. One of its officials stated, in presenting a clubhouse to the employes, that 'all having learned to work hard, they must now learn to play hard.' The clubhouse, which cost thousands of dollars, is as complete in its appointments as any country club, and is operated on a self-respecting basis. Best of all, perhaps, is provision for the future of the boys who will one day be inventors and trained mechanics. Two groups, each containing thirty-five boys, alternate between the factory and the Beverly High School. The company furnishes all materials and keeps the accounts. The boys are paid one-half the price which would be paid to men performing the same tasks. The other half goes toward the expenses of the schools."

One of the greatest accomplishments of the Employers' Welfare Department has been the result of an investigation of the factories of one company, where there are 10,000 employes distributed in various States from Missouri to Rhode Island. The report with recommendations made by our Department resulted in the appropriation on the part of the company of a fund of $100,000 for important sanitary improvements.

Homely illustrations of particular phases would show, for example, our commissary expert having installed in a Connecticut factory within the last six months an artistic self-supporting lunchroom for men and women employes, where the product manufactured is hotel silverware. Now he has just completed designs for a lunchhouse in a dental factory on Long Island, employing 2,000 men and women, which will be one of the finest in the United States; and at the same time he is installing a lunchroom for women in a cotton mill in New Jersey.

None the less useful has been an annual conference of the heads of Welfare Departments in various factories, stores, mining corporations and railroads, held in January, where, through an interchange of experiences, there was brought to the attention of many employers for the first time the extremely important idea of night ventilation for workrooms. While there were other valuable presentations on proper lighting of workrooms for ensuring of health, emergency hospitals in mines, et cetera, this new theory is worthy of special attention, and I, therefore, quote from the address of Dr. Bannister:

"While night ventilation originated in our medical department, it had to be placed on an economic basis. It occurred to me if the windows could be opened at night, that the girls and all the workers would have the advantage of going into a well-ventilated workroom the next morning. Previously, as soon as work was done, every window was closed. When the watchman made his rounds and found one open, he closed it. So, the question of night cleaning came up from an economic point of view. We have a night force of about ten men in charge of what we call a night foreman. An overseer at night is absolutely necessary. They tried putting two men on each floor with the overseer running around to keep them busy. That didn't work for the reason that we kept the whole factory illuminated, which was an expense, and oft-times the overseer would go around and find one man asleep, because the factory is large, and he had to cover a great deal of ground. Now we take each floor separately, putting all the men there and having it illuminated. We have the overseer on that floor. All the windows are opened, the floor is cleaned and all the dust taken out. Then the windows are left open and

the lights turned down, the force going to the next floor, where the same routine is gone through. We have a system of going through the lavatories, cans are carried out, and so forth, but the main point is all the windows are opened. Early in the morning, at probably 3 or 4 o'clock, the windows are supposed to be closed. Having plenty of windows, certainly we have plenty of fresh air, and the girls and men are better fitted for the day's work than they were before."

The work of the Employers' Welfare Department of The National Civic Federation has practically doubled during the past year, which indicates the widespread interest it has created among employers, many manufacturers having consulted us either by correspondence, through their representatives or personally, and having secured material through our Bureau of Exchange, recommendations from expert investigators, or submitted plans of work for our criticism.

ADDRESS OF PRESIDENT SETH LOW

I shall say a few words about The National Civic Federation as a whole. Someone has likened society to a three-legged stool, one leg being the employer, another leg the employe and the third leg what we now hear called the ultimate consumer. At any rate, whether the illustration will hold or not, that does suggest one of the possible divisions running through society. You could easily perceive that, if one leg of the three is shortened up, the stool is not very comfortable for society as a whole, and when one is seriously injured, there may be a disaster. The peculiar thing about The National Civic Federation, that which is unique in it, not only in our own country but in all countries, is the fact that it consists of large employers of labor, the representatives of organized labor, and of persons, like myself, for example, who are neither one nor the other—representatives of the ultimate consumer.

You can easily perceive that those three different elements do not always run parallel with each other; but we all get the benefit of learning from the others what are their points of view. We get many illuminating illustrations on all sorts of questions in that way. One may interest you. I think I hear labor unions criticised as often because of their attitude toward apprentices as for any other one thing. You hear men say they will not allow the young fellows to be taught any more in their trade. I always used to sympathize with that as a thing that did not admit of dispute until I heard a labor union man say at one of our conferences at the office one day, "The trouble is, an employer in modern industry employs a boy as an apprentice; they set him to work to run a machine or several machines. In a short time he can run those machines as well as a man. At the end of his apprenticeship, or during his apprenticeship of several years, the employer gets a man's work done for a boy's pay, and when that boy becomes a journeyman, he does not know anything more about his trade than when he began. He knows how to run that one machine and that is all." I happened to speak of that at a gathering of large manufacturers in Providence, R. I., very soon after I heard it, and one of them said to me, "That is absolutely a fair indictment of modern industry." The other one said to me that his father and grandfather had conducted a machine shop in Providence ever since 1830 or thereabouts; that they had pursued the old policy always of teaching every apprentice every part of his trade, with the result, he said, that they have never had a strike in seventy or eighty years, and that "You can find our men who have been taught as apprentices in our machine shop in every machine shop in Providence."

I venture to think that no one coming face to face with the industrial questions of our day, from the angle of most of those in this room, any more than I myself, would ever have got that understanding of the motive lying behind the trade union's attitude toward apprentices. This union leader that I speak of remarked that in their business the trade agreement made it a necessary requirement of the apprentice system that every boy taken in should be taught every part of his trade. This union leader said, "If that were the attitude in all trades, you would find the position of the labor unions on the apprenticeship question changed very radically and very quickly."

Now, that serves to illustrate the point that I think is so fundamental in connection with all the work of The National Civic Federation that, whether we can agree or not, we do by meeting, by bringing together these three different elements that are concerned with all industries—the employer, the employe and the ultimate consumer, each one gets the other's point of view, at the very least.

But there are certain things in regard to which we can agree. It may surprise you, but on this question of regulating workmen's compensation, in regard to which Mr. Belmont reported, there was, I think, absolute unanimity of opinion between the employers, the employes and The National Civic Federation on the desirability of that movement, and, so far as they were in New York, they supported the New York law which was pronounced unconstitutional. I think, therefore, you will see that when they do agree, these employers and these employes and the ultimate consumer, that they represent a tremendous power in a democracy like ours, a tremendous power in any country, because every country to-day is governed, whatever be its governmental form, in the last resort by public opinion. But in a country like ours, such a united front can carry almost anything that is desired in any State in the Union, if effort is maintained long enough and intelligently enough.

Perhaps we will hear some man inclined to say, "Why do you have the leaders of organized labor, or a very small fraction of the laboring element of the United States?" The answer is that unorganized labor cannot be represented because they are unorganized. No individual has any authority to speak for the unorganized millions, but organized labor can be heard just because it is organized, and that is the reason why we have organized labor in our councils rather than unorganized labor. One other reason is that I think it is the common or universal belief on the part of those interested in the Federation that organized labor, with all its mistakes—and no one appreciates how many it makes better than its friends—has been a tremendous force in improving the hours of labor, the rate of pay and the conditions under which our industries are carried on and, therefore, we want to work with them. We strive never to hesitate to criticise what we believe should be criticised and, when we cannot agree, as I said before, we can do nothing. But nobody, by joining the Federation, abandons his personality or his individual relation to public questions or industrial questions, or anything else. You may find members and officers of the Civic Federation, as we saw in the last presidential campaign, speaking on every platform and supporting precisely the opposite doctrines; but that does not prevent us from working together, when we can agree, nor from striving to enlighten each other when we do not agree.

I think we live in an age that is full of interest, and if there be any keynote of it that is more significant than any other, I think we should have to say it is an age of combination. I suppose that we all have our own philosophy of the times, and my own is that we have reached in human society just the moment that was reached in the art of printing when each type came to represent a single letter. You remember they used to print from blocks with several words on them and you did not get to the time of limitless combination, as represented by the art of printing, until you individualized your type. Now, precisely so, we do not reach the era of combination on such a scale as we see it to-day in human society until we do individualize our man. The struggle of the ages has been to make every man count for what he was entitled to count, to make every man equal before the law, and the best blood of all the nations throughout all time has been poured out in that cause.

And some men say, just look at it! Here is the individual capitalist disappearing in the corporation and the individual laborer disappearing in the trade union; the corporation is disappearing in the trust and the trade union is disappearing in the Federation of Labor. Of course, if one thinks that individuality is disappearing I should think everything in our day would seem amiss. But, if on the other hand it be true, as it seems to me it is, that we have all of this combination just because we have more successfully individualized each human being than before, then I think there is every reason to be encouraged, just because we see the combination taking on always new forms and acquiring always new power. Of course it is, comparatively speaking, a new force in human society, just as much so as electricity was twenty-five years ago. How have they learned to make electricity our servant instead of its being a source of constant danger? Simply by experiments, and by experiments that have often cost great loss of life and great destruction of property.

Precisely so I think this idea of combination in human society has to be brought out by experience. Capital organizes—I do not like to use the impersonal thing; capital does not do it; it is the men, the stockholders if you please—the stockholders organize in response to the law that I speak of; labor organizes in response to the same law. Neither one nor the other organizes to fight the other. They organize for their own sake now. They feel the new strength at their command. At first they think they can do anything if they try. By and by they find out that although they are organized, they are organized within a society that is greater than any of them. Society places this law upon them, when it knows what it ought to be and says within those limits you can act; outside of those limits you cannot act. I think that is the process that is going on all over the world, in a thousand ways, more conspicuously in industry, perhaps, than in any other field. If that be true, I think you see again why the philosophy of The National Civic Federation is so useful in composing itself of the three elements which together comprehend the whole of human society. At least those of us who throw ourselves into that work will understand better the other's point of view; and useful service is apt to be proportioned directly to the intimate knowledge of the problems to be dealt with.

I trust this meeting will respond perfectly to Mrs. Hammond's hopes. I want to assure her of the heartiest co-operation.

WELFARE WORKERS' FOURTH CONFERENCE

MEMBERS OF PROFESSION MEET UNDER AUSPICES EMPLOYERS' WELFARE DEPARTMENT

A CONFERENCE of the Welfare Workers, under the auspices of the Welfare Department of The National Civic Federation, was held in the Assembly Room of the Metropolitan Building, New York City, on the day preceding the annual meeting.

Morning Session.

Address of Welcome: Hon. William R. Willcox, Chairman Employers' Welfare Department, New York City.

Opening Address: The Human Machine: M. W. Alexander, General Electric Co., Lynn, Mass.

Ventilation: Dr. Winthrop Talbot, Director, Health and Economics Department, National Electric Lamp Association, Cleveland, Ohio.

Night Ventilation of Factory Workrooms: Dr. Lucy A. Bannister, Welfare Manager, Westinghouse Lamp Co., Bloomfield, N. J.

Light Work Rooms: Arthur A. Ernst, Consulting Engineer of Light and Technical Adviser, New York.

First Aid to the Injured in Anthracite Coal Fields: Dr. J. M. Wainwright, Moses Taylor Hospital, Delaware and Lackawanna R. R. Co., Scranton, Pa.

Our Effort to Prevent Tuberculosis: Miss Mary L. Goss, Welfare Secretary, International Harvester Co., Chicago.

Afternoon Session.

Stereopticon Views on First Aid to Injured Miners: Dr. George H. Halberstadt, Philadelphia and Reading Coal and Iron Co., Pottsville, Pa.

The Work of the Welfare Manager: Miss Anna A. E. Van de Carr, Forbes Lithograph Co., Boston, Mass.

New Developments in Our Industrial Villages: W. E. C. Nazro, Welfare Manager, Plymouth Cordage Co., North Plymouth, Mass., and Welland, Canada.

A Complete Factory Welfare Plan: D. C. Lowles, Sherwin-Williams Co., Cleveland.

Home Work: Mrs. G. H. Furman, R. H. Macy & Co., New York.

The Department Store Problem: Mrs. L. L. Ray, Greenhut-Siegel Cooper Co., New York City.

Sanitation in Mining Villages—the Home, School and Club: W. H. Moulton, Superintendent Welfare Department, Cleveland Cliffs Iron Co., Ishpeming, Mich.

Five o'Clock Tea: At the residence of Mrs. J. Borden Harriman, Chairman of the Industrial Employes' Welfare Committee of the Woman's Department of the Federation, in honor of participants at Conference.

There was an attendance of Welfare Workers and special experts on the subject, including employers and economists from a number of States. An exchange of experiences brought forth new and helpful information. Following the address of the Chairman, HON. WILLIAM R. WILLCOX there was an introductory speech delivered by MR. M. W. ALEXANDER, of the General Electric Company, Lynn, Mass., who presided over the conference.

The opening address of Chairman Willcox follows:

"It gives me great pleasure to welcome members of this comparatively new profession at the Fourth Conference of Welfare Workers, called by the Welfare Department of The National Civic Federation.

"The first meeting was designated a 'Conference of Social Secretaries,' as that title had been given to workers in this field, but when these professional workers came together they refused to accept the term. After considerable deliberation it was decided to accept the proposition of Mr. W. G. Mather, President of the Cleveland-Cliffs Iron Company, and take officially the title of 'Welfare Manager.' That term was adopted by many, while others have taken 'Welfare Director,' 'Welfare Superintendent' or 'Welfare Secretary.'

"The true origin of the term 'Welfare Work' is found in the kindred language of Germany. The machinery of that language is adapted to the liberal expression of thought in the form of a single though comprehensive word. The Germans took advantage of their linguistic convenience by naming the various arrangements which may be devised and which employers may carry into effect for the protection and comfort of wage-earners, *Wohlfahrtseinrichtungen*, which has received the explanatory translation 'Examples of personal care for their workers by employers.' When we began the modification and adaptation of this work to the less paternalistic social and industrial conditions in the United States, we made use of the term 'Welfare Department,' not only as descriptive of the organization of the voluntary efforts that have been made in Germany by the employer for the betterment of the living and working conditions of the employe, but as suitable for use in this country.

RESCUE CORPS WITH DRAEGER HELMET, FINDING MINER OVERCOME BY GAS.
ILLUSTRATING ADDRESS OF DR. J. M. WAINWRIGHT.
COMPLIMENTS OF CAPTAIN W. A. MAY, GENERAL MANAGER, HILLSIDE COAL AND IRON CO., AND PENNSYLVANIA COAL CO., SCRANTON, PA.

"There has been some objection made to this specific application of the term, but the adverse criticism seems not to rest upon a sound basis. Upon the contrary, the objections that have been made to its use imply in some degree the erroneous assumption that the underlying motive of welfare work is charity. The preamble to the Constitution of the United States, in its concise but comprehensive summary of the purposes of that instrument, includes the phrase 'to provide for the common welfare.' This affords historic and distinguished precedent for the use of the word in expressing the purpose of this department. The framers of the fundamental law of this country did not have the word 'charity' in mind, at least in its restricted sense of almsgiving, when they included the 'general welfare' among its vital purposes. The essential reason for the promotion of welfare work is that its true object is the mutual and inter-active benefit of each of the human factors in industrial production, the employer and the employed; a result that includes the great body of consumers grouped in the term the 'general public.' Hence it is that the phrase of the Constitution 'the *common* welfare' happily and correctly expresses the inclusive purposes of this organization, that gathers and that welcomes its friends here to-day.

"But it is not alone this origin of the term 'welfare work' that it is appropriate to consider. The phrase has proved so attractive as to invite, not the flattery of imitation, but the abuse of misapplication. There have been those who have, whether unconsciously or with appreciative design, taken the term as promising an impetus to movements that have no relation whatever to the promotion by the employer of the welfare of employes, whatever proper and peculiar merits may be claimed for those enterprises.

"Now, welfare work in its practical application has a number of divisions, among these being placed as of first importance, sanitary work-places, to which a list of specified provisions for physical welfare is accounted essential. The use of the word 'welfare' came readily into the vocabulary of those who sought to forward the physical as well as the mental benefit of pupils in the public schools. Again, certain genial persons sought to forward through a dinner a cause that they termed 'municipal welfare,' and again there appeared promoters of a 'child welfare exhibit,' and the attractiveness of the term to the literary mind appeared in the adoption of it in the modified title of a periodical published in the high cause of altruism.

"There is no desire to file a caveat or to apply for a patent in the tribunal of economic literature as to exclusive proprietorship in the application of this term. A serious reason for objecting to its appropriation as a phrase descriptive of efforts foreign to and distinct from those for which it was originally intended is that it has caused confusion in the minds of employers and of some writers, and of others. It is a term precisely descriptive as it is applied to the work of this organization, and no research or ingenuity has discovered one more fit.

"Our work largely is educational, the main point being to interest employers in promoting welfare work as we understand it, namely, improving of the working and living conditions of employes by the employers.

"In promoting the work it is recognized that the first essentials to the welfare of employes are steady work, an equitable wage and reasonable hours of labor, but that the employer has a further obligation.

"It is advocated that the beginning of all welfare work should be directed toward meeting the pressing necessities for the physical well-being of employes in their work-places.

"We have five divisions covered by the phrase 'Welfare Work': 1, Sanitary Work-Places; 2, Recreation; 3, Educational Opportunities; 4, Housing, and 5, Provident Funds.

"We find interchange of experiences as most valuable between employers as well as between those engaged in supervising the activities for the benefit of employes in any enterprise.

M. W. ALEXANDER dwelt upon the fact that the welfare of employes is a highly important factor in industrial production. Every industrial proposition involves the problem of raw materials, for which purchasing agents, chemists and physicists are employed in order to obtain the necessary results; it involves also the problem of machinery to do the work in the shortest time and at the least possible cost. Then, there is the most important of all—the problem of the men which has, perhaps, received the least attention of all. One machine is like another save in small details, but every human being is different from every other one. The competitor may buy raw materials and machinery at equal advantage, but in the personnel of the establishment there arises the question of increasing the efficiency; therein lies an asset of great value and reality. Waste of life and of human energy is to be avoided. The waste of human effort on the part of employers and employes is an impairment to the asset of pro-

duction. The whole effort of welfare work must result in the lessening of this waste. This problem is now the study of all practical men in welfare work.

DR. WINTHROP TALBOT, Director of the Health and Economics Department of the National Electric Lamp Association of Cleveland, Ohio, impressed the importance of the comfort and welfare of the worker as an economic feature. He discussed particularly types of ventilation and the value of cross currents. Drafts may be prevented in workrooms and offices by perforated screens. The conditions of air in the Government buildings in Washington and in other cities are so bad as to be abnormal. The speaker liberated some ozone in the hall to illustrate its practical efficiency in sterilizing vitiated atmosphere.

DR. LUCY A. BANNISTER, Welfare Manager for the Westinghouse Lamp Company, at Bloomfield, N. J., stated that the first problem was to convince employers that comfort of wage-earners reduced expenses. She dwelt particularly upon ventilation of factory rooms at night as a preparation for the next day; at the same time, in cold weather the working rooms must be properly warmed in the morning. She had known foul air to be pumped from one room to another merely to save the expense of heating, but that this was not true economy. She emphasized the statement that welfare work is not philanthropy, but sound investment. It is her experience that there should be a hospital in every factory for emergency cases, or for cases of weariness, for the women workers, because of the better attention that could be so given. She spoke also of lunch rooms and counters and recreation rooms as highly important.

"Light Workrooms" was the topic discussed by ARTHUR A. ERNST, Consulting Engineer of Light and Technical Adviser, New York City. He stated that results had been directly shown of the effect of insufficient or too intense light upon the worker. It would affect the entire system. Every effort was made to utilize free daylight in our modern structures. Proper light promotes safety, reduces fatigue and increases efficiency and output. In artificial light must be considered, first, intensity, which may fatigue the eye and head if the source be not correctly gauged. The results of too bright a light within the field of vision may be very great, causing contraction of the pupils and the admission of insufficient rays; insufficient illumination may cause short-sightedness and headache. A bill is in preparation for the New York Legislature to regulate and standardize the light in factories.

"First Aid to the Injured in the Anthracite Coal Fields" was the topic of DR. J. M. WAINWRIGHT, of the Moses Taylor Hospital, Scranton, Pa. Conditions proved that First Aid was needed in the stores in New York, upon their streets, and upon railroads, which began to provide operating rooms for the victims of accidents near stations along their lines. The first thing of pressing importance was to check the loss of blood and to prevent infection by the use of sterilized dressing. The first five minutes might affect all subsequent treatment, and might cause a simple injury to become fatal or result in permanent disability, which might have been prevented by the prompt application of a simple piece of gauze. The mines provide packets for first aid, as also do some railroads. The mines also have what is known as a surgical dressing room underground. These rooms are now required by statute in Pennsylvania. There is an ambulance always at hand at the mouth of the mine, and a hospital nearby. The first aid men are taught simply to prevent further injury, and never to undertake further treatment which might cause harm. Their first purpose is to place the patient in condition for transportation from the place where the injury was received. There are prizes for competition between First Aid teams. The corps competing for the prizes are watched by hundreds of spectators. The miners are as proud of their First Aid teams as the college boy is of the work of his football team. The speaker showed photographs of the helmets and other equipment for First Aid workers. Carelessness among miners can be cured only by education and not by punishment. Miners, for example, frequently try to drive a one-inch dynamite cartridge into a seven-eighth inch hole, with, of course, disastrous results. They are being taught, through illustrated literature, "How not to do things."

"Our Effort to Prevent Tuberculosis" was the topic of MISS MARY L. GOSS, Welfare Secretary of the International Harvester Company, Chicago, Ill., who stated that it comprehends all work for better health in the sixteen factories and one hundred offices throughout the United States. Attention is given more and more to light, calsomined walls, clean floors, sprinkling before sweeping, removal of dust and gases, circulation of fresh air, sanitary drinking fountains and sanitary cuspidors, proper wash places and other lines of sanitation in our factories. Great consideration has been given to ventilation in all our works, the removal of fibre and metal dust, and noxious gases. Some effective systems have been installed, and others, which are inadequate, are still being tried. A thorough investigation into the conditions surrounding our industrial family of 40,000 showed home circumstances to be more largely responsible for infection than those in the shops. One stenographer became ill, having indications of lung trouble. Knowing the office to be light and well ventilated, I looked into home conditions and found that she kept late hours, had attended, evenings and Sundays, a friend who died from consumption, and that she slept with an elderly relative in a room with no open window. She died despite our efforts. Among certain types of foreigners, particularly Polish and Austrians, the attempt to improve home conditions is met with stubborn opposition. The doctor's report upon one case is: "Has pulmonary tuberculosis; getting worse every day; lives in one room in basement; surroundings about as bad as possible and cannot get him to better them." Interest is awakened by distributing circulars calling for increased sense of responsibility, urging co-operation with boards of health and tuberculosis associations, and giving lists of health suggestions. Our plan is for foremen to watch their men and send them to the dispensary for advice and treatment if lung trouble is indicated. Some advice given in our literature, posters and cards follows: "How to prevent consumption!" "Don't give it to others." "Don't let them give it to you." "Avoid food from consumptive animals." "Avoid dusty places." "Avoid foul air." "Avoid human jams." "Build up your resistance." "Occasionally look up the source of neighborhood milk supply." "Encourage out-of-door life, recreation and playgrounds." We ask street car companies, railroads, churches and public bodies to help in the fight for health.

W. L. SAUNDERS, President of the Ingersoll-Rand Company, New York City, spoke on the "Practical Methods of Ventilating Offices Without Draughts." He gave credit to the Benefit Association in that establishment for successful welfare work.

ANNUAL CONTEST, FIRST AID CORPS, PHILADELPHIA AND READING COAL AND IRON COMPANY, POTTSVILLE, PA.
1. VICE-PRESIDENT, W. J. RICHARDS. 2. PRESIDENT, GEORGE F. BAER. 3. SURGEON, GEORGE H. HALBERSTADT.

At the afternoon session DR. GEORGE H. HALBERSTADT, of the Philadelphia & Reading Coal & Iron Company, Pottsville, Pa., explained some of the devices for first aid at coal mines, and the teaching of classes of workers. Charts are used for primary instruction in anatomy. There are now one thousand men in the anthracite region so instructed and supplied with first dressings. Applications by the army medical corps of several foreign governments had been made for samples of packets containing these appliances. An outside hospital is at the mouth of every shaft and an ambulance is within call. Some of these hospitals are supported by the State and others by private aid. The territory is divided into two districts and these are competitive, and there are held drills for prizes between representative teams. "Prevent Further Harm" is the motto of these first aid workers. The company has established a laboratory for instruction, including the use of first aid apparatus. This work has led to the study of medicine by several of the pupils. The speaker exhibited stereopticon views of first aid apparatus and of its use at the mines.

MISS ANNA A. E. VAN DE CARR, of the Forbes Lithographing Company, Boston, Mass., spoke upon the "Work of the Welfare Manager." She emphasized the lack of friction in this work as a guarantee of its progress. The absentee list had been large and expensive both to employers and workers. This has been reduced greatly—as much, in fact, as 75 per cent. Men, for example, would lose wages by staying at home to nurse a sick wife, not knowing enough to hire a nurse. There are emergency rooms and a physician is always within call. She described a system of savings conducted by the employers by a deduction agreed upon until the amount had reached $50, when it was deposited in a bank to the credit of the employe.

W. E. C. NAZRO, Welfare Manager of the Plymouth Cordage Company, North Plymouth, Mass., and Welland, Canada, described "New Developments in Our Industrial Villages." He outlined the work done for village improvement and its effect. He traced from the beginning the development of the work to its present proportions, including the installation of books in the free library, the increase of use of baths, the growth of the factory dining room; all showing increased interest among the employes. At Welland, beside other developments, the problem of housing had been of especial importance. He showed photographs of the celebration of Labor Day at Plymouth, which had much influence in promoting good relations between the interests of the factory and the homes.

D. C. LOWLES, of the Sherwin-Williams Company, Cleveland, O., spoke upon "A Complete Factory Welfare Plan." This industry extended from mines in Mexico to the workers in Cleveland, and to shops in Canada and England, and the plan was intended to be applicable to all. Health and safety of the employes were the first problems. Compensation for injuries in work were rated as a part of the operating expenses. A plan for pensioning employes would be put into operation immediately. He explained also a plan for advancing money to employes for proper purposes and in time of need. Industrial education is of special importance to an employer of large numbers of workmen. Recreation is another feature that must come in response to the wishes of the workers, and means to that end should be made to co-operate so far as possible with existing institutions.

In describing the "Home Work" of R. H. Macy & Co., MRS. GENEVA H. FURMAN gave a number of interesting illustrations. She told how the cause of a girl packer's frequent fainting spells was traced to her attempt to support a sick widowed mother, half starving herself. Food, medical attendance and many other necessities were furnished and the girl was given a better position. Her mother has recovered and they are now happy and comfortable. The weeping of a child bundler led to the discovery of a home where the father had committed suicide because of inability to get

work. The man was laid out in the cheapest way on a long bench, covered with a black canopy having a convenient flap to open and show the face. The house was a ramshackle tenement, broken panes being replaced by sacking dancing in the wintery blasts, and the family was destitute. Their immediate wants were supplied and later the mother was given a position, the family now being self-supporting. The prejudice of another girl's mother and friends against operations and hospitals was overcome after four months' effort, and the girl, once badly disfigured by a tumor back of the eye, which would have crowded it from the socket, is now very pretty. A refined young woman in the state of melancholia and about to commit suicide because she had been abandoned and left homeless by her brother-in-law, was given sympathy and money and restored to a normal, happy business woman who makes life worth while for all about her. The men also receive attention. A visit to a porter, recovering from a long illness, showed his two children in bed with scarlet fever, all windows and shutters closed tight, a dispossess notice on the door and a doctor asking excessive charges by threats of no more calls. The rent and the doctor's bills were met. Good food, fresh air, disinfectants and the services of the store physician soon restored the family to health and happiness. A store girls' tuberculosis was traced to the dying father, for whom she was caring before and after working hours. Not only was he put into a hospital and later his funeral expenses paid, but she was sent to a sanitarium and kept there until restored to health. She is now happily married and grateful for the help she had when it was most needed.

Miss HELEN H. SNOW, Secretary of the Welfare Department of the Curtis Publishing Company, said: "Our building will have a glass enclosed roof garden, with outdoor promenade, a dancing space for the girls, with good floor, a library, an adequate lunch room, two emergency hospitals, distilled drinking water, locker rooms, shower baths, the latest heating, lighting and ventilating arrangements, while there will be a fireproof zone for the elevators, stairs, fire escapes, water pipes and electric conduits. All dangerous shafting will be supplanted by motor power."

R. W. CORWIN, M.D., LL.D., General Manager Sociological Department, The Colorado Fuel and Iron Company, Pueblo, Colorado, reported: "In addition to our regular work, we have equipped all of our school houses now with electric lights, which makes it possible to have stereopticon lectures and moving pictures at almost every camp. Much stress has been put, in the last year, upon the installation of safety devices in the mines, looking to the prevention of mine accidents, and a system of prizes has been established among our mine superintendents, based upon the decrease of accidents for the month. Our company is the first in America to have a Mine Rescue Car, equipped and ready at all times, and when the United States Government decided to equip a car, they borrowed our man to demonstrate the rescue helmets. A year ago we employed a man to look after the religious life of the mines where no church organization was at work, and this has proven very successful and will be continued. At Sunrise, Wyoming, the company is erecting a new church building, with the agreement that the Presbyterian Board give us a $1,200 a year man. This method gets rid of the cheap missionary who is going off on a tangent, and who could not be used anywhere else. We are demanding the best men, so that the church services will appeal to the best element in the mining camps. In the boys' work, we have been establishing the Boy Scout movement, with some success, but, of course, have difficulty in getting good leaders."

Mrs. J. BORDEN HARRIMAN, Chairman of the Industrial Employes' Welfare Committee of the Woman's Department of The National Civic Federation, opened the addresses at the reception at her home by saying that specialists, meeting in this way, and interchanging experiences, make for progress. Anything that assists in the upbuilding of our institutions should be encouraged. It is helpful to the work of this committee to obtain the counsel of such experienced workers.

Mrs. L. L. RAY, Welfare Secretary of the Greenhut-Siegel-Cooper Company, explained the development of the work there, saying:

"Our first step in welfare work was taken when we started the employes' association, and that for a time filled all the needs. This included the doctor's services any day during the year while at the store, all the medicines free and half of their salaries for six weeks in the year. A few years later, Mr. Greenhut started welfare work on a systematic basis, being convinced that it was advisable to have a welfare secretary or manager to do for his employes what he would like to do, but had not time. One can readily see that with 7,000 employes, there is a field for thought and a great deal to be done. Since this step was taken, there have been improvements throughout the store in general. We have a sick room, a restaurant and better dressing rooms, and best of all a lunch room, where food is served to employes for less than cost. The milk is examined and the food inspected, and we are always glad to have others come and test it. Since we have broadened out it has enabled the welfare manager or secretary to come in touch with the home environment, where we can better see the needs of the employes through this personal contact."

W. H. MOULTON, Superintendent of the Welfare Department of the Cleveland Cliffs Iron Company, Ishpeming, Mich., said:

"The Cleveland Cliffs Iron Company is a producer of iron ore in Michigan, Wisconsin and Minnesota, owning a railroad line, charcoal iron furnaces and a steamboat line to the lower lake ports. The work which we have done along welfare lines is for the direct benefit of the men employed. In our mining department we have careful inspection of our mines by a competent committee with the suggestion for remedies in every particular case of a serious accident. The sanitation and ventilation of the mines are carefully looked after. The best of washing facilities, with single washing basins, is provided. The men have individual steel lockers and shower baths. A pension system for old employes is provided and the widows and orphans of men accidentally killed also receive a pension. The families of our men have the services of visiting nurses, who visit the homes and render aid to any one who may be ill or injured and console the wives and children. In the Summer a rest home is provided for the invalids or the mothers of families who are used up from overwork. A new mining town has been built in the last three years at Gwinn, Mich. The business portion of this town is of brick or stone buildings, and all streets are macadamized. In the building of this town, the first thing was the introduction of the water and sewer systems, on account of which there was not during the building a single case of typhoid fever, which is usually prevalent in all this new work. Buildings were both for rent and sale to the employes, and school buildings with the most up-to-date equipment, were erected. The school buildings have bathrooms for the pupils, and are modern in every particular. The clubhouse has been erected by the President, William G. Mather, and thoroughly equipped. It serves as the social centre of all the town festivities."

EMPLOYES' LUNCH HOUSE, PLYMOUTH CORDAGE COMPANY, NORTH PLYMOUTH, MASS.

MISSION LUNCH HOUSE ADDED TO WELFARE WORK AT ALTON, ILL.

An example that may be inspiring to others, of the application of Welfare Work by women who are interested financially in industrial enterprises is that of Mrs. Pascal Enos Hatch, at the works of the Illinois Glass Co., at Alton, Ill. This establishment is the greatest producer of glass bottles in the world. The Welfare Work there has been progressive and, from the beginning, has been carried out in accordance with the advice of and by experts furnished by the Employers' Welfare Department of The National Civic Federation. The first efforts of Mrs. Hatch were directed toward improvements in sanitary rooms; providing a rest-room for the women packers, furnished with easy chairs and a lounge, and brightened with plants and pictures; and, upon going through the factories and seeing the workmen eating cold lunches, she decided to start a hot lunch place in the yards. The original lunch-house, which was a small brick structure, appropriately called the "coffee station," is now to be converted into an emergency hospital. It was a beginning made in the spirit of efficient helpfulness, simple but nutritious food being served with coffee or milk at a counter at most reasonable prices, and yet making the place self-supporting. Progress has been made to a much larger establishment, 90 by 40 feet, in mission style of architecture. The concrete floor and wainscoting are chocolate brown, the walls being light tan. The ceiling is exposed sheathing, finished with two coats of oil. The roof is supported by iron trusses. All exposed iron work is painted black. All interior woodwork, and tables and chairs are finished in weathered oak. The outside window and door trim is black, the overhanging cornice and lookouts being finished with two coats of oil. All cement plaster finish is painted with one coat of concrete gray waterproof paint. The roof is imitation tile, painted dark green. There is a concrete walk around the building. It contains not only a long counter with stools for fifty-five customers, but an additional space for one hundred men, equipped with tables, seating four each, and chairs. This restaurant is well lighted and attractive. The character of the food, cooking and service is indicated by the continued attendance of the men as well as by their repeated expressions of appreciation. The building was erected and furnished at the expense of Mrs. Hatch, daughter of the late president of the company, William Eliot Smith, who was a member of the Federation's Welfare Department. The restaurant is open day and night. All the neat china is marked and the knives and forks are triple plated with silver. The kitchen, well lighted and ventilated, is furnished with modern appliances, including steam warming tables, steam coffee urns, bread-slicer, potato-peeler and dish-washer, all three electrically driven. The kitchen utensils are principally of aluminum. The coal-heated oven will bake 150 loaves of "home-made" bread, and there is especial provision for making wholesome pies, sold at 5 cents per quarter. There are urns for milk, cream and ice water. The cooking is done principally by steam. Much credit for these results is due to Miss Emma L. Condon, the efficient manager, who finds economy in buying the best food, and whose combination of good cheer with dignity of manner have proved as important in results as is her business ability. Mrs. Hatch has stipulated that the quality of food be the best and that the portions served be liberal. The prices are: Soup, coffee and milk, 3 cents each; meat sandwiches—beef or ham—with two thick slices of home-made bread—including potatoes, 10 cents; roast veal, 5 cents; hash, 3 cents; mashed potatoes, 3 cents; sauerkraut, 5 cents; and pudding, 5 cents. The restaurant runs day and night, the men working on eight hour shifts and receiving the highest wages paid in any industry excepting "rollers" in steel mills. The company makes annual trade agreements with the Glass Bottle Blowers' Union.

SAFETY OF EMPLOYES

ADDRESSES UPON THE REPETITIVE LESSONS OF FATAL FIRES AND OF INDUSTRIAL ACCIDENTS AT A MEETING OF THE NEW YORK STATE EMPLOYERS' WELFARE COMMITTEE

The program for this meeting, held at the rooms of the New York Board of Trade and Transportation, in New York City, was in charge of the Committee on Improvement of State Inspection of Factories of the Department on Compensation for Industrial Accidents and Their Prevention.

The recent deplorable fire, bringing suffering and death to many employes in the Triangle Shirtwaist Factory, emphasized the importance of securing a widespread introduction of welfare work, including sanitary workrooms, free from debris, fire escapes, fire drills and compulsory workmen's compensation, which would cause employers more to safeguard against such insurance loss by better protecting the workers.

There were addresses upon "The Duty of the Employer," "The Duty of the State," "The Duty of the Municipality" and "The Standpoint of Labor," by W. L. Saunders, president the Ingersoll-Rand Company; John Williams, State Commissioner of Labor; Cyrus W. Phillips, Chairman Committee on Causes of Industrial Accidents, New York State Liability Commission; Edward F. Croker, then Chief of the Fire Department of the City of New York, and J. W. Sullivan, of the Typographical Union. There was made an earnest appeal for more efficient State inspection of factories by Louis B. Schram, Chairman of the Federation's committee on that subject. Other speakers were: Colonel Edward D. Meier, President American Society of Mechanical Engineers, and President the Heine Safety Boiler Company; Senator Howard R. Bayne; Frank B. Gilbreath, a contractor and builder; Professor T. R. Hutton, and James P. Archibald, of the Painters' Union.

In opening the meeting, the Chairman, W. L. Saunders, stated: "It should be the duty of every employer of labor to care for the health, comfort and safety of the workers. He should be held responsible for the employes' welfare and life while at work and in cases where carelessness and neglect are proven, that responsibility should be both civil and criminal."

The principal recommendations made by other speakers follow:

Commissioner JOHN WILLIAMS: "The State Department of Labor has no authority to enforce the provisions of the factory fire escape law in Greater New York, but it has power in every other part of the State. That section of the labor law should be changed to permit the substitution, for the present drop-ladder, of a counterbalanced stair reaching from the lower balcony of the fire escape to the ground, such stair to be inseparably attached to the balcony so as to be available for use at all times and to be of sufficient length to allow a proper slant. Fire escape balcony floors should be erected approximately on the same level as factory floors. Exits from factories to fire escapes should be fitted with doors placed at the extreme ends of the balconies and hung to open outward against the end rail of the balcony. Fireproof balconies, so constructed, should extend the full length of manufacturing buildings and be connected by proper iron stairs. Requirements for new buildings should include fireproof stairs and halls of ample width and thoroughly lighted. Doors leading into hallways should open outward and be hung on the wall side, that they may be pushed back against the wall and give full use of the passage. In existing narrow halls, doors should not open outward, but there should be given authority to require sliding doors. Spring locks, readily turned on the inside, would render exits immediately available. The State also should clothe the Commissioner of Labor with the authority to regulate internal conditions in factories that ample passage ways to stairs and fire escapes may be maintained. Smoking in any factory using inflammable material should be a penal offense. Every owner of a building used for manufacturing should be required to register such building in the State Department. There should be an adequate appropriation by the State to afford a sufficient number of inspectors, there being at present only fifty to cover sixty thousand places in New York State."

J. W. SULLIVAN: "We are here to arraign a system in the employment of labor which results in burning working people alive. All in the community are not to blame. The trades unions have worked unceasingly to better factory laws and compel employers to live up to them. The Typographical Union spent more than five million dollars to get an eight-hour day for printers because of the dangerous nature of the trade due to bad ventilation, overwork and the like. Before these benefits were obtained, affecting at least twenty thousand printers, the deaths from tuberculosis to the total number were 30 to 35 per cent. The Women's Trade Union League had pointed out to employers in the garment industry the very deficiencies of firetraps such as the one just burned. It is for such meetings as this one and such organizations as the one promoting this meeting, to bring to the working people some help in sound thought, some practical step toward better workshop conditions, some designs for efficient factory laws, some reorganization and strengthening of the State Labor Bureau, some additional civilized agencies that will curb the lawless greed of conscienceless employers and, especially, some method for promoting the well-being of the poorest class of wage-earners. Something must be done! It must be done either through the force of extremists preaching destruction or through the painstaking activities of men animated with a desire to be fair to their fellow men who toil and determined to punish that worst of wrong-doing—the exploitation of the poor. The question before New York is whether betterment to its masses is to come through the principle of class consciousness or the principle of human consciousness."

Chief EDWARD F. CROKER: "When the Fire Department arrived at the Triangle Shirtwaist Factory fire, the employes were jumping from the windows on the eighth and ninth floors. When they

struck the sidewalk the impact was so great that they broke through the deadlights into the cellar and sub-cellar. It will readily be seen that, as they went through an iron grating, naturally they would have crashed through our canvas nets.

"To prevent a recurrence of such a disaster, I would recommend outside fire escapes on all buildings; standpipes; sprinkling connections with outlets on all floors; buckets filled with water; fire extinguishers; weekly fire drills; automatic fire alarm telegraph communication; and, where possible, outside enclosed fire escapes, known as 'tower fire escapes.' They afford the only means of escape in a bad fire.

"Responsibility should rest upon one department, preferably the Fire Department, which should inspect buildings, serving written notice upon occupants, not owners, that they must comply with its regulations. At the expiration of two weeks to thirty days there should be re-inspection and, if regulations have not been complied with, the buildings should be immediately closed with the following notice placed upon the doors: 'DANGER! Closed by order of the Department.' The buildings should be kept closed until they have complied with the regulations."

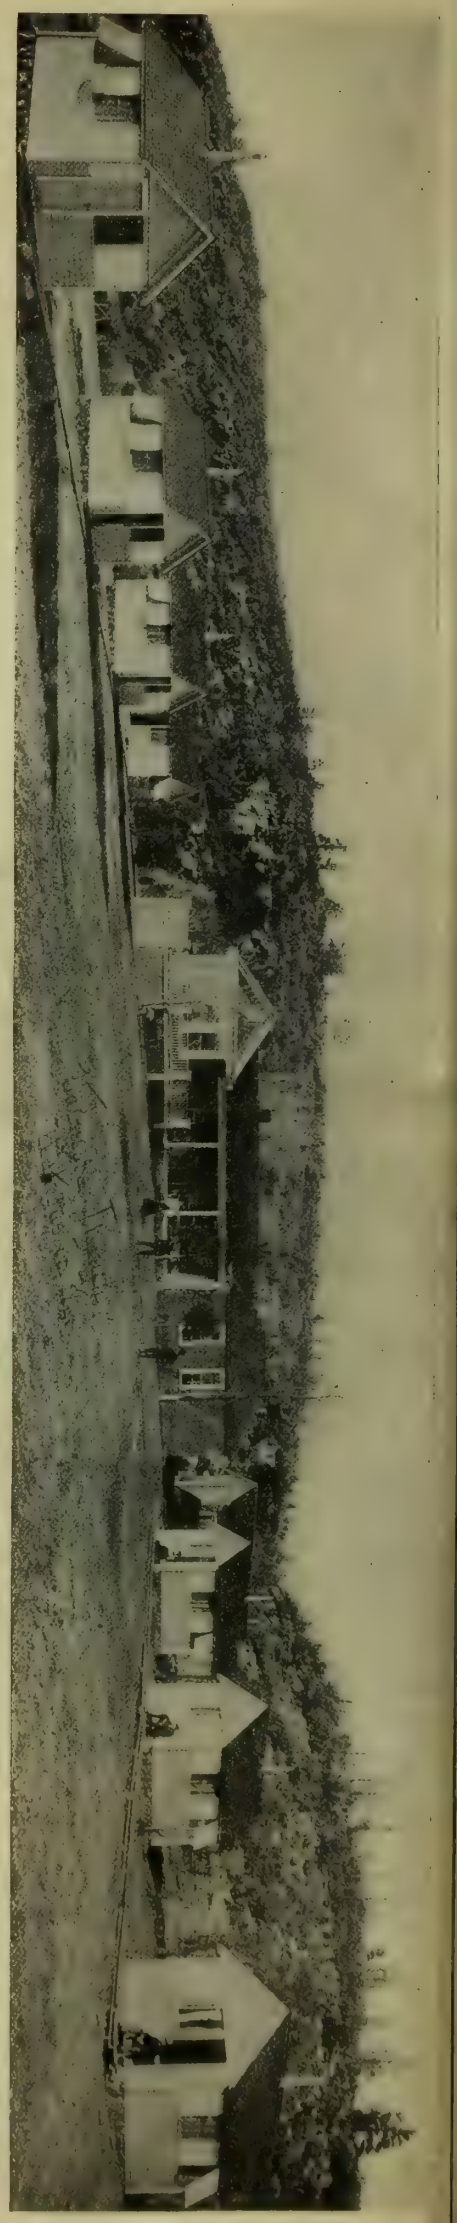
CYRUS W. PHILLIPS: "For the year ending September 30 last, 25,390 accidents were reported to the Department of Labor as occurring in factories, mines and quarries. Of these 353 were fatal, *2,410 resulted in permanent injuries*, while *2,476 were reported as serious and probably permanent.* During the same year the reports to the Public Service Commission of the First Department showed 9,424 accidents to employes of common carriers, gas and electric companies, while the reports of the Public Service Commission of the Second District for the same period showed 2,909 accidents to employes of common carriers, *257 of which were fatal.* On September 30 the building trades commenced reporting their accidents under a law passed last Winter, and these reports, *for three months*, showed about *2,500 accidents*, nearly one-half of which occurred in excavation work, and more than one-half occurred in public work, such as the aqueduct and barge canal. It

FRANCIS LYNDE STETSON,
Chairman Committee on Legislative Policy, Workmen's Compensation Department.

is safe to estimate that there are annually 50,000 accidents to industrial workers in New York State. The value of accident prevention is apparent when it is considered that more than 2,000 accidents have occurred in the past four years due to the operation of belting and shafting, and that accidents of this kind are of a serious nature, maiming the victims for life. During the year 1908 twenty-five men were killed by being caught in belting and shafting, according to the reports of the Labor Department. It is a waste of time to pass laws requiring installation of safety devices and the curing of dangerous defects in factories unless a sufficient force of men is provided to enforce such laws.

"If the State were to be divided into districts with a high-class supervising inspector in charge of each, the work of accident prevention by the Labor Department would be more effective. A supervisor could, by consultations and conferences with employers and employes, bring about safer conditions. Many employers have started inspection bureaus and safety committees of their own, but they look more and more to the Labor Department for advice."

LOUIS B. SCHRAM: "Let us hope that this great calamity destroying so many human lives will arouse the public to action. For every life lost in a destructive factory fire, hundreds are sacrificed annually through the use of machinery not adequately protected by safety devices. The toll in lives lost and bodies maimed, bread-winners disabled and families rendered helpless, is almost beyond belief, and, in comparison with it, even so dreadful a calamity as the destruction of life in the Asch Building almost pales into insignificance. The vast majority of these accidents are not only preventable, but can be avoided without the expenditure of much money and without interfering with the usual methods of conducting the business. The remedy is adequate and thorough factory inspection involving the compulsory use of approved safeguards on all machinery the operation of which is attended with danger. The agitation to accomplish this should be nation-wide, and it should not rest content until every State in the Union has adopted a perfect Factory Inspection Law and has placed its enforcement in the hands of a sufficient number of competent inspectors. In this State there are fifty inspectors. There should be eighty-five, if not one hundred. They should be selected with a sole view to fitness and their tenure should be such as to divorce them from the vicissitudes of politics. There should be a Chief Inspector, whose work, outside of being the responsible head of the Inspection Department, should be to provide means for training the inspectors to even greater efficiency. Another provision has been suggested in this connection, and its great value seems apparent—the establishing of State Museums of Safety, preferably with appliances in operation. By this means the fact could most readily be brought home to the manufacturer that it is as easy, and as cheap and vastly more profitable, to run a safe, comfortable and efficient factory than it is to operate a deathtrap. The National Civic Federation, through its Committee on Improved Factory Inspection, has for some time past been engaged in this work. It is now framing a Factory Inspection Law, which it hopes to make as nearly perfect as its ability may permit, such proposed law to be offered for introduction in the Legislatures of all the States. This committee numbers among its members important manufacturers in many lines, many prominent in the ranks of organized labor, who have at heart the welfare of the workmen, and the Labor Commissioners and Factory Inspectors of many States. Its labors are known to many of the Governors, who have expressed their readiness to co-operate. There is one element more that we want to enlist, without whose hearty and earnest co-operation we cannot hope to achieve success. I mean an enlightened, active, persistent public opinion."



COL. EDWARD D. MEIER: "Scaling ladders and safety nets are inadequate for our present skyscrapers. Canvas tubes three feet square applied to the windows in the manner of the knitting needles of our grandmothers are adequate for a height of ten stories. To shoot the people down, perfectly trained firemen are needed, two men at the top and three at the bottom to hold the tube taut. They must throw the people in head first, on their backs, and let them slide down. This principle has been applied in tall buildings by using a spiral slide. The sprinkling system is adaptable to any height where water pressure will reach. It is the most difficult thing in the world to extinguish a fire where the material is filmy. It burns like an explosive. Therefore, smoking and the use of matches, absolutely, should be forbidden where there are cotton goods. There should be a permanent commission, after giving power to the Fire Department, to study facts and figures and devise better means than those yet considered, for with any precaution, and you can't be too drastic, you will simply find that you have not gone far enough."

SENATOR HOWARD R. BAYNE: "We in the Senate and Assembly are extremely cautious about instituting drastic measures, the effect of which we do not understand. You must make practical suggestions to the Legislature to forefend the dangers upon the whole industrial community. You are practical men, know what the industries of the State require and will stand. We need your help and information. Many of us are practical legislators and want to do the wise, prudent thing. Frame your measure and bring it to us! There will be no difficulty about getting it passed as soon as we know that it will not do more harm than good."

FRANK B. GILBREATH: "In the art of putting fires out after they have been started, we have reached a high degree of efficiency. In keeping fires from starting, we are as savages to-day. What is it that burns? It is wood! It can be eliminated, it no longer being necessary in construction."

PROF. T. R. HUTTON: "Experts should be appointed to tell the Legislature what we desire to accomplish."

JAMES P. ARCHIBALD: "The idea of eliminating wood is excellent, but the tower fire escape, in all four corners of every building and in the middle, will make every man and woman perfectly safe, if accessible. Fire drills are important. The enforcement of the laws that affect the poorest class of people is not, as a rule, put into the hands of men of high integrity."

VALMORA INDUSTRIAL SANATORIUM, AT WATROUS, N. M.

Founded by twenty-five Chicago firms and others for the care of employes suffering from tuberculosis in its early stage, or threatened with that disease. It is intended to be self-supporting but without financial profit, the charge for each patient being $10 a week, exclusive of laundry and personal expenses. It is built on the cottage plan and at present accommodates thirty patients. The water supply is from a beautiful spring and is piped directly into each cottage. Milk and cream of superior quality are supplied by their own herd of Jerseys. The altitude is 5,988 feet above sea level; the climate ideal all the year round; the Summer never too hot nor the Winter too cold, there being a clear, bracing atmosphere. For the rank and file sanatoria nearer home have been found more practical.

ANNUAL MEETING, WASHINGTON, D. C., MARCH 5, 6, 7, 1912

The National Civic Federation Review

Vol. III NEW YORK, FEBRUARY 15, 1912. No. 12

TO PROMOTE INDUSTRIAL PEACE AND PROGRESS

PRESIDENT TAFT WILL OPEN ANNUAL MEETING OF THE CIVIC FEDERATION AT WASHINGTON, CARDINAL GIBBONS PRESIDING—GOVERNORS ENDORSE OBJECT OF MEETING—DELEGATES NAMED

THE NATIONAL CIVIC FEDERATION has so far received from the following Governors of States acceptances of the invitation to send delegates to its Twelfth Annual Meeting, to be held in Washington, D. C., March 5, 6 and 7, 1912, namely: Governor Robert P. Bass, of New Hampshire; Governor W. Hodges Mann, of Virginia; Governor Aram J. Pothier, of Rhode Island; Governor Chester H. Aldrich, of Nebraska; Governor Albert W. Gilchrist, of Florida; Governor W. W. Kitchin, of North Carolina; Governor Emmet O'Neal, of Alabama; Governor John A. Mead, of Vermont; Governor Lee Cruce, of Oklahoma; Governor Chase S. Osborn, of Michigan; Governor Joseph M. Carey, of Wyoming; Governor Eugene N. Foss, of Massachusetts; Governor John Burke, of North Dakota; Governor John A. Dix, of New York; Governor Judson Harmon, of Ohio; Governor Charles S. Deneen, of Illinois; Governor O. B. Colquitt, of Texas; Governor George W. P. Hunt, of Arizona; Governor George A. Donaghey, of Arkansas; Governor John F. Shafroth, of Colorado; Commissioners of the District of Columbia; Governor Adolph O. Eberhart, of Minnesota; Governor Herbert S. Hadley, of Missouri; Governor William J. Mills, of New Mexico; Governor John K. Tener, of Pennsylvania; Governor Robert S. Vessey, of South Dakota; Governor William E. Glasscock, of West Virginia; Governor Francis E. McGovern, of Wisconsin.

HIS EMINENCE, JAMES, CARDINAL GIBBONS

Copyright by Pach Bros.
THE PRESIDENT

SETH LOW, PRESIDENT
THE NATIONAL CIVIC FEDERATION

The general theme for the program of the meeting will be "Industrial Peace and Progress." It will be held in the Peace Hall of the Pan-American Building. His Eminence, Cardinal Gibbons, will preside on March 5, and the opening address will be made by President William Howard Taft. The relation of employer to employe will be considered from three standpoints, viz.:

The private employer to his employes.

The public utility company to its employes.

The Government, Federal, State or Municipal, to its employes.

Where Capital Treats With Labor.

There will be discussed the practical operation of the trade agreements between the railway systems of the country and the brotherhoods of engineers, firemen, conductors, trainmen and other employes; the successful operation of the three years' contract between the National Association of Newspaper Publishers and the International Organizations of Printers, Pressmen and Stereotypers; as well as the contracts in many other trades, such as street railways, building trades, coal mining, and brewing. The contract between the publishers and their employes is one of the most remarkable in this country, which is the same as saying "in the world," as nothing in any of the European countries can compare with it. In this industry they have worked out a model plan, which practically amounts, so to speak, to voluntary compulsory arbitration. The contract provides for a local arbitration committee, composed of an equal number of representatives of the local employers' and the employes' organizations concerned, and to this committee must be submitted all grievances that may arise. If either side is displeased with the award of this local committee an appeal may be made to the National Board, where an odd man can be selected, if necessary. The National Board consists of Charles H. Taylor, Jr., of "The Boston Globe"; George C. Hill, of "The Indianapolis Star," and H. M. Kellogg, Secretary of the American Newspaper Publishers' Association; and for the Typographical Union, James M. Lynch, its President; Hugo Miller, its Second Vice-President, and J. W. Hays, its Secretary and Treasurer.

The feature, however, which is most unique and also most potential in the interest of peace is that should the men in any office, from any cause, violate the agreement and strike, instead of submitting their grievance to the arbitration board, their places will be filled by the union, and not by the employers, who are thus protected from being obliged to enact the role of strike-breaker with all its unpleasant accessories; and the very fact that every member knows that if he violates his contract and strikes, his place will be filled by union men makes him think long and hard before he throws down his tools. This provision, also, is tantamount to an underwriting by the national organization of the contracts made by the men, and being entirely voluntary it is much more satisfactory than any legal methods of incorporation that have been proposed. While the printers have such restraints put upon them, the publishers also

e restrained from violations of the contract or attempts to interpret it unfairly, because every dispute n be referred to the national body, which is called e Supreme Court in the industry, and as it prodes for an odd member of the board, there is bound be a decision.

Public Utilities Concerned.

What has been done in private industry, it is laimed, can well be done also in such quasi-public tilities as street railways, electric light and gas ompanies, and there are, in fact, many contracts f that kind already existing between the street railays and their employes. Street railway strikes in hiladelphia and Columbus, the express strike in ew York City, and the shop men's strike on the nion Pacific and Southern Railway systems emphaize the need for doing everything possible to reduce o a minimum such disturbances.

The need for careful consideration of the relation f public employes, Federal, State and Municipal, to heir employers, the people represented by the Govrnment, is emphasized by the tremendous upheavals which have occurred in Europe, especially in Paris, where the controversy with the letter carriers and he employes of the Government railway almost led o a revolution. This subject will be discussed at he annual meeting under the head of:

"How Can Public Employes Secure Redress of Just Grievances Without Resorting to a Strike?" In the Federal Government the controversy on this subject with the Federal employes is becoming acute. Following the defeat of Congressman Loud, Chairman of the Appropriations Committee, by the Letter Carriers' Association because of his refusal to approve certain new legislation which they demanded, an executive order was issued by President Roosevelt, which has since been re-issued by President Taft. This order reads:

"All officers and employes of the United States, of every description, serving in or under any kind of executive department or independent government establishment, and whether serving in or out of Washington, are hereby forbidden, either directly or indirectly, individually or through associations, to solicit an increase of pay or to influence or attempt to influence in their own interest any legislation whatever, either before Congress or its committees, or in any way save through the heads of the departments or independent government establishments in or under which they serve, on penalty of dismissal from the government service." This order, the employes claim, was a denial of their right to petition and they are now supporting a bill in Congress, introduced by Senator La Follette, which would give them the right to organize and to petition Congress direct on any matter they choose.

Similar questions have been raised in several States, where the school teachers, firemen and policemen have organized campaigns to secure an increase in salary. There are those who justify the action of public employes in organizing and bringing political influence to bear, when necessary, to secure better conditions of employment, but who deny the right of such public servants to use their political power for the purpose of forcing an advance in their salaries, claiming that such action is against public policy. "Is there such a distinction?" is a question which will be discussed.

Public vs. Private Working Conditions.

For, aside from the wage question, it is well known that in many instances public employes work under conditions much worse than those of wage-earners in private establishments. While there are no important instances of school teachers, firemen or policemen striking to better their conditions, strikes of public employes have occurred in many other lines, the most recent instance in New York City being that of the garbage drivers, while last year there was a strike of the firemen on the Municipal ferry boats. Just how such questions have been answered in all the countries of Europe will be presented at this meeting.

Compensation for injuries sustained during employment by public employes and industrial wage-earners will receive a further impetus by devoting a part of the program to its consideration. It is appropriate that that subject should have presentation in the National Capital at this time, as the Congressional Commission is about to report, through the President, to Congress a compensation act for interstate railways. That Commission has adopted the principles of the Federation's model Workmen's Compensation Act. It is hoped, if these are enacted into law and upheld by the Supreme Court, that this action will have great weight in the interest of uniform State legislation for compulsory workmen's compensation, in which the Federation is particularly interested, and it will doubtless take action to assist in the passage of this Federal measure.

The Letter Carriers' Case.

A further reason for discussing this question within the portals of the Federal Government is the desirability of securing legislation by the Congress to ensure compensation to injured Federal employes not now covered by national legislation. For example, letter carriers may receive injury and even though those injuries should occur after years of faithful service, their pay stops the moment incapacitation comes.

Pensions and Retirement Plans.

"Pensions for Federal, State and Municipal Employes" as well as "Retirement Plans for Wage Earners in Private Enterprises" will be urged. Pensions for employes is a topic co-related to workmen's compensation, in that disabled employes may become pensioners.

To become incapacitated after years of loyal service with no means of support, is the dread of every thinking wage-worker, whether in private industry or in public service. The main problem involved in all pension plans is the question, "Shall employes contribute to retirement funds?" From the public standpoint it is of serious moment that the work of the Government, whether Municipal, State or Federal, should not be hampered by retaining in the service employes incapacitated by age. Until a proper pension plan is worked out, public machinery will be clogged, as no official has the heart to throw out upon the world those who have devoted their lives to the service of the Government.

The "common surfman" in the Life-Saving Service, who has an enforced vacation of two months in the year without pay and makes only $65 a month, presents one of the many types in the employ of the National Government appealing for its consideration.

The Superannuation Problem.

There are now more than 250 men in the Government Printing Office over sixty-five years of age. It would be an advantage to the Government to provide for the retirement of men who cannot perform an average day's work.

To urge legislation on pensions for public employes, fair to the State and to the employe, is one of the objects of the Federation.

Regulation of Industrial Corporations.

The Department on Regulation of Industrial Corporations, of which President Seth Low is Chairman, will consider its proposed legislation supplementary to the Sherman Act and also a proposed model bill for the regulation of State Corporations. This Federal Bill, when finally endorsed by the Federation, will be presented to the Senate Committee on Interstate Commerce for its consideration and disposition.

The analysis of the sixteen thousand responses to the Questionnaire sent out by this Department of The National Civic Federation to representative manufacturers, bankers, merchants, lawyers, college presidents, representatives of labor and agricultural organizations, chambers of commerce, etc., will be reported upon in detail and, together with the proposed bill, will furnish the basis for discussion.

Workmen's Compensation and Safety Acts.

The Department on Compensation for Industrial Accidents and Their Prevention, of which August Belmont is Chairman, will discuss and consider the proposed Federal Bill for interstate commerce, to provide compensation for railroad employes; the situation in States which have adopted different types of Compensation Acts applicable to industrial employes, generally; and the Federation's Model Safety Act, designed for uniform State legislation in the interest of accident prevention, and covering safety devices in manufacturing enterprises.

The Congressional Commission, after exhaustive research work and public hearings on all phases of the subject, has adopted the principle of "compulsory" compensation which is the basis of the Federation's Model Workmen's Compensation Act. Its passage by Congress, if later upheld by the United States Supreme Court, will have great weight in influencing uniform State legislation of that character, which is the great purpose of The National Civic Federation. It is, therefore, of paramount importance that the Federation should consider what action it should take in furthering the bill when introduced into Congress.

Control of Public Utilities.

The Department on Regulation of Interstate and Municipal Utilities, of which Emerson McMillin is Chairman, will meet to consider the reports of its Executive Council, which is already beginning an exhaustive inquiry into the question, "What is adequate regulation?" or, in other words, "How far can regulation go and be efficient without unreasonably interfering with management?" Professor John H. Gray, of the University of Minnesota, the Secretary of the Department, with a force of experts to assist him, will devote six months of his time to directing the investigations throughout the country.

The Department on Pure Food and Drugs, of which John Hays Hammond is Chairman, will consider the report of the Committee of Fifteen on Plan and Scope for the work of the Department. Uniformity between the laws of the States and co-ordination between the State and Federal laws on this subject are important principles underlying the work of the Department.

Broad Powers for State Food Officials.

It is is also important that State Food Commissioners should be given broad powers for the enforcement of the food laws of their respective Commonwealths, together with the power to adopt regulations, so as to make possible uniform enforcement in the State and National law. To this end, Congress and State Legislatures will naturally be appealed to to make sufficient appropriations, that such food laws may be efficiently enforced.

The Department on Reform in Legal Procedure, of which Alton B. Parker is Chairman, will organize and will outline its work for the coming year. This Department, which has only recently been formed, comprises representative lawyers from every State in the Union.

Representative Women to Speak.

The Woman's Welfare Department, of which Mrs. John Hays Hammand is Chairman, will hold its annual meeting on Thursday, March 7. Its program will consist of a business meeting in the forenoon and addresses from representative women from different parts of the country in the afternoon.

During the annual meeting there will be a conference of the chairmen of the State Councils of the Federation to consider important matters relating to their work.

The Annual Dinner will take place at the New Willard Hotel on the evening of Thursday, March 6, and on Friday evening, March 7, Mr. and Mrs. John Hays Hammond will give a reception at their home in Washington to the delegates and members of the Federation.

STINGING REBUKE FOR SOCIALIST INTRIGUERS

President Timothy Healy, of the Stationary Firemen, Defends American Institutions in Patriotic Speech—Tells of Efforts to Hamper Good Work He Is Doing.

TIMOTHY HEALY, President of the International Brotherhood of Stationary Firemen and a member of the Executive Committee of The National Civic Federation, used plain, forceful and patriotic language in accepting again the presidency of his organization at the eleventh biennial meeting at Milwaukee. Mr. Healy was elected unanimously.

The speech was an interesting exposition of the attitude of the Socialists toward American institutions and toward the love of those institutions that is so characteristic of the wage-workers of this country. Mr. Healy also showed the baleful influence exerted by Socialists in the ranks of organized labor, and their constant intriguing against labor officials who decline to subscribe to their disloyal creed. His own words, however, are much more to the point than any paraphrasing of them could possibly be. He said in part:

Defends Flag and Country.

"Attacks have been made upon me for the smallest and most trivial things. I have been attacked because I would not stand for certain things. I would not stand for some things I felt were not proper. If a man who is the official head of this city refuses to have the Stars and Stripes hoisted on the municipal buildings of Milwaukee; if he refuses municipal employes a holiday on Washington's Birthday, and then makes the statement, as we are informed on good authority that he did, that Washington was the biggest liar the country ever produced—I want to ask if that man is fit to open the convention of a labor organization? I say he is not, and with all the power at my command I will at all times raise my voice in protest against any insult to our flag and against any man who will defame the memory of the Father of our Country. The man who will not do that is not an American citizen; he is not entitled to that distinction.

"As trades unionists we must stand by the flag of our country. There may be wrongs committed under it that ought to be righted; there may be injustice done under it; but for all that we should not stand for revolution against it. We stand for American institutions; we stand for the American form of government; we stand for American liberty at all times.

"A Dangerous Institution."

"I have been accused, among other things, of being a member of The National Civic Federation, which some of our friends of the radical type brand as a dangerous institution. That sort of statement is only what we may expect from those people when we consider their feelings toward American institutions generally. There are good men of all classes; there are

(Continued on Page 21.)

WHAT SHALL BE DONE WITH THE SHERMAN ACT?

16,000 REPRESENTATIVE AMERICANS FROM ALL WALKS OF LIFE SAY: "DO NOT REPEAL, BUT AMEND OR SUPPLEMENT IT WITH CONSTRUCTIVE LEGISLATION IN HARMONY WITH THE BUSINESS AND ECONOMIC DEMANDS OF THE DAY"

THE GIST OF THE MATTER.

"The replies indicate little sentiment in favor of the unconditional repeal of the Sherman Act. On the other hand it is shown that there is practically no desire to abolish large combinations. The public have no desire for government ownership, on one side, or unrestricted and unregulated private or corporate control on the other. They will accept large combinations adequately regulated."

MORE than sixteen thousand Americans, representing the learned professions, business in its various branches, the capital, talents and energy employed in our great industries, and the skill and toil which have built up and maintained those industries have answered a series of questions presented by The National Civic Federation on the Sherman Anti-Trust Act.

"Questionnaires" were sent to editors, political economists, lawyers, publicists, statisticians, manufacturers, merchants, bankers and the officers of commercial, labor and other organizations. As introductory to the questions it was pointed out that "the Sherman Anti-Trust Act has now been interpreted by the Supreme Court to mean, as to interstate commerce, that any combination in restraint of trade with the purpose of controlling prices and stifling competition is unlawful."

This questionnaire was prepared and sent out by the Department on Regulation of Industrial Corporations of The National Civic Federation, which is preparing to propose constructive legislation to deal with the business situation as it relates to the Sherman Anti-Trust Act; and in the same connection is considering what State legislation is called for, so far as State legislation is needed, to cover such phases of the subject as Federal law cannot reach.

The Executive Committee of this department, of which President Low is Chairman, consists of the following gentlemen:

Seth Low, Chairman; E. A. Bancroft, Illinois; John B. Clark; William Dudley Foulke, Indiana; Frederick P. Fish, Massachusetts; James R. Garfield, Ohio; J. W. Jenks, New York; Charles L. Jewett, Indiana; Frederick N. Judson, Missouri; H. B. F. Macfarland, District of Columbia; Theodore Marburg, Maryland; G. H. Montague, New York; George W. Perkins, New York; John C. Richberg, Illinois; W. Z. Ripley, Massachusetts; Leo S. Rowe, Pennsylvania; C. A. Severance, Minnesota; F. L. Siddons, District of Columbia; Reuben D. Silliman, New York; J. J. Spalding, Georgia; Walter George Smith, Pennsylvania; Frederic J. Stimson, Massachusetts; Henry W. Taft, New York; Frank Trumbull, New York; Samuel Untermyer, New York; A. Leo Weil, Pennsylvania; Talcott Williams, Pennsylvania.

A sub-committee of the department, consisting of Messrs. Low, Clark, Foulke, Garfield, Severance, Smith, Stimson, Untermyer and Williams, is drafting the proposals relating to Federal legislation, and is also making a digest of the trust laws of the States, with a view to drafting a uniform, model bill for the regulation of intrastate corporations.

The answers leave no doubt that the public is thoroughly aroused to the vital importance of the problems dealt with by the Sherman Act. This condition of the public mind is appreciated just as much by those controlling great combinations of capital as by the business man and the wage-earner.

Charges Against Combinations.

The evils charged against large combinations are well known. These include the power to exploit the producer and consumer by depriving them of a competitive market, thus making the prices of the raw material unduly low, and those of the finished commodity unduly high; the concentration of power, sometimes perilous in a few hands, through holding companies; the ruin of competition in a given locality by selling at prices below the cost of production; the selling of one variety of goods at less than cost for the purpose of driving from the field a rival who produces chiefly that variety; refusing to furnish goods at trade rates to merchants who buy anything from rival producers, or who refuse to maintain list prices, as required by "sellers' agreements;" the use of patents to protect what is not patented; checking improvements in methods of production when monopoly is successfully assured; the exploitation of investors by the manipulation of stocks and securities, and the buying up and suppression of useful inventions to prevent their introduction from diminishing the profits of monopoly.

Certain Advantages Claimed.

Among the advantages claimed are economies in production and distribution, the greater use of by-products; steadier employment of labor, and at better wages; better protection against industrial accidents; more command over international trade; a command of the best ability; assurance of a steady market, and avoidance of those fluctuations which, under old competitive conditions, so often brought disaster alike to employer and employe, and the standardization of products, so that dealer and ultimate consumer know exactly what they are purchasing.

No Unconditional Repeal.

The replies indicate little sentiment in favor of the unconditional repeal of the Sherman Act. On the other hand it is shown that there is practically no desire to abolish large combinations. The public have no desire for government ownership, on one side, or unrestricted and unregulated private or corporate control on the other. They will accept large combinations adequately regulated.

Business Disturbance Felt.

That business conditions are disturbed nearly every reply admits. In the thousands of replies received a large majority assert that business conditions are unsatisfactory. Enforcement of the Sherman Law is most frequently mentioned by business men as a disturbing cause, on the ground that they do not understand the law, and that the uncertainty as to its meaning retards enterprise, makes capital hesitate to enter pon new investments, and prompts those in charge of business undertakings to restrict expenditures to the absolute demands of trade.

What Labor Wants.

It is significant that the leaders of organized labor, representing three millions of wage earners, are practically unanimous in demanding that the Sherman Anti-Trust Act should be either repealed or amended to exempt from its operations organizations of labor and organizations of farmers. Many of them, however, argue for its amendment from the standpoint of the business interests. Their experience and training in organization work and their contact with the employers of the country have led them almost universally to the position that too much competition is the death of trade. Samuel Gompers, John Mitchell, James Duncan, Warren S. Stone, W. S. Carter, W. G. Lee, James M. Lynch and A. B. Garretson all reflect this view.

Some labor organizations took a referendum vote on the questionnaire and their answers were sent in under official seal.

It is interesting to note that the manufacturers, bankers, wholesale and retail merchants and also commercial organizations that took a membership vote are strongly opposed to the repeal of the Sherman Act, but just as strongly want it amended along lines that will permit regulation through an Interstate Industrial Commission of some kind.

ANALYSIS OF THE OPINIONS OF 16,000 PROMINENT AMERICANS ON SHERMAN ANTI-TRUST ACT.

AN overwhelming majority of the answers—eighty-four per cent—pronounce the Sherman Law neither clear nor workable, or workable without being clear; but only some twenty per cent declare in favor of its repeal. Of these latter the larger number add that "if not repealed, it should be amended," etc. Substantially, the usual phraseology of suggestions for amending the Sherman Law is—"make it so that business men can understand it," or "bring it into line with modern business conditions."

Federal License or Incorporation.

Eighty per cent of the replies favor Federal license or incorporation for companies engaged in interstate commerce, about one-third of the eighty taking Federal license as an alternative. Seventy-five per cent are opposed to holding companies, while of the remainder nearly all want holding companies bound by restrictions that would prevent abuses.

Regulation of Capitalization Approved.

Government regulation of capitalization is approved by ninety per cent of those to whom that question was submitted, a few of the minority who disapprove suggesting that over-capitalization is not always an evil, but sometimes brings capital into action that would otherwise remain idle.

Three important advantages claimed for those doing business on a large scale—economies in production, economies in distribution and greater use of by-products—are admitted without dissent by all who answer that query. "Steadier employment of labor and at better wages," and "better protection against industrial accidents" are denied by thirty-five per cent, and "more command of international trade" and "command of the best ability" are doubted by ten per cent of those answering.

Interstate Industrial Commission.

About eighty per cent favor an Interstate Industrial Commission, some qualifying with the condition that it should be composed of business men only, and two labor representatives proposing that the Commission should consist of one member from each State—a sort of Interstate Business Senate.

A comparatively small proportion are in favor of control of prices by an Industrial Commission.

Some Dull Times Diagnoses.

Only ten per cent mention a defective banking and currency system as a primary source of trouble, and several urge the adoption of the Aldrich currency plan. Extravagant living and a reaction from recent prosperity are given among other reasons by sixty per cent of those who answer that question. The tendency to desert the farms for the cities, thereby reducing the number of producers, is mentioned as an unsettling cause in some fifty per cent of the answers. Tariff agitation figures in thirty per cent of the replies—many of these being from business men who have interests protected by the existing tariff. One reason that has probably not suggested itself to the public mind is offered by a considerable number of men in business circles That reason is the automobile, the use of which, it is declared, has diverted a good many millions of dollars from the ordinary channels of trade to indulgence in that article of usefulness and of luxury. Increased production of gold, poor crops in some localities, sales of "fake" stocks, the approaching Presidential election, the demands of organized labor, emigration to Canada, and unsettled conditions in Europe and Asia are among other causes set forth.

TEXT OF A FEW REPRESENTATIVE EXPRESSIONS THAT "QUESTIONNAIRE" PROVOKED.

THERE is given herewith the text of a few of the many interesting expressions provoked by the "questionnaire." In selecting those to quote it has been attempted both to present opinions that are typical and also such as will give an idea of the wide range of views expressed on the subject:

SAMUEL REA, Vice-President Pennsylvania R.R. Co., Broad St. Station, Philadelphia, Pa.

I believe the Sherman Law, as now interpreted, is not yet clear, but under court interpretation will become workable. I do not consider it feasible to return to what are commonly known as old competitive methods in business, for it means unreasonable and generally ruinous competition. Competition is desirable, and we can have it if the laws of supply and demand are permitted to take their course. I do not favor a repeal of the Sherman Law. I am not prepared to make any reply as to amending the Sherman Law. The matter should first be studied by a commission of wise and experienced men whose findings and recommendations should determine this question. Railroads should be

allowed to enter into agreements affecting rates, subject to the approval and regulation of the Interstate Commerce Commission. This necessary privilege should never have been withheld.

Trade unions should not be exempted from the operation of the Sherman Act. No worse violation of the act has been experienced than the abrogation, through force and intimidation, of the free right to labor and the restraint of trade caused by strikes and labor union activities.

President JAMES C. FARGO, of the American Express Company:

I do not favor a repeal of the Sherman Law, though I do not consider that it has been made clear and workable. The Sherman Law should be amended, first, so as to make it intelligible; and, second, not only so that "the concentration of capital essential in the full and efficient development of modern business" be made legitimate, but when so used it must not be left subject to confiscation.

ALBERT A. SPRAGUE, President of Sprague, Warner & Co., wholesale grocers, Chicago, Ill.:

Commercial corporations have been the chief factors in the growth and development of the country, and at the same time, almost without exception, they have reduced costs to the consumer. As such, they should be fostered and encouraged by the same protection, and given the same rights as are granted to the individual or the copartnership in the same kinds of business.

Indiscriminate public antagonism to corporations fostered by an indiscriminate press and self-seeking politicians; uncertainty as to the scope of the Anti-Trust Act; and agitation and uncertainty regarding tariff action and anti-trust legislation on the part of Congress tend to hamper enterprise and to keep business unsettled. The Sherman Law should be amended or supplemented so that an intelligent public can understand it, and know definitely what is a reasonable and what an unreasonable "restraint of trade." Railroads should be allowed to enter into agreements affecting rates. I favor a national incorporation law, if it does not duplicate the expense and is not in conflict with State incorporation. I favor an Interstate Trade Commission with limitations. It would be absurd to give the government the power to fix prices on merchandise.

A. C. BARTLETT, President of Hibbard Spencer, Bartlett & Co., Wholesale Hardware, Chicago, Ill.:

The Sherman Law will never be satisfactorily workable until the necessity for determining the legal status of each individual case by submission to the courts is eliminated. If aggregations of capital to an unlimited extent are to be permitted—as it must be under present conditions—stifling of legitimate competition must be prohibited, but the old competitive methods would prove ruinous to any enterprises not employing immense capital.

I would favor an Interstate Trade Commission with limitations. No trade commission could successfully fix the prices upon all manufactured articles from knitting pins to ocean liners; nor could it intelligently or satisfactorily fix any prices. The present disturbance is due to a combination of past extravagance, doubt regarding the disposition of the Government (Federal and State) toward so-called trusts, the usual dullness which precedes a Presidential election, aggravated at this time by extraordinary political disturbance and a general reaction from an extended period of prosperity.

J. M. LYNCH, President International Typographical Union, Indianapolis, Ind.;

I do not regard the Sherman Law as clear and workable, nor do I consider it feasible to return to what are commonly known as old competitive methods in business. I favor either a repeal of the Sherman Law or amendments that will make its intention (the intention of Congress) clear. The Sherman Law should be amended to make it regulatory of the combinations. Railroads should be allowed to enter into agreements affecting rates subject to the approval and regulation of the Interstate Commerce Commission, and trade unions should be excepted from the operation of the Sherman Act. Combinations of farmers should not come under the Sherman Act. If they or the trade unions must be regulated by law, then it should be by special act. I doubt, however, the necessity for such a law.

I favor a statute for the regulation of big business that will be clear and workable and prevent extortion. But such a statute must recognize that the Trusts, so called, are an economic development that cannot and should not be legislated out of business. Combinations are inevitable and scientific. But they should benefit in the greatest degree all of the people.

SYLVESTER C. DUNHAM, President Travelers Insurance Company, Hartford, Conn.:

I favor Federal charters for corporations doing an interstate business, including insurance companies. I also favor legislation recognizing the fact that modern business must be transacted by large corporations operating on a large scale. A law amended up to date and sufficiently specific should be enacted. I believe in holding companies under suitable restrictions. The advantage to the public of competition is greatly overestimated. The public pays the penalty for reckless and irresponsible competition, which is worse than unfair competition. I favor laws providing for government regulation and publicity.

In addition to the advantages claimed for those doing big business on a large scale should be added suppression of ruinous and irresponsible competition whereby degraded products are imposed upon the market—such as adulterated foods, shoddy garments and Buddenseik buildings.

The Sherman Law as now interpreted has not yet been made clear and workable. It should not be repealed, but modernized. Railroads should be allowed to enter into agreements affecting rates.

JOHN MITCHELL, former President United Mine Workers of America, Mt. Vernon, N. Y.:

The Sherman Law has not been made clear and workable, and I favor its repeal. I do not consider it feasible to attempt to return to what are commonly known as old competitive methods in business. If the Sherman Law is not repealed, I favor amending it so as to exclude from its operation associations having no capital stock and not organized for profit.

Railroads should be allowed to enter into agreements affecting rates subject to the approval and regulation of the Interstate Commerce Commission. Trade unions and combinations of farmers should be excepted from the Sherman Act.

I favor an Interstate Trade Commission with powers not unlike those now enjoyed by the Interstate Commerce Commission in relation to common carriers.

Disturbed business conditions are due, in my judgment, to uncertainty as to the meaning of the Sherman Law; demand of the people for a greater measure of control and a more direct voice in the administration of legislative and administrative affairs.

I believe that Congress should create a commission composed of representatives of wage-earners, employers, legislators and economists, whose duty it should be to make a study of this entire subject and recommend to Congress such reforms in the legislative, administrative and judicial branches of our government as may seem necessary because of the changes and the development in our industrial and commercial life.

CHARLES A. BOSTON, Hornblower, Miller & Potter, Attorneys-at-Law, New York.

The Sherman Law owes its existence to a spirit which is as old as the English people. Hitherto, that spirit has not been quellable. It was manifested in the Charters of Liberties and of the Forests; in the Statutes of Mortmain and the law against perpetuities; in the deep-rooted objection to the grant of monopolies; in the continual controversies in the American Colonies with the Royal Governors; in the execution of Charles I. and the situation which forced the abdication of James II.; in the Boston Massacre, so-called; in the tea-parties at Annapolis and Boston; in the Acts of Settlement of the English Crown; in the Declaration of Independence; in the Bills of Rights; in the American Revolution and the War of 1812; in the refusal to recharter the Second United States Bank, and in the Civil War. The Sherman Law is a historical, political and economic landmark. It does not oppose big business, because it is business, but because it is dangerous.

W. D. CREWS, Farmer and Editor and Proprietor The Union Farmer, Murphysboro, Ill.

In my judgment, the present disturbed business conditions are caused fundamentally by the evolution of the human race from old and inadequate conditions to better and more progressive conditions: incidentally, too much selfishness and dollar-chasing: also a lack of sufficient progressive spirit on the part of the masses to keep up with the classes.

A tadpole has to change its tail for legs to become a frog. The butterfly must work its way out of the cocoon. A child must experience the pain and inconvenience of teething in order to develop a digestive apparatus sufficient for the needs of an adult. Human progress is somewhat slow and disagreeable, partly because we are not wise enough to lightly adjust ourselves to the great strides of progress from a competitive to a co-operative system of business.

M. WES. TUBBS, Secretary-Treasurer Wisconsin State Union, American Society of Equity, Madison, Wis. (official communication from the union).

We recognize the advantages claimed for those doing business on a large scale when the advantages are properly managed.

The Sherman Law, as now interpreted, is not clear and workable. It should be amended to make it more explicit. Railroads should be allowed to enter into agreements affecting rates, subject to the approval and regulation of the Interstate Commerce Commission. Combinations of farmers to restrict production or to hold a crop for higher prices should be lawful up to the limit of average cost of production, with a reasonable profit added.

We do not consider it feasible to return to old competitive methods. We favor a national incorporation law and an Interstate Trade Commission with powers not unlike those now enjoyed by the Interstate Commerce Commission in relation to common carriers.

E. W. RANKIN, Manager Farmers' Mail and Breeze (agricultural paper), Topeka, Kan.:

The Sherman Law should be amended to make it more specific and to use the undoubted but seldom used power of Congress to prevent the Supreme Court from nullifying it. I am not sure as to whether railroads should be allowed to enter into agreements affecting rates, subject to the approval and regulation of the Interstate Commerce Commission. Trade unions should be excepted from the operation of the Sherman Act.

In my judgment, the causes of the present disturbed business conditions are various; crops under average; increasing number of non-producers; middlemen; political apprehension; too high prices; growing inequality in the distribution of wealth—these may all be regarded as causes of existing unsatisfactory conditions. What we need is more democracy, the making of laws from the point of view of all the people, and not of special classes of the people. For instance, the lumber people should not dictate lumber tariffs, nor the bankers dictate all banking laws.

WALTER G. OAKMAN, President of Hudson Companies, etc., New York:

The Sherman Law is not clear, but perhaps workable, failing other legislation. Unlimited competition would result in survival of the strongest and a recurrence of conditions now deemed requiring regulation. The country would not accept a repeal of the Sherman Law unless substituted by other legislation. Perhaps the best solution would be a control of the amount of the total of any industry by any one corporation. A general control of business by a commission covering the details of each activity would be impossible and destructive.

CHARLES F. COX, Railway Treasurer, Grand Central Terminal, New York:

In general, all laws should be repealed which lead to prosecutions of corporations or individuals because of what they may intend to do, or have the power to do, instead of for specific and material acts they have performed. In regard to advantages claimed for those doing business on a large scale, no one can reasonably believe that the numerous corporations into which the Standard Oil Company is dissolved can serve the public better and more economically than was done by the original corporation.

HENRY R. SEAGER, Professor Political Economy, Columbia University, New York:

In my opinion the trust movement has been in part artificial, due, that is, to opportunities afforded to promoters for large gains. Enforced publicity and fair competition would enable small producers in many lines to hold their own. In some, great monopolistic combinations might prove more efficient, that is, able to produce or sell at lower cost than smaller companies, and for them regulative policy might have to include eventually control over prices. I believe, however, that has yet to be demonstrated.

I prefer Federal incorporation—this might be made optional at first and coupled with certain privileges as well as certain responsibilities, but should, I think, eventually be made obligatory on companies doing interstate commerce. I do not believe in holding companies. We should have an amendment to the Sherman Act specifying practices in reasonable restraint of trade. The German plan of enforced publicity and limitation of capital to actual bona fide investments appeals to me. I favor an Interstate Trade Commission, but do not believe that such a commission should have power to fix prices until need of such power under the new system is clearly demonstrated by experience.

JOSEPH SELIGMAN, J. & W. Seligman, Bankers, New York:

The Sherman Law will not be clear and workable until the courts define more clearly what constitutes "reasonableness." I do not consider it feasible to attempt to return to old competitive methods but competition is greatly to be preferred to Government interference and inquisition, which has so disturbed conditions of late. I do not favor a repeal of the Sherman Law, but its amendment. It should be amended by enacting more stringent laws against directors and promoters of guilty cor

porations; the establishment of a Government Corporation Bureau; enforcement of a law compelling all corporations to incorporate under Government statutes.

I decidedly favor a national incorporation law, but it must not entail inquisition into the private affairs of innocent persons constituting the corporation, such as stockholders who are connected with the management. I favor a Federal license law and an Interstate Trade Commission.

In my judgment, the cause of disturbed business conditions is too much Government attempt at remedying all at once the entire corporation "evils" of the country, coming as it did in a time of European and world-wide unrest and financial disturbance.

B. WHITE, Lumberman and Farmer, Kansas City, Mo.:

Industrial corporations have proved to be the fortunate opportunity to thousands of men. Look at them in every village and city, especially in the Middle and Eastern States. Hundreds of thousands of men of little means have been enabled to club together and unite their savings in an industrial corporation, where their money and labor are employed, with the result that they have made and are making a financial success, and own their own homes.

I am told that in Jamestown, N. Y., where there are 143 industrial corporations, there are hundreds of small prosperous stockholders, but not a millionaire amongst them. And there are thousands of similar examples. We require competition, but not that kind "with the red tooth and the bloody claw." We want co-operation, and not merciless, unrestrained competition, where only the luckiest or the strongest survive at the expense of the weak and the unfortunate. A living wage should be the first corner stone of every industrial enterprise.

The endeavor to create a condition of enforced and unrestrained competition, causing the over-production of low wages and enforced idleness among the laborers, has caused much trouble. The Sherman Law should be repealed or amended so that manufacturers may be able to legally ascertain the supply and demand and be enabled to avoid committing waste by exceeding the demand and by selling their products under the price of production.

The late JOHN BIGELOW (written just a month before his death):

I know of no other law ever enacted for our Federal Government that I thought more absurd when enacted than the Sherman Law, and I still think the same of it.

As the man shortened the vicious dog's tail by cutting it off close behind his ears, so I would do with the Sherman Law. There is no amending a law that defies common sense.

We will never have a just government, nor be a free people, nor an honest people, until we open every port of the country to the commerce of every nation as freely as the port of New York is open to the commerce of New Jersey or Connecticut.

JAMES DUNCAN, Secretary-Treasurer the Granite Cutters' International Association of America, Quincy, Mass.:

The Sherman Law, as now interpreted, is not clear and workable. I would favor a repeal of the Sherman Law only to permit the passage of a practical similar act. The Sherman Law should be amended to bring and keep large financial and transportation corporations under governmental supervision and control, preventing corporation monopolies, and the "freezing out" process of small competing concerns should be declared positively criminal. Railroads should be allowed to enter into agreements affecting rates. Trade unions should be excepted from the operation of the Sherman Act. They are not in business, nor are they, nor can they form transportation, interstate or profit-making trusts or corporations; hence are not comprehended in such an "act." As to combinations of farmers, restriction of production should never be "rendered lawful" under the "Sherman" or any other act. Holding crops for higher prices, when done by individuals as such, is not unlawful, but a combination by farmers to do so simply to force higher prices should be "rendered unlawful."

I favor a national incorporation law—one such as would require publicity of the business, purposes, and workings, including profits, of the concern incorporated, and that all large interstate concerns should come under the law. I consider that some such commission as an Interstate Trade Commission with powers not unlike those now enjoyed by the Interstate Commerce Commission in relation to common carriers would be helpful.

M. S. CARTER, President Brotherhood of Locomotive Firemen and Enginemen, Peoria, Ill.:

It seems to me that the present "disturbed business conditions" are largely based upon a doubt as to whether the "common people" will much longer stand for the present high cost of living, which they believe is of artificial creation, and is not a natural economic result of the condition of the country.

In August of 1909 my business called me to Texas, where I was astonished to observe farmers (or fruit growers) shaking their peach trees so that the peaches would fall off and be consumed by their hogs. These peaches were finer than I had ever seen before. I asked many why it was that these peaches were not shipped to the Northern States, where the housewives were paying $2.25 per bushel for an inferior quality. I was told that the farmers could not afford to gather, sort, pack and deliver at the railroad station these peaches for less than sixty cents per bushel, and that they were not offered as much as sixty cents for these peaches. Further investigation showed that a carload of peaches shipped to the city of Chicago in a refrigerator car would cost about thirty-five cents per bushel. That is, if the farmer got sixty cents and the railroads got thirty-five cents for delivering a carload of peaches into Chicago, the cost F. O. B. Chicago would have been ninety-five cents per bushel. Yet, at the same time, peaches of inferior quality could not be secured by the citizens of Illinois for less than $2.25 per bushel. I imagine if it now becomes evident that the people are going to demand "Who got the $1.30?" that there will be "disturbed business conditions" until the people "go to sleep again." I read an article contributed by a leading manufacturer of pianos recently wherein he protested that the manufacture of pianos was not prosperous because the consumer had to pay 100 per cent more for the piano than the manufacturer received for the finished article.

I have been told by those who should know that an automobile that is sold for $2,200 does not net the manufacturer $1,000.

I might go on indefinitely with almost every article of commerce and the story would be the same.

F. W. TAUSSIG, Professor of Political Economy in Harvard University, author of Tariff History of the United States, Wages and Capital, Principles of Economics, and Editor of the Quarterly Journal of Economics.

In addition to the methods of unfair competition mentioned in the circular, there should be adduced the deliberate sale of a product by a large concern or combination at less than cost, for the purpose of driving smaller competitors out of the business. Mention should be made also of the establishment of bogus competitors, in reality controlled by the combination. The whole subject of fair and unfair competition should be newly dealt with by the Legislature. Unfair competition should be more carefully defined and further remedies of a penal sort should be added to the civil remedies which the law now provides.

The holding company system is bad. It lends itself to manipulation and fraudulent management, and above all to concealment. Yet, as matters stand, we must move with caution toward getting rid of it. If an interstate trade commission were established, it could appropriately supervise the holding of securities by great corporations, and require from them a full statement of their holdings, direct and indirect.

Among the advantages on which stress is laid in favor of combinations is the prevention of relentless competition, and thereby of unwholesome alternations of activity and depression. It is not clear how fully an advantage of this sort is attained. Steadier employment of labor, better protection against accident, greater command of international trade, may perhaps all be secured by large scale production, not necessarily by competition; and for this phase of the problem we must still await the outcome of experience.

I favor the creation of an interstate trade commission which might be developed from the existing Bureau of Corporations. For the present its functions should be limited, and should be directed more particularly toward the enrollment and supervision of the great industries which threaten to develop into combinations. In time, it will perhaps prove expedient to enlarge its functions. It is not inconceivable that eventually direct control of prices may be entrusted to it, as control over railroad rates is entrusted to the Interstate Commerce Commission. But regulative legislation of this sort should proceed tentatively, and should begin with the gathering of accurate information.

WHAT IS ADEQUATE REGULATION OF RAILWAYS AND PUBLIC UTILITIES?

CIVIC FEDERATION'S NEW DEPARTMENT WILL ENDEAVOR TO ASCERTAIN HOW FAR PUBLIC CONTROL MAY GO WITHOUT INTERFERING UNDULY WITH MANAGEMENT—ALL INTERESTS REPRESENTED—BROAD SCOPE OF INVESTIGATION

THE Executive Committee of the recently formed Department on Regulation of Interstate and Municipal Utilities, at a meeting held in New York City December 2, appointed seven sub-committees, among which is distributed, among other duties, the work of formulating a model act designed to afford adequate regulation of public utilities. The personnel of these committees is given elsewhere in this article.

This department of The National Civic Federation was organized at a conference of public service officials, officers of public utilities and representatives of organized labor, held in New York City last July. At that meeting a sub-committee of seven was appointed to prepare a report on the plan and scope for an inquiry into the extent to which regulation can go and be effective without interfering unduly with management.

Effective Impetus Given Work.

At subsequent meetings the plan and scope were finally decided on, officers were elected and an Executive Committee and Executive Council appointed, and further steps, noted above, were taken to give effective impetus to the work of the department.

Emerson McMillin, chairman of the Executive Committee of the American Light and Traction Company, heads the newly-formed department. A complete list of officers and committees is given further along.

The work that this department proposes to do is the logical sequence of the investigation of private vs. public operation of public utilities, made by The National Civic Federation in England and this country. The commission which conducted that investigation was composed of those in favor of municipal operation, of private operation, and those classed as "neutrals." This exhaustive study resulted in a practically unanimous agreement that in this country, under the present condition of municipal government, private operation is preferable to public operation, *provided* there be adequate regulation to protect the public in the matter of price and quality of service. The proposed inquiry is to determine, as stated above, what constitutes adequate regulation of public utilities.

Territory to Be Studied.

One of the purposes of this department is to outline a model State or municipal regulation bill. This will involve a careful study of the subject in the United States, England and Canada, the examination in this country being made in such typical States as New York, Massachusetts, Wisconsin, Texas, Kansas, Tennessee and Nebraska.

Some Past History.

The original commission was presided over by Melville E. Ingalls, former chairman of the Executive Board of the Big Four Railroad.

After spending many months with engineers, accountants and experts selected by the "Antis" and the "Pros" respectively it unanimously agreed upon a number of recommendations. That referring to regulation follows:

"First, we wish to emphasize the fact that the public utilities studied are so constituted that it is impossible for them to be regulated by competition. Therefore, they must be controlled and regulated by the Government; or they must be left to do as they please; or they must be operated by the public. There is no other course. None of us is in favor of leaving them to their own will, and the question is whether it is better to regulate or to operate."

The commission then declared for adequate regula-

tion by a competent public authority, with power to require for all public utilities a uniform system of records and accounts, giving all financial data and all information concerning the quality of service and the cost thereof, which data should be published and distributed to the public like other official reports, and also recommended that no stock or bonds for public utilities be issued without the approval of some competent public authority.

Present Scope Broader.

While this commission dealt entirely with the regulation of municipal utilities—railroads, telegraph and telephone companies, both interstate and intrastate, are equally concerned in the question: "What is adequate regulation?" or in other words, "How far can regulation go and be efficient without unreasonably interfering with management?" The Interstate Commerce Commission, of course, has only to do with interstate railroads, telegraph, telephone and express companies, but many of the forty-one State railroad commissions regulate both the intrastate railroads, telephone companies, etc., and the municipal utilities in such States. In New York State, the State Commission has more power over the railroads running into New York City than has the Interstate Commerce Commission.

With public sentiment practically unanimous in favor of the proper regulation of all public utilities, whether State or interstate, and with forty-one different State commissions making as many dissimilar rulings, serious conflicts can readily be imagined, not only between the States themselves, but also between the State and the Federal Commissions and courts.

There are many questions which in their consideration involve identical principles, whether in relation to interstate railways or to quasi-public utilities, not the least important of which is the method of valuation of the property as a basis for rate-making or cost of service to the public.

REPORT OF CONFERENCE AT WHICH DEPARTMENT WAS FORMED.

In opening the conference at which the Department on Regulation of Interstate and Municipal Utilities was formed, PRESIDENT LOW epitomized the problems to be considered in the following words: "I can perfectly understand that dissimilarity of State legislation on this subject may easily be a source of injustice, both to the railroads and other corporations whose limits extend beyond one State. Many States are considering the enactment of public service regulations, and it is quite possible that if a model law could be drafted by men who know what they are dealing with, such a draft might be very beneficial to the legislation of the States which have not yet acted."

All Interests Represented.

PROFESSOR JOHN H. GRAY, of the University of Minnesota, who is now secretary of the Department on Regulation of Interstate and Municipal Utilities, formed as a result of this meeting, was the first speaker called on. He argued strongly that all parties at interest should be represented in the work of formulating a model law for the regulation of interstate and municipal utilities. He called attention to the fact that within the past four years there had been a marvelous growth in the sentiment which favors Government regulation of public monopolies. "That being true," said Professor Gray, "we are confronted with the proposition of what kind of regulation we shall have, to what degree we desire regulation, and, also, what arms of government ought to exercise that regulation."

President Hadley Cited.

The speaker tersely outlined the situation confronting these public utilities in their relation to the public, with the statement that regulation by forty-seven different States is an impossibility, and he endorsed the position of President Hadley, of Yale, that such regulation must come, on the one hand, through the substantial control of such utilities by the Federal Government, as the result of the interpretation of the law; direct control of them by the same authority through the remote contingency of amendment of the Constitution of the United States; or, on the other hand, through public ownership.

Professor Gray thought that the time was ripe, both in view of what The National Civic Federation had already done, and of the tremendous growth during the last few years in public sentiment for adequate regulation to do "a great national public service" by undertaking a thorough investigation of the control of public corporations and of how far such control can be carried without working injustice to business. "It seems to be a very logical outcome of the investigation already undertaken through the instrumentality of The National Civic Federation," said he, "and certainly if the time ever was ripe for some serious consideration of this problem, it is to-day."

Professor Gray broadly outlined the objects of a model law on public utilities as including, first, publicity of accounts; second, the extent to which the State may go in regulating service; third, what profit such utilities should be allowed to make.

On the question of uniformity of legislation, the speaker said, in part: "There is no reason for assuming that we cannot get a very considerable uniformity of State legislation on these matters, therefore I think we can submit a model law, framed not from one point of view, but from the most comprehensive point of view that we can obtain, and I think it is possible to get a law as a sketch, at least, for legislation. If so, that is a great gain."

BLEWETT LEE, general counsel of the Illinois Central Railroad, expressed the opinion that it was very desirable, at the present time, that a model law of some kind should be drafted; and he thought that such a law should be prepared by experts and considered and weighed by persons experienced in the practical working out of such things.

Federation's Great Opportunity.

F. E. BARKER, chairman of the Massachusetts Electric Light and Gas Commission, expressed the opinion that the fundamental principles which ought to prevail in the regulation of the utilities under consideration are very much the same in all those industries, and that there ought not to be any insuperable difficulty in discovering what those fundamental principles are, and perhaps in giving them form. Mr. Barker expressed the opinion that the questions pending to-day indicate a rather more acute state of supervisory activities than has been manifest hitherto, and, in consequence, he thought the importance of some uniform understanding of these principles and of the method of their application had come to be of increasing importance.

Mr. Barker said that his commission would do what it could to help work out such legislation as was under consideration along lines that would be considerate of all interests, both public and private. "I think," said he, "that The National Civic Federation has a great opportunity in respect of this proposition, and we in Massachusetts look to see it take advantage of that opportunity in a way that shall be profitable."

MARTIN S. DECKER, former president of the National Association of State Railway Commissioners and a member of the New York Public Service Commission, expressed the opinion that it might be well indeed after the experience had in some years under the different statutes, which may differ in words, but not greatly in effect, to draft a model law. "There are experiences which the Public Service Commissions of the various States have had," said he, "which indicate that those laws ought to be still further strengthened, and there are some few points, perhaps, wherein they might be weakened." Mr. Decker suggested a careful study of the working, not only of State Commissions, but of State laws, and what part these ought to play in constituting or instituting proper regulation of the great public utilities.

Model Law "Crying Necessity."

JOHN C. BELL, Attorney General of Pennsylvania, gave an interesting account of attempts at regulatory legislation in that State. The problem of regulation, as seen by Mr. Bell, is: "Whether public service corporations shall be let alone to manage their own business; whether there should be public ownership or private ownership; or whether there should be reasonable and proper regulation." The speaker argued strongly for proper regulation, and for uniformity, citing the uniform legislation now on the statute books with regard to negotiable instruments, bills of lading, etc. Mr. Bell thought that there was a "crying necessity" for a uniform public service law. The speaker said that a model law drafted under the auspices of The National Civic Federation with corporate, labor and banking interests all represented, would be "a long step toward a practical solution of the civic evils of the time." He held that a bill so drawn would satisfy legislators at once that it had been well considered and, further, that it would silence opposition from their constituents who would have, in a sense, been represented in the framing of such a statute.

P. H. MORRISSEY, former president of the Brotherhood of Railway Trainmen, said that in his opinion The National Civic Federation is in a peculiarly happy position to give expression on the subject of regulation of utilities. "Your work on municipal ownership was one that was well received," said he, "and I think that your organization can feel complimented on your accomplishments in that direction." Mr. Morrissey made complimentary reference also to the work of The National Civic Federation in the matter of workmen's compensation, and added that these past accomplishments impressed him with a belief that whatever a well-balanced, representative committee on this subject in the name of the Federation might say to the public with regard to railway regulation would have a considerable influence not only with the railways themselves and their employes, but with the public. Mr. Morrissey laid particular stress on the fact that the question of regulation of public utilities is too important to be done by inexperienced hands, that it requires the best thought and most experienced consideration that can be given, and he expressed confidence in good resulting from the method that The National Civic Federation is proposing to use in handling this matter.

Emerson McMillin Relates Some Experiences.

The remarks of EMERSON McMILLIN, the next speaker, are given in full because of the illustration they afford of the attitude of enlightened public service corporations toward adequate regulation in the interest of the public which they serve, and also for the quality of humor which the speaker injected into his subject. Said Mr. McMillin:

"The first attempted regulation that I know anything about occurred in Ohio, where the Legislature had given the city councils the power to regulate the price of gas.

"That was fought by the gas companies bitterly, and they were defeated and thought they were ruined. At that time I was managing gas works in Ohio, and I have been managing gas works and other facilities most of the time since then, having investments in ten to twenty States, and in all of these years Ohio has been the best place in which to have a gas company. There was a time when the companies were being raided everywhere else by new companies springing up. It was assumed they would not go into the business except to be bought out; but when they applied for franchises in Ohio it was said: 'Why should we have two companies in an Ohio city? The city can fix prices!' It was the best State in the Union in which to own gas companies, and in all the years since then I have never known a city council to abuse its privilege save in one instance, and other gas companies were glad of it, because that particular company had been very ugly with the city when it could, and when its contract expired it, as we say, 'got it in the neck.'

Massachusetts' Pioneer Commission.

"I think it was very fortunate that Massachusetts was the first State that brought out a commission, and still more fortunate that they should have got my friend Mr. Barker as president of the Board.

"As a result of my familiarity with the Massachusetts Commission's work, I have, in all the States in which I have been interested, advocated the appointment of commissions. I do not recall an instance where any commission has done anything palpably wrong. That city councils and legislatures will do wrong from our viewpoint is before us every day. I quite agree with the gentleman who said here to-day, that no company would ask the repeal of the commission law. It would know better. That would be the way to make the law stand—to ask for its repeal. But, generally, companies absolutely do not want the commission laws repealed.

Believes in Regulation.

"I believe that the companies ought to be regulated. I believe it because other people favor it, not because of experience. I have in mind now an instance where a gas company was granted a perpetual and exclusive franchise, sustained by the Supreme Court, and it has always sold gas at less than in any other city in the United States. Now two or three years ago the State in which this company is located passed a commission act. The law was about as radical as it could be. Every company that could be put under it was forced there, and the law provided that the property might be appraised for purchase by the city and the courts could not interfere; and one of the worst features, to my mind, was that the cities that had *perpetual and exclusive franchises* were the only places authorized to have opposition gas companies. Where there were no exclusive and perpetual franchises the law provided that there should be no opposition, but where there was the exclusive privilege then the city council was authorized to grant opposition franchises.

"Now, recently, there was advocated a law reducing the price of gas to 60 cents. It was defeated in the Senate by one vote. The average price of the gas had been about 77½ cents. Notwithstanding we were selling gas at 77½ cents, we began late last winter to prepare our figures to reduce the price still further. But, feeling that if the Legislature passed a 60-cent bill, we would want to adhere to the old rate as long as we could during the fight that would follow, we did not make the reduction until we were asked to do so unofficially by a member of the Commission, and thus was saved the State's good name. They knew we had the figures all ready, and the member suggested to us that we make the reduction. We waited, however, until the bill was killed.

The Humorous Side.

"When that Commission was appointed we were sued in another city in the same State, and in that suit all the questions that were ever likely to come up in that State were brought in and thrashed out. The Commission appraised our property a good deal lower than it cost us. It didn't matter at all what

it cost; but under the law they appraised it at the figure at which it might be replaced. They also said how much we should make, what percentage, and they fixed the prices which in their opinion would make that percentage.

"The suit lasted two years, and at the end of the first year thereafter we had to go to them and ask permission to reduce the price, as we were making too much money.

"We would not be without commissions, not because we love the commissions more, but because we love the legislatures and city councils less."

Must Preserve Initiative.

The preparation of a general plan without too much detail was advocated by MILO R. MALTBIE, of the New York Public Service Commission. He suggested a thorough investigation of the results of regulation and methods of control of gas and water companies in Great Britain, and particularly pointed to the fact that in some directions at least that country has solved the problem of how to control such utilities without interfering with initiative. Mr. Maltbie thought that any law must offer a reward for initiative. He, too, argued for the employment of trained men in an investigation of the subject under consideration, and among the good results that he thought would follow would be the possibility of accurately drawing a line between State activities on the one hand and national activities on the other.

Following the extended and interesting discussion detailed above, a motion prevailed that the chairman appoint a committee of seven on Plan and Scope, with instructions to report as early as possible, with the understanding that if the plan proposed should meet with approval, steps necessary to make it effective would be taken promptly. On taking this action the meeting adjourned.

THE EXECUTIVE COUNCIL.

Upper Row (left to right)—Emerson McMillin, Chairman; Franklin K. Lane, Martin S. Decker, Milo R. Maltbie, Franklin Q. Brown, Vice-Chairman.
Lower Row—Blewett Lee, John H. Gray, Secretary; F. C. Walcott, Treasurer; P. H. Morrissey, Leo S. Rowe.

REPORT OF THE COMMITTEE ON PLAN AND SCOPE.

The report of the Committee on Plan and Scope, together with its personnel, follows:

New York,
July 28, 1911.

At a meeting of the Department on Regulation of Interstate and Municipal Utilities, held in New York June 23, 1911, the undersigned were appointed a subcommittee to outline a proposed plan and scope for work.

It being taken for granted that Government regulation of some kind and character is essential, your committee starts with this premise. Our recommendations relate solely, therefore, to the general field to be covered and the organization to be provided. We have not attempted to prescribe in detail upon either of these two points, for, as the committee proceeds, new lines of investigation will appear and other opportunities for effective work will develop. It is necessary at this time merely to provide a general groundwork and organization so that these new functions and new matters may be taken up as they arise.

Combined Action Necessary.

This is considered necessary when one considers the importance and scope of the questions connected with the regulation of public utilities. In an undeveloped country each person relies, to a large extent, upon individual action. Each family is a self-contained unit. It protects its own members, instructs the young, administers justice, provides its own conveniences, and seldom comes into contact with the neighbors or unites with them in communal enterprises. With an increase in population and the greater congestion which accompanies such increase, combined action is not only more possible, but more necessary, and out of the common needs have sprung the great public utilities providing transportation and the other services which are now such an essential part of our civilization. An elaborate water system supplants the old well; gas and electric light take the place of the candle and the oil lamp; the telegraph and the telephone supplant the infrequent call and the written communication; the electric street railway and the trans-continental line replace the cumbersome wagon and the stage route. It is utterly impossible to imagine the United States without its steam railroads. Our whole economic, social and political life depends upon them. Even a short and partial paralysis upon an important line produces an immediate effect, often of far-reaching consequences.

Special Obligations Inhere.

These utilities, which now represent investments of millions and millions of dollars throughout the United States, are vital to the growth and development of the country and the well-being of our cities. Various authorities have granted to public service corporations extraordinary and far-reaching powers, powers which the individual does not possess, powers which are entrusted to corporations only because of their public character and the great functions which they perform in the life of communities. The acceptance of these special and important powers carries with it duties and obligations from which the individual and the ordinary corporation are entirely free.

The nature and character of these public services tend to make them monopolistic. Combination and consolidation have gone further in certain localities than in others, but every large city has witnessed the trend towards monopoly. In the smaller cities generally competing companies never got a foothold. Similar utilities in different areas have also been united until free and unrestricted competition has either been curtailed or largely eliminated, and in some cases even competing services have been brought under a single management. Railroad lines which were formerly disconnected units have been bound together into trans-continental lines. Although the corporate organization may change when a State boundary is crossed, one journeys through State after State without realizing such change and without passing from one system to another.

Must Be Adequate Control.

Uncontrolled monopoly not only contains elements of danger to the public, but sometimes leads to stagnation and inefficiency, which, reacting, are harmful to the public and may prevent the development of a community or a nation. A proper system of public regulation should, therefore, not only protect the interests of the public but should provide a means whereby initiative and enterprise may receive proper reward and encouragement while securing to the public upon the other hand proper service at reasonable rates.

"Public Utility" Defined.

While it is difficult to define a public utility with precision, every one has a general idea of the services ordinarily included. These are railroads, street railroads, express lines, gas plants, electric supply plants, water works, telegraphs and telephones. There are many others, however, of a similar character which are important in certain localities, such as pipe lines, steam-heating plants, fire and police signal systems and a long list of other minor utilities which are generally included under the expression "common carriers." Your committee believes that the utilities to be considered by the national committee should include the principal services, namely, transportation—steam and electric—communication, lighting and water. It does not believe, however, that any absolute limit should be fixed, for there have been interesting experiments in the control of other utilities, and it may be found very desirable to have such experiments investigated and considered in the preparation of the final report. Furthermore, if model statutes are to be prepared, one of the important points to be decided will be what utilities should be regulated. This question is one of public policy, and, therefore, not to be passed upon by your sub-committee.

History of Regulatory Laws.

The regulation of steam railroads in the United States, starting with the recommendatory process in Massachusetts and the mandatory and rate-fixing method in Iowa, receiving great impetus from public demand in the so-called Granger States, followed by the original enactment of the Federal "Act to Regulate Commerce," and that scheme in turn, successively, as structural changes of the Federal statute have been made, furnishing the basis for radical amendments of State statutes, has developed into combined general systems of advanced governmental supervision and control, showing, however, many differences in regulating methods and widely varying construction and application of powers. The time seems ripe for full investigation and thorough discussion of these various plans of governmental regulation. All concede that these public agencies must be effectively controlled.

Pitfalls to Be Avoided.

Few conceive as yet that such supervision and control may proceed so far through legislative action and growth of administrative authority along independent lines in each of the States, and as between the States and the Nation, that the results will be not merely incongruous but damaging to the interests of commerce, thus tending to defeat the underlying reason for transportation regulation, and that this can be avoided only by the attainment of general uniformity in statutory provisions and methods of administration. We have before us the problem of securing such uniformity while necessarily recognizing the jurisdictions of the States as against each other and the Nation as a whole and the jurisdiction of the Federal Government as against those of the States, in accordance with the Constitution of the United States, as that supreme law has been interpreted by the court of last resort.

Suggestions for Inquiry.

It is recommended that investigation should be made into the principal methods that have been tried in the United States and Europe, particularly Great Britain. For instance, the laws enacted in New York and Wisconsin within a few years, and the results of the regulation provided for therein, should be considered. Likewise, the experience of Massachusetts, which was the first State to attempt to control in any broad way the public utilities other than railroads. The results of the operation of the Texas law would be interesting and profitable. The recent experience of such States as Virginia, Nebraska and Tennessee would be illuminating.

It is questionable how far foreign experience would
helpful, for our conditions are in many ways dif-
ent from those obtaining in any European country;
t certainly the methods that have been found suc-
ssful in Great Britain, particularly as to gas and
ter companies, would be of great value, and doubt-
s England's experience with railroads would point
moral and adorn a tale.

Published Reports a Feature.

These subjects and fields of investigation are sug-
sted merely as illustrative. Your committee does
t believe that any fixed limit should be imposed at
e present, for one of the most valuable features of
e work of the committee will be the publication of
ports upon the various methods and experiments
at have been tried and the results which they have
oduced. If thorough and impartial reports are
epared by competent investigators, who will can-
dly report the facts, such reports will not only be
great value to the committee in preparing the
commendations it may see fit to make, but will be
great use to the entire country and will become
recognized source of information and an authorita-
ve document upon the subject of public regulation.
our committee has not attempted to outline the pre-
se fields which should be traversed, but this phase
the work is extremely important and it should be
refully and scientifically done.

Skeleton Scheme Suggested.

Your committee also believes that a most useful
nction will be the preparation in outline of a
atute providing for public regulation and the or-
nization to carry it into effect. We appreciate that
w States have precisely the same conditions. Fur-
lermore, constitutional provisions vary from State
State, and judicial decisions have been made which
ust be recognized in the framing of any statute. It
believed, however, that a general scheme of regula-
on could be prepared which would not go too far
to detail, but which could be used as a framework
skeleton in the preparation of a law for any State.

Executive Council Proposed.

To carry forward the work, your committee recom-
ends the appointment by the President of The Na-
onal Civic Federation of an executive council to
upervise the various investigations which are to be
ade, to determine the precise subjects to be investi-
ated, to appoint sub-committees upon the various
hases of the subject, to provide the necessary means
r the conduct of the work, and to employ and direct
l experts and investigators, subject always to the
eneral supervision of the department.

Without intending to limit the functions of the
xecutive council or to determine what that body
hould do, we consider that at least the following
ommittees should be appointed by the executive
ouncil, and that, so far as practicable, members of
he council should be chairmen of such sub-com-
ittees:

(*a*) Regulation of Rates.
(*b*) Control of Service.
(*c*) Control of Accounts and Reports.
(*d*) Regulation of Financial Matters.
(*e*) Conflicts of Jurisdiction.
(*f*) Control over Labor Questions.
(*g*) Legal and Legislative.
(*h*) Committee on Ways and Means.

Sub-Committees' Functions.

The sub-committee on each one of these subjects
ould consider the various questions connected there-
ith. For example, "service" is to be considered as
cluding not merely the number of trains to be oper-
ted or the illuminating power of gas, but every point
t which the public comes into contact with the cor-
oration through the service which it provides, such
s the amount and character of cars and other equip-
ment to be operated, safety-devices, gas pressure, the
urity of water, etc.

The committee on financial matters, for example,
ould consider to what extent the issuance of stocks,
onds, notes, etc., should be regulated, how such con-
rol should be exercised, what conditions should be
ttached to the approval of securities, the methods
f amortizing discounts, the question of issuing stock
elow par, etc.

The committee on conflicts of jurisdiction has a
very broad and difficult field. It would naturally con-
sider how far Federal regulation should extend and
how far matters should be left to the States; also the
delimitation of the jurisdiction of the courts in their
control over administrative bodies, the separation of
Governmental powers, etc. Respectfully submitted,

SUB-COMMITTEE ON PLAN AND SCOPE.

EMERSON MCMILLIN, FRANKLIN K. LANE,
M. S. DECKER, FRANKLIN Q. BROWN
JOHN H GRAY, P. H. MORRISSEY,
MILO R. MALTBIE.

EXECUTIVE COUNCIL AND COMMITTEE, OFFICERS AND SUB-COMMITTEES.

Following the approval of the above report, an Executive Committee, whose personnel is representative of all interested in the rightful solution of the problem involved, was appointed to provide for the carrying out of its proposals. This committee follows, together with the Executive Council, which is in immediate charge of the work of the department, and the various sub-committees:

Executive Council.

EMERSON MCMILLIN, Chairman.
FRANKLIN K. LANE Chairman Committee on Rates.
MARTIN S. DECKER, Chairman Committee on Control of Service.
MILO R. MALTBIE, Chairman Committee on Control of Capitalization.
BLEWETT LEE, Chairman Committee on Franchises.
FRANKLIN Q. BROWN, Vice-Chairman.
LEO S. ROWE, Chairman Committee on Accounts and Reports.
P. H. MORRISSEY, Chairman Committee on Safety of Operation.
JOHN H. GRAY, Secretary.
F. C. WALCOTT Treasurer.

Executive Committee.

ALFRED L. BAKER (Bond and Stock Broker), Chicago, Ill.
F. E. BARKER (Massachusetts Gas and Electric Commission), Boston, Mass.
JOHN C. BELL (Attorney General of Pennsylvania), Harrisburg, Pa.
AUGUST BELMONT (Chairman Board Directors Interborough Railroad Company), New York.
UNION N. BETHELL (Vice-Prsident American Telephone and Telegraph Company), New York.
ARTHUR W. BRADY (President American Electric Railroad Company), Anderson Ind.
CHARLES F. BROOKER (Director New York, New Haven and Hartford Railroad Company), Ansonia, Conn.
WILLIAM C. BROWN (President New York Central and Hudson River Railroad Company), New York.
H. M. BYLLESBY (Contractor, H. M. Byllesby & Co.), Chicago, Ill.
JAMES CAMPBELL (President North American Securities Company), New York.
JOHN N. CABLISLE (Former Member New York Railway Commission), Watertown, N. Y.
W. J. CLARK (General Electric Company), New York.
GEORGE B. CORTELYOU (President Consolidated Gas Company), New York.
F. A. DELANO (President Wabash Railroad Company), Chicago, Ill.
B. A. ECKHART (Chairman Illinois Railroad Commission), Chicago, Ill.
CHARLES L. EDGAR (Chairman Committee on Public Policy, National Electric Lighting Association), Boston, Mass.
HALFORD ERICKSON (Railroad Commission of Wisconsin), Madison, Wis.
W. W. FINLEY (President Southern Railway Company), Washington, D. C.
ALLEN P. FORBES (Banker, Director Public Utility Companies, Harris, Forbes & Co.), New York.
DAVID R. FRANCIS (Railroad Director and Banker), St. Louis, Mo.
W. W. FREEMAN (Vice-President and General Manager Edison Electric Illuminating Company), Brooklyn.
A. B. GARRETSON (President Order Railway Conductors), Cedar Rapids, Iowa.
TIMOTHY HEALY (President International Brotherhood of Stationary Firemen), New York.
MYRON T. HERRICK (Railway Director and Banker), Cleveland, Ohio.
ALEXANDER C. HUMPHREYS (President Stevens Institute of Technology), Hoboken, N. J.
SAMUEL INSULL (President Commonwealth Electric Company), Chicago, Ill.
D. O. IVES (Manager Transportation Department, Chamber of Commerce), Boston, Mass.
J. C. LINCOLN (President National Industrial Traffic League), St. Louis, Mo.
THOMAS N. MCCARTER, (President American Street and Interurban Railway Association), Newark, N. J.
JAMES H. MCGRAW (Publisher), New York.
F. J. MCNULTY (Grand President International Brotherhood of Electrical Workers), Springfield, Ill.
V. EVERIT MACY (Director Queensborough Gas and Electric Company), New York.
WILLIAM D. MAHON (President Amalgamated Association of Street Railway Employes), Detroit, Mich.
T. C. MARTIN (Secretary National Electric Light Association), New York.
C. E. MERRIAM (Professor Political Economy, University of Chicago), Chicago, Ill.
B. H. MEYER (Interstate Commerce Commission), Washington, D. C.
H. U. MUDGE (President Chicago, Rock Island and Pacific Railroad Company), Chicago, Ill.
JOSIAH T. NEWCOMB (General Counsel Stone and Webster Company), New York.
H. B. PERHAM (President Order of Railroad Telegraphers), St. Louis, Mo.
ROBERT R. PRENTIS (President National Association of State Railway Commissioners), Richmond, Va
W. Z. RIPLEY (Professor Political Economy, Harvard University), Cambridge, Mass.
JOHN H. ROEMER (Railroad Commission of Wisconsin), Madison, Wis.
ALBERT SHAW (Editor "Review of Reviews"), New York.
ALFRED H. SMITH (Vice-President and General Manager New York Central and Hudson River Railroad Company), New York.
JAMES SPEYER (Banker), New York.
MASON B. STARRING (President United Railways Investment Company), New York.
CHARLES A. STONE (Stone and Webster Company), Boston, Mass.
WARREN S. STONE (Grand Chief International Brotherhood of Locomotive Engineers), Cleveland, Ohio.
JAMES J. STORROW (Banker and Director of Public Utility Companies), Boston, Mass.
OSCAR S. STRAUS (Former Secretary of Commerce and Labor), New York.
GEORGE F. SWAIN (Professor Civil Engineering, Harvard University), Cambridge, Mass.
FRANK TRUMBULL (Chairman Board Directors Chesapeake and Ohio Railroad Company), New York.
THEODORE N. VAIL (President American Telephone and Telegraph Company), New York.
ARTHUR D. WHEELER (Chairman Board Directors, Chicago Telephone Company), Chicago, Ill.
WILLIAM R. WHEELER (Traffic Manager, Chamber of Commerce), San Francisco, Cal.
JOHN H. WIGMORE (Dean of Law School, Northwestern University), Chicago, Ill.
DANIEL WILLARD (President Baltimore and Ohio Railroad Company), Baltimore, Md.
WILLIAM R. WILLCOX (New York Public Service Commission), New York.
TIMOTHY S. WILLIAMS (President Brooklyn Rapid Transit Company), New York.
ROBERT WINSOR (Banker, Kidder, Peabody & Co.), Boston, Mass.
ROLLIN S. WOODRUFF (Former Governor of Connecticut), New Haven, Conn.

AND THE MEMBERS OF THE EXECUTIVE COUNCIL.

Sub-Committees for Detail Work.

After careful consideration, the Executive Council appointed the following sub-committees, in order to make effective the suggestions contained in the plan and scope of work:

Rates.

Chairman, FRANKLIN K. LANE; F. A. DELANO, HALFORD ERICKSON, J. C. LINCOLN, ALEX. C. HUMPHREYS, THEODORE N. VAIL.

Control of Service.

Chairman, MARTIN S. DECKER; B. A. ECKHART, D. O. IVES, ROBERT R. PRENTIS, UNION N. BETHELL, CHARLES L. EDGAR, ALFRED H. SMITH, WILLIAM R. WHEELER, CHARLES A. STONE.

Control of Capitalization.

Chairman, MILO R. MALTBIE; JAMES SPEYER, GEORGE B. CORTELYOU, B. H. MEYER, TIMOTHY S. WILLIAMS, W. J. CLARK.

Franchises.

Chairman, BLEWETT LEE; MASON B. STARRING, ALFRED L. BAKER, JOHN H. ROEMER, JOHN H. WIGMORE, H. M. BYLLESBY, JOHN N. CARLISLE, SAMUEL INSULL, CHARLES E. MERRIAM, THOMAS N. MCCARTER, JOSIAH T. NEWCOMB, LEO S. ROWE, ARTHUR D. WHEELER.

**Accounts and Reports.*

Chairman, LEO S. ROWE.

**Safety of Operation.*

Chairman, P. H. MORRISSEY.

**Ways and Means.*

Chairman, FRANKLIN Q. BROWN.

Inquiry Actively Begun.

Professor Gray is now in active charge of the work of the Department on Regulation of Interstate and Municipal Utilities as director of the investigation that is being made.

A staff of experts has been recruited, and will be added to from time to time as the work demands. No pains will be spared to make the inquiry as thorough and as authoritative as it is possible for it to be.

Announcement of the creation of this Department and of the work it proposes to do has met with widespread and gratifying commendation from those interested in a rightful solution of the problems involved.

*Personnel of these committees not yet completed.

FEDERATION'S MODEL COMPENSATION ACT FINDS FAVOR

ITS PRINCIPLES ADOPTED BY SPECIAL COMMISSION FOR RECOMMENDATION TO CONGRESS—SAFETY MEASURE IN PREPARATION—INTERESTING WINTER MEETING

A MEETING of the Department on Compensation for Industrial Accidents and Their Prevention was held December 8, at 1 Madison avenue, New York City. The gathering was distinguished by reason of the number and prominence of those who attended, and also because of the scope of the program and the quality of the speeches. The importance of the proceedings is such that they have been published in booklet form. Extended notice will not be given here.

The published proceedings contain a wealth of material which would seem to be almost indispensable to anyone who wishes to keep posted on the developments in workmen's compensation legislation and the prevention of industrial accidents. Compulsory compensation, elective compensation and compulsory State insurance are all discussed at length by speakers of recognized authority.

There are presented herewith, as a summary of the meeting, the speech of the Chairman, August Belmont, which gives a succinct account of the most recent developments in workmen's compensation, and the text of an amendment, proposed by Francis Lynde Stetson, which is designed to remove the constitutional obstacle in the path of effective workmen's compensation in the State of New York.

Mr. Belmont's Address.

"The topics for discussion to-day relating to Workmen's Compensation in themselves indicate the progress which has been made since the adoption of our model Workmen's Compensation Bill and the subjects show the necessity for educational work on our part. They are:

"'Compulsory Compensation vs. State Insurance.'
"'Compulsory Compensation vs. the Elective Plan.'
"'The Situation in New York Concerning Proposed Amendments to the Constitution Permitting the Enactment of a Workmen's Compensation Law.'
"'The Next Step in Workmen's Compensation in New York State.'

"Our model bill was submitted to the States where legislatures were in session last February with the suggestion that it be prepared in form for submission by attorneys familiar with the legislative diction in the several States.

"The adverse decision of the Court of Appeals in New York State upon the Wainwright Act following very quickly made the advocates of Workmen's Compensation hesitate to favor the compulsory principle, and as you know, there have come into existence State insurance laws and the elective plan.

"We find sentiment on the part of some employers and wage-earners in favor of State insurance—both having given the subject casual study, recognizing the advantages, but failing to see the evils which may arise, under a system of State insurance. But as a rule the leading labor men are following the same line that The National Civic Federation has adopted in its model bill.

"The American Federation of Labor sent out to its local unions throughout the country, with its endorsement, twenty thousand copies of the Civic Federation's bill on Workmen's Compensation.

"State Insurance is now operative in the State of Washington, but has not been in existence long enough to furnish a conclusive illustration. In Ohio the State insurance laws, while having passed, are not yet in operation. In Wisconsin the elective method has been sustained by the higher court; in New Jersey only by the lower court; but the indications are that that method will be sustained where adopted. No compulsory law has yet been endorsed by the higher courts.

"A law has been passed in Massachusetts, and its endorsement by the higher court is expected. In other words, it has been submitted to the Supreme Court before being put on its passage.

"The principle is mutual insurance. It is an elective system which, if entered into, gives the employer immunity from other claims under the liability law. I understand from the Massachusetts Commissioners that the insurance companies are somewhat opposed to it.

"The greatest encouragement has been the adoption of the principles of our bill by the Congressional Commission on Employers' Liability and Workmen's Compensation.

"The Chairman, Senator George Sutherland, at a conference with some of our active members recently in New York, gave his reasons for adopting our plan, and asked our assistance in securing the passage of the bill to be recommended for interstate commerce by the Congressional Commission January 1, 1912.

"If this bill is enacted into law by Congress and upheld by the United States Supreme Court it will have great weight in influencing uniform State legislation on Workmen's Compensation, which is the great purpose of The National Civic Federation.

"At the meeting of the Department held May 26, 1911, it was determined to have committees appear before the Congressional Commission at its hearings, and the Department has been represented on three such occasions.

Valuable Briefs Submitted.

"The briefs which were submitted to the Commission have since had a wide circulation and great influence in moulding sentiment. These briefs are:

"First, one submitted at the first hearing of the Congressional Commission in June jointly by four of our legal members—Messrs. Francis Lynde Stetson, P. Tecumseh Sherman, Launcelot Packer and William J. Moran. That brief is an argument for compulsory compensation.

"At the next hearing of the Congressional Commission at Chicago in October, 1911, there was presented a brief by Mr. P. Tecumseh Sherman, Chairman of our Legal Committee, opposing State insurance and a Federal tax.

"At that same hearing Mr. Louis B. Schram, Chairman of our Committee on Improvement of State Inspection of Factories with Special Reference to Safeguarding Machinery, emphasized the desirability of adopting the Lewis Bill based upon the Civic Federation's model act, and also presented arguments in favor of the establishment of Federal and State museums of safety and the adoption of a standard uniform blank for reporting industrial accidents in the interest of accident prevention.

"There were afterward submitted by Mr. Francis Lynde Stetson, Chairman of our Committee on Legislative Policy, an opinion upon the police power of the United States Government, and a brief by Mr. William J. Moran against the elective system of compensation.

"These documents, in addition to the views of our Legal Committee concerning the effect of the decision of the Court of Appeals in New York State, are sought from every point in the Union by men giving consideration to the subject of Workmen's Compensation.

"Upon invitation from the Congressional Commission we arranged to have at its last hearing in Washington, November 6, experts from large corporations having voluntary compensation plans, and representatives of trades unions having relief funds, to offer suggestions upon such matters as the following:

> "'The amount which injured men shall receive'; 'The method of ascertaining the truth of their claims, and extent of injuries'; 'The number and degree of independents'; 'Medical examination by employer immediately following accident'; 'A practical scheme for eliminating malingering'; and some plan whereby a concern which has to pay compensation during a long period of time may follow up the recipient, etc., etc.

"We have been co-operating closely with the Workmen's Compensation Committee of the Uniform State Law Commissioners and a like committee from the American Bar Association appointed at our request.

States Especially Active.

"Our correspondence shows especial activity in the following States: West Virginia, Texas, Colorado, California, Maryland, Michigan, North Dakota, Montana, Connecticut, Rhode Island, Missouri, Indiana and Iowa.

"These have not yet adopted any form of compensation laws with the exception of Montana.

"We recommended last year that compensation commissions be appointed where they do not yet exist, and we should continue that activity by urging again that such commissions be appointed by the twelve legislatures in session this season, and that there be a new commission in New York State to continue the work so ably pursued by the Wainwright Commission.

"You will receive encouraging word from the Committee on Improvement of State Inspection of Factories as to the manner in which its recommendations have been received in the various States, and there will come to you for discussion from that committee a report upon a Model Safety Act. I am sure that its report is going to be not only constructive, but indicative of great progress and usefulness for the future."

Amendment Submitted by Mr. Stetson.

Great interest was shown at the meeting in an amendment to the Constitution of the State of New York that was proposed by Francis Lynde Stetson with a view to making possible the enactment of a Workmen's Compensation Law. The amendment follows:

> "The Legislature may require employers, or employers and employes jointly, to make provision for, and to pay reasonable compensation, regardless of fault, to employes on account of injuries suffered by them arising out of and in course of the employment, or to the dependents of any such employe dying from such injury.
>
> "To assure the payment of such compensation the Legislature may prescribe or approve methods of insurance which may or may not include the mutual association of persons responsible

(Continued on Page 24.)

SOME OF THOSE HEARD AT THE MEETING

(1) August Belmont, Chairman; (2) Francis Lynde Stetson, (3) William J. Moran, (4) J. Walter Lord, (5) Timothy Healy, (6) Louis B. Schram, (7) John Calder, (8) Cyrus W. Phillips, (9) James L. Gernon, (10) Marcel A. Viti, (11) Edgar T. Davies.

TO AID PURE FOOD AND DRUG CAMPAIGN

NEW DEPARTMENT OF CIVIC FEDERATION—REPRESENTATIVE COMMITTEE ON PLAN AND SCOPE —OPPORTUNITY FOR WORK OUTLINED AT GATHERING OF OFFICIALS, EXPERTS, MANUFACTURERS AND DEALERS AND LABOR LEADERS

PLAN AND SCOPE COMMITTEE.

UPPER ROW—JOHN HAYS HAMMOND, CHAIRMAN; HARVEY W. WILEY, DR. WILLIAM J. SCHIEFFELIN, SAMUEL GOMPERS, W. C. BREED, MRS. S. S. CROCKETT, LUCIUS P. BROWN.
LOWER ROW—NAHUM J. BACHELDER, JAMES O'CONNELL, W. G. LEE, JOHN GOLDEN, GEORGE M. WHITAKER.

IN accordance with a resolution adopted at a meeting held in New York City on October 2, the following Committee on Plan and Scope has been named by President Low for the Department on Pure Food and Drugs, of The National Civic Federation, which was organized on that occasion:

Committee on Plan and Scope.

JOHN HAYS HAMMOND, Washington, D. C., Chairman.

DR. HARVEY W. WILEY, Chief Food Chemist, Department of Agriculture, Washington, D. C.

LUCIUS P. BROWN, President of the Association of State and National Food and Dairy Departments, Nashville, Tenn.

DR. WILLIAM J. SCHIEFFELIN, former President of the Wholesale Druggists' Association, New York City.

W. C. BREED, Counsel for the National Wholesale Grocers' Association, New York City.

B. L. MURRAY, Chairman American Chemical Society, Rahway, N. J.

GEORGE M. WHITAKER, President Farmers' National Congress, U. S. A., Washington, D. C.

N. J. BACHELDER, former Master of the National Grange, Concord, N. H.

SAMUEL GOMPERS, President of the American Federation of Labor, Washington, D. C.

W. G. LEE, President Brotherhood Railroad Trainmen, Cleveland, Ohio.

JAMES O'CONNELL, International Association of Machinists, Washington, D. C.

JOHN GOLDEN, President United Textile Workers of America, Fall River, Mass.

MRS. S. S. CROCKETT, Chairman Public Health Department, the General Federation of Women's Clubs, Nashville, Tenn.

Other representative women will be added to the committee.

Attendance Was Representative.

The meeting in question was notable for a number of things, among them being the large attendance of leaders in the movement for pure food and drugs in this country; of representatives of labor and of the various associations of manufacturers who work under pure food and drug laws. A word of greeting was also given from a member of the Farmers' National Congress and the National Grange.

The opinion was expressed by several speakers that progress in food regulation had gone further to date than that in drugs, but all agreed that there was great work yet to be done in both lines.

There seemed to be a unanimity of sentiment that The National Civic Federation could play a useful part in furthering the cause of pure food and drugs, and special emphasis was laid by several speakers on the helpful work that they thought the Federation could do in the matter of educating the public in this matter.

Attention was called by some of the speakers to what they declared to be the tendency on the part of some of the States to adopt food and drug standards of their own with great resulting confusion. On this point William C. Breed, of Breed, Abbott & Morgan, attorneys, who is counsel for the National Wholesale Grocers' Association and other trade organizations, voiced the views of these and other food manufacturers as follows:

Conflicting Standards Weighty Question.

"The tendency toward the adoption of conflicting standards is the weightiest question that confronts the manufacturers to-day. Experience certainly leads to the conclusion that if standards for food products are to be formulated for the American people the movement should originate as an amendment to the national act, or at least should arise out of the authority of some national statute. The only intelligent method of handling a subject of this sort is through a commission which should be given the power not only to adopt standards, but to change them.

"The State of Wisconsin has already adopted a standard of its own, and other commonwealths have legislated similarly with regard to vinegar, milk, etc. In Indiana the use of benzoate of soda has been prohibited, although the Federal Government permits it. The matter is now in litigation, and the Supreme Court of the United States will pass upon it.

Great stress was laid on the necessity for uniformity between the States and the Federal Government in legislation on the subject of both food and drugs.

Leaders of organized labor called attention to the fact that the people they represent are probably more frequently the victims of unscrupulous purveyors of food and drugs than any other part of our citizenship. These gentlemen demanded stringent laws and a broad educational policy, and asked that The National Civic Federation exert its influence to the utmost to this end.

Spirit of Fair Play.

A number of those who spoke, while urging that no loophole be left for the unscrupulous dealer, insisted that encouragement be given manufacturers and dealers who are sincerely putting themselves in touch with the great national trend toward purity in food and drugs.

The distinguished and representative character of the attendance, the broad scope of subjects discussed, and the high character of the addresses that were delivered, made the meeting one that will likely be regarded as of more than passing importance in the campaign for pure food and drugs in this country.

Federation Wants Information.

In opening the meeting PRESIDENT LOW, of The National Civic Federation, who presided, said that he would waste no words in an effort to show the importance to the people of good food and good drugs. "The marvelous thing," said Mr. Low, "is that any one can be found who is willing wilfully to offer to the people for their use bad food and bad drugs." The speaker went on to state that The National Civic Federation had determined on creating a Department on Pure Food and Drugs, to consider the subject and to deal with it, "not because the Federation has any theories or any special knowledge, but it wants information, and when it secures that information it wants to sustain the authorities in protecting the interests of the people of the United States."

DR. HARVEY W. WILEY, chief food chemist of the United States Department of Agriculture, the first speaker, argued interestingly and at length for so much of a paternalistic attitude on the part of the Government in conserving the health of citizens as is necessary to bring about that result.

Speaking of the existing Federal law, Doctor Wiley said that he did not claim that this act had had its full fruition, that all knew as a matter of fact that it had not, but the speaker claimed a great step forward had been made, and that there was considerable hope in the near future for the complete realization of the ideas which had been enacted into law in that statute.

"Real Service for the People."

"The National Civic Federation," said Dr. Wiley, "in taking up this subject of the purity of drugs is doing a real service for the people of this country."

Dr. Wiley said that people are still dying by the thousands from preventable diseases because of their absolute indifference to the conditions surrounding them, and added that just as soon as they demanded the same protection of the Government that it now gives the laborer in Panama or the soldier on the Rio Grande, fear of infectious diseases would be practically abolished.

Dr. Wiley closed his speech with the advocacy of a National Board of Health, whose head should have a seat in the President's Cabinet, basing his argument for the establishment of such a board upon the statement that health is our greatest national asset simply measured by its money value, and that if those who look after agriculture, post-offices, our foreign relations, and so forth, have a seat in the Cabinet,

one who is charged with conserving the public health certainly should sit there too. The speaker's concluding words were: "It seems to me that if The National Civic Federation in its wisdom should see fit to promote a movement having to do with the public health, it would perform one of its most useful functions."

Work for the States.

LUCIUS P. BROWN, who followed Dr. Wiley, is president of the Association of State and National Food and Dairy Commissioners. In his opening remarks he expressed pleasure at being present on an occasion when "there is to be begun constructive work in another of the numerous and useful activities of The National Civic Federation for the public welfare." The speaker said that the protection of a food supply naturally assumes two forms, namely, (1) the assurance of the purity of foods as to their ingredients, and (2) the assurance of their freedom from disease-producing contamination. The first division named again divides itself under the heads of adulteration and misbranding. In discussing the protection of food from disease-producing contamination, Mr. Brown pointed to the fact that the Federal Government can aid scarcely at all in this, and that the work must therefore be done by the States.

After a general survey of the field, the speaker advocated certain concrete efforts that in his opinion should be made through organization in furthering the pure food and drug movement in this country. First among these he placed educational measures; second, organized effort was recommended to secure as early as possible an amendment of the National Food and Drugs Act so as to carry out the evident intent of its framers and make such other changes as nearly five years of experience have shown to be desirable; a third line of action recommended was the addition of such provisions to the Federal law as will prevent the misrepresentation of the therapeutic action of drugs. Mr. Brown spoke of the necessity of getting in the several States legislation which shall be uniform in its essentials with a future revised Federal Act, and he argued that the execution of pure food and drug laws should be taken strictly out of politics. He endorsed Dr. Wiley's proposal of a National Board of Health, and stated that one of the crying needs of food control work at this time is co-operation among the States and between the States and the nation.

State Drug Laws Needed.

"I regret to say," said Mr. Brown, "that pure food laws, well administered, are much more abundant than pure drug laws." The speaker expressed the opinion that The National Civic Federation could do no better work than to aid in the passage of pure drug laws in States which do not now possess them.

The question of short weights and measures was touched upon briefly with the statement that this evil is known to be "most flagrant everywhere." The opinion was expressed that a peculiarly favorable time had been chosen to inaugurate this department of The National Civic Federation, and that it could not engage in a work which would redound more to its credit with the masses of the people, nor one by which more could be done to quicken the public conscience or develop public morality.

German Testing and Inspecting.

Prior to the introduction of GEORGE L. FLANDERS, of the Department of Agriculture of New York, Chairman Low referred to a bulletin that had been handed him which showed that there exist in the whole German Empire 174 institutions which are required to test and inspect articles of food. Of these, 27 were founded with government capital, 49 with local community capital, 10 by agricultural boards, and 88 with private means.

Mr. Flanders, the next speaker, expressed agreement with Dr. Wiley that the common law doctrine of, "let him who purchases beware," should be modified in the matter of pure food and drugs with the establishment of certain paternalism, expressing the opinion, however, that care should be taken not to go to the extreme of paternalism, and thus run the risk of getting too far ahead of public sentiment and suffering a setback. Mr. Flanders stated that in New York during the past three years there had been referred to the Attorney-General for prosecution as violations of the food law more than 3,300 cases. Of these he said not ten per cent, and possibly not five, were cases in which a question of health was involved, but rather that it was almost invariably a question of fraud, which he assumed came within the police power.

The speaker laid emphasis on the fact that the law as it now stands is practically that the public cannot be sold any deleterious or harmful products, but that other adulterated goods may be sold if they are shown to be so on the label.

Important to Toilers.

Organized labor was heard from, following Mr. Flanders, in the person of JOHN GOLDEN, president of the Textile Workers of America. Mr. Golden at the outset endorsed Dr. Wiley's advocacy of a National Department of Public Health. He said that the creation of a Department on Pure Food and Drugs by The National Civic Federation was of importance to the toilers, first, because of the fact that this class was an easy prey to the unscrupulous adulterator and manufacturer and the false-weigher, and, secondly, because it could ill afford to stand short weight and short measure, particularly in view of the high price of commodities. Mr. Golden related an interesting experience, and an unfortunate one, it may be added, that a friend had who endeavored to administer honestly the office of sealer of weights and measures.

"I know," said the speaker, "that our people are wide awake with regard to the system of short measures and short weights, but I believe they need a whole lot of education with regard to adulteration of products. I feel there is a wide field for this National Civic Federation in its new department to aid in such education."

Great Public Service Possible.

HUGH FOX, secretary of the United States Brewers' Association, outlined succinctly and interestingly the role that he felt The National Civic Federation could play in the matter under discussion, in the following words:

"Now the mere fact that The National Civic Federation has suggested this new department is a crowning proof of the popularity of the public health movement. We believe that an organization like this, taking hold of this question in a careful manner, can do a very great public service."

Mr. Fox endorsed the proposition of a public health bureau. He said that he thought the day was coming when a man would be proud of the fact that he was a recognized purveyor to the American public and had lived up to the standards that had been set forth.

Resolve to Organize a Department.

Prior to the adjournment of the morning session DR. THOMAS DARLINGTON, former Commissioner of Health of the City of New York, and now secretary of the Welfare Committee of the American Iron and Steel Institute, offered the following resolution:

> RESOLVED, That it is the judgment of this meeting that a Committee of Fifteen be appointed to prepare a plan for a Department on Pure Food and Drugs, of The National Civic Federation, and to define the scope of such a department; and it is further resolved that the President be, and hereby is, authorized to appoint such a committee.

In seconding the above resolution, Herman Metz, former Comptroller of the City of New York, said: "We want a definite law that will mean something. I second that resolution most heartily."

Following the unanimous adoption of Dr. Darlington's resolution the morning session adjourned.

Lucius P. Brown in the Chair.

The afternoon session was called to order by Lucius P. Brown, who introduced Dr. THOMAS DARLINGTON as the first speaker. Dr. Darlington spoke in part as follows:

"Few people realize how great is the problem of furnishing pure and wholesome food to a large community. Inspection of the food supply cannot be made in a single place. It must be watched from its production to the table. Thus, in the inspection of milk, which may be taken as a type, there are six links in the chain:

"1. The care and inspection of the dairy.
"2. Transporting the milk to the creamery or receiving station.
"3. Handling the milk at the creamery.
"4. Shipping the milk on the train.
"5. Receiving and distributing the milk in the city.
"6. Care of the milk in the household.

Dr. Darlington Defines Proper Inspection.

"So there is a chain of links in the inspection of nearly all food. Yet how little of it is done compared with the vast amount of food sold and consumed! The inspection should see that the proper weight is given; that the food is not adulterated or colored, nor has anything in it that purports to make it better than it really is, nor contains deleterious preservatives, and that it is really that which we desire to purchase.

"We sit down to our daily meal and partake of ham from Westphalia, bananas and pineapples from Panama and Central America, olive oil from Italy, wines from France, cheese from Switzerland, sugar from Cuba, cream not yet twenty-four hours old from Canada, coffee from Brazil and tea from China, little mindful that the localities to which we are indebted for the supply of a single meal encircle the globe. Naturally, the assimilating of as great an amount of foods from such separated localities of divers interests affords opportunities for mistakes and frauds. We must admit that at this daily meal our Westphalian ham may come from Chicago, our Italian olive oil from the cottonseed of the South, our French wines from California, our Swiss cheese from New Jersey or New York, and our Java coffee may contain a mixture of chicory, dandelion, legumes, sawdust, date stones, acorns and other articles.

When Food Is Impure.

"Food is to be regarded as impure when sold under any misrepresentation; although it is not necessary that such misrepresentation should be productive of injury to health. Impure food may be divided under four heads: Decomposition, Infection, Substitution and Adulteration. To my mind, decomposed or infected food is the worst. It is that which is infested with bacteria that renders it unfit for human consumption. To illustrate: The way in which decomposed meat acts injuriously is that it contains certain poisons. When an animal is killed and the meat is kept too long or improperly, putrefaction commences. This cannot take place without bacteria. These little workers break up complex substances into those which are less complex, so that ultimately organic substances such as meat become water, carbonic acid and ammonia. But in the process of transition from meat to these substances many chemical products are formed and include what are known as ptomaines. So ptomaines are chemical poisons which are produced in putrefying flesh by the action of germs. They vary in character according to the stage of decomposition and are of various kinds; some crystalline, some liquid, etc. Many of these have been isolated so as to make distinct chemical compounds, and in their action resemble very much the vegetable alkaloids. Some are like nicotine, atropine, etc., covering nearly the whole list of alkaloids. Such ptomaines have been extracted from nearly all kinds of decaying albuminous material, from horseflesh, cheese, milk, etc. Some are not poisonous and others are extremely so. Thus, a few milligrams of neurine are sufficient to kill a cat. These ptomaines are of the most importance to us from the fact that, under certain conditions where the food has not been properly kept, they are found in some of our common articles of consumption, such as sausage, milk, ice cream, etc., and, unfortunately, people have been made ill by them and wholesale poisonings have occurred."

In introducing WILLIAM C. BREED, general counsel of the National Wholesale Grocers' Association, Chairman Brown paid the following compliment to the organization with which the speaker is connected: "Among the associations which are intimately connected with food work is one which has always stood for purity and for the square deal. I mean the National Wholesale Grocers' Association."

Mr. Breed expressed the opinion that the time had now come in the fight for pure food and drugs where a practical discussion of results should be had, together with some real agreement on the principles that must govern future food legislation and administration. The speaker said that it might seem strange to some that many of the trade organizations had been the leaders in the movement for uniform food legislation, and stated that this was in part to be explained by the fact that all business is opposed to chaos and that the picture of a manufacturer whose products are sold throughout the United States trying to follow the provisions of forty-six different statutes, not even mentioning the various interpretations of food commissioners, afforded a good example of the chaotic.

Another matter of concern, the speaker said, to those who are interested in the subject of pure food and drugs is the question of what to do with the various amendments that are continually being suggested under the guise of improvements upon the national law.

Weight and Measure Branding.

Mr. Breed said that organizations such as he represents had come to the belief that the public desires package goods to be branded with weight or measure and that accordingly they had approved a bill amending the national law in that particular. If passed, he said, it would be the first amendment to the national law since that measure was passed by Congress and adopted by a majority of the States. The speaker argued for national initiation of further legislation relating to pure food, showing that in the past legislative year, for instance, thirty-seven weight laws were introduced in the various State legislatures, all of which differed in terms. "Suppose, for example, that one-half of them had passed," said he, "what would have become of this principle of uniformity, which I think all agree is absolutely necessary to the successful handling of this great subject?" Mr. Breed argued strongly against any attempt on the part of any of the forty-six States to adopt a set of standards. "Experience certainly leads to the conclusion," said he, "that if standards for food products are to be formulated for the American people the movement should originate as an amendment to the National Act, or, at least, should arise out of the authority of some national statute. The only intelligent method of handling a subject of this

sort is through a commission, which should be given the power not only to adopt standards, but to change them."

Broad Powers for Commissioners.

Argument was made for the giving of broad powers to food commissioners. Particular emphasis was laid on the fact that there are several States that have no specific food laws, and a large number which have no enforcing officer except the district attorney, and it was further stated that in nearly all the States the appropriation for making the statute effective was inadequate.

Mr. Breed spoke of co-operation between those who are interested in improving conditions under which food products are prepared and packed and those who actually do the work. "The committee proposed to be formed by The National Civic Federation," said he, "can do much to bring about the desired condition. It is a great opportunity to become a medium between the consumer, the producer and the official."

A Physician's Views.

In introducing DR. E. ELIOT HARRIS, chairman of the Committee on Legislation of the New York County Medical Society, the Chairman said: "There is no class which has done more to put the pure food and drug laws upon the books than the physician." Dr. Harris said he hoped that the department which it was proposed to form would consider the value of the private agencies that work in the interest of pure drugs and wholesome food. Druggists, he said, when they hand out the product that is upon their shelves know very little of what it contains, because they buy from the wholesale druggist and have to take their merchandise on faith. "That faith," said the speaker, "under the present incomplete inspection, is not always well placed." He agreed with Mr. Breed that food and drug standards should not be incorporated in the laws of any State, and argued that the standardization of food products should be left with a commission.

HARRY THOMPSON was introduced by the chairman as a member of the Toledo bar who had given to the question of legal procedure in the enforcement of regulatory laws very considerable thought. Mr. Thompson's speech was mainly an arraignment of what he conceived to be the tendency toward paternalism in the regulatory laws of the country. "When Congress," said he, "undertakes under the Food and Drugs Act—when it has undertaken to control the health, pocketbooks and morals of the people—it has distorted and usurped a power never intended to be granted to it by the primeval law of the land."

Labor Asks Protection.

The speech of TIMOTHY HEALY, president of the International Brotherhood of Stationary Firemen, was given close attention. Mr. Healy strikingly outlined the necessity of pure food and drugs to the man who earns his living by manual labor. Said he, in part: "The laboring man is not in a position to protect himself in this matter; therefore I am glad to have an opportunity this afternoon to appeal to the men who are interested in this subject and understand it, and to The National Civic Federation to protect the workers, and to try to do away with the unwholesome and unhealthy food that is going into the bodies and stomachs of the great mass of the people to-day."

The speaker paid a tribute to Dr. Thomas Darlington and called attention to the unusual opportunity for aid to working people that lay within the power of the latter.

The opinion was expressed that The National Civic Federation had assumed one of the most important pieces of work that it had ever attempted, and an appeal was made to the various associations of dealers and manufacturers to lend a helping hand to the Federation in its work. Mr. Healy said that the matter should be viewed from a patriotic standpoint, adding, "If we are to poison the bodies of our children with rotten foods, what manner of men and women will they be?"

Trend in Pharmacy Business.

DONALD McKESSON, of the drug house of McKesson & Robbins, made an effective speech, which was given close attention. Mr. McKesson argued strongly for thorough consideration from every standpoint of any laws that might be proposed. He spoke interestingly of the changes that recent years had wrought in the business of pharmacy, saying that it had become so unremunerative that from it alone the small pharmacist could not make a living.

Force of circumstances, the speaker said, was driving the better class of men out of the business into more lucrative lines. Mr. McKesson expressed the opinion that it would be a good thing for the country if the practice of pharmacy could be restricted to those who are seriously entering it as a profession.

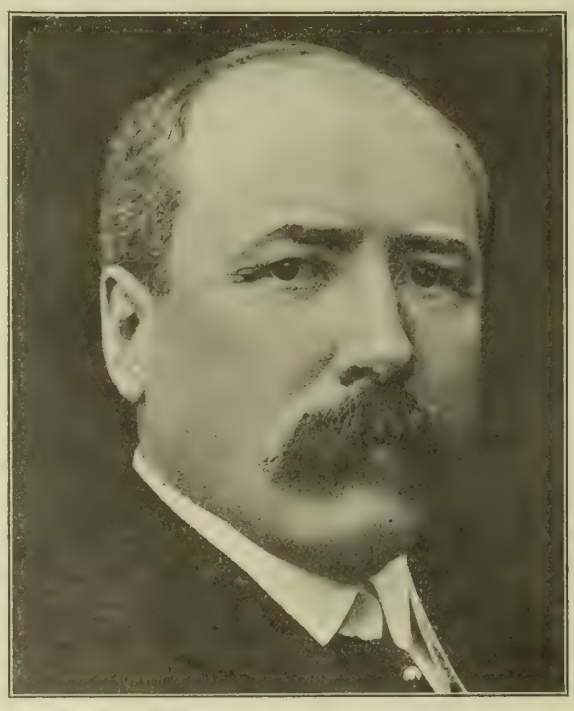
A paper from GEORGE M. WHITAKER, in charge of the Market Milk Section of the United States Department of Agriculture, was presented, Mr. Whitaker being prevented at the last moment from attending the meeting. The writer, as secretary of the Farmers' National Congress, and as a member of the National Grange, presented to the meeting, on behalf of those organizations, the best wishes of the agricultural people of the country.

Reactionary Legislation Menace.

The speaker cited instances in five States where recent legislation of a reactionary nature had been passed with regard to matters affecting food material, and said that such cases pointed to the need of education as being necessary in many instances before there can be a suitable law.

Mr. Whitaker expressed the opinion that the consumer should be shown that differences in quality mean differences in cost, and that a low cost product may be dangerous and expensive in the long run. He counseled against too much reliance upon law to right all that was wrong.

Following the reading of this paper the meeting adjourned.



SEEKS TO PREVENT DELAY IN LEGAL PROCEDURE

Civic Federation Advocating Bill for Federal and State Adoption That Would Cut Litigation Costs, Too—Its Special Department Aiding Bar Association.

The Executive Council of the National Civic Federation is urging the passage of a bill now in Congress (known as Senate No. 3750 and House No. 16461), designed to prevent delay and unnecessary cost in litigation through reversals by higher courts on technicalities.

The text of the bill is as follows:

"No judgment shall be set aside, or reversed, or new trial granted, by any court of the United States in any case, civil or criminal, on the ground of misdirection of the jury or the improper admission or rejection of evidence, or for error as to any matter

JUDGE ALTON B. PARKER.

of pleading or procedure, unless, in the opinion of the court to which application is made, after an examination of the entire cause, it shall appear that the error complained of has injuriously affected the substantial rights of the parties. The trial judge may in any case submit to the jury the issues of fact arising upon the pleadings, reserving any question of law arising in the case for subsequent argument and decision, and he and any court to which the case shall thereafter be taken on writ of error shall have the power to direct judgment to be entered either upon the verdict or upon the point reserved, if conclusive, as its judgment upon such point reserved may require."

President Low is also addressing letters to the Governors of the States in which Legislatures are now in session, asking them to urge the passage of this bill by their respective Legislatures.

It has already become a law in Kansas, Wisconsin and California, and in Ohio it has been adopted with some modifications.

The National Civic Federation has a Department on the subject of Reform in Legal Procedure, which will meet during the sessions of the Federation's Twelfth Annual Meeting, to be held in Washington, March 5, 6 and 7, 1912. This Department, of which Alton B. Parker is Chairman, is working in conjunction with the American Bar Association. Its Executive Committee includes the following well-known attorneys and deans of university law schools:

Representative Executive Committee.

ALTON B. PARKER (Chairman), former President American Bar Association, New York.
STEPHEN H. ALLEN, Topeka, Kan.
CHARLES B. AYCOCK, Goldsboro, N. C.
CHARLES J. BONAPARTE, Baltimore, Md.
RALPH W. BRECKENRIDGE, Omaha, Neb.
WILLIAM P. BREEN, Fort Wayne, Ind.
WILLIAM E. CHANDLER, Concord, N. H.
LAWRENCE COOPER, Huntsville, Ala.
FREDERICK P. FISH, Boston, Mass.
WALTER L. FISHER, Chicago, Ill.
ERNST FREUND, Chicago, Ill.
CHARLES NOBLE GREGORY, Iowa City, Iowa.
STEPHEN S. GREGORY, President American Bar Association, Chicago, Ill.
WILLIAM O. HART, New Orleans, La.
FREDERICK N. JUDSON, St. Louis, Mo.
GEORGE W. KIRCHWEY, New York.
FREDERICK W. LEHMANN, former President American Bar Association, St. Louis, Mo.
CHARLES F. LIBBY, Portland, Me.
WILLIAM MINOR LILE, Charlottesville, Va.
NATHAN WILLIAM MACCHESNEY, Chicago, Ill.
CHARLES F. MANDERSON, former President American Bar Association, Omaha, Neb.
LAWRENCE MAXWELL, JR., Cincinnati, Ohio.
JOHN G. MILBURN, New York City.
PETER W. MELDRIM, Savannah, Ga.
MORGAN J. O'BRIEN, New York.
GEORGE R. PECK, former President American Bar Association, Chicago, Ill.
ROSCOE POUND, Chicago, Ill.
J. H. RALSTON, Washington, D. C.
HENRY WADE ROGERS, New Haven, Conn.
JOHN BELL SANBORN, Madison, Wis.
WILLARD SAULSBURY, Wilmington, Del.
THOMAS W. SHELTON, Norfolk, Va.
CHARLES W. SMITH, Stockton, Kan.
SELDEN P. SPENCER, St. Louis, Mo.
FRANCIS LYNDE STETSON, New York.
MOOREFIELD STOREY, Boston, Mass.
HANNIS TAYLOR, Washington, D. C.
CHARLES S. THOMAS, Denver, Col.
BRADLEY MARTIN THOMPSON, Ann Arbor, Mich.
HENRY ST. GEORGE TUCKER, Lexington, Va.
GEORGE TURNER, Spokane, Wash.
EVERETT P. WHEELER, New York.
JOHN HENRY WIGMORE, Chicago, Ill.
WESTEL W. WILLOUGHBY, Baltimore, Md.
FREDERIC J. STIMSON, Boston, Mass.

Injustice to Workingman.

The injustice to the workingman in the law's delay is so great that he can scarcely avail himself of the courts to bring a suit in any matter. This is particularly true in cases resulting from injuries through accidents. By the time the injured man receives a verdict, which he does after many delays and reversals for technical reasons, the court costs deprive it of much of its value.

According to the statistics of the American Bar Association, *new trials are granted in forty-six per cent of all the cases in our courts involving a penitentiary offense.* And in sixty per cent of this number the new trial is granted, not because of a question affecting the possible guilt or innocence of the prisoner, but *because of a purely technical point of dispute in the conduct of the case.*

In nearly half of the criminal cases in American courts it requires two or more trials to convict a prisoner. And in sixty per cent of these cases his guilt is plain. He is given a new trial because the higher court holds that there has been an error of "pleading and practice," either on the part of the lawyers or the judge.

Some Pertinent Illustrations.

Illustrations can be taken from any State. Hugh Weir, giving examples of the technical rulings, practice and abuses in our courts, says:

> "Here are two cases from Alabama and North Carolina which sound almost incredible. Indeed, were they not matters of court record, the average American citizen would dismiss them with a shrug as sensational journalism:
>
> "In the former State, a man charged with murder went free, because the Clerk of Courts, in writing the word 'malice' in the indictment, left out the letter 'i.'
>
> "In North Carolina an enraged citizen shot a neighbor through the breast, inflicting a wound which resulted in the latter's death and his own arrest for murder. A short time later, however, he was released from custody. In the indictment the clerk had spelled breast as 'b-r-e-s-t.' The court held that the misspelled indictment was not legal and freed the prisoner."

SAMUEL GOMPERS—THE FLAG AND McNAMARA INCIDENTS

By RALPH M. EASLEY.

SINCE the confession of the McNamaras in the Los Angeles dynamite cases many letters have been received by me as editor of THE NATIONAL CIVIC FEDERATION REVIEW, both from friends of the Federation and from its critics, asking about the relation of Mr. Samuel Gompers to that matter and to various incidents which have taken place since, including the recent charge that he had "defiantly and contemptuously trampled upon the American flag."

Four Questions Commonly Asked.

Instead of attempting to reply to each of these correspondents, I will group their questions under four heads, to wit:

1. Is Mr. Gompers guilty of defiantly trampling on and insulting the American flag at a Labor Day meeting in San Francisco?
2. Does Mr. Gompers use his influence to prevent members of the unions from joining the State militia?
3. Did Mr. Gompers have criminal knowledge of the crimes of which the McNamaras were guilty, as accessory either before or after the fact?
4. Why does not Mr. Gompers cancel the charter of the International Association of Bridge and Structural Iron Workers until that Association purges itself of its dynamiting members?

---

1. Is Mr. Gompers guilty of defiantly trampling on and insulting the American flag at a Labor Day meeting in San Francisco?

LET us take first the incident of the flag, which seems to be the climax of a virulent campaign of insinuation, innuendo and denunciation against Mr. Gompers, conducted ever since the day of the McNamara confessions. In fact, this recent attempt has been so palpably unfair that it has proved a boomerang, and is giving color to Mr. Gompers' claim that he is being persecuted. This is well voiced by the following editorials from "The New York Sun," "The New York Evening Post" and "The Chicago Tribune":

From THE SUN, January 4, 1912.

"The Labor Leaders and the Flag."

"We have our opinion of Mr. Samuel Gompers and of some of his associates in the misleading of union labor. We do not hesitate to express this opinion plainly whenever it becomes proper to discuss his or their pernicious acts and utterances. But we do not believe that GOMPERS, or any other leader sufficiently astute to get into a controlling position in the vast organization, would be fool enough, even under momentary excitement, to plant foot leather upon the American flag in a spirit of defiance or insult. The yarn from San Francisco will not wash. The man mad enough to do anything of that sort would cease by the very fact to be dangerous as a misleader, for he would be defying and insulting his own American audience."

From THE POST, New York, January 3, 1912.

"Silly Piece of Business."

"The charge that Gompers trampled on the American flag while making a speech in California on Labor Day last year looks like an extremely silly piece of business. Mr. Gompers has many faults, but he is not an imbecile; and, even supposing that his sentiments would incline him to such a performance, no man of sense will believe, without overwhelming evidence, that he was such an ass as to indulge in it upon a public occasion. If the photographs that are being exploited are genuine, then we may be sure there is some simple explanation of the appearance they present, having in it no taint of treason. The dynamiting inquiry presents too much that is serious to give room for such childishness as this flag business; the only result that it is likely to have is to give Gompers ground for the accusation that he is being persecuted. Possibly an industrious search might discover that he, or some other labor leader, has wiped his mouth with a paper napkin having the flag imprinted on it; and there would be just about as much use in following up that scent as in trying to read disloyalty into those Labor Day photographs."

From THE CHICAGO TRIBUNE, January 3, 1912.

"A Vicious Piece of Claptrap."

"The story that President Gompers stood on the flag to show his contempt for it at a radical labor meeting in California will not be believed by any sensible American until it is proved beyond a doubt as to all its circumstances. Mr. Gompers is not a fool. Moreover, Mr. Gompers is yet to be shown to be lacking in patriotism. Both would have to be true if this yarn is true as given out.

"The story, moreover, is especially untimely now. Mr. Gompers has been severely criticized for his course prior to the McNamara trial. The arrest and prosecution and confession of these men have brought about something like a crisis in the history of union labor. Public opinion should keep cool, and sane, and just. It would be an injury to the whole nation if, whatever the outcome of the proceedings initiated against the McNamaras, demagogic passion, class prejudice and reaction should be permitted to turn the public conscience against legitimate union labor and the cause of the wage earner's advancement."

Not a Government Organ.

There are, however, many people who still believe the story which has been sent broadcast over the country, founded on the charges made by the *Army and Navy Register*. This paper is supposed by the general public to be an official organ of the War and Navy Departments, whereas it has no official connection whatever with the Government, and is simply what would be called in the commercial world "a trade journal." Under the heading of "The Enemies of the Army," this paper charges that a systematic attack has been made on the military service on the Pacific Coast; and that there is being conducted "a campaign by means of street harangues and defamatory posters with a view to prejudicing public sentiment against the army and discouraging enlistment."

This journal makes it appear that Mr. Gompers is connected directly with that agitation, which statement the officials of the War Department promptly denounced as untrue, saying that the American Federation of Labor had no part in that agitation, and that it was the work of the Socialist and Anarchist organizations on the Coast.

Referring specifically to the flag episode, the *Army and Navy Register* states that "the War Department is in possession of photographs showing these speakers standing on the American flag and addressing their audience. The photographs are sent officially and are duly authenticated."

A Palpable Fraud.

If anything more is needed to show the fraud perpetrated on Mr. Gompers in this matter than Mr. Gompers' own emphatic denial, which follows, and an explanation of the plates published by the *Army and Navy Register*, it certainly will be furnished by a careful scrutiny of the two pictures on the next page, which have been taken from the *Michigan Tradesman*, an employers' journal, published in Detroit, December 6, 1911. The upper picture is the same as that published by the *Army and Navy Register*, but the second one seems to have been too palpable a fraud to be used in the recent story going the rounds of the press. If the latter picture had been sent out, I am sure most of the journals that I have seen publishing the first picture would have quickly repudiated the whole matter, for the industry of producing composite fake photographs is quite thrifty and is well understood in all newspaper offices. Even President Taft recently has been compelled to have an injunction served on a Washington photographer who has been furnishing to any sitter a photograph showing him shaking hands with the President at a public or private reception, the President taking a walk with him, or the President showing him over the White House, etc.

Mr. Gompers' Statement.

Mr. Gompers' denial, given to the press on January 2, 1912, is as follows:

"Of the two addresses I made in Oakland, Cal., one was on Labor Day, in connection with the San Francisco demonstration and mass meeting, and that was during the day. The other meeting was during the evening, and was some days later, in a hall.

"My recollection of the meeting at Shellmound Park, Oakland, was that it was a park for athletics. There is a grandstand and a large field. A temporary stand was erected in the middle of the grounds, the speakers facing the grand stand, and in this instance there were thousands of men and women standing between the speakers' temporary stand and the grand stand. The crowd was so great that many of them overflowed and stood on the temporary platform, so that the speakers could not have been seen by any one other than those on the temporary speakers' stand. There was a table on this stand, intended for the speakers' notes, and having a pitcher of water and a glass on it. The table was festooned with an American flag. No part of it, except possibly an inch, was overlapping the table, and this simply for the purpose of holding it in position.

"When the meeting was called to order the disadvantageous position of the speakers was observed, and the public officers (School Superintendent, Mayor, Supervisor, etc.), as well as the speakers who addressed the assemblage, were called to by the crowd to ascend the table. The crowd manifested its discontent because it could not see those who were to address them and they shouted their disapproval, and those nearer shouted to us to 'get on the table.' A chair was furnished and we stood on the table. They did not one of them, nor did I, stand upon the American flag. *I would as lief insult the memory of my revered mother as to insult the flag of my country.* But anything and everything is good enough to charge me with and try to bring me into contempt with the American people. But my life of more than sixty-one years has been so straightforward that my good name and the work that I have tried to do in the interest of the people of our country will live long after my traducers will die and their names be coupled with the contempt of the people of the United States."

A "Built-Up" Photograph.

Mr. Gompers also produced correspondence with Mr. Orion T. Thomas, dated Los Angeles, October 24, 1911, stating that the charges had been made before Stanton Post, G. A. R., Los Angeles, and that the Post had adopted resolutions censuring Mr. Gompers for desecrating the American flag. Mr. Gompers immediately telegraphed his denial, embodying the above explanation. In his reply, under date of November 6, 1911, Mr. Thomas made the following statement: "As soon as I saw the photo I was convinced that it was a 'built-up' or 'composite' picture, and stated my opinion and how such photos were made. I also submitted the picture to several of the artists on the *Los Angeles Examiner*, who pronounced it the rankest kind of a 'fake' photograph."

As stated above, the daily press, so far as I have been able to discover, has not published the flag picture in which Mr. Gompers seems to have been jumping all over the table with soles properly inked at intervals. It would seem from that picture that Mr. Gompers must have been very precise in his motions, as at no time did he cross his tracks. Also, the stripes seem to be going the wrong way, according to the other picture. At one time he would have been standing eighteen inches off the table, resting his one hundred and eighty pounds avoirdupois on the salubrious climate of California. There are plenty of other evidences of the picture's having been made to order.

How the Real Picture Looks.

The writer has seen a copy of *The San Francisco Call* of Tuesday, September 5, 1911, the morning following Mr. Gompers' Labor Day speech, and the picture in that paper shows clearly that there is no flag on the table from which he spoke. That picture, published the day after the meeting, agrees entirely with the statement of Mr. Gompers when he says that there was a flag draping the table and the edges of it were turned over, presumably to be tacked down. So, too, do all the circumstances I have narrated above, including the tell-tale footprints. But it will be noted that the tale they tell is one of deception and fraud by the author and finisher of the photograph.

2. Does Mr. Gompers use his influence to prevent members of the unions from joining the State militia?

I HAVE known Mr. Gompers for fifteen years, and, while I have found him to be a vigorous and vehement speaker on many subjects, and have known him to take many positions with which I do not agree, I have never heard any of his utterances or read anything in his writings that had the least taint of disloyalty to the Government. On the contrary, his speeches have been intensely patriotic. It has happened frequently that some local union, controlled by the Socialists or Anarchists, or, for the time being, by radical union men who had had a sanguinary conflict with the State Militia, has passed

resolutions refusing to permit members of that union to belong to the State Militia. In one case, I believe, the union expelled a member because he had joined the State Militia. Mr. Gompers' position on that matter is clear and convincing. I quote a letter which he habitually sends in reply to questions on this subject. The particular copy of this letter which I have is addressed to Mr. W. L. Amthor, Dickinson College, Carlisle, Pa. It reads:

Militia Bulwark Against Standing Army.

"Now, as to the matter of members of trade unions joining the State Militia, I beg to say that you have an entirely erroneous idea. As a matter of fact, a man who is a wage-earner and honorably working at his trade or calling to support himself and those dependent upon him has not only the right to become a citizen soldier, but that right must be unquestioned.

"The militia, i. e., the citizen soldiery of the several States in our country, supplies what otherwise might take its place—a large standing army.

"The difference between the citizen soldiery of the United States and the large standing armies of many European countries is the difference between a republic and monarchy—it is the difference between the conceptions of liberty and tyranny.

"While organized labor stands against the arbitrament of international or internal disputes by force of arms, yet we must realize we have not yet reached the millennium; that in the age in which we live we have not the choice between armed force and absolute disarmament, but the alternative of a large standing army and a small one supplemented by a volunteer citizen soldiery——the militia of our several States.

"With this both wisdom and policy, as well as principle, should warrant our trade unions in not taking any cognizance of the matter at all, allowing each member to follow the bent of his own inclinations, insisting only that he shall be a wage-earner, a faithful member of his union, and true to the cause of labor—the cause of humanity.

"In connection with this subject-matter I would also call your attention to the action taken by the recent convention of the American Federation of Labor, held in San Francisco."

Socialists' War on Militia.

That patriotic position is taken by Mr. Gompers and all the representative national leaders of the American Federation of Labor and the Railway Brotherhoods, which organizations include ninety-five per cent. of the organized labor in this country. At one of the meetings of the American Federation of Labor, where a resolution was offered by the Socialists, refusing to members of the State Militia membership in the unions, Mr. Gompers left the chair and made an impassioned speech against the resolution, which resulted in its being tabled by an overwhelming vote. So much for his loyalty to the Government.

3. Did Mr. Gompers have criminal knowledge of the crimes of which the McNamaras were guilty, as accessory either before or after the fact?

IN reply to the above question I will say that, speaking for myself, I do not *know* whether he had or had not, but I do not believe he had. No man can *know* what any other man suspects or what any other man *knows*. It is hard enough for a man to know all the time just what he himself knows and suspects. If there is any evidence that Mr. Gompers did know of these crimes of the McNamaras such evidence should be produced. Mr. Gompers has challenged and defied the world to produce a scintilla of incriminating evidence against himself. On the theory that every man is presumed by the law to be innocent until he is proved guilty, are not those who attack Mr. Gompers making the same kind of mistake that he is criticized for making, except that they are taking for granted guilt when he took for granted innocence?

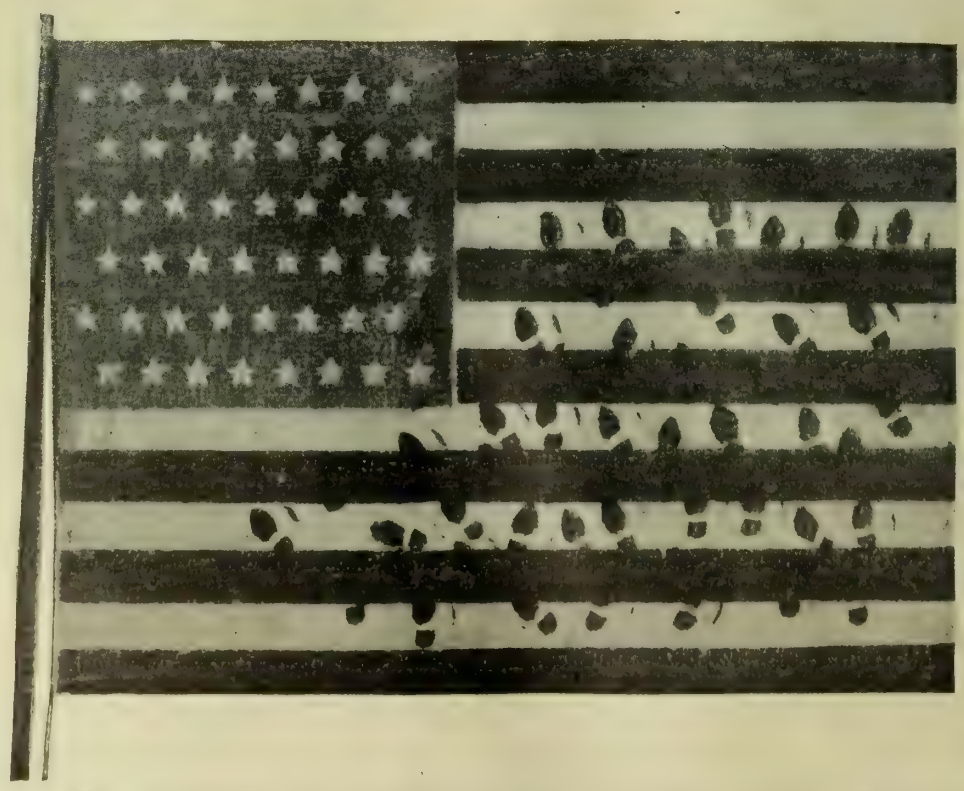
"Assassins" versus "Martyrs."

I hope also that all other labor men, union or non-union, or their sympathizers, involved in any criminal manner in dynamiting or other lawless outbreaks will be adequately punished.

I have no sympathy with the maudlin sentiment expressed in certain quarters that the McNamaras are martyrs of oppression. They do not belong in the class of martyrs who go to the stake or the guillotine for a principle. The martyr suffers. The hired assassin takes pay. The ruling quotation of the McNamaras was $125 to $250 for a murder or murders, discount for job lot of bridge explosions.

As to the charge that Mr. Gompers had guilty knowledge of the McNamara outrages, the general counsel of the National Erectors' Association, Mr.

Photographic Reproduction from The Michigan Tradesman, December 6, 1911.



Union Labor Leader Desecrates American Flag

Gompers Tramples Under Foot "Old Glory" While Discussing Disrupted Labor Conditions

SAMUEL GOMPERS

President American Federation of Labor, desecrating the American Flag by standing on it, while speaking at Oakland, Cal., September 5, 1911. Will the honest laboring men of this free land approve of such treatment of "Old Glory?"

The American Flag stained with the footprints of Sam Gompers. These stains and the opposition to the Boy Scouts by the American Federation of Labor are enough to cause George Washington and Abraham Lincoln to rise from their graves. Let the American people judge of these insults. "Up with 'Old Glory'—down with the desecrators."

Walter Drew, has publicly announced that that association has no evidence incriminating Mr. Gompers in any way. The appeal from District Attorney Fredericks to Mr. Gompers to unseal the mouths of the McNamaras would of itself imply that he knew of no evidence against Mr. Gompers; otherwise his request would have been stupid. If Mr. Burns had any evidence it might be presumed that either Mr. Fredericks or Mr. Drew had knowledge of it; and yet, of course, this does not follow. It must not be forgotten that the charges of knowledge made against Mr. Gompers come largely from Mr. Burns. Now, Mr. Burns, in addition to being an able detective, is also a very human man, and after Mr. Gompers had so vehemently and, as I think, ill-advisedly, charged that there had been a conspiracy to plant the various dynamite bombs throughout the country for the purpose of injuring organized labor, Mr. Burns naturally wished to get back at him on every possible occasion, and he certainly was in a position to do so when the McNamaras confessed.

In this connection I want to repeat President Low's statement that the American people owe a debt of gratitude to Mr. Burns, to the Erectors' Association and to all who were concerned in securing evidence so incontestable that it forced the confessions of the McNamaras, because only by those confessions was a class war averted on the Pacific Coast.

A Call for Fair Play.

Mr. Gompers, in addition to challenging Mr. Burns to produce in court any evidence against him, has also issued a challenge to Senator Heyburn, who in the United States Senate undertook to prevent the acceptance by that body of a petition from the American Federation of Labor because it was signed by Samuel Gompers. That the Senate did not uphold Senator Heyburn was proved by the fact that his motion was defeated by fifty-seven votes against three. I think every one will agree that the fair thing for the men whom Mr. Gompers has challenged is either to accept his challenge or to admit publicly that they have no evidence against him.

I know that many of the important representative men in this country who are acquainted with Mr. Gompers, and have worked with him, feel from their knowledge of the man that he is not capable of such conduct as is charged against him. This does not mean that there is not criticism of his action in rushing to the rescue of the McNamaras and so sweepingly charging their accusers with fraud and conspiracy. Many of Mr. Gompers' friends think that that was bad judgment, and since the confessions he probably thinks so himself, but bad judgment is not a crime. If it were the jails would not hold us all.

A friend of Mr. Gompers recently compared him to a bear with her cubs, instantly on the defensive, irrespective of conditions or theories. The two millions of members of the unions are Mr. Gompers' cubs, and if they are attacked he is at once on the defensive. This quality is at once his strength and his weakness.

Path Not Strewn with Roses.

Another characterisic of Mr. Gompers which frequently makes enemies for him is his vehement manner of speaking. It has been said that, if he should make the statement to an audience that two and two make four, he would do it with clenched fist and with such force and energy as to arouse immediate hostility and provoke a denial of the proposition. One explanation of this is to be found in the fact that, in the thirty years of struggle to build up what even his enemies will concede is the greatest labor organization in the world, his path has not been strewn with roses. It has been one battle after another, and it may well be surmised that all the combative elements in his nature are well developed and trained for instant action. In this long struggle he has embitttered many people, including individual employers and organizations of employers. He also has developed a hostile feeling in a great section of the daily press in the large cities, so that at times it seems almost impossible for him to get a fair showing in many of our important newspapers.

But, while Mr. Gompers has developed this hostility it is more vital to him to feel that he has the affection and confidence of ninety per cent of the American Federation of Labor—the remaining ten per cent being the Socialists, who would destroy him if they could. The more he is unfairly attacked by his critics in or out of the press, the stronger becomes the loyalty of his people. In this respect he is like a Congressman who has his own constituency solidly with him and everybody else against him. It is his own people about whom he cares, and he can afford, politically speaking, to snap his fingers at all the others. The rank and file of the unions read few of the daily newspapers which are the most unfriendly to Mr. Gompers, but when they do read what they believe to be the unfair attacks on him it only makes them grit their teeth and shout all the louder for their President.

The Deadly Headline.

As an instance of the alleged unfairness of many papers toward Mr. Gompers, his followers point to the headlines over the Indianapolis dispatches on January 3, 1912, purporting to give the statement of Ex-Mayor Charles A. Bookwalter, of that city, in reference to the investigation he had once made of dynamite explosions in Indianapolis. Here are three that were brought to my office by two officers of an important union:

"TOLD GOMPERS OF DYNAMITE TWO YEARS AGO."

"AVERS GOMPERS WAS COGNIZANT OF DYNAMITING."

"SAYS GOMPERS KNEW OF McNAMARA'S GUILT."

These dispatches stated that Ex-Mayor Bookwalter, as the result of his investigation, had come to the conclusion that McNamara was responsible for the explosions in his city. In answer to the specific question whether he had told Samuel Gompers, he said: "No, I don't know Mr. Gompers well enough to talk about these things." And when asked if any of the men he had told had reported it to Mr. Gompers, he said: "I don't know whether they told him or not." Then this dialogue occurs:

"Do you think Mr. Gompers knew while these explosions were going on who was responsible for them?"

"Gompers is the general of a great army, and, like a general, he did not inquire when any of his men were engaging in guerilla warfare. But, if this were called to the attention of the General, naturally he would rebuke them."

"Do you think he could have stopped it had he tried?"

"I do not, as the iron workers were only an allied organization to the American Federation of Labor. *John J. McNamara was not the kind of man to take orders from anybody.*"

That was all there was upon which to build the headlines, and yet, unless the readers of these papers read through the entire article, they would certainly think that Mr. Gompers had been told of these crimes.

Vigorous Opponent of Socialism.

There may be a reason for this unfairness other than a common unfriendliness to Mr. Gompers in newspaper circles, which is not generally understood. Mr. Gompers is a most vigorous opponent of Socialism. He has been charged by the Socialists, both here and abroad, with having been responsible for keeping the trade unions of this country from joining the Socialist party. Also, Mr. Gompers and other leaders of the American Federation of Labor at the Annual Convention held in Atlanta, Georgia, last November, completely routed the Socialists, by a vote of three to one, on the proposal to force the labor leaders out of The National Civic Federation. This might naturally be supposed to be a reason why Mr. Gompers should have friends, rather than enemies, on the daily newspapers, whose interests and sympathies are all against revolutionary Socialism.

In this connection the following excerpt from a letter recently received from a prominent labor man in New York may well be worth considering:

* * * * * * *

"Has it occurred to you that much of the venom contained in the attacks by the newspapers generally on Mr. Gompers does not necessarily represent the feeling of the owners and responsible publishers of those papers? It is well known to all readers of Socialist papers that the chief object of their hatred to-day is Samuel Gompers. While they do not love John Mitchell, James Duncan, James O'Connell and the other labor men more, they love Gompers less. Now, the Socialists by their own statements, borne out by what we can see in the daily papers, are pushing their propaganda in nearly all the large newspaper offices in the country. I quote an extract bearing on this subject, taken from an article by George Allen England, a magazine writer, which I think ought to be sent to the proprietors and managers of all daily papers for their information:

Socialists in Editorial Sanctums?

"'In almost every newspaper and magazine office to-day Socialism has its adherents. I am informed by the editor of a great daily that in Chicago the newspaper offices are so full of Socialists, not only in the composing and press-rooms, but also on the editorial staffs, that, should occasion arise, the Socialists, by striking, could instantly put an end to the publication of the papers. . . . Many a plutocratic magazine owner would be horrified if he knew the truth that one or more of his apparently subservient editors were out-and-out Marxian Socialists, dues-paying party members and enthusiastic workers in this field. The moral and intellectual influence exerted by these large numbers of directing spirits scattered throughout the publication offices of this country, even though their work must, perforce, be carried on sub rosa, can hardly be over-estimated. . . .

"'I personally had the privilege, somewhat over a year ago, of helping organize in Philadelphia and in New York City Socialist clubs comprising professional and literary people of national repute, editors, writers, illustrators and the like. The Philadelphia club was holding, and is holding, large banquets, "full-dress" affairs, at fashionable hotels, where, by speeches from prominent Socialists, the new doctrines can be taught to a class of people who would refuse to attend the working class meetings. The membership of the New York club is now close to fifty. It meets once a month to discuss radical topics and consider means of furthering the Socialist propaganda through the printed word.'

"With the newspapers of the country 'honeycombed with Socialists,' and with Samuel Gompers recognized as the greatest enemy of the Socialists, there need be little surprise that a vigorous campaign is being made by the newspapers against him. A Socialist headline-writer on a daily newspaper, understanding as he does the Socialist philosophy and tactics, can do great work for Socialism and against all the enemies of the Socialist party. The managers may be none the wiser, and in this particular case, as they have a dislike for Mr. Gompers on general principles, the headline-writer may get an advance in his salary if he does an exceptionally good job."

* * * * * * *

I will not comment on the above. I do not know how far the statements of the Socialists to whom the writer of the letter refers are true. I am sure, however, that there are some papers which oppose Mr. Gompers that are not influenced by the Socialists.

4. Why does not Mr. Gompers cancel the charter of the International Association of Bridge and Structural Iron Workers until that Association purges itself of its dynamiting members?

IN reply to the question given above, I would say that the answer is perfectly clear to those who understand the organic character of the American Federation of Labor. Unfortunately, and also naturally enough, outside of the labor organizations themselves, very few of the ninety million people in this country do so understand it. The same question has arisen many times with reference to strikes. Why doesn't Mr. Gompers, as President of the American Federation of Labor, do this, or that, or the other thing? The fact is that Mr. Gompers has no more authority to tell the structural ironworkers what they shall do or what they shall not do than has President Taft the power to tell South Carolina what it shall do in the case of the lynching of a negro; nor has Mr. Gompers any more power to cancel the charter of an association of labor men than would the President of the United States have to read South Carolina out of the Union if he did not like its conduct. The American Federation of Labor is a federation composed of delegates elected annually by the one hundred and thirty organizations affiliated with it While Mr. Gompers is the president of the organization, he does not own it; he is the paid employe of the one hundred and thirty unions.

Authority Is Limited.

His duties and powers are clearly defined by constitution and by-laws. Under these he has not a vestige of authority to interfere with the internal government of any of the constituent organizations. An attempt on his part to do so would be instantly resented, and should he persist, the organization involved would doubtless prefer charges against him at the ensuing annual convention of The American Federation of Labor. If the organization were not sustained by the Federation in convention assembled, the complainant organization would be likely to withdraw from The American Federation of Labor.

A charter can be revoked only by a two-thirds vote of all the delegates elected to an Annual Meeting of The American Federation of Labor. Where charters have been revoked by the Executive Council it has been in cases where the offending organizations have disputed an order given by The American Federation of Labor itself in convention assembled. No set of people are more jealous of their prerogatives and rights than the officials of labor organizations—National, State and local. When one organization is involved in a strike with employers, it is impossible to get labor leaders of other crafts to interfere in any way. They may be willing to give advice if it is requested, but they will not volunteer it. This unwritten law is just as potential with organizations of employers, mercantile associations, and in fact all classes of organizations that have national and affiliated State and local branches, as it is with labor organizations.

Outside Interference Resented.

When the President of the New York Periodical Publishers' Association was engaged in the controversy with the Typographical Union, he would have

PRACTICAL MEASURES FOR ACCIDENT PREVENTION

THE NATIONAL CIVIC FEDERATION, through its Department on Compensation for Industrial Accidents and Their Prevention, is urging the uniform adoption by the several States and the Federal Government of the following measures, or the principles underlying them, all of which, it is felt, would be potent factors in reducing the loss of life through industrial accidents:

1. A Model Safety Act.
2. Standard Accident Report Blank.
3. Model Workmen's Compensation Act.

Essentials of Accident Prevention.

The essentials of industrial accident prevention seem to lie:

First, in laws providing for the safeguarding of machinery.

Second, in the requirement of reports of industrial accidents of such definiteness as shall afford knowledge of the common causes of those casualties and hence point the way to their removal.

Third, in the education of the wage-earner and the employer as to the dangers of machinery and the inculcation of habits of care and caution in the former; and

Fourth, in the enactment of workmen's compensation laws so designed that the employer has every incentive to prevent accidents in his plant.

Finally, in the establishment of museums of safety, preferably with machinery in motion, similar to those that are to be found in almost every civilized country of Europe.

The Federation's Model Safety Act, drafted by a Special Committee consisting of Cyrus W. Phillips, Chairman; P. Tecumseh Sherman, John Calder, Louis B. Schram, John Williams, Edgar T. Davies, H. W. Forster and Abram I. Elkus, is based upon the principles and theories involved in the following:

WESTERN... BURIES FOUR... One Party Can Be Heard ing to Get Out.

DENVER, Col., Dec. 15.—Fourteen men are entombed in the Leyden Coal mine . . . . . The twelve men are fighting for life on their own side and can be heard work ing to tear their way through to rescue them. The upper part of the shaft in which they are trapped is burning fiercely and unless they succeed in reaching shaft No. 1 their death is certain. The fire, but the explosion started the fire, but the cause is unascertained. The shaft was ablaze in an hope of escape cut off. The body that there is communica in the shaft and that if the two shafts and that air and can be kept working the men to escape. confined to the upper part

Specify Dangerous "Mechanical Elements."

With regard to laws safeguarding machinery, the trend of opinion among those who have given serious study to this question seems to be against the enumeration in any statute of all specific dangerous machines, excepting, of course, elevators and common utilities in structures, in power generation and transmission, and the substitution therefor of a catalogue of the "dangerous mechanical elements" which are found on machinery and appliances, with the requirement that these "elements" be always guarded where found, with certain exceptions that need not be noted here. The great advantage claimed for this method is that these mechanical "elements" are few in number, fixed and unchangeable, and they cover every sort of machine that ever has been devised or ever will be; whereas, it seems to be well agreed, that a specific enumeration of all the dangerous machines is impossible.

Board of Experts Suggested.

Those who argue for this comprehensive and undetailed method of machinery safeguarding suggest as its concomitant a board of expert advisers for the Commissioner of Labor, which shall be clothed with authority to make, amend and abrogate specific rules for safeguarding in accordance with the general and comprehensive authority in that direction that would be contained in a law formulated along the outline given above.

WHAT THE CLIPPINGS TELL

THERE are shown here a few newspaper headlines, setting forth the main features of the industrial accidents that are detailed in the body of the several articles to which they apply. These accidents have been classified in some measure by industries or by their character, chiefly for the purpose of grouping such illustrations as they afford of the importance of prevention. The period covered is restricted to the second half of 1910 and the greater part of 1911, but it should be understood that these are by no means a complete record, nor do they cover the entire country. They are only an indication of similar disasters that it may be assumed received only local record.

AND MEMBERS OF EXECUTIVE COUNCIL.

The Annual Meeting.

"Industrial Peace and Progress" is the timely theme of the twelfth annual meeting of The National Civic Federation, to begin in Washington on March , Cardinal Gibbons presiding and President Taft elivering the opening address. This is an era of the reatest progress the world has known. Already he twentieth century is outstripping the nineteenth; he age of steam is giving way to electricity. Wire-'s telegraphy, the aeroplane, Niagara harnessed industrial plants hundreds of miles from the ract, horses disappearing before the automobile, telephone talking across the continent—are some the marvels of a century that has barely entered pon its second decade.

Progress, however, has not had peace for a handmaiden. Industrial unrest is the rule, not in the United States only, but throughout civilization. Within the bounds of order, and of loyalty to civic obligations, this is not an unhealthy sign. Ably and wisely directed, industrial unrest makes for economic and social betterment. The inspiration of good citizenship, of every one who loves his fellowmen, who not merely wishes well to his country and to humanity, but who is willing to do something to make his wishes effective, should be to turn industrial unrest into channels of improvement and advancement, to establish and maintain harmony between capital and labor, to bring about the reign of "Industrial Peace and Progress."

The National Civic Federation has aimed from the first to bring capital and labor together in relations of harmony and mutual respect, of mutual regard for each other's rights, in mutual devotion to our country and to its leadership among nations in industry, in commerce, in all that makes for national greatness and prosperity. Much has already been achieved in that direction; capital and labor have met in friendly handclasp under the auspices of The National Civic Federation; each has learned that the other has good qualities not heretofore suspected, and that the average workingman and the average capitalist are both trying to act fairly, according to their honest understanding of conditions. An appreciable advance has been made toward that industrial peace without which progress is impossible. Obstacles are being overcome, and difficulties, as they arise, are giving way before a calm and temperate presentation of the claims of employer and employed.

Scope of the Federation's Work.

A glance through this number of the "Review" will, we think, convince its readers that the reforms for which the Federation is working and the methods pursued in the attempt to secure them are desirable. The work falls naturally into two divisions —that dealing with humanitarian questions and that dealing with business questions. The mere enumeration of the departments of the national organization that are now active suggests their far-reaching scope and importance, and the personnel of the chairmen is a guarantee of the practical results that may be expected. State councils of the Federation are being organized with sub-committees corresponding to the national departments, the chairman of each subcommittee being a member of the executive committee of the corresponding national department. The national departments, with their respective chairmen, are as follows:

Department on Regulation of Industrial Corporations—Chairman, SETH LOW.

Department on Regulation of Interstate and Municipal Utilities—Chairman, EMERSON MCMILLIN.

Department on Reform in Legal Procedure—Chairman, ALTON B. PARKER.

Department on Compensation for Industrial Accidents and Their Prevention—Chairman, AUGUST BELMONT.

Department on Pure Food and Drugs—Chairman, JOHN HAYS HAMMOND.

Department on Taxation—Chairman, EDWIN R. A. SELIGMAN.

Department on Industrial Economics—Chairman, NICHOLAS MURRAY BUTLER.

Employers' Welfare Department—Chairman, WILLIAM R. WILLCOX.

Woman's Welfare Department—Chairman, MRS. JOHN HAYS HAMMOND.

Meetings of these departments will be held in Washington at the time of the annual meeting in March.

The Socialist Repulse at Atlanta.

Organized labor never rose more manfully to a sense of civic duty, of the rights, the obligations and privileges of American citizenship, than in the annual convention of the American Federation of Labor held at Atlanta in November last. By the overwhelming vote of 11,851 to 4,924 the convention rejected the demand of the Socialists that officers and other members of labor unions should retire from membership in The National Civic Federation.

Naturally, the layman will ask, "Why are the Socialists making such demands?" The reply to this question lies deep in the very constitution and organization of The National Civic Federation. This body stands, first of all, for INDUSTRIAL CONCILIATION AND ARBITRATION. It fosters the idea of the best possible relations between capital and labor. Through peaceful agencies, it believes, can be prevented many of the unfortunate strikes and lockouts which harass alike worker, employer and the general public. The Civic Federation upholds and sedulously encourages the principle of COLLECTIVE BARGAINING, which means that organizations of employers and organizations of workingmen shall get together and work out mutual contracts in reference to wages, hours and conditions of employment.

The Socialists are against conciliation and arbitration and collective bargaining. They do not want the settlement of labor disputes and troubles to be made in a peaceful manner. They believe in the "general strike," which is the Socialist plan for tying up all industry, as attempted in France, beginning with the Government employes in Paris.

The essence and the spirit of the utterances in the Atlanta Convention went far beyond The National Civic Federation, far beyond the interests of labor and capital, using those terms in their conventional meaning. They raised the greater issue whether the American people shall endure as one people, whether class shall be arrayed against class, whether the attitude of labor toward capital and, conversely, of capital toward labor, shall be one of inextinguishable hate and extermination, or of mutual tolerance, mutual respect, mutual goodwill and recognition of common citizenship, common humanity, common share in our magnificent heritage.

The result could not have been otherwise. The genius, the intelligence, the keen and broad comprehension of issues affecting his own welfare and that of the nation at large, characteristic of the American workingman, made it inevitable that the decision of the convention would be what it was, that the mission of The National Civic Federation would be approved, and that the representatives of organized labor who are taking part in that mission would be commended instead of condemned.

One of the principal arguments made by the Socialists at that convention was that the labor representatives had no business to associate with employers of labor, because some employers had been unfriendly to their workmen at some time or other. Delegate James M. Lynch, president of the International Typographical Union, punctured this argument when he said: "Ten years ago when we made a contract with the Newspaper Publishers' Association, Otis was a member and opposed any relations with the International Typographical Union. Since then we have increased wages in ninety-five per cent of the cities where we have gone to arbitrate with the newspaper publishers, and Otis is still a member of the Newspaper Publishers' Association. Reasoning the same way as the delegates who have spoken of Carnegie and others, there can be but one conclusion, and that is that the officers of the International Typographical Union, when they took up the negotiations with the Newspaper Publishers' Association, made a mistake—that they have made a mistake in continuing their relations with the Newspaper Publishers' Association, despite the increase made in wages." Mr. Lynch very aptly disposed of this phase of the attack on The National Civic Federation with the remark: "Their argument is fallacious to start with, founded on false reasoning, and not worthy of consideration."

We have no space to repeat the many favorable statements made at the Atlanta Convention of the good results that have come to labor through The National Civic Federation, of clouds cleared away that had overhung and obscured the better feelings of both employers and employed, of wage concessions and labor agreements in the bringing about of which The National Civic Federation has been a potent factor. On another page we give a summary of the speeches made in behalf of The National Civic Federation, and we urge all our readers to read every one of them. The National Civic Federation has things to do and is too busy with its appointed tasks to indulge in recrimination. The record that the Civic Federation has made, and will continue to make, shall be a sufficient rebuke for its enemies and a sufficient defense for its friends.

We express heartfelt thanks to the representatives of continent-wide union labor who voted at Atlanta their faith and trust in The National Civic Federation.

The Trust Question.

In another column will be found an analysis of the sixteen thousand votes taken upon the Questionnaire sent out by the Department on Regulation of Industrial Corporations of The National Civic Federation on the subject of repealing, amending or supplementing the Sherman Anti-Trust Act. A book containing 600 pages is now on the press, giving the gist of the replies made by some fifteen hundred manufacturers, merchants, bankers, lawyers, college presidents, representatives of labor and agricultural organizations, chambers of commerce, boards of trade, etc., etc. These replies have been analyzed for the use of the sub-committee of the department which is now framing a bill proposing supplementary legislation. This bill, when endorsed by the Executive Committee of the Federation, will be presented to the Interstate Commerce Committee of the Senate for its consideration. A day will be devoted to the discussion of the proposed measure at the Federation's annual meeting on March 5, 6 and 7.

Employers Appreciate Service.

he earnestness of the efforts that have been put th is meeting with what is felt to be deserved ognition by employers who have welfare problems solve. To such as these the Bureau of Exchange nishes as a loan the experience of the leading ployers of the country on any phase of welfare rk in contemplation, giving forms applicable to ge or small numbers of employes and causes of ure as well as successes in this great branch of nanitarian endeavor.

Speaking somewhat more specifically, it may be d that this data includes not only literature, but o plans and photographs relating to sanitary angements, recreative efforts, industrial educa- n, homes for employes and provident funds or ployes' insurance associations.

That the value of this clearing-house of informa- n is appreciated by many employers is evidenced the voluntary testimonials which have been re- ved.

A Typical Inquiry and Answer.

A typical inquiry and the manner of handling it is dicated by the example given here.

The following letter was received from the presi- nt of a steel company making open-hearth steel tings:

"I have on my desk a report of fifty-two accidents t occurred in our steel foundry during the month December, 1910. Twenty-nine of the fifty-two, or er 55 per cent. of these cases, were caused by being struck in the eye with pieces of flying steel, these eye cases happening chiefly in the roughing and finishing department, where the pieces of steel are caused to fly by clippers when cleaning and finishing castings. Many of these cases result in the loss of eyesight.

"It is quite distressing to us, as we feel deeply on these matters, and for a long time have provided goggles for the men to wear. The goggles seem to be distasteful to the men and they do not wear them, and we are wondering if there is not some way to meet this situation. Have you any suggestions to offer? If you can learn of any concern that is using a goggle not objectionable to the men, we would be glad to send for a sample and see if we cannot supply that kind to our men.

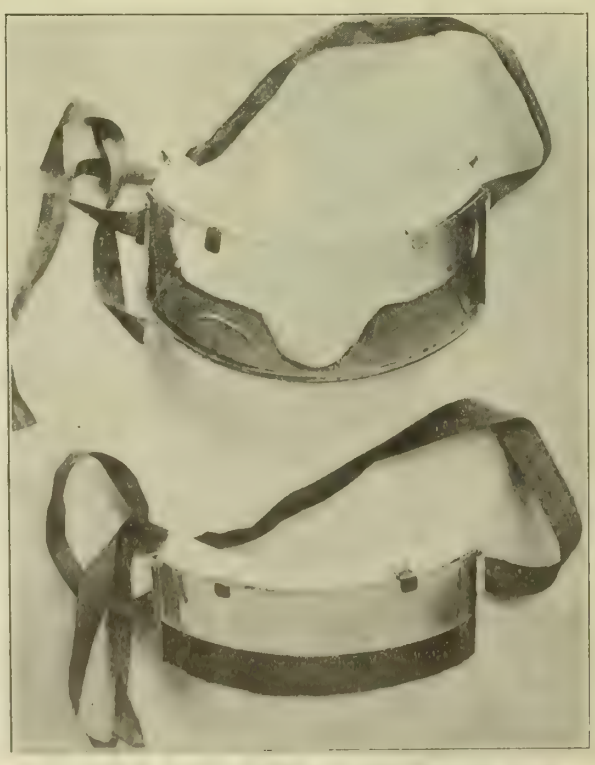
"The other twenty-three cases were chiefly minor ones, being bruises to hands or feet, etc., etc., which would probably result in some temporary physical discomfort, but no serious injury. It is the eye troubles that are bothering us chiefly.

"Greatly appreciating any suggestions that you can offer us and the good work that you are doing, etc., etc."

Types of goggles which men *do use* and other devices for eye protection were loaned for the inspection of the officers of the company making the inquiry, but this account is limited to illustrations furnished by Mr. George Gilmour, a member of the Federation's Committee on State Inspection of Factories, the purpose of which is particularly the prevention of accidents.

Sketch of George Gilmour.

The views show German goggles and other forms of body protection found in actual use by Mr. Gilmour during a visit to Germany for the New York State Employers' Liability Commission. Mr. Gilmour is chief engineer of the Travelers' Insurance Company, being at the head of an inspection department composed of more than 125 experts whose duties are to investigate industrial concerns applying for insurance to determine whether or not the machinery and work places are so protected against accident as to make them safe risks for liability insurance. He is a member of the American Society of Mechanical Engineers, of the Engineers' Club of New York and the Machinery Club of New York and Hartford.



Pupil of Lord Kelvin.

His experience has afforded him unique opportunities, of which, it may be said, he has taken full advantage. His father is Chief Naval Constructor for the Russian Government. Mr. Gilmour, after studying under Sir William Thompson, afterward Lord Kelvin, in Glasgow, and learning his trade with a large contract firm in that city, spent years of service in South America, Panama, Jamaica and New York with great mechanical engineering companies and others. He is therefore competent to speak with authority.

Mr. Gilmour states that "the use of goggles in Germany is compulsory." It is well known that employes have to be educated to use many forms of safeguards, but that when proper devices which do not handicap the employe are afforded, with adequate information, there is little difficulty in that connection.

SHOWS GOGGLES PICTURED ABOVE IN ACTUAL USE BY A WORKER.

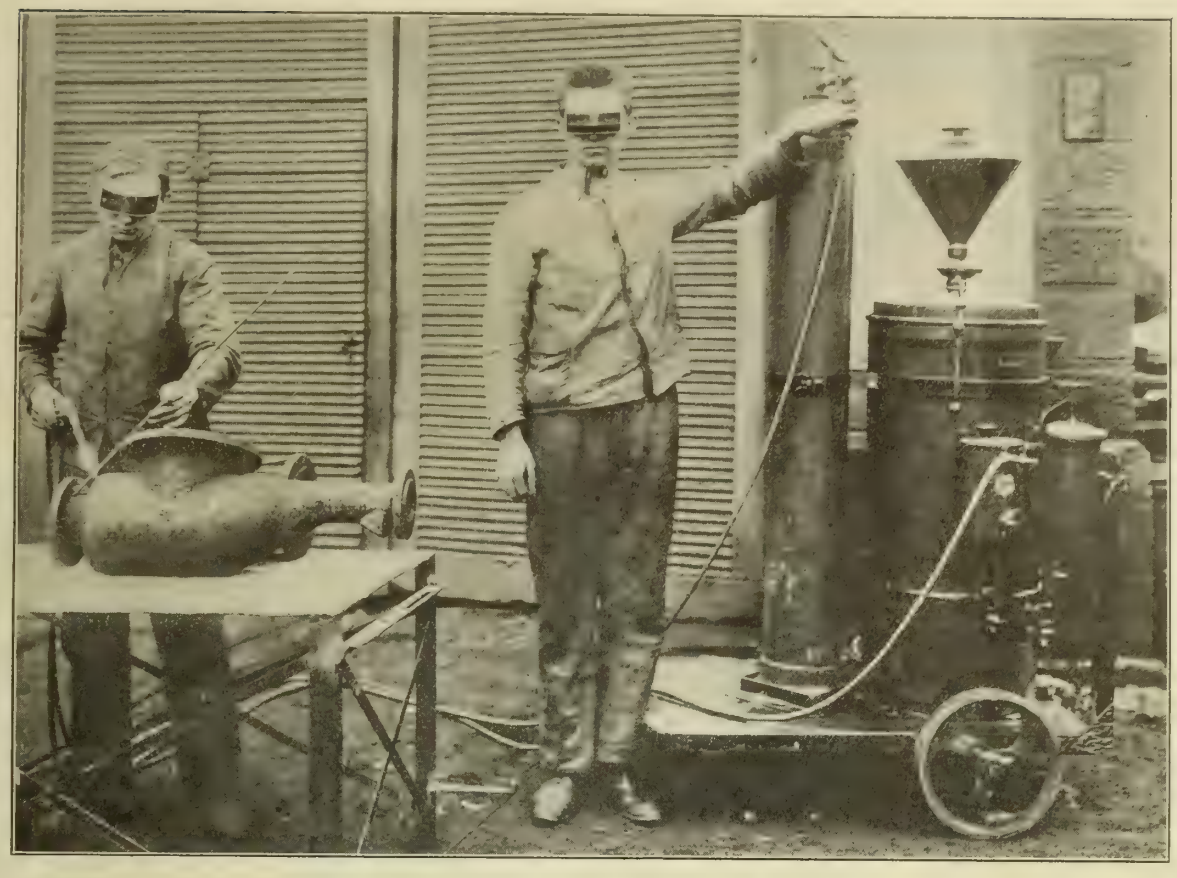
TWO KINDS OF GOGGLES—ONE WITH THE FRAME CUT AWAY TO FIT THE NOSE.

A Plan for Workmen's Compensation and Pensions in the Brewing Industry.

Pioneer work in workmen's compensation in this country is being done, jointly, by the United States Brewers' Association and the International Union of United Brewery Workmen. Nearly two years ago a committee representing these two organizations started work on a scheme for accident compensation and old age pensions which has now been completed and is being sent out to the various local unions and the company members of the Brewers' Association for ratification. The plan that is being submitted is based on an investigation of accidents in brewery work, reports from 16,374 workmen having been gathered by the committee in the course of its investigation.

Recognition is given the fact that accident prevention is the great aim to be sought in any scheme of workmen's compensation and every provision that is possible is made in order to realize this consumma-

tion. Not only must employers comply with State regulations which seek to effect safety in factories, but a Board of Directors and Award, which is included in the scheme, may require further safety devices and make all proper rules with regard to sanitation. To make this part of the scheme thoroughly effective, it is stipulated that an employer failing to install any safety appliance that may be required shall be liable to a fine imposed by his fellow employers equal to five per cent of the total compensation awarded the workman who has been injured as a result of the delinquent employer's neglect.



A fund is provided for to which each employer must pay one and five-tenths per cent of the amount of his payroll, and each employe five-tenths per cent of his wages. The pension clause is made applicable to salaried officials of the union. This provision constitutes a recognition of organized labor as a legitimate business institution, and the broadmindedness that prompts it reflects great credit on the Brewers' Association.

The main compensation features may be summarized as follows:

1. First aid is to be provided for all injuries.

2. Workmen are to receive from the fund sixty-five per cent of their wages after the first week, in case of temporary disability, unless the period of disablement lasts longer than four weeks. In that event, compensation will be paid for the first week also.

3. For total disability not resulting in death within two years it is provided that sixty-five per cent of the injured workman's wages shall be paid for a period of five years.

GOGGLES TO PROTECT THE EYES OF THE MEN FROM STRONG LIGHT WHEN WORKING IN FOUNDRIES, GAS WORKS OR IN WELDING.
They consist of bent glass set in aluminum frames and are held to the head by a band. Two kinds of glass are used, the lower part being dark to protect the eyes from strong light and the upper part ordinary glass to give the man a free view. The picture shows the goggles in use during oxygen welding.

4. In no class of disability is the payment to be more than $20 a week nor less than $5.

5. There is a provision that in case of "unquestioned" disability a man may be paid a lump sum equal to the total weekly payment for five years.

6. Approximately four years' wages are paid for death resulting from accident within two years from date of injury, but the total is limited to $3,400. In this connection there is a provision for the advancing of funeral expenses. This compensation is to be paid irrespective of any negligence, delinquency of fellow-servant, or other statutory or common law defence.

The pension provisions are as follows:

1. One-half the pensioner's average weekly wage during the six months prior to his retirement is provided for where a workman has been in the service of a member of the Association for twenty-five years and has arrived at the age of sixty years.

2. The same pension as the above will be paid to any man retired on account of incapacity.

3. Certain minor provisions are that twelve months' cessation of work for any cause is not to interfere with a continuous employment record, nor will change of employment from one Association member to another.

The compensation feature of the plan is to go into effect as soon as adopted and the pension provisions on January 1, 1913. The Board of Directors and Award will administer the fund. It is to be composed of three members each, representing employer and employe. Local boards of award are provided for, together with certain rights of appeal.

The plan is to be effective when approved by a majority of the union membership in referendum vote, and by brewery proprietors whose output represents forty per cent of the beer manufactured in the United States. The outlook for final adoption is bright, as the union has already expressed itself as favoring the principle involved in the plan.

A SUIT OF CLOTHES MADE OF ASBESTOS WITH A WIRE FACE MASK.

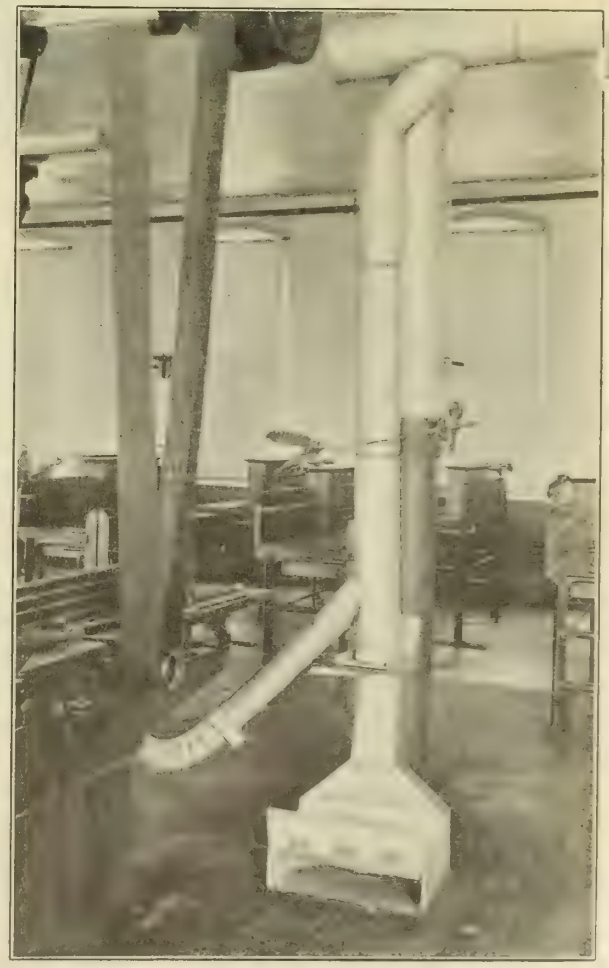
STINGING REBUKE FOR SOCIALIST INTRIGUERS

(Continued from Page 2.)

good men and women in high society as well as there are in the most lowly; and I want to say, as a trades unionist, that any man or any woman who is willing to sit down with me and discuss the questions that affect my organization is looked upon by me as a friend to labor and not an enemy.

"The National Civic Federation was organized for noble and good purposes. It was organized for the purpose of bringing all classes of people together, and to wipe out class distinctions. I know of no institution that has better objects in view than that.

"This is a great and powerful country. There are men in this hall to-day who have benefited by the opportunities that were given them through our form of government. Those are opportunities we did not have in the old countries. Those who do not appreciate their opportunities ought to go back from whence they came and starve and die, for they are not big enough to appreciate American institutions."



REGULAR HOURS FOR XMAS SEASON.

Those interested in th humanitarian movement t reduce the business hour of retail stores during the Christmas season to a reasonable basis will find encouragement and inspiration in the efforts to that end of Mr. B. F. Schlesinger and the Women's Garment Association of San Francisco and Oakland, of which he is President. Mr. Schlesinger says that he came years ago to the belief that a good retail business can be done up to and including Christmas Eve in the regular hours for business, namely, 9 a. m. to 6 p. m.

AN AUTOMATIC DUST PAN.

W. W. Bird, director of the Washburn Shops of the Worcester Polytechnic Institute, Worcester, Mass., who furnished the illustration of the automatic dust pan installed there, states that it works well.

At convenient intervals there are in the factory these galvanized iron boxes, connected with an exhaust system which carries away the shavings from the machines. The vertical pipes arising from the boxes are provided with dampers, that the exhaust may be turned on or off. This obviates the necessity of conveying rubbish from the workrooms.

"SWEEP BOX," OR AUTOMATIC DUST PAN.
(THE WASHBURN SHOPS, WORCESTER, MASS.)
Shavings and waste are swept in and a damper opened, permitting all sweepings to be carried by an exhaust blower to the boiler room.

BOSTON GIVES SPLENDID WELCOME

MASSACHUSETTS AND RHODE ISLAND SECTION OF WOMAN'S WELFARE DEPARTMENT ORGANIZED AT REPRESENTATIVE GATHERING IN THAT CITY

A MASSACHUSETTS and Rhode Island Section of the Woman's Welfare Department was organized, following the efforts of the National Chairman, Mrs. John Hays Hammond, under the most promising conditions, at a representative gathering held in Boston, November 24.

The meeting closed with the election of a Committee on Organization, which has since announced the election of the following officers:

Chairman, Mrs. Charles R. Hamlin.
Treasurer, Mrs. Matthew Bartlett.
Secretary, Miss Elizabeth S. Porter.
Chairman of Membership Committee, Mrs. George R. Agassiz.

The speakers, whose addresses constituted the larger part of the program of the meeting, included manufacturers with wide experience in welfare work, physicians, officers of boards of health, and Mrs. Hammond, Chairman of the Woman's Welfare Department, and Mrs. Francis McNeil Bacon, who is at the head of the New York and New Jersey Section.

Those who spoke were unanimously of the opinion that a field of useful endeavor lay before the new organization, and one which is not within the scope of any other body.

"Plucky and Pioneer Spirit."

In introducing Mrs. JOHN HAYS HAMMOND, Mrs. Roger Wolcott, who presided over the meeting, said: "Mrs. Hammond has shown a plucky and pioneer spirit, which well fits her for this important work. I ask your cordial support and co-operation."

Mrs. John Hays Hammond

Augustus P. Loring

Mrs. Francis McNeil Bacon, Jr.

Mrs. Hammond explained at the opening of her speech that the meeting had been called to interest those present, as influential women in Massachusetts and Rhode Island, in the formation of a section of the Woman's Welfare Department and that that department is a branch of The National Civic Federation. After explaining concisely the scope of The National Civic Federation, the speaker addressed herself to the purposes of the Woman's Welfare Department.

"We who are interested in this welfare work," said she, "realize that human beings constitute by far the most important of our natural resources, and therefore the proper preservation of human life and strength is of vital consequence."

Mrs. Hammond explained that the various sections of the Woman's Welfare Department were composed largely of women who, as stockholders or through family relationship, were vitally interested in industrial corporations, and that there were also in their membership wives and relatives of men prominent in public affairs and women desirous of being helpful in all work which tends to improve the condition of the wage-earner.

Recognition was made of the fact that excellent and efficient societies already exist in Massachusetts and Rhode Island that are engaged in work that aims to improve the condition of all wage-earners, but the speaker stated that after a close investigation and after interviewing many of the leaders in the different welfare organizations in Boston the consensus of opinion was that the work which the proposed organization would undertake would in nowise conflict with that of the associations referred to.

Co-operation the Keynote.

Mrs. Hammond called attention to the fact that it was well recognized that intelligent and experienced women can do much to aid industrial progress. "We have this problem to solve," said she, "and, as conscientious women, we should all co-operate. *Co-operation therefore should be our keynote.*"

Reference was made to the fact that social problems in Boston have ever been dealt with discreetly and with intelligence, and a full appreciation of this fact, the speaker said, impelled her all the more to solicit the aid of the city's representative women in the work that had been outlined.

An interesting outline was given of important results accomplished by the various sections of the Woman's Welfare Department, attention being called, among other things, to the fact that Congress, animated by the efforts of the Department, had appointed a committee to inspect buildings and report as to their needs in the way of proper sanitation. The audience was told of the establishment of restaurants and the securing of better ventilation in Government buildings at Washington, and also of important results accomplished in the Treasury, the Census Bureau, the Federal jail and the Bureau of Engraving and Printing.

The New York and New Jersey section and its Chairman, Mrs. Francis McNeil Bacon, Jr., were warmly praised for notable work which has been done, and the audience heard of the establishment in the mill towns of the South of night schools, dispensaries with visiting nurses, medical clinics and kindergartens and of provisions made for lessons in cooking, sewing and household economics.

For Women and Children.

Mrs. Hammond explained that in each State there were individual problems to be met and that an especial effort would be made in Massachusetts and Rhode Island for the improvement of conditions of women and child wage-earners. In support of this policy she quoted from a recent public address of Professor Irving Fisher, of Yale University, to the effect that in spite of all agitation against the employment under improper conditions of women, especially of married women, little practical reform had as yet been accomplished as compared with what was necessary from the standpoint of industrial efficiency.

The speaker stated that one-quarter of the entire number of women in Massachusetts were wage-earners and that in Rhode Island, within the scope of the Factory Acts alone, there were forty-six thousand women at work and three thousand girls under sixteen years of age. Practical and businesslike methods were urged in the prosecution of the work proposed.

In her concluding remarks Mrs. Hammond pointed to the fact that a moral obligation inhered in those on whom she was calling for support not to permit the fathers and mothers of future generations to be overworked and to become victims of insanitary conditions. "What does it profit us," said she, "if the spirit of the home is destroyed? The woman makes the home. A clean, pure home is the solution of our social and economic problems."

Employer Who "Practises What He Preaches."

The next speaker, AUGUSTUS P. LORING, was introduced as an employer who practises what he preaches. Mr. Loring spoke on the theory of Welfare Work.

Problems involved in welfare work, according to the speaker, fall naturally under three principal heads, the first of these having to do with the provision of a suitable place and surroundings for workmen, the second dealing with housing problems and the third with those questions that have to do with financial affairs such as profit-sharing, annuities, retirement schemes, etc. Great stress was placed by the speaker on the necessity of good air in the factory, and the opinion was expressed that this is not by any means recognized as fully as it ought to be.

Emphasis was laid on the great amount of tact needed in that part of welfare work which is done outside the factory. "Anything you do in the factory," said the speaker, "the workman cannot do for himself, but when he gets outside of it he naturally resents anything that seems to him interference or dictation as to his private life." Mr. Loring added that it was his opinion that it is better on the whole for the manufacturer not to undertake anything that the operatives can or will undertake by joint effort or that the public ought to do at the general expense and pay for by taxation.

Citing an instance in which a request had come from certain employes to add bathrooms to tenements owned by his company, coupled with an offer to pay more rent in return for this improvement, the speaker said, "That only shows that when that is done for which there is a demand by the workingmen themselves it is appreciated and they will ask you to do more. To go very far beyond their demand is a mistake." Mr. Loring told an interesting story of the conversion of a threatened failure in interesting those in his employ in gardening into a decided success through the offering of prizes and the institution of exhibits. The speaker ended his address with the following words, which brought forth loud applause: "It seems to me most important that all these things be done, not by compulsion of the law, but by the will of the manufacturer; that it is much better to have them done because noblesse oblige than because the Legislature says so."

No Charity or Philanthropy.

The keynote of sincere welfare work was sounded by LOUIS A. COOLIDGE, Treasurer of the United Shoe Machinery Company, when he said at the opening of his remarks, "I would call welfare work sympathetic and intelligent industrial co-operation, for everything that we have undertaken has been with the help of our employes, and whatever we have done has been with the feeling that while it was doing good to them it was also doing good to us." Mr. Coolidge said that real welfare work should be divorced from charity or philanthropy absolutely.

The importance of light in factory buildings was dwelt on by the speaker, who told of three immense structures in the group of buildings that constitutes the Shoe Machinery Company's plant in which ninety per cent of the wall space is of glass. The speaker evinced a thorough knowledge of and deep interest in safeguarding of machinery against accidents, and, also, sanitation, ventilation and recreation. He told how systematic work by a Safety Committee in his plant had reduced the proportion of accidents to employes by seventy-three per cent within the space of one year. The results were obtained mostly through the installation of safeguarding appliances.

"Our company," said the speaker, "has never undertaken to give anything to anybody in the factory without some kind of an adequate return," and he told of a relief association within the factory with a membership of twenty-three hundred (this being a little over half of the total number of employes), together with a savings bank insurance in force with $210,000 in policies and 420 policy holders.

The novel industrial school, supported by the United Shoe Machinery Company, was detailed at some length. In this school half of the sixty-eight pupils are in the factory one week while the other half are in the high school at Beverly, Mass., receiving technical training. Space does not permit the giving of details of this successful and highly unique scheme.

Good Work in New York and New Jersey.

Mrs. FRANCIS McNEIL BACON, Jr., Chairman of the New York and New Jersey section of the Woman's Welfare Department, was the next speaker. Her subject was the work of that Section, which she has directed with marked success. The speaker outlined a unique course of lectures on the departments of the Federal Government, in which the name of almost every member of President Taft's Cabinet appears as a speaker. The work of the Section's Vacation Committee was detailed at some length. This committee is engaged in an effort to aid working women in securing wholesome and attractive summer boarding houses in which to spend their vacations, and also is endeavoring to stimulate them to save so as to make possible a yearly vacation.

Mrs. Bacon was given close attention, and her remarks showed the possibilities for good of a well-organized branch of the Woman's Welfare Department.

Dr. WILLIAM C. HANSON, Assistant Secretary of the Board of Health, of Massachusetts, spoke on the necessity of welfare work in that State. The speaker pointed to the fact that the Woman's Wel-

fare Department of The National Civic Federation is unique in that it considers factory conditions in connection with home conditions, and he expressed the belief that this work rests upon a broad and eminently sane and practical basis. "Your methods," said he, "are persuasive, and you deal directly with manufacturers on behalf of wage-earners and the public. . . . Finally, you do not convey the impression to employes that they are to take no part in bringing about their own welfare."

Dr. Hanson spoke of the immense value to physicians in their work as sanitarians that the effort of the branch about to be organized would be. He requested that a direct effort be put forth to induce manufacturers to adopt protective measures against lead poison, stating that employers and workmen both have been found who were absolutely ignorant of the danger involved in exposure to lead, and that even where such knowledge exists precautions are not often taken.

Great Possibilities in Work.

"You could show the manufacturers," said he, "the wisdom of providng such establishments and such protective devices as to make the expression 'occupational disease' lose what significance it now has." The necessity of teaching the workers in white lead and other compounds of that metal the importance of using respirators was urged. Dr. Hanson asked that the new branch of the Woman's Welfare Department stimulate manufacturers to adopt standards, if anything, far above the legal requirements for safeguarding, sanitation, hygiene, etc. He expressed the opinion that an organized force of visitors to the homes of tenement dwellers could do great good, and he thought that these visitors could co-operate with the manufacturers' staff in such a way as to revolutionize the industrial community from the point of view of the welfare of the manufacturer, the employe and the public.

The speaker outlined succinctly many other things that appealed to him as coming within the scope of activities of the proposed organization, and he asked that help be given the State Board of Health in showing that if the avoidable dangers in cotton manufacture are removed the only menace that will remain, practically, will be the cotton dust that occurs in some of the processes. "When some of our manufacturers," said he, "have cotton mills that are practically beyond reproach, is it not worth while to get others to bring their buildings into the same class? Is it not equally worth while to ask if there is a good reason why women should be kept at work in rooms which require gaslight at 11 o'clock in the morning on a bright day?"

DR. RICHARD C. CABOT emphasized the fact that success in getting anything done for health or morals or anything of like nature depends upon sticking to the idea that the effort constitutes a personal problem, and not a scientific or economic one. Dr. Cabot told of the experience of a health inspector in Massachusetts who found operatives working in a factory under conditions menacing to health, while respirators, which had been provided under the law, were hanging on the wall, with evidence of the fact that they had not been used for a long time. Instances of this sort, the speaker thought, showed strongly the need of personal work with employes. "Shall we ever," said he, "get anything done unless we succeed in bringing about in the employe a state of mind in which he will care enough for life and home and friends to avoid the particular form of death which he faces? Such a change does not come about as the result of handing a circular to a workman, but only following personal influence."

Problem Involves Friendship.

The problem involved in welfare work, as seen by Dr. Cabot, was closely allied with that of friendship and, he added, that there was room enough for all in that field. Continuing, the speaker said that those proposing to engage in welfare work must make it perfectly clear to themselves that they were not trying to make the poor more like the rich. "We want," said Dr. Cabot, "to make the rich or the poor or anybody else better citizens. In my work in the Massachusetts General Hospital I see how this social service idea is utilized and what can be done by reason of getting into close contact with those who need our effort and giving them such personal, friendly, close help that the best results may be obtained. It seems to me that this organization has a good work to do, which will be attained in so far as it sticks to that point of view."

DR. HARVEY W. WILEY, Chief Food Chemist of the Department of Agriculture, made the concluding address. He said that without proper nutrition no betterment of any kind in our scheme of civilization can be accomplished. "In fact," said he, "the food question is an underlying problem of all social reform and is becoming more acute every day."

The speaker expressed the opinion that every city should pass an ordinance prohibiting the building of any new factory within its borders, arguing that this territory is not the place for production, but for exchange only. "Every man who works in a factory," said Dr. Wiley, "should have a garden and plenty of fresh air."

"Less Meat," Says Dr. Wiley.

Dr. Wiley argued for less meat in the dietary of workers of all classes and kinds, and for a well-balanced ration with special emphasis on wheat and milk as perfect foods. He expressed the opinion that this would result in increased efficiency on the part of all workers and, at the same time, effect considerable economy in their living. Dr. Wiley expressed himself as immensely pleased with the story told earlier in the meeting by Mr. Loring about the employes in whom had been stimulated a desire to excel in the raising of vegetables. Said he, "That is the best news I have heard in a long time, because it is the fruition of a theory that I have been preaching for years."

At the conclusion of Dr. Wiley's address a motion prevailed to form a Massachusetts and Rhode Island section of the Woman's Welfare Department of The National Civic Federation, and a Committee on Organization was forthwith elected.

Following this action the meeting was declared adjourned.

MERCURY AS A MENACE TO WORKERS

Interesting Monograph on the Part It Plays in Industrial Processes—Suggestions for Safeguarding—New York and Vicinity the Territory Investigated.

"Mercury Poisoning in the Industries of New York and Vicinity" is the title of a monograph, just published, which constitutes an interesting contribution to the rather meagre bibliography of the part played by poisons in the various industrial processes of this country. The author is Mrs. Lindon W. Bates, Chairman of the Committee Upon Dangerous and Unhealthy Industries of the New York and New Jersey Section, Woman's Welfare Department, The National Civic Federation.

The Executive Committee, under whose authority and co-operation the investigation was carried out, is composed of the following prominent women:

Mrs. Francis McNeil Bacon, Jr., Mrs. William Rand, Jr., Miss Maud Rives Borland, Mrs. George Blumenthal, Mrs. Walker Smith, Mrs. Charles F. Meyer, Miss Gertrude Robinson-Smith, Miss Elizabeth Marbury, Mrs. Archibald Alexander, Mrs. Lindon W. Bates, Mrs. August Belmont, Mrs. Francis Higginson Cabot, Mrs. John Corbin, Miss Cornelia Crooke, Mrs. James S. Cushman, Mrs. Charles Noe Daly, Mrs. Ernesto G. Fabbri, Mrs. M. D. Kalbfleisch, Mrs. V. Everit Macy, Mrs. Marcus M. Marks, Mrs. Gilbert Montague, Miss Anne Morgan, Miss Marie B. Pond, Mrs. Ralph Sanger, Mrs. Alexander Shaw, Miss Caroline Shippen, Mrs. Lyndsay Van Rensselaer, Mrs. Mary Hatch Willard, Mrs. William R. Willcox.

Deals Largely with Hat Making.

The work in question deals largely with the manufacture of felt hats and the preparation of material used in their making, the statement being made that this is almost the only important branch of manufacture in which the use of mercury remains a menace.

The author seems to have approached her task with an open mind, and to have maintained an excellent balance throughout the painstaking investigation which the work in question evidences.

Mercurial poisoning in hat and felt making, we learn, results primarily from the "carrotting" of fur, a process which involves the use of a solution of the poisonous metal. Apparently there is more danger in the handling of the fur after it has been "carrotted" than in the operation itself.

Mercury enters the system through the skin, lungs and digestive tract, principally in the form of vapor or minute dust particles. Mercurial poisoning, the disease, has three stages, viz.:—psychic, tremors, final.

It manifests itself in distressing and sometimes loathsome forms, including tremors, degeneracy, despondency and decay of the will, memory and brain.

Four Impressive Facts.

Four impressive facts, encountered in the course of the investigation, are strongly emphasized by the author as follows:

1. Mercurial poisoning is easily curable until it reaches the stage of tremors, and the risk of contracting the disease can, in large part, be eliminated by simple, prophylactic measures, sanitation being a great aid.

2. The disease is highly insidious, years not infrequently elapsing before decidedly unfavorable symptoms appear, but it early creates a fertile field for the germs of pneumonia, tuberculosis and other maladies, the responsibility for which it is, in the very nature of the case, seldom charged with.

3. The history of practically every case of poisoning is accompanied with a rapid and substantial decline in the earning power of the victim, to say nothing of the intervals in which he is not able to labor at all.

4. Substantial progress cannot be made in this country in reducing mercurial infection without stringent laws designed to effect prophylaxis, and a sufficient number of inspectors to see that those laws are enforced.

Interesting Data Given.

Mrs. Bates has found her material chiefly in the facts obtained in an investigation of 122 cases of mercurial poisoning and dermatitis, nearly all of which were treated in some hospital. A full report of each case investigated is given, and there is, in addition, a tabulation of the salient facts. Other sources of information were physicians and hospitals in hat manufacturing communities, employers, workers and labor organizations.

Divergent and perplexing statements are given from various authorities with regard to the prevalence of mercurial poisoning. These range from practically a denial that it exists at all to the statement of one physician that ninety per cent of those exposed are in some degree affected and that fifty-five per cent ultimately succumb. Much emphasis, however, is given by the author to the statement that workers in three of the numerous divisions of the hat making process are denied protection by insurance companies.

A point strongly emphasized is the need of suitable eating quarters and hygienic provisions, instances being cited where food and drink were daily exposed to mercury-laden dust and mercurial vapor.

Two Interesting Cases.

The following excerpts are taken from two of the 122 cases reported:

Case No. 1.—Mr. S—— had the "shakes" in his arms; his teeth were blackened and he was salivated. His throat and stomach were most seriously affected, and Dr. S—— attributed the tuberculosic throat to chronic sore throat brought on by breathing mercurial vapor. He belonged to the Finishers' Union, to which no benefit association was attached. He had worked as a hatter for seventeen years, eight of which were spent in ——'s factory. He had been married five years, and had one child (a girl of four years). At the time of his illness he was working at ——'s factory, —— avenue, Newark, N. J. He carried no life insurance, but was receiving a sick benefit of $5 a week from the Sons of St. George, of which he was a member. Five dollars was the sole income of the family at the time of the visit.

The dwelling was a tenement flat of three rooms; bedroom off the kitchen in which Mr. S—— was in bed, and a third room off the kitchen, with a cot for mother and child.

Mr. S—— had worked for two years in ——'s hat shop.

Could get no information on factory conditions. Mr. S—— did not chew tobacco. He was able to average $20 a week during the time he had steady employment.

Case No. 2.—P—— C—— was found living in a very neat little flat with his daughter, a rather delicate looking girl, who keeps house for him and his son, aged sixteen, who has just started to work. Mr. C—— is a pleasing-looking man and seemed very willing to give all the information he could.

His symptoms are the usual ones: excessive salivation, discolored teeth, diarrhoea, morbid frame of mind, and has the tremors and shakes in a most exaggerated manner. He has worked with this same company, which has changed hands several times, for thirty-five years. Says Mr. G—— is very wealthy. They have paid his full wages for the six weeks he has been out. Mr. C—— is very much worried as to what is going to become of them all and feels sure he will soon die. His brother F——, aged forty, died on January 15, 1910. Had worked for many years at the same place, and his symptoms were exactly the same.

The brothers worked in a poorly ventilated basement over a boiling combination of mercury, nitric acid and epsom salts, and the fumes were simply frightful. The mouth used to fill with a horrible slime, and they had to cough and gag, and "saving your presence, lady, spit blood sometimes." P—— says the air was not so bad until their plant was surrounded by tall buildings.

There is no special place for them to eat lunch, so they eat in the workrooms. He knew of no other case of mercurial poisoning. Said nobody ever stayed long enough to get it. He had it

bout six years ago and was out of work for a hile, but apparently recovered and went back. e did not know *why* he went back, except that was the only thing he knew how to do.

In a conversation with the daughter, later, she ied and said she did not know what would be- me of them if the firm stopped paying her ther. She said that he had never done anything l his life but go to work, come home, get his upper and go to bed, and the next day get up nd do the same thing. He never drank to excess. She said it was very hard to live with a sad erson like that—she had "tried to get Pop to go o the moving picture show, but he won't go." She did not know why this trouble had come o them.

t is just to say that Case No. 2 is declared to e been one of the worst discovered.

Conditions in Best Factories.

n the best class of factories Mrs. Bates finds at everything is being done that can be with the gle exception of the education of workers in the ngers of mercurial poisoning through placards, a ctice that obtains universally in Great Britain. ith the class of factory in question it seems that thing further, practically, can be done until a bstitute is found for mercury in the process of arrotting."

It should be stated, however, that the number of ctories Mrs. Bates would put in the first class is mparatively small, and that in the case of the hers she would recommend the adoption of the easures contained in the eleven recommendations iven below, accompanied in every instance, of ourse, with adequate inspection by the State.

Eleven Recommendations Made.

The recommendations suggested as the result of he investigation are concisely summarized by Mrs. Bates as follows:

1st.—Placards announcing the unhealthy nature f the trade should be set up in factories and work- hops warning men of the need for precaution.

2nd.—Eating and drinking and the keeping of food hould be forbidden in rooms where mercurial pro- esses are carried on. Some suitable lunching place hould be provided.

3rd.—Ample washing facilities should be installed.

4th.—Proper drinking water should be supplied.

5th.—Sweeping should be superseded by the vacuum system of suction cleaning.

6th.—Mixing of mercury and acids should be done after work hours.

7th.—Rubber gloves and simple respirators should be supplied.

8th.—The industry should be regulated by special legislation, requiring the elimination from the atmosphere of steam, heat, acid and mercury fumes, fur and dust, at their source of production. THIS IS THE HEART OF THE WHOLE MATTER.

9th.—Regular medical inspection is advisable. This would warn both the men and the management of mercurial attack in its incipiency, and transfer to other processes could give a chance for cure.

10th.—Compensation for disease should be a tax upon the poison-using industry begetting it and profiting from it.

11th.—The industry should supply insurance for men working in processes of such unhealthiness that insurance companies decline the risk.

A LECTURE COURSE OF DISTINCTION

Most of President Taft's Cabinet Will Address New York and New Jersey Section, Woman's Welfare Department — Vacation Committee's Excellent Work.

The New York and New Jersey Section of the Woman's Welfare Department is carrying out a program consisting of a series of ten lectures, explanatory of the working of the various departments of the Federal Government, which has attracted wide attention. The press has commented at length on the scheme.

These lectures are being given on Monday afternoons at 4 o'clock at the Waldorf-Astoria Hotel, New York City. The distinguished lecturers and their subjects are as follows:

December 4, "Government"... PROF. JOHN B. MOORE
December 11, "State"... SECRETARY KNOX
December 18, "Treasury"... SECRETARY MACVEAGH
January 8, "War"... SECRETARY STIMSON
January 15, "Justice"... ATT'Y-GENERAL WICKERSHAM
January 22, "Interior"... SECRETARY FISHER
January 29, "Post Office"... FORMER SEC'Y CORTELYOU
February 5, "Navy"... SECRETARY MEYER
February 19, "Agriculture"... ASST. SECRETARY HAYS
February 26, "Commerce and Labor"... SEC'Y NAGEL

Miss Marbury in Charge.

Each Cabinet officer will discuss his own department. Miss Elisabeth Marbury is chairman of the Committee on Lectures. The following from the Evening Post, of New York, gives a comprehensive idea of the lecture course:

"Led by Miss Anne Morgan, daughter of J. Pierpont Morgan, the women members of the New York and New Jersey branch of The National Civic Federation have arranged for practically all the members of President Taft's Cabinet to speak in a series of Monday afternoon lectures at the Waldorf-Astoria this winter. The lectures are for the public, and men are cordially invited."

Mrs. Bacon Explains Lecture Scheme.

"Mrs. Francis McNeil Bacon, Jr., chairman of the Executive Committee of the New York and New Jersey Section, explained the undertaking as follows:

"'We wanted to learn something about these various branches of the government, so we went to the men who would surely know all there is to know on the subject. To most of us the government is a sort of invisible automobile that is carrying us along all right, though we don't know a thing about the mechanism. No, we don't expect the "good old wagon to break down," and we are not preparing to volunteer in case it should. But we are interested, and a lot more women would be interested if they had the first idea what politics and political economy and elections were all about. I think there are a good many people voting for President to-day who would not be ashamed to admit that they are pretty hazy on even the fundamental points of our government machinery.

"'If there are, we hope they will come to these lectures and learn. They are open to the public. To teach lessons in democracy—that was Miss Morgan's idea. We want those who are interested to contribute a modest share toward a course that is requiring a big endowment.'"

Working Women's Vacations.

Another interesting phase of the Section's activities is the work of its Vacation Committee, whose personnel is herewith given: Miss Gertrude Robinson-Smith, chairman; Mrs. August Belmont, Mrs. Selden Bacon, Miss Marshall, Miss Anne Morgan, Mrs. Henry B. Binsse, Miss Maud Rives Borland, Mrs. Alfred A. Cook, Miss Rachel Crothers, Mrs. Michael Dreicer, Mrs. M. D. Kalbfleisch, Mrs. William Rand, Jr., Miss Evelyn Smith, Mrs. J. E. Spingarn (representing the Committee on Amusement and Vacation Resources).

This committee exists principally to investigate and recommend to working girls wholesome and attractive vacation boarding houses within easy access of New York City, to sow the "paid vacation" seed in the minds of employers and to stimulate the woman worker to save for her vacations through a fund it has established for that purpose.

Boarding Houses Investigated.

There have been investigated one hundred boarding houses within sixty miles of New York City, and the enthusiastic comments of the young women who patronized the committee's approved list of houses during the past summer leave no doubt of the success of the work that has been done.

During the winter a series of "Vacation Evenings" for working women is being held at the Section headquarters. The social side is emphasized at these gatherings, and they also furnish opportunity to stimulate the idea of saving for next summer's vacation.

The New York and New Jersey Section secured two hundred new members within two weeks recently and has nearly seven hundred enrolled altogether now. Every cent of income and much more is needed to keep its work up to the standard of efficiency which it has always striven to maintain.

FEDERATION'S MODEL COMPENSATION ACT FINDS FAVOR

(Continued from Page 9.)

for, or of persons entitled to such compensation, or both, with or without others. Any employer so insured may be relieved from personal responsibility for such compensation.

"After the enactment of a compensation law no civil proceeding, other than as authorized by such law, shall be maintainable in respect of any accident covered thereby.

"In the exercise of the powers herein conferred the Legislature shall not be affected by antecedent provisions of this constitution requiring trial by jury and forbidding limitation of the amount recoverable in the case of injury resulting in death."

The necessity of some sort of amendment lies in the fact that the Court of Appeals held the Wainwright Compensation Law unconstitutional.

Avoidance of Encumbrances Sought.

The proposal of Mr. Stetson, who is Chairman of the Committee on Legislative Policy of the Department on Workmen's Compensation of The National Civic Federation, is in the nature of a substitute for several amendments that have already been suggested, in all of which he finds objections to the extent that they undertake to do something other than and different from making provision for a suitable workmen's compensation law.

Commenting on the situation with regard to these amendments, Mr. Stetson said:

"We want to get a proper Workmen's Compensation Law, and we want to get it as soon as we can.

PROGRAM — WINTER MEETING, DEPARTMENT ON WORKMEN'S COMPENSATION.

OPENING ADDRESS
AUGUST BELMONT, Chairman Department on Compensation for Industrial Accidents and Their Prevention. The National Civic Federation, New York City.

COMPULSORY COMPENSATION VS. STATE INSURANCE
P. TECUMSEH SHERMAN, Chairman Legal Committee, Workmen's Compensation Department, The National Civic Federation, New York City.
J. WALTER LORD, Chairman Maryland Council, The National Civic Federation, Baltimore, Md.
HON. JOHN T. MCDONOUGH, former Secretary of State for New York, of Albany, N. Y.

COMPULSORY COMPENSATION VS. THE ELECTIVE PLAN
WILLIAM J. MORAN, Member Legal Committee, The National Civic Federation, New York City.

RIGHTS OF NON-RESIDENT ALIENS UNDER WORKMEN'S COMPENSATION ACTS
CHEVALIER MARCEL A. VITI, Philadelphia, Pa.

REPORT FROM COMMITTEE ON IMPROVEMENT OF STATE INSPECTION OF FACTORIES
LOUIS B. SCHRAM, Chairman.

REPORT UPON A TENTATIVE BASIS FOR A MODEL SAFETY ACT FOR UNIFORM STATE LEGISLATION.
Presented by JOHN CALDER.

WHAT A MODEL SAFETY ACT SHOULD EMBRACE.
JOHN CALDER, Manager Remington Typewriter Works, Ilion, N. Y.

THE SITUATION IN NEW YORK CONCERNING PROPOSED AMENDMENTS TO THE CONSTITUTION PERMITTING THE ENACTMENT OF A WORKMEN'S COMPENSATION LAW
FRANCIS LYNDE STETSON, Chairman Committee on Legislative Policy, Workmen's Compensation Department, The National Civic Federation, New York City.
PROF. HENRY R. SEAGER, Columbia University, New York City.

LEGAL PHASES OF THE TENTATIVE MODEL SAFETY ACT
ASSEMBLYMAN CYRUS W. PHILLIPS, of Rochester.

HOW LABOR BUREAUS MAY HELP IN THE EFFECTIVE ADMINISTRATION OF SAFETY LAWS
HON. EDGAR T. DAVIES, President International Association of Factory Inspectors.

THE NEXT STEP IN WORKMEN'S COMPENSATION IN NEW YORK STATE
CYRUS W. PHILLIPS, member former New York State Commission on Employers' Liability, Rochester, N. Y.
JAMES L. GERNON, Chairman Committee on Employers' Liability and Compensation, New York State Federation of Labor, New York City.

My belief is that the introduction of ancillary, even though desirable, provisions which are questionable and questioned by many, will lead to a postponement and not to a facilitation of the enactment of a proper workmen's compensation law; and so, having that subject and object near to my heart, I do trust that every friend of wise legislation on the subject of workmen's compensation will be willing to join with all of us in an amendment having that special and single object in view, and that if these other objects are to be sought they shall be sought through a different series of amendments, depending upon their own merits and upon a discussion concerning them."

SAMUEL GOMPERS—THE FLAG AND McNAMARA INCIDENTS

(*Continued from Page 15.*)

esented an attempt of Mr. Baer, of the Anthracite Coal Operators, to influence his conduct just as uickly as would John Mitchell, when he was leading the great strike in the anthracite coal fields, ave resented the offering of advice by James M. Lynch, President of the International Typographical Union. And yet, while this simple rule of insisting pon every one's attending to his own business is erfectly understood in all other walks of life, there eems to be an idea that in labor controversies all hat the President of The American Federation of Labor has to do is to push a button and every nion man in the country is to dance. When it omes to the dancing business, the union men can ake Mr. Gompers, their paid President, do the ancing if they are not satisfied with his administration. His position is exactly the same as that of he president of any large railway company or public service corporation. The stockholders and directors are the bosses when it comes to matters of olicy or important questions outside of general outine.

Now, in closing, let me ask those who would drive Samuel Gompers from the leadership of the labor ovement whom they would put in his place. As the nly opposition to Mr Gompers of any importance omes from the revolutionary Socialists, those who ould oust Mr. Gompers would have to substitute a Debs or a Haywood. Is that what they want? There re those who would profit by the disintregration of he union movement in this country who will say hat Gompers is no better than Debs or Haywood, nd that it would make little difference if either of hem took his place, but the great mass of thinking eople in this country know better.

Socialism vs. Organized Labor.

The importance of a clear discrimination by men f education and affairs between the principles nderlying the American Federation of Labor and the Railway Brotherhoods and those underlying the ocialist party in this country cannot be too seriusly emphasized at this time. There has just ccurred a national referendum election in the Socialist party for the seven members of the National Executive Committee which governs its affairs. One f the candidates for election was William D. Haywood, the leader of what is called the violent or narchist branch of the Socialist party, "The Industrial Workers of the World." Some of the members f the Socialist party were so much alarmed over he possibility of Mr. Haywood being elected that hey began an attack upon him in the Socialist apers. They quoted extracts from Haywood's book, Industrial Socialism," in which he states that any orker who understands Socialism

> "retains absolutely no respect for the property rights of the profit-takers. He will use any weapon which will win his fight. He knows that the present laws of property are made by and for the capitalists. Therefore, he does not hesitate to break them. He knows that whatever action advances the interests of the working class is right, because it will save the workers from destruction and death."

Haywood's Anarchistic Principles.

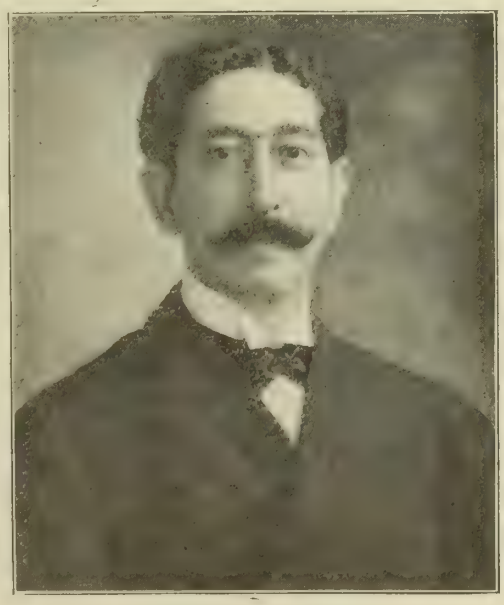
This was declared by Mr. Haywood's opposers to e anarchy. Mr. Haywood came to New York during his fight for election and made a speech at Cooper Union, in which occurred the following clear and ringing declarations for revolutionary Socialism and anarchy:

> "Can you wonder that I despise the law? I understand the class struggle. I am not a law-abiding citizen. More than that, I do not believe you here ought to be law-abiding citizens. Out there they called the troops out after us and one of their mills went up. So much dynamite was under the mill that it went up so high I guess parts of it have never come down yet.
>
> "Let us Socialists be frank. We want to overthrow the capitalist system and establish in its place an industrial democracy. Why then say we are law-abiding?
>
> "I believe in coercion. Every trade union believes in coercion. But I would have this game of coercion played on so large a scale that it would be irresistible instead of sporadic as it is now. I believe in a boycott backed by a hundred street cleaners, who are left alone in their fight because their union brothers who might have supported them are all tied up with contracts and trade agreements.
>
> "Better no organization of any kind than one which makes contracts to lie dead for a year or three years and be out of the struggle. You know if we had this organization we could protect our lives at work, shorten our hours, and finally declare a general lockout, backed up by armed warfare against the capitalists. Try it, fellow workers. You have only your chains to lose and a world to gain."

BUT HAYWOOD WAS OVERWHELMINGLY ELECTED.

Mr. Gompers Denounces Socialism.

In contrast with these Socialistic-Anarchistic utterances of Mr. Haywood, I want to call attention to the well-known and able opposition to Socialism which has always been led by Mr. Gompers, and to close this article by quoting again the same pronouncement that appears on another page in this issue (and it ought to be at the head of every newspaper in this country that believes in American institutions): I refer to what Mr. Gompers said in Faneuil Hall in Boston, in closing his eloquent speech against the proposition of the Socialist party to commit the American Federation of Labor to its propaganda, namely:



> "I want to tell you Socialists that I have studied your philosophy; read your books upon economics, and not the meanest of them; studied your standard works, both in English and German—have not only read, but studied them. I have heard your orators and watched the work of your movement the world over. I have kept close watch upon your doctrines for thirty years; have been closely associated with many of you, and know how you think and what you propose. I know, too, what you have up your sleeve, and I want to say that I am not only at variance with your doctrines, but with your philosophy.
>
> "*Economically, you are unsound; socially, you are wrong; industrially, you are an impossibility.*"

MR. MARKS PROVES EFFICIENT ARBITER

Danbury Hat Makers and Workers Call on Civic Federation to Furnish Umpire Under Clause in Their Agreement.

A HAPPY example of industrial arbitration was afforded recently in the decision of Marcus M. Marks, chairman of the New York Arbitration Committee of The National Civic Federation, in a controversy between the United Hatters of North America and a member of the Danbury and Bethel Hat Manufacturers' Association.

At the termination of trouble, in 1909, between the national organizations of employers and workmen in the hat making industry, an agreement was entered into between the hat manufacturers of Danbury, Conn., and the United Hatters of North America to the effect that all matters in dispute should be arbitrated by a committee on which both sides should have equal representation. In the event agreement could not be had in this way, the selection of a final arbiter was provided for.

MARCUS M. MARKS.

It was, however, a further part of the agreement that if the committee failed to decide upon some one as final arbiter within five days he should be chosen by the chairman of the Conciliation Committee of The National Civic Federation.

Both sides requested President Low to act in accordance with the provision just referred to, and he designated Mr. Marks to act as final arbiter, each party to the controversy having expressed itself as thoroughly satisfied with the choice.

Investigation by Mr. Marks showed that the controversy was not of such a nature as to be susceptible of settlement by conciliation, it being a question of "piece-work" and "task-work." In view of this fact an abitration of the matter was entered into.

Mr. Marks' findings as arbitrator were accepted by each party, and the threatened trouble seems to have been most happily averted.

The decision of Mr. Marks in the case follows:

Decision of the Arbiter.

"To THE

"UNITED HATTERS OF NORTH AMERICA, 11 Waverly Place, New York City.

"DANBURY AND BETHEL HAT MANUFACTURERS' ASSOCIATION, Danbury, Conn.

"GENTLEMEN: A study of the matter presented to me for arbitration, under the contract existing between the Danbury and Bethel Hat Manufacturers' Association and the United Hatters of North America, reveals the fact that the dispute does not hinge upon the relative satisfaction of the week-work and piece-work systems, as had been intimated, but concerns a complaint against what I should term the system of *task-work* operating for the past three years in the factory of the Delohery Hat Company, member of the Hat Manufacturers' Association. The union demanded a change to the piece-work system, such as exists in all the shops of other members of the Manufacturers' Association, and the adjustment of the piece price to a scale which would give satisfactory earnings to the employes of the department of 'sizing' hats and 'starting on the machine.'

"The bill of prices offered to the men by Mr. Delohery on May 1, 1911, is as follows:

> "'PLANK SHOP BILL OF PRICES TO CONTINUE TO APRIL 30, 1912.
>
> "'Wages for machine sizing to be at the rate of $20 per week of fifty hours' work.
>
> "'Wages for starting on machine to be at the rate of $20 per week of fifty hours' work.
>
> "'Nine hours constitute the time for a day's work.
>
> "'Sixty-four hats agreed on as a fair day's work from a sizer, and twelve dozen agreed on as a fair day's work from a starter.
>
> "'Slow men to be paid in proportion to above bill.'

"It will be seen that while a certain task is expected for the weekly wage designated, a proportionate reduction is stipulated for smaller production. There is, however, no provision for higher pay for higher production. In other words, no steady weekly wage is offered nor any minimum pay stipulated, but a maximum earning power is rigidly set. This, in spirit, is, in my judgment, against the best interests, not only of the workingmen who, in the Delohery bill, are met with a blank wall, limiting their hopes, but it is equally against the interests of the employer. It does not stimulate men to do their best. Extra production does not proportionately increase the overhead charges of the factory and therefore brings an increased net return to employer as well as employe.

"The present task-work system led to increase in the practice, on the part of rapid toilers, of quitting work early in the afternoon, when their stipulated task was completed, and led to a disregard of the terms of the association agreement in force to work nine hours per day for five days and five hours on Saturday.

"An agreement of this kind should mean what it plainly says and be so carried out. Men should work to the full extent of their ability (with due regard for the protection of their health) during those hours, and they should be entitled to full pay for their output in accordance with the ability they show.

"For reasons best known to the hat trade in Danbury and Bethel, the piece-work system has been in vogue in all the factories except the one complained about at this time.

Price List Is Fixed.

"Since there is keen dissatisfaction with the operations of the task-system in this one case, and since it has offensive features per se, I see no reason for its continuance, but must decide that, for the good of both parties and to further the uniformity of system among the members of the Manufacturers' Association, the piece-work system be adopted in the 'sizing and starting' departments of the Delohery Hat Company until April 30, 1912. As to fixing a price-list to be operative until April 30, 1912, I must frankly state that I feel the responsibility very keenly. I have studied the price-list of a number of the manufacturers in Danbury, but find that the case is simplified by the fact that there is but one other factory employing the same system of manufacture as that of the Delohery Hat Company. In the shop to which I

(*Continued on Page 28.*)

DOCTRINE OF CLASS HATRED IS SMITTEN HARD

TURDY AMERICANISM IN FEDERATION OF LABOR REJECTS SOCIALISTIC PROPOSAL—UNION OFFICIALS MAY CONTINUE TO AID THE CIVIC FEDERATION IN ITS EFFORTS FOR INDUSTRIAL PEACE

STURDY Americanism arose in its might at the recent annual convention of the American Federation of Labor, at Atlanta, Ga., and smote p and thigh "class consciousness" and the various her doctrines by which Socialism tries to sow the eds of hate, malice and envy among the wage-orkers of every country.

The vote was nearly three to one. The opportnity to assert its revulsion at these Socialistic octrines came to the delegates to the convention in he following way:

Three resolutions condemning the Civic Federaion, and either directly or indirectly calling upon ny member or officer of any labor union holding membership in the Federation to withdraw, were resented.

One of these was offered by a delegate from the llinois State Federation of Labor; another by a representative of the United Mine Workers, and a third jointly by representatives of the United Mine Workers and the Michigan State Federation of Labor.

One of these resolutions alleged that the employing class had banded itself into an organized union known as the Civic Federation, "ostensibly for the purpose of averting strife between the workers and the employers, but really for the purpose of blinding the workers as to their true condition;" another alleged the favorite doctrine of Socialism that, "conflict between the employing class and the working class is constantly becoming more intense." The third resolution offered found fault with the Civic Federation because "a number of those who contribute to its financial support are enemies of the labor movement and are working to destroy the labor unions of the country."

REPORT OF THE COMMITTEE WHICH INVESTIGATED ALLEGATIONS MADE IN THE RESOLUTIONS.

To the allegations outlined above, the Committee on Resolutions replied in a report which strongly endorsed the efforts of The National Civic Federation to bring capital and labor into closer relationship and also its efforts to better the working conditions of wage-earners. The report states that, after careful investigation, the allegations made in the resolutions are found to be without foundation. The complete report of the committee follows:

"Your committee in connection with the consideration of these resolutions has endeavored to secure such information relative to The National Civic Federation as could be presented by the delegates introducing them, and in addition such information as could be given by those who as trade-unionists have held membership in that body, or who have in any manner noted the influence of The National Civic Federation upon the safety and progress of the trade-union movement and the principles for which it stands.

"In addition your committee has examined its official records for the purpose of discovering the aims and objects of The National Civic Federation and of assuring itself as to whether there existed any variations between the principles of that organization as laid down in its organic laws and the rules it has adopted, and in its practice.

"Your committee finds that The National Civic Federation was organized in part for the purpose of furthering the adjustment of disputes between employers and their employes through the methods of friendly conference, conciliation or arbitration when mutually acceptable, and the consummation of joint contracts and agreements covering the terms of employment. In addition, to bring together representative men from all groups for the public discussion of the questions affecting the relations between employers and organized workmen. This organization, we find, at the time of its inception, set the official seal of its approval upon the recognition of trade unions by employers, and as endorsing the consummation of formal agreements covering the terms of employment between employers and organized workmen.

"Your committee has had no information placed before it which would indicate that The National Civic Federation has at any time departed from its policy as above outlined, but evidence has been presented which demonstrates that it has extended its original program by creating departments whose entire work has been to give a widespread influence in favor of the peaceful adjustment of all questions arising between employers and organized workmen.

"In evidence of this fact your committee quotes from the official announcement of The National Civic Federation creating the Department of Conciliation, as follows:

"'Declaration of the Purpose of the Conciliation Department.

"'The scope and province of this department shall be to do what may seem best to promote industrial peace and prosperity; to be helpful in establishing rightful relations between employers and workers; by its good offices to endeavor to obviate and prevent strikes and lockouts, and to aid in renewing industrial relations where a rupture has occurred.

"'That at all times representatives of employers and workers, organized or unorganized, should confer for the adjustment of differences or disputes before an acute stage is reached, and thus avoid or minimize the number of strikes or lockouts.

"'That mutual agreements as to conditions under which labor shall be performed should be encouraged, and that when agreements are made, the terms thereof should be faithfully adhered to, both in letter and spirit, by both parties.

"'This department, either as a whole or through a sub-committee by it appointed, shall, when requested by both parties to a dispute, act as a forum to adjust and decide upon questions at issue between workers and their employers, provided in its opinion the subject is one of sufficient importance.

"'This department will not consider abstract industrial problems.

"'This department assumes no powers of arbitration unless such powers be conferred by both parties to a dispute.'

"We have carefully examined such records as were available, to learn whether The National Civic Federation has officially or unofficially committed itself to the assumption that the interests of capital and labor are identical and we have failed to find any evidence that this question has ever been passed upon; we have found, however, in the public statements of the officers of this organization, who were not members of trade unions, and in its official publications, expressions of the conviction that in the profits arising from production, the interests of the employer and the workman were not identical, as both endeavored to secure to themselves as large a share of the value of products as possible.

"From its attitude and official expressions of opinion The National Civic Federation seems to have committed itself to the belief that the primary purpose of trade unions is to secure a larger share of the actual value arising from production, through collective action, than would be possible for their members to acquire through their efforts as individuals, and that the employers frequently associate themselves together that they might be in a better position to retain the largest possible portion of the profits.

A Friendly Influence.

"Your committee has had no evidence presented to it which would indicate that the influence of The National Civic Federation has ever been unfriendly to organized labor or that it has been detrimental either when negotiations were in progress between employers and trade unions or when industrial controversies had led to strikes and lockouts. Officers of national and international unions affiliated with the American Federation of Labor have appeared before your committee and testified that on numerous occasions interviews and conferences were secured with employers who had previously refused to meet any representatives of their organizations, through the kindly offices of The National Civic Federation, and that as a result of these interviews and conferences and the friendly influence of that body, satisfactory adjustments of controversies were effected.

"Your committee is aware of criticisms which have been directed against The National Civic Federation by some members of organized labor, but none of these compares with the vindictive and vicious attacks which have been made against it by every association of employers in America which is organized for the purpose of opposing and antagonizing our trade unions and the principles they are contending for.

"The bitter hostility of the anti-trade union associations has evidently been directed toward The National Civic Federation because that body has emphatically declared its conviction that trade unions are essential to the workmen's welfare, and that as indispensable organizations they should be given full recognition and encouragement.

A Covert Blow at Individuals.

"It appears to your committee that the criticisms which have been made by members of labor organizations are directed more toward certain individuals holding membership in The National Civic Federation than against that body itself.

"It is not to be expected that in an association composed of representatives of trade unions, employers and the general public that every member will be equally acceptable to all of the others because of his views and personal attitude; men differ in their view-point, and these differences become more apparent when representatives of such groups as organized workmen and employers meet upon a common footing to discuss problems affecting both directly. But are we to hold that we shall not meet and discuss the grave problems which affect the wage-earners' standard of civilization with an association whose membership may include some whose vision has not yet been sufficiently broadened?

"These individual members of The National Civic Federation, against whom criticism has been directed, are in many instances active members of the church, of fraternal and of other civic organizations, contributing to their support. Their attitude toward many questions may fail to meet with the approval of their associates, but is this sufficient reason why any member should withdraw his affiliation from such organization or organizations, or that recommendations should be made by this convention that members of organized labor should withdraw from any of them?

"Since the formation of The National Civic Federation there has been in its membership a number of trade-unionists, among these being men who have deservedly earned our full confidence, and who for years have been selected by organized labor in this and their own organization as among the most trusted and capable officers and members. These representative men have had the fullest opportunity of becoming familiar with the policies and the influence of that body upon the welfare and progress of our trade union movement, and we are convinced that if any of them had discovered that the The National Civic Federation was in any manner inimical to the welfare of our movement they would have been the first to sound a note of warning.

"Your committee therefore recommends non-concurrence with the resolutions."

SPEECHES OF LABOR LEADERS OF NATIONAL PROMINENCE IN SUPPORT OF COMMITTEE'S REPORT.

DENNIS A. HAYES, President of the Glass Blowers' Association of the United States and Canada, favored the Committee's report in a strong speech. He said that he was a member of The National Civic Federation as an individual, and not as a representative of his trade, and that no one induced him to join, but that he had done so of his own accord; and he held that in so doing he had exercised the same privilege that he did in becoming a member of a trade union.

Mr. Hayes took the broad position that organized labor should seize every opportunity offered for explaining its humane objects to people who do not thoroughly understand them, and he added that, "we were not brought into this movement to be put in a nursery, or to join some select school of economics where we would hear nothing but that which appealed to our own prejudices and views." He expressed the opinion that labor had gained probably more increases in wages and reductions in hours of work by meeting employers who were at one time bitterly opposed to it than in any other way, and he pointed to the fact that herein lay one of the purposes of The National Civic Federation, namely, to allay prejudice and ill-feeling on the part of representatives of both capital and labor through friendly intercourse.

The speaker claimed that the few labor organizations that had condemned The National Civic Federation had done so without investigation of its purposes. Mr. Hayes, in common with practically all who spoke in favor of the Committee's report,

pointed out the fact that if he could be told to leave The National Civic Federation, his religious and political affiliations could similarly be interfered with. He paid his respects to the Socialism animating the resolutions under discussion very concisely with the statement that, "To talk of more democracy, and more liberal conditions of employment, and at the same time foment feeling between the classes seems to me like a contradiction."

John Mitchell Discusses "Chloroform."

The next speaker was JOHN MITCHELL, Vice-President of the American Federation of Labor, formerly President of the United Mine Workers of America. Mr. Mitchell pointed to the fact that he had helped to organize The National Civic Federation, aided in the writing of its laws, and that the President of the American Federation of Labor, and other representative men in the movement, wrote the declaration in support of the trade agreement. He outlined the wonderful growth made by the United Mine Workers of America while he was President, and added, "all this progress and achievement was made while I was supposed to be suffering under the effects of chloroform administered by The National Civic Federation." He pointed to the fact that those behind the movement that led to his voluntary resignation from The National Civic Federation were in reality trying to drive him out of the United Mine Workers of America.

Referring to a few members of The National Civic Federation who had been cited by the opponents of the Committee's report as not in sympathy with the principles of organized labor, Mr. Mitchell said it was all very well to single out such persons, but that he thought it was only common justice that employers of labor who have been in constant agreement with their workmen, year after year making contracts with representatives of organized labor, should be given credit for what they had done.

Mr. Mitchell announced that he would not talk on abstract propositions, nor would he even suggest for the credit of The National Civic Federation, "those numerous settlements made by organized labor as a result of conferences secured through representatives of the Civic Federation." He would, however, he said, refer to some specific instances in which he himself had participated. He thereupon outlined several settlements that had resulted in justice to organized labor and which had come about through the influence of The National Civic Federation.

Mr. Mitchell referred to the fact that in the State of New York a comprehensive factory law, drawn by a commission of which he was a member, had been saved from veto by the earnest representations of August Belmont and other prominent members of The National Civic Federation. "That," said he, "was not an evidence of hostility; on the other hand, it was regarded by those who knew of it as an evidence of friendship. I have here a letter written by a member of the Legislature who introduced the bill extending his thanks to The National Civic Federation because of Mr. Belmont's action."

The speaker declared that the resolution of the Mine Workers of America denouncing The National Civic Federation was "not the expression of a majority of the delegates duly elected at the last annual convention," and charged that a large number of delegates, about fifty from one district alone, sat in that convention with credentials fraudulently given to them, and cast the votes that sent in the resolution in question to the American Federation of Labor. In making this statement, Mr. Mitchell made it plain that no censure of the members of his Union was implied, saying that he had full knowledge that the resolution was passed with the votes of men who had no right to seats as delegates in the Miners' Convention.

A Lack of Evidence.

JAMES O'CONNELL, President of the International Association of Machinists, said that he had hoped that the discussion would have brought out some evidence of the charges contained in the resolutions attacking The National Civic Federation, but that the opponents of that organization had failed to show anything that would warrant the support of the resolution they had presented. Mr. O'Connell stated that while he was not now a member of The National Civic Federation, he had been on its rolls in its early history, and that he was well acquainted with its beginnings, and knew something of the benefit it had been to him and the organization he represented. "The mere fact," said he, "that there may be one or two or a dozen men associated with that body whose records may show unfriendliness toward labor does not indicate by any means that the institution is unfair in any way." The speaker told of the effective use of the good offices of The National Civic Federation in his own

(Continued on Page 28.)

THE PRESS EMPHATICALLY ENDORSES LABOR'S REJECTION OF SOCIALISM

ROCHESTER HERALD, N. Y.—It is fortunate that a majority of the delegates to the convention were wise enough to vote down the resolution. It is a happy augury.

GRAND RAPIDS PRESS, Mich.—When John Mitchell was compelled to resign from The National Civic Federation or be ousted from the miners' organization, The Press expressed the opinion that the unionists responsible for pressing the choice upon him did not really represent organized labor. It is glad to see its good opinion of working men in general confirmed by the refusal of the American Federation of Labor to force the same action on President Gompers and other union leaders.

EVENING POST, New York.—In voting down the resolution * * * the American Federation of Labor puts itself in a distinctly better light than the United Mine Workers, who last Spring forced their ablest member to sever his connection with a body that exists for the sole purpose of fostering good relations between capital and labor in this country.

WHEELING REGISTER, W. Va.—It was a sensible decision * * * when a majority of the delegates * * * voted against the absurd resolution demanding the withdrawal of Gompers, Mitchell and other labor leaders from The National Civic Federation.

ST. PAUL PRESS, Minn.—The work of The National Civic Federation merits the commendation and support of organized labor, and the American Federation of Labor is to be congratulated upon its refusal to follow the Socialists in condemnation of an agency that is doing so much in the way of improving relations between capital and labor.

MILWAUKEE SENTINEL, Wis.—Good for the American Federation of Labor! Its three to one vote at Atlanta against a narrow, asinine and Socialistic resolution * * * was a sensible and salutary performance.

GREAT BARRINGTON COURIER, Mass.—This [the rejection of the Socialist resolution] is creditable to the unions and is an indication of the desire of most of them for fair play.

NEW ORLEANS TIMES-DEMOCRAT, La.—The refusal * * * was, in our opinion, wise and altogether commendable.

GALVESTON NEWS, Tex.—It must be gratifying to every friend of organized labor that the resolution * * * was voted down * * * The National Civic Federation strives to be, and it actually is, a body that considers all public questions from every angle at interest. It differs from nearly all other organizations in that it attempts to consider all civic matters from the standpoint of the national interest rather than from that of any class.

VISALIA DELTA, Cal.—The Civic Federation is providing common ground for an intelligent discussion and investigation of the mutual interests of capital and labor, and it would have been regrettable to allow class prejudice to thwart the good work that the Federation will ultimately accomplish for all the people.

BOSTON ADVERTISER, Mass.—Perhaps the most unpopular thing any group of Socialists have attempted for some time was the effort to stop all conferences between employe and employer. * * * The citizens of this country need, and can profit by, peaceful conferences and arbitration as greatly on commercial and industrial questions as by the same methods on questions involving international policies.

CHICAGO RECORD-HERALD, Ill.—This action reflects credit on the Convention. It is a victory for sense and fair play. The resolution was demagogical, foolish and reactionary. It is highly desirable that representative labor men should confer, associate and co-operate as citizens and students with representative employers and representative "neutrals"—lawyers, economists, educators, etc. The National Civic Federation has never antagonized trade unionism and would not know "class consciousness" if it "met it on the street."

ERIE DISPATCH, Pa.—The fact that so decisive a vote was cast on the side of just feeling and common sense in the labor convention will go a great way towards convincing the country of the fair spirit of the members of the American Federation of Labor.

GRAND RAPIDS NEWS, Mich.—It is a matter for gratulation that, by nearly three to one, the American Federation of Labor * * * defeated the firebrand resolution * * * The Michigan Federation of Labor, which * * * adopted a similar resolution, should make a note of this action by the great international body of which it is only one of many subsidiaries.

OMAHA BEE, Neb.—The decisive vote * * * is at once a severe blow to unreasoning radicalism and a tribute to common sense and fair play.

PATERSON PRESS, N. J.—The resolution was wisely defeated, and Messrs. Gompers and Mitchell will continue their association with a body in which they may, by showing a reasonable and broad-minded spirit, be able to do vastly more good to the cause of labor than they could possibly accomplish in the antagonism to it with which the more intolerant element of the labor unions desire to array them.

INDIANAPOLIS NEWS, Ind.—Those who are deeply interested in the trade union movement and believe in it—and it must be remembered that they are not all members of unions—will be gratified by the overwhelming vote * * * by which organized labor refused to repudiate The National Civic Federation.

UTICA PRESS, N. Y.—The decision reached * * * is wise. It is a manifest mistake to try to array labor against an organization like the Civic Federation, which is seeking the solution of problems of this sort, not in the interest of either side alone, but with the hope of promoting the welfare of all concerned.

BOSTON JOURNAL, Mass.—The Federation of Labor has turned the tables on the United Mine Workers. * * * The status to which labor leaders attain in The Civic Federation should be of great definite advantage in adjusting or arbitrating future difficulties between employers and men.

CHRISTIAN SCIENCE MONTHLY, Boston.—Every member of the labor organization should rejoice because those whom they have given a vote of confidence by electing to office seek to broaden the realm of labor by intercourse with thinkers in other lines. * * * If organized labor does not permit its officers to mingle with men on the other side of the question, the situation resolves itself into this: they either do not wish justice established by learning the other side or they are afraid to trust their officials.

GLOVERSVILLE LEADER, N. Y.—* * * the heavy majority recorded * * * shows very conclusively where the bulk of the level-headed labor element stands on the subject.

WASHINGTON STAR, D. C.—That was a highly creditable performance at Atlanta. * * * The vote was nearly three to one, a most healthy sign in a matter of the first importance.

NEWARK STAR, N. J.—Common sense wins in the American Federation of Labor. If the resolution * * * had gone through it would have discredited the Labor Federation and split it hopelessly.

FORT SMITH TIMES-RECORD, Ark.—If the Federation of Labor had voted to taboo The National Civic Federation that action would have been tantamount to a declaration that organized labor has no interest in common with any other class, that it is an Ishmaelite which has its hand raised against every other interest and expects the raising of the hand of every other interest against it.

DALLAS NEWS, Tex.—It must be gratifying to every friend of organized labor that the resolution * * * was voted down.

CAMDEN COURIER, N. J.—The American Federation of Labor wisely rejected the resolution * * * requesting Federation officials to withdraw from The National Civic Federation.

MILWAUKEE JOURNAL, Wis.—The fight that the Socialists made against the Civic Federation * * * grew out of their desire for destruction, which is the chief policy of Socialism as now practised. Everything that is accomplished toward the betterment of the condition of the manual wage-earners is a blow to Socialism, for hope must give way to despair before Socialism can really thrive.

(Continued from Page 27.)

le in a strike a few years ago in which one of largest railroad systems in this country was in-ved. He showed that a conference with the sident of the railroad in question had been ar-ged through President Seth Low of the Civic leration, and that from that day to this the road question has favored organized labor in every nt way. The speaker asked whether the fact t hours have been shortened, wages increased, working conditions improved was evidence of fact that labor members of The National Civic leration have been "chloroformed."

he speaker sensed a real danger in the logic in-ved in the resolutions that had been proposed, said that if these were adopted it would set a fectly valid precedent for demanding that the icers of organized labor should be Catholics or otestants, Democrats or Socialists.

W. B. WILSON, a delegate from the United Mine orkers of America, pointed out the fact that The tional Civic Federation, in its conciliation work, s two very definite and distinct purposes, one ng to provide a forum from which the view-nts of men representing various opinions may presented to the world; and the other to foster far as possible collective bargaining. In each of se purposes he saw much that was of value to ganized labor, and he made the point that every presentative of an international trade organiza-n present on the floor of the convention knew at it was good policy to use every means to get close as possible to the heads of corporations ose conduct labor felt was not friendly to its in-rests. "The National Civic Federation," said he, as given us an opportunity of that kind, and we ght to avail ourselves of it."

Lynch's Logical Argument.

JAMES M. LYNCH, President of the International pographical Union, said that when he became a mber of The National Civic Federation his or-nization had 35,000 members, and that it now has 000; "all of this," said he, "despite the 'chloro-m' that has been administered to my organiza-n on account of my affiliation with The National vic Federation." Mr. Lynch referred to the fact at those "responsible for the resolutions denounc-The National Civic Federation had distinguished mpany in the National Association of Manufac-ers," and quoted from certain correspondence of Manufacturers' Association in support of his tement as follows:

"In this connection I will express the hope that day is not far distant when The National Civic deration will clear its literature of the union el and will stand squarely before the public com-tted absolutely to the interests of all the people, l freed forever from any alliance with the labor st and from an affiliation with labor union dema-gues."

The speaker advanced the opinion that the propo-ion that was being debated was not so much op-sition to The National Civic Federation as it was position to the labor leaders associating with tain men belonging to that organization. "If t is good doctrine as applied to The National ic Federation," said he, "it is good doctrine as plied to other associations. If it is good as ap-ed to the Civic Federation, it is good as applied the Newspaper Publishers' Association." Then Lynch went on to tell of the splendid results t had been accomplished through the close rela-ns established between the International Typo-phical Union and the Newspaper Publishers' As-ciation, and he pointed to the fact that the pub-her of the Los Angeles Times was then and still a member of the Publishers' Association. Mr. nch said that if the line of reasoning that was posed were adopted, one must conclude that the ernational Typographical Union is making a eat mistake in continuing its relations with the wspaper Publishers' Association, despite the man-st betterment that had come to his membership ough that association.

Following Mr. Lynch's speech, it was brought out t one of the largest publishing houses in the ntry after bitter resistance to the Typographical ion had been brought into harmonious relations h it through John Mitchell when he was Chair-n of the Trade Agreement Department of The tional Civic Federation.

Mr. Mahon's Story of Subway Strike.

The speech of WILLIAM D. MAHON, President of Amalgamated Association of Street Railway Em-yes of America, was of unusual interest, including it did the first public statement from the head of street railway employes' organization of the ts in the subway strike of a few years ago. Mr. hon's action was a brave one. He minced no rds in showing that the subway management oughout that trouble had lived up to its part of contract and that it had been the victim of bad The speaker began his recital of the causes leading up to the subway strike with the statement that before the opening of the subway there was on the elevated system in New York an organization of locomotive engineers composed of some 300 men, which had continued in existence after the steam locomotives had been done away with on that road; and further that there were about 100 firemen who had their organization. Immediately prior to the opening of the subway, Mr. Mahon said, these organizations had made demands on the company without effect until an appeal had been made to him, and he, through the Civic Federation, had got in touch with the company, and had been able to work out an amicable settlement. With this brief introduction, the next step will be told in Mr. Mahon's words:

"That (the threatened trouble referred to) was in the fall of 1904, I believe. We agreed in the subway upon a contract for two years. I wanted our men to remain out of that. Our men insisted that that be part of the subway contract, and they signed it. The contract in the subway was made for two years, dating from August, 1905. The next spring when the subway strike, of which so much is said, took place, our organization on the elevated made demands, outlined a new agreement, sent it to our office and had it approved. It was sent back and given to the company. An arrangement was made that prior to the expiration of the agreement conferences would be held and the agreement discussed. In the meantime the engineers for some reason, I know not what, and the firemen became dissatisfied and again got into conference with our men. They decided that they would present an ultimatum to the company repudiating the two years' contract that was made the fall before in the subway. They decided to go to the company and lay down an ultimatum at 2 o'clock in the afternoon and give the company until eleven o'clock that night to sign. They were not to notify the International officers, but the Secretary secretly wired me. I did not know he was simply doing it as an individual.

Protest Against Breach of Faith.

"I went on to New York and met the Secretary at noon with the Vice-President of our organization. He notified me that he was going down town to meet the balance of the committee and that they were going to deliver an ultimatum, which he had read to me. I protested and told him it was ridiculous, that the position they were taking was contrary to all the laws of our organization. I appealed to him and the Vice-President to protest to the committee. They went down, but the committees met and presented the ultimatum. If it was not agreed to by eleven o'clock that night they would enter into a strike. They said they knew it was contrary to our laws and contrary to the Brotherhood laws, but that they expected the strike would be won before we could protest."

Mr. Mahon then told of further unavailing efforts to avert trouble and of how the strike was called and speedily lost. Commenting on the breach of faith that had caused the strike, he said:

Endorses Mr. Belmont's Action.

"Mr. Belmont had been assured when representatives of the Engineers called on him a few days before, when he wanted to know their position, as he was going away, that nothing would be done until he returned. He said, on the other hand, that the Amalgamated had put in their contract and he knew their policy would be to discuss it and work it out. He left New York feeling that the whole situation was one that would be dealt with according to the laws of the organization. I will not criticise Mr. Belmont for the action he took in that strike; it is the position I would have taken, or that any other man would have taken under similiar cirmumstances."

Continuing, Mr. Mahon said: "Mr. Belmont came into the Civic Federation. I was one who, after getting acquainted with him, persuaded him to come in, and we were able to settle many grievances that came up. I went to him on other railroad affairs and got him to assist us. I say this in behalf of the subway strike that the delegates may know that some of the stories that have been circulated around the country are absolutely false. The Civic Federation in these matters has given us assistance."

Almost all of Mr. Mahon's speech was taken up with concrete instances of valuable aid rendered his organization by The National Civic Federation in placing him in touch with the heads of large traction corporations with results highly beneficial to the street railway men's union in every instance.

T. W. McCULLOUGH held that the whole question in dispute was, "Shall we keep in touch with our employers?" Mr. McCulough thought that organized labor should keep in touch. "We are called into existence," he said, "to represent the workers of America, to have their interests in our charge, and to take up matters in contention with employers from time to time. There is not a minute that we are not in contact with the employers on one question or another concerning our employment. The Civic Federation has opened an avenue where the employer and employe can meet on a ground that is as nearly neutral as any that has as yet been suggested. Shall we then close that avenue of opportunity?"

Mr. Healy's Pertinent Observation.

TIMOTHY HEALY, President of the International Brotherhood of Stationary Firemen, expressed the opinion that if the men who were attacking The National Civic Federation had investigated the work it is doing the resolutions that were being debated would never have been presented. "I have thought," said he, "while listening to the discussion here today, that if Mr. Parry, Mr. Post, Mr. Kirby and Mr. Walter Drew were here, they would have applauded vociferously some of our orators." Mr. Healy very effectively unmasked the Socialism lurking in the denunciatory resolutions that were being considered, and he advised fledgeling delegates to beware of the Socialist "chloroform."

"No Surrender of Conviction."

PRESIDENT GOMPERS, of the American Federation of Labor, spoke at length in unmasking the motives impelling the Socialists in presenting the resolutions under discussion. He said that there was nothing the American Federation of Labor could do to satisfy those gentlemen short of turning the organization over to them.

"There is a sort of reason," said Mr. Gompers, "misnamed a philosophy, upon which all this antagonism is based. It is the idea that the working people must get into a condition of abject poverty and misery and by a cataclysm, called a social revolution, 'come into their own and take charge of society and government.' As if an impoverished people ever really made for constructive revolution! The poorer the people the more abject they become. There may be a revolt, like a riot and a flash in the pan, but the constructive, constant work, day by day, hour by hour, and year after year, is the work in which the trades unionist is engaged."

The speaker said that The National Civic Federation had never adopted a proposition affecting the rights of labor unless the men of labor approved, and that one vote cast against any such proposition by a representative of labor would be sufficient to defeat it. This was in answer to the criticism that organized labor composed only one-third of the Executive Committee of the Federation.

Continuing, Mr. Gompers said: "As a matter of fact, every man who attends these meetings of the Civic Federation knows that we meet there without surrendering one jot of our judgment or our convictions or our faith in the justice of our cause. When we meet these people we endeavor to drive home the claims of labor. They do not often get this otherwise, and now the proposition is that they shall not get it at all!"

JAMES DUNCAN, President of the Granite Cutters' International Association of America, closed the debate in a strong speech in which he called to the attention of the United Mine Workers' organization the fact that he had first heard of the Civic Federation through a good turn it had done that organization.

The report of the Resolutions Committee rejecting the proposed criticism of The National Civic Federation was adopted by a vote of 11,851 to 4,924, practically three to one

MR. MARKS PROVES EFFICIENT ARBITER

(Continued from Page 25.)

refer the earnings seem to give satisfaction to the workers, and the cost is not objected to by the employer. Allowing for a difference in grade and avoiding the technicalities of specific variations in material, color and weight, I have decided to establish an *average price*, leaving it to the fairness of the Delohery Hat Company and their employes to treat equitably any exceptional situation that may arise during the next six months, for which this decision establishes the piece-price.

"The uniform piece-price for 'starting' and for 'sizing,' which my study of the situation brings me to conclude will be fair in the Delohery shop, is 32 cents per dozen for starting and 80 cents per dozen for sizing. This price to be retroactive from October 13, 1911, which is the date when the Manufacturers' Association and the union agreed to refer this dispute to an arbitrator selected by The National Civic Federation.

"In the interest of the individual employer and employe herewith concerned, and in the greater interests of the hat industry of Danbury and Bethel, I trust that the men and their employers may work together in the proper spirit, aiming at friendly co-operation, which makes for mutual success. I hope that all personal differences will sink into insignificance in consideration of the importance of conserving and developing the greater prestige and prosperity of the cities of Danbury and Bethel. Very sincerely yours,

(Signed) "MAROUS M. MARKS, Arbitrator.

"New York City, November 28, 1911."

SOCIALISM AND THE NATIONAL CIVIC FEDERATION

CORRESPONDENCE BETWEEN MESSRS. MORRIS HILLQUIT AND R. M. EASLEY.

THERE is reproduced herewith some recent correspondence between Mr. Morris Hillquit (member of the National Executive Committee of the Socialist Party and Secretary of the International Socialist Bureau) and Mr. R. M. Easley, (Chairman of the Executive Council of The National Civic Federation) on the attitude of the Socialists toward The National Civic Federation. That attitude is well represented by the following quotation from Mr. Hillquit's letter:

"The game played by the Civic Federation is the shrewdest yet devised by the employers of any country. * * * To the organized labor movement the policy of the Civic Federation is the most subtle and insidious poison. It robs it of its independence, virility and militant enthusiasm; it hypnotizes or corrupts its leaders, weakens its ranks and demoralizes its fights. The Socialist Party is employing all efforts at its command to save American labor from the "benign" influence of The National Civic Federation, hence there is so little love between the two organizations."

MR. HILLQUIT'S LETTER.

320 BROADWAY, NEW YORK, June 16, 1911.

MY DEAR MR. EASLEY—Many thanks for the proof of your pamphlet and the expression of your confidence in my fairness. I have read the outline of the work and plans of your Federation with great interest, particularly those portions which relate to the attitude of your organization toward the labor movement and its problems, and as you rightly predicted, it does not meet with my approval.

It would be difficult to find two other movements so diametrically opposed to each other in principle and methods as are those represented by The National Civic Federation and the Socialist Party. Both movements have their inception in the struggles between capital and labor, but here their similarity ends. The Socialist leaders consider these struggles as inseparably inherent in the present form of industrial organization. They contend that under a system of private and competing industries there is and always must be a conflict of economic interests between the workers and their employers. The smaller the worker's wages, the larger the employer's profits, hence the employer in the natural course of business always strives to secure the utmost labor for the least pay, while the worker as naturally strives to sell his labor for the largest price obtainable. This strife is a chronic social disease, ever present, ever active. The Labor Union and the Employers' Association are its permanent organized forms; the strike and the lockout, the boycott and the blacklist are only the symptoms of its acuter phases. It is a fight to a finish, and one of the two contending sides must ultimately win out. The final victory of capital would mean universal enslavement and national decadence, the triumph of labor would mean social harmony and progress. The Socialists, therefore, frankly and unreservedly ally themselves with the forces of labor in all its struggles against capital. They seek to increase the fighting efficiency of the workers by educating them to a sense of their class solidarity and by organizing them into a compact, independent and class-conscious body, industrially and politically.

Attacks Efforts for Harmony.

The National Civic Federation, on the other hand, regards the struggles between the workers and their employers as purely accidental, as results of deplorable misunderstandings. Its social philosophy is based upon an assumed harmony of interests between the exploiting capitalists and the exploited workers, and its policy is to bring the two classes together, to patch up their differences, to gloss over their struggles. This is the express function of your Industrial Conciliation, Industrial Economics and Employers' Welfare Departments, and the implied purpose of your annual "harmony dinners."

The game played by the Civic Federation is the shrewdest yet devised by the employers of any country. It takes nothing from capital, it gives nothing to labor, and does it all with such an appearance of boundless generosity, that some of the more guileless diplomats in the labor movements are actually overwhelmed by it.

Take your stand on Workmen's Compensation. It is characteristic of your Federation. The pamphlet, of which you have been kind enough to send me the proof, summarizes the subject in the following language: "To all employers of labor it is of the highest importance that a fair and equitable compensation law be placed on the statutes of our various industrial States in place of the present liability laws. *If this is not done, the workingmen will insist on legislation which will sweep away all the defenses of the employer*, leaving him at the mercy of jury decisions in suits pressed by shyster, ambulance-chasing lawyers."

Activities Are "Cheap and Trivial."

What is really meant by this eloquent and touching admonition is about this: The workers of this country have recently begun to show signs of revolt against our barbaric system of law, which practically gives them no redress for injuries sustained in the course of their employment. They are discussing and formulating demands for radical legislative reforms on this subject, and there is danger that this agitation may give rise to a powerful political labor movement along Socialist lines. To forestall this dire possibility, the watchful Civic Federation has drafted a measure of its own, a "Compensation" Act that would not compensate the workers, nor hurt the employers, and now it seeks to divert the movement of the workers into the shallow channels thus created by it. And so it is with all other "reforms" of the Federation. They are cheap and trivial, and their main purpose is to avert the threatening revolt of the workers. To the organized labor movement the policy of the Civic Federation is the most subtle and insidious poison. It robs it of its independence, virility and militant enthusiasm; it hypnotizes or corrupts its leaders, weakens its ranks, and demoralizes its fights. The Socialist Party is employing all efforts at its command to save American labor from the "benign" influence of The National Civic Federation, hence there is so little love betwen the two organizations.

Very truly yours,
(Signed) MORRIS HILLQUIT.

MR. EASLEY'S REPLY.

NEW YORK CITY, July 21, 1911.

MY DEAR MR. HILLQUIT:—I have your letter of June 16, in which you express, frankly and fully, your views in regard to the purpose and work of The National Civic Federation. I had hoped to have replied to it sooner, but absence from the city, necessitating the disposal on my return of much accumulated work, has delayed me until now. Also, as your letter fairly represented much of the general opposition that has been expressed by leading Socialists to the Civic Federation, I felt it my duty to go more fully into the history and scope of the work of the Federation than could have been done in a brief and hasty response.

My first thought on reading your letter was that, were it not an act of discourtesy to you and were my relations with Mr. Kirby, the President of the National Association of Manufacturers, sufficiently intimate to permit, I should like to send it to him. As you probably know, Mr. Kirby is expending a great deal of his surplus time and energy in abusing The National Civic Federation, because, as he says, "it is dominated entirely by and run in the interest of the Gompers-Mitchell Labor Trust, the most infamous of all the trusts." In one issue of an official organ of a manufacturers' organization the declaration was made that "Gompers and Mitchell dictate every policy of the Federation in the interest of the American Federation of Labor and against employers," and the further declaration was made that the writer of this letter is "a paid walking delegate for Gompers." At the annual meeting of the Manufacturers' Association, held a few weeks ago, President Kirby repeated his well-known views on The National Civic Federation, saying, among other things:

President Kirby's Sentiments.

"My opposition to it [The National Civic Federation] has been relentless, however, and will be relentless, because of its close alignment with the dominating influences of labor unionism. * * * The American Federation of Labor is engaged in an open warfare against Jesus Christ and his cause. Analyze it as you may, you can make nothing else out of it, and those who profess Christ, yet *hobnob with the leaders of that wicked conspiracy and give them encouragement by eating and drinking and smoking and holding social relations with them, cannot segregate themselves from the responsibility that attaches to such affiliation.* On this issue, therefore, I challenge The National Civic Federation to disprove my charges, and if my *conservatism* is denounced as *radicalism*, then my mind goes back to Los Angeles, and I take refuge in the stand of Martin Luther: 'Here I stand; I can do nothing else; God help me!'"

These utterances were applauded by the members of the Manufacturers' Association, who showed their confidence in Mr. Kirby by shortly afterward unanimously re-electing him president; so, it must be inferred that his views on The National Civic Federation, so expressed, were endorsed by the members of the Association, and were not simply the views of President Kirby.

The National Association of Manufacturers not only represents three thousand employers, numbering among them some of the largest employers in the country, but it also includes among its sympathizers other employers who are anti-trade union to the core. Some of the latter denounce The National Civic Federation on the very ground taken by Mr. Kirby, namely, that it is conducted in the interest of organized labor. The president of a very large corporation stated last summer to a member of the Federation that, "had it not been for The National Civic Federation, we (the manufacturers) would have smashed every union in this country two years ago. It (The National Civic Federation) has played up Gompers, Mitchell, Stone, Morrissey, and other labor leaders to such an extent at their meetings and banquets that these men now think they are our equals."

From another employer, who received a circular letter, inviting him into membership in The National Civic Federation, a reply was received from which I quote: "No, sir, I will not join The National Civic Federation. I regard it as one of the most insidious schemes ever concocted to promote the damnable practices of the trade unions, including the closed shop, the boycott and the slugging of non-uion men. The very letter you sent me has on it the union label, the badge of slavery. It is an insult to ask any employer to join such an association."

I might go on, my dear Mr. Hillquit, quoting pages of such matter, attacking the Federation because "it is run in the interest of organized labor."

Yet, on the other hand, you charge in your letter that "the game played by the Civic Federation is the shrewdest yet devised by the employers of any country. * * * To the organized labor movement the policy of the Civic Federation is the most subtle and insidious poison. It robs it of its independence, virility and militant enthusiasm; it hypnotizes or corrupts its leaders, weakens its ranks, and demoralizes its fights. The Socialist Party is employing all efforts at its command to save American labor from the 'benign' influence of The National Civic Federation, hence there is so little love between the two organizations."

"Some One Is Mistaken."

Now, it is evident that some one is mistaken. The positions taken by the National Association of Manufacturers, as represented by President Kirby, on the one hand, and by the Socialist Party, as stated by yourself, on the other, are irreconcilable.

Who is right?

The fact is, both are wrong.

If either view is correct, The National Civic Federation ought not to exist; and if either view is correct, men who voluntarily give much time and thought to the work of the Federation—like President Seth Low, for example, who is neither an employer nor a member of a labor union—would no longer wish to be connected with it.

Without undertaking in a letter to discuss all the matters included in your sweeping indictment of The National Civic Federation, there are some points that directly affect the integrity of its work upon which I should like to touch. In doing this, let me say that I am writing to you in my personal capacity and not as an official of The National Civic Federation, as, I take it, you wrote to me in your personal capacity and not officially as a member of the National Executive Commitee of the Socialist Party nor as the Secreary to the International Socialist Bureau.

Let us begin, for instance, with the charge that the Civic Federation was organized as a shrewd game in the interest of the employers. If there were any truth in that allegation, some evidence of it would certainly have been discovered by some of the members of Mr. Kirby's organization, and it would also have been apparent somewhere in the inception of the movement. I am enclosing a printed sheet, containing the original prospectus of The National Civic Federation, which was published in June, 1900, at a time when, I think you will admit, Socialism had not cut much figure in this country and when very few people outside of its limited membership knew anything about it.

Origin of Federation Idea.

The idea of a National Civic Federation grew out a National Conference on Combinations and Trusts, held at Chicago, in September, 1899, under the auspices of the Civic Federation of Chicago, an organization dealing only with municipal reforms. This conference was attended by some five hundred delegates sent by the Governors of the States and by organizations of every description, including Single Taxers, Socialists and Anarchists, Messrs A. M. Simons and Thomas J. Morgan representing the Socialists, and Mrs. Benjamin R. Tucker and George A. Schilling, the Anarchists. The fact that Socialism and Anarchism were little understood at that time is evidenced by the fact of their representatives being invited to participate in this conference.

m the prospectus which I enclose you will ob- that it was the purpose of The National Civic ation:

To provide for study and discussion of ques- s of national import affecting either the for- or domestic policy of the United States, to in the crystallization of the most enlight- d public sentiment of the country in respect reto, and, when desirable, to promote neces- y legislation in accordance therewith."

u will also observe that the By-Laws provided tanding committees on the following subjects, e order named: FOREIGN RELATIONS, INSU- AFFAIRS, BANKING AND CURRENCY, IN- TRIAL COMBINATIONS, INTERSTATE AND EIGN COMMERCE, CONSULAR AND DIPLO- IC SERVICE, MILITARY AND NAVAL AF- RS, LABOR, EDUCATION, IMMIGRATION, NICIPAL GOVERNMENT, TAXATION, CIVIL VICE, INDIAN AFFAIRS, THE NEGRO QUES- N.

e Chairman of the Committee on Organization, Franklin H. Head, who was also the first presi- of the Federation, said at the time of the or- zation:

The manufacturers have their national organiza- and meet annually to discuss questions that af- their special interests; the agriculturalists have r national grange meetings and farmers' con- ses to discuss their interests; the great labor es of the country have their annual meetings oted to their special questions; also the National kers' Association, American Bar Association, erican Economic and Social Science associations, great church bodies, mercantile, trade and traffic ciations, and many other strictly class organiza- s meet annually or oftener to discuss their ious interests, while the object of The National ic Federation, in addition to creating departments study national problems, will be to provide a na- al forum, by means of which representatives of these great divisions of society may come to- ner and discuss the problems in which all have a mon interest. There are many such to-day, outside political questions, in the solution of which such ody may assist in an educational way. The meet- s will be held annually, or as often as conditions gest, and in different localities. The organiza- n will be absolutely non-partisan. That there is ield for such an organization is evidenced by the e hundred acceptances received on the Advisory uncil and the hearty endorsement of the plan tained therein."

think that this ought to convince you that The tional Civic Federation was not a "scheme or- ized in the interest of the employers of the coun- ." nor for the purpose of "averting the threatening olt of the workers." In fact, as you will observe, the fifteen subjects to be considered only one re- ed to the Labor question.

How Labor Question Came In.

n order to make clear how the Federation af- ward became so prominently identified with the bor question, allow me to explain that, on a refer- dum vote of the Advisory Council, consisting of e hundred members, whose names are on the en- sed sheet, it was decided that the first three ques- ns to be taken up should be Taxation, Municipal nership, and Industrial Conciliation and Arbitra- n. The Conciliation question was especially per- ent because of the great coal strike in the Fall of t year. Accordingly, a conference on Industrial nciliation and Arbitration was called, and took ce in December, 1900, at which time the Indus- al Department of The National Civic Federation s organized, with A. C. Bartlett, of Chicago, as airman. The following May a National Confer- ce on Taxation was held at Buffalo, to which con- rence three hundred delegates were sent by the vernors of the various States and by commercial, ricultural, manufacturing and labor organizations. ter two days' discussion, the Department on Tax- on was organized, with Professor E. R. A. Selig- an as Chairman and Professor John R. Commons Secretary. It was at that time intended to hold October, 1901, a National Conference on Munici- l Ownership, but so much work had developed in Industrial Department, through threatened ikes in the anthracite coal industry, a large strike the steel industry, and strikes on street railways several cities, that the time of the Executive ficers was taken up and the Municipal Ownership nference was for the time abandoned. In De- mber, 1901, the first annual meeting of the Indus- al Department was held, and at that time the late nator Hanna was made Chairman. Among the embers of the Executive Committee of his Depart- ent were Bishop Henry C. Potter and Grover eveland, now deceased and Charles M. Schwab, muel Gompers and John Mitchell. This meeting turally attracted great attention in the press, and in fact, together with Senator Hanna's strong per- nality, pitched the whole movement, so far as the public was concerned, upon industrial lines. It was not until two years later that the Federation got back to its broader work. The program of work which is described in the proof sent you is different from that announced in the original prospectus of the Federation in 1900, but this is only the difference between theory and practice. We are making practical headway with the questions we are working on to-day, and they better suit the temperament and activities of our members than the original list of subjects. So much by way of history.

Enumeration of "Trivialities."

You say, in speaking of the "reforms" of the Federation, that "they are cheap and trivial," and that their main purpose is "to avert the threatening revolt of the workers." I cannot think, Mr. Hillquit, that you have read with care the matter sent to you.

Is it "cheap and trivial" to organize a movement to help put a stop to the sale of impure food stuffs and adulterated drugs to the masses of our people, helpless to protect themselves against such fraud? While in the last four years, under the Federal and State Pure Food and Drug Laws, tremendous headway has been made in accomplishing this purpose, a great deal remains to be done, as stated in the pamphlet (of which you had the proof) herewith sent to you, and only by a determined and organized effort, both Federal and State, can the reforms be effected.

Is it "cheap and trivial" to work, in conjunction with the American Bar Association, of which I think you are a member, to secure reforms in legal procedure which will enable working people and the poor of all classes to obtain redress of grievances cheaply and expeditiously; and which will assist the laboring classes in suits against employers in the matter of accidents, breach of contract, et cetera?

Is it "cheap and trivial" to work for uniformity among the States on the regulation of combinations and trusts, and for co-ordination between the States and the Federal Government, on matters where there now is conflict, when amending the Sherman Act is regarded as of such great importance to organized labor? Under both Federal and State courts, decisions have been rendered, as you know, which organized labor believes strike at the vitals of that movement.

Is it "cheap and trivial" to attempt to get reform in taxation methods in view of the present chaotic conditions and incessant conflict between the States? The relation of the problem of taxation to the congestion problem of New York City is too well known by you to make it necessary for me to amplify this point.

Is it "cheap and trivial" to work to secure better regulation of trust companies, loan associations and savings banks? In many States, as you know, the savings of the poor are left with little or no protection, and we have recently had plenty of illustrations in this city alone of the lack of proper regulation of State banks and trust companies.

Is it "cheap and trivial" to undertake a movement for the purpose of bringing into harmony forty-six States on the many important questions of the day, when, unless such harmonious action can be secured by the States, so many great problems will be thrown upon the central Government that it will, sooner or later, break down? The central Government, you will admit, is already overburdened. So important did this movement appear to the Governors of the various States that, in most instances where State Councils were organized, the Governors themselves presided and the meetings were held at the State Houses. In this matter of uniform State legislation not only are the working men vitally concerned, but also the farmers, the manufacturers, the bankers, the merchants and the lawyers. The working men and women are greatly interested in uniform State legislation in respect to such matters as Child Labor, the Shorter Work Day for Women, Prevention of Accidents in Mines and Factories, Factory Inspection, Workmen's Compensation, and Prison Labor. As a lawyer, if not as a Socialist, I am sure you appreciate the great importance of the movement the Federation has initiated for securing uniform State Legislation. The Conference of Commissioners on Uniform State Laws, organized some twenty years ago by the American Bar Association, has testified to the aid it has received from The National Civic Federation in its last annual report, a marked copy of which I send to you. The Commissioners do not think our work is "cheap and trivial" in this matter; neither do I believe that you will do so after glancing through the Uniform State Legislation number of THE NATIONAL CIVIC FEDERATION REVIEW, which I am sending you with this letter.

Some Delay in Socialism's Utopia.

I could continue this interrogatory through all the various subjects with which the Federation is dealing, but those I have mentioned are of especial import to the working people. You will certainly not deny that the reforms proposed are needed. If you say, "Yes, they are needed, but the Federation is not going to work in the right way," I will ask you to tell me how the Socialist Party proposes to bring about such reforms in our day. I may not be correctly informed but, looking over the Socialist platform, the main remedy that I find which that platform offers for any of the evils above referred to is the collective ownership and operation by the Government of all means of production and distribution and of land. In other words, if we can wait until the Socialist Party has captured the governments of this country, Federal, State and Municipal, and has taken over all the factories, stores, railways, banks, mines and farms, a solution will be furnished of such problems. In fact, many of the leading Socialist writers put off the day until all the governments of the world shall have been captured. From the cursory reading that I have been able to give to Socialist literature, I gather that the leaders of the party themselves do not expect such a state of affairs to be brought about in our time nor in the time of our children, nor even in the time of our children's children. But, my dear Mr. Hillquit, should the people be obliged to wait until that time for reforms, admitting—which I do not—that such a change would mean reform? The progress that has been made in the last decade alone is so tremendous that every one must feel proud of what has been accomplished. I do not mean to say that there is not much still to be done, a great deal, in fact; but the hundreds and thousands of men and women in this country who have enlisted in the warfare against economic and industrial evils, through the various reform organizations, are a guarantee that the next decade is going to see still further accomplishments and that we shall not need to tear everything up and begin all over again.

I was particularly interested in the paragraph in your letter which you offered as an evidence that the Civic Federation is playing a shrewd game devised by the employers of the country. I quote:

> "Take your stand on the Workmen's Compensation. It is characteristic of your Federation. The pamphlet, of which you have been kind enough to send me the proof, summarizes the subject in the following language: 'To all employers of labor it is of the highest importance that a fair and equitable compensation law be placed on the statutes of our various industrial States in place of the present liability laws. *If this is not done, the workingmen will insist on legislation which will sweep away all the defenses of the employer*, leaving him at the mercy of jury decisions in suits pressed by shyster, ambulance-chasing lawyers.'"

Now, I might paraphrase your sentence and retort as follows: "Take your *criticism* on our Workmen's Compensation Bill. It is characteristic of much of the *criticism* of the Federation by its enemies." But I won't. I prefer to assume that you did not read our pamphlet carefully, because the very next sentence (which you failed to quote) says:

> "The leaders of labor in this country are fair in the matter and prefer compensation laws with definite awards enabling workmen to secure all that is legally due them *at the time they need it*, and without risking lawsuits, finally resulting in no compensation, or, if decided in their favor, from 30 to 50 per cent of the amount allowed by the verdict."

Labor Endorses Compensation Act.

I think that you will admit that this is a correct statement of the position of the leaders of labor organizations in this country. At any rate, the compensation act which you state "would not compensate the workers or hurt the employers" was endorsed by the Executive Council of the American Federation of Labor and by many other labor bodies. Mr. John Mitchell, who was a member of the New York State Commission on this subject, and who has probably given more careful study to it than any other labor representative in this country, he'ped to prepare this bill. I hardly think you will contend that such men are not competent to speak for the wants and needs of labor; and, if I am not mistaken, you were on the Joint Labor Conference on Workmen's Compensation of Greater New York, which declared for the adoption of the compensation principle, and which did not oppose the Wainwright Bill that did not go nearly so far as our bill.

In all events, there is more difficulty in getting employers to see that it is to their interest to substitute compulsory compensation for the liability principle than there is in getting the intelligent labor leaders to see that it is to their interest. The latter, in fact, saw it long ago and in every civilized country, except our own, organized labor has, as you know, already brought about the change which The National Civic Federation is helping it to effect in this country. The Federation's Department on Compensation is made up of six hundred representative employers, wage-earners, political economists, lawyers and publicists who, after a year's study, formu-

lated the model compensation bill which recognizes the principle that industry should bear the burden. It followed the lines of the law drafted at the request of the trades unions of England and I am sure, Mr. Hillquit, that no Socialist, in his most excited moment, will claim that the Civic Federation got in any of its "insidious work" on that law.

Purposeful Welfare Work.

While some of our departments are composed of employers, wage-earners, lawyers, farmers and representatives of all classes, there are two departments whose membership is composed entirely of the employing class, to wit: the Employers' Welfare Department and the Woman's Welfare Department, the latter consisting of the wives, daughters and other relatives of employers, and also women stockholders in industrial plants. The efforts of these two departments are directed toward interesting employers, whether public or private, in improving the conditions under which employes in all industries work and live. In promoting this work, it is clearly recognized that the first essentials to the welfare of employes are steady work, a fair wage and reasonable hours of labor; but that the employer has a further obligation. It is this further obligation that the two Welfare Departments are trying to get employers to discharge. They have nothing to do with the question of unionism or non-unionism, but take up those matters which relate to the physical and social well-being of employes.

Some of the subjects involved in this work are:

Sanitary Work Places: Systems for providing pure drinking water; for ventilation, including the cooling of superheated places, and devices for exhausting dust and removing gases; for lighting work places; and for safeguards against industrial accidents; wash rooms, with hot and cold water, towels and soap; shower baths and racks to dry damp garments for molders and stationary firemen; emergency hospitals; locker rooms; seats for women; laundries for men's overalls or women's uniforms; the use of elevators for women, and luncheon rooms.

Recreation: The social hall for dancing parties, concerts, theatricals, billiards, pool or bowling; the gymnasium, athletic field, roof garden, vacations and summer excursions for employes, and rest rooms or trainmen's rest houses.

Educational: Classes for apprentices; in cooking, dressmaking, millinery; first aid to the injured; night classes for technical training; kindergartens and libraries.

Housing: Homes rented or sold to employes, and boarding houses.

Provident Funds: Include employers' plans for savings or lending money in times of stress, as well as all forms of industrial insurance.

Many union leaders have applied to the Welfare Departments for aid in securing improvements in sanitary conditions. They state that, as their energies are largely devoted to securing changes in wage scales, they welcome outside assistance in obtaining welfare features.

I am sure that, if you could spend a day in this office looking over the work of these departments, you could scarcely withhold from it your commendation. I can hardly believe that you would want to say that men and women wage-earners should continue to work under insanitary conditions, which can be and are being improved daily, until such time as the Socialist Party can bring about its collective ownership and operation of all means of production and distribution and land. At any rate, I think I am safe in saying that 99 per cent of the wage-earners of the country would decide that they would rather have their conditions improved *now*.

The Industrial Economics Department, as its name implies, is one which promotes discussion upon economic questions. It does not attempt to pass resolutions, nor does it attempt to bring people together who can agree, but rather to bring people together who do not agree. At the present time it is arranging for a Commission to make a thorough study of the so-called "Efficiency" proposition which has so captivated the magazines and the press of the country. This department does not accept at one hundred cents on the dollar all the claims that are being made for or against this proposition. The Commission to investigate this subject will include not only employers who advocate the "Taylor System," but employers who have tried it and claim that it is a failure; also members of labor organizations and, last but not least, members of the medical profession who will study the physical and nervous effect produced on the worker by the pace-making part of the scheme. This phase of the subject has been entirely neglected in the discussions in all the popular magazines, whereas it is regarded by many persons as a very important one. A report on the subject by a committee of trade unionists, or manufacturers, or political economists, or doctors, alone, would not be convincing, but a committee made up of all these classes will be pretty apt to bring out all that is good in the plan, as well as to show what is bad in it. This, I am sure, you will not insist is a "cheap and trivial" matter.

Wants "Insidious Poison" Designated.

You say that the Civic Federation, through instilling "subtle and insidious poison," has "robbed the labor movement of its independence, virility and militant enthusiasm." Will you kindly point out in what respect this indictment is true? I invite you to read carefully all the utterances of the labor leaders at the meetings of The National Civic Federation, and I request you to point to one utterance that, by fair interpretation, supports your charge. The Civic Federation is the one place where every member speaks his mind freely, and where a practically unanimous vote is required to make any measure effective. I cannot recall a time when the Executive Committee of The National Civic Federation has ever taken a vote on any matter while in session. Discussion either leads to unanimous agreement or the matter is dropped. Matters are frequently submitted to the Executive Committee by mail, action being taken only when the vote is unanimous. So there is no way for the labor members to be out-voted or duped by the employers or the representatives of the public. The Civic Federation is effective only when it can present a solid front, and there are so many great reforms demanded today, upon which all agree, that the questions where differences arise can well be dropped until such time as an agreement can be reached.

If your theory is correct about the hypnotic powers of the capitalists of the Federation, those hypnotic powers certainly were not in good working order when the United States Steel controversy came along. If you can conceive of more things that the American Federation of Labor could have done or tried to do in its fight against the United States Steel Corporation, your imagination is certainly good; and yet the labor members of the Civic Federation are abused by many Socialists for being "hypnotized through hobnobbing and wining and dining with the United States Steel officials." Parenthetically, let me admit that in that same controversy the Federation met one of its great defeats. Its officers, from the President down, including that great ogre of the Socialists, Andrew Carnegie, did everything in their power to bring about a satisfactory settlement, but failed.

Labor's Virile Brand of "Impotency."

I can imagine that the presidents of our great railway systems, "Baron" coal operators, the big builders of the country who deal with thirty-five separate international unions, the publishers of the great dailies and of the weekly and monthly magazines, not to speak of other captains of industry, would smile audibly when told that labor organizations have become impotent. After the Civic Federation had robbed these labor leaders of their "independence, virility and militant enthusiasm" they seem to have retained enough of these virtues to secure a good many millions of dollars in wages and better conditions from the railroad corporations; to secure from the anthracite coal operators alone in 1902 a 10 per cent increase in wages and the sliding scale, which has since netted the miners an additional $30,000,000, in round numbers, to say nothing of a batch of improvements in working conditions too numerous to mention. In the building trade—well—there is an eight-hour day to start with, generally a closed shop and wages that make the bank clerk, the school teacher, the preacher and the average college professor turn green with envy. In the printing world there are the eight-hour day, the closed shop, and an agreement between the publishers of the dailies and the International Typographical Union which has resulted in many wage increases during the past ten years, and the vigorous, successful two-year fight at a cost of $5,000,000 put up by the Typographical Union to secure the eight-hour day in the weekly and monthly publication establishments. And yet in most of those instances officials on both sides of the controversy "hobnobbed and wined and dined together at the Civic Federation's annual meetings and banquets." If the "hypnotic influences" were at work surely those to do the complaining are not the unions nor the Socialists, but the employers. And may I add a word here in favor of those much-abused "wining and dining" banquets? In the first place, the Federation never had any wine at its banquets, although any guest has been at liberty to order it at his own expense just as at any other banquet whether a "capitalist" "labor" or "socialist" affair. In the second place, and what is more interesting, some of the most important settlements of labor controversies, which led to improvement in conditions and wages, were initiated at these very banquets, the opposing parties being placed at the same table.

Socialism's "General Strike" Theory.

If by loss of "virility and militant enthusiasm" you mean that the labor organizations are learning to strike less and to resort more and more to methods of conciliation, conference and business negotiations with their employers, then the credit, I must say, is not due to The National Civic Federation, but to the increasing sanity and intelligent business methods adopted by the union organizations and the great railway brotherhoods, which methods experience has shown to be fairly successful. If the Federation has contributed in any degree to this result, it is thankful. It is only the new and raw recruits, plus the revolutionary Socialists within the ranks of the labor movement, who any longer talk about the "general strike" and the proposal "to tie up all industry" on the slightest provocation.

In regard to your implication that the Civic Federation is concerned about a possible agitation which "may give rise to a powerful political labor movement along Socialist lines" and which the Civic Federation probably is sitting up at night worrying about, I want to say this: If you take the five thousand members, in round numbers, of The National Civic Federation, and subtract the organized labor members and a small percentage of political economists, I think you will find that not many of the remaining members would know what you were talking about. You can take any thousand business men in the United States, and I will make the bold prediction that not more than ten of them have the slightest interest in or conception of what the Socialists are doing and saying. As a rule, they classify the Socialists with the Populists, the Single Taxers, and frequently with the Anarchists. They are infinitely more concerned to-day about the "insurgency" movement, which bears no relation to Socialism, than they are about Socialism.

I do not mean to imply by this that the members of the Federation or the business men of the country generally are ignorant, nor that I share their indifference; but the simple fact is that you haven't got along far enough to attract their attention. They are not scared by the "Milwaukee Revolution," because that seems to imply that Socialism is only another name for municipal reform, and many of those reforms are reforms which have been advocated for years by other people who have no use for the doctrines of Socialism.

Several years ago, I was myself quite excited over Socialism, and wrote some very "able philippics" on the fifty-seven varieties of Socialism, much of which matter I found afterward was not true. Instead of "fifty-seven varieties," I found that there was at that time really only one, the simon-pure Marxian revolutionary Socialism. To-day, I believe the main division is between Karl Marx Marxites and the anti-Karl Marx Marxites; in other words, the "revolutionary Marxites" and the "palliative Marxites," the latter supporting propositions that may eventually enable them to help The National Civic Federation in some of the reforms it is seeking.

The National Civic Federation itself once had a committee to study Socialism in this country. It sent out an appeal for money to make this study. If the Socialists only knew how meagre was the response to that appeal and could see some of the letters received in reply, they would not feel greatly alarmed over an attack from that quarter. In fact, the committee dropped the subject and took up other questions in which the people seemed more interested.

"Corruption" of Labor Leaders.

I doubt if you mean all that your words imply by your statement that the leaders of labor are either hypnotized or corrupted by their association with The National Civic Federation. I quote here your entire sentence:

> "To the organized labor movement the policy of the Civic Federation is the most subtle and insidious poison. It robs it of its independence, virility and militant enthusiasm; it hypnotizes or corrupts its leaders, weakens its ranks and demoralizes its fights."

I know that there are minor branches of the Socialist movement which make sweeping charges against anything or anybody not agreeing with them, but I am amazed that a national officer of the Socialist Party should do this.

The following national labor men are on the Executive Committee of The National Civic Federation:

Samuel Gompers (President American Federation of Labor), Washington, D. C.
Warren S. Stone (Grand Chief International Brotherhood of Locomotive Engineers), Cleveland, Ohio.
James M. Lynch (President International Typographical Union), Indianapolis, Ind.
A. B. Garretson (President Order of Railway Conductors), Cedar Rapids, Iowa.
James Duncan (General Secretary Granite Cutters' International Association of America), Quincy, Mass.
W. G. Lee (President Brotherhood Railroad Trainmen), Cleveland, Ohio.
William D. Mahon (President Amalgamated Association of Street Railway Employes of America), Detroit, Mich.
Timothy Healy (President International Brotherhood of Stationary Firemen), New York City.
W. S. Carter (President Brotherhood Locomotive Firemen and Enginemen), Peoria, Ill.

NIEL J. TOBIN (President International Brotherhood of Teamsters), Indianapolis, Ind.
L. CEASE (Editor "Railway Trainmen's Journal"), Cleveland, Ohio.
N F. TOBIN (General President Boot and Shoe Workers' Union), Boston, Mass.
EPH F. VALENTINE (President Iron Molders' Union of North America), Cincinnati, Ohio.
NIS A. HAYES (President Glass Bottle Blowers' Association of United States and Canada), Philadelphia, Pa.
LLIAM D. HUBER (President United Brotherhood of Carpenters and Joiners of America), Indianapolis, Ind.

Do you mean to charge that the men whom I have med, or any of them, are knaves or fools?
f they are corrupt, they are knaves; if they can hypnotized, they are fools.
f the great progress made by the labor movement this country is not due to them, their associates d their predecessors, then to whom is it due? I nk I am sufficiently familiar with the history of trade union movement in this country to assert at to them belongs the credit for securing the orter work day and better working conditions for llions of wage-earners. They have not yet sered for *every* worker an "eight-hour day and a satactory wage," but the great progress which they ve made along these lines during the last fifty ars is an achievement without parallel in the anls of industrial history.
I think you will agree with me in this statement, hough neither of us is a union man, nor is either en eligible for membership in a union, you being attorney-at-law and I an editor.
One of the Departments of the Federation whose rk is attacked, sometimes viciously, by both the cialists and the non-union employers, is that nich deals with Conciliation, Arbitration and Trade greements. Briefly, the history of the organizaon of that department and its methods is as follws: At the Industrial Conference held in Chigo, December, 1900, referred to above, it was animously declared:

"First—That employers and wage-earners should enter into annual or semi-annual agreements or contracts.

"Second—That all industries in the United States should establish boards of conciliation within the several and varied interests, to which boards of conciliation all differences and disputes arising between employer and employe, if not readily adjusted between the immediate interests concerned, might be referred for settlement."

"To Promote Industrial Peace."

At the first annual meeting of that Department, eld in New York, December, 1901, the plan and cope of work for the Department, which was unaniously adopted, contained the following principles:

"The scope and province of this Department shall be to do what may seem best to promote industrial peace and prosperity; to be helpful in establishing rightful relations between employers and workers; by its good offices to endeavor to obviate and prevent strikes and lockouts, and to aid in renewing industrial relations where a rupture has occurred.

"That at all times representatives of employers and workers, organized or unorganized, should confer for the adjustment of differences or disputes before an acute stage is reached, and thus avoid or minimize the number of strikes or lockouts.

"That mutual agreements as to conditions under which labor shall be performed should be encouraged, and that when agreements are made, the terms thereof should be faithfully adhered to, both in letter and spirit, by both parties.

"This Department, either as a whole or through a sub-committee by it appointed, shall, when requested by both parties to a dispute, act as a forum to adjust and decide upon questions at issue between workers and their employers, provided in its opinion the subject is one of sufficient importance.

"This Department will not consider abstract industrial problems.

"This Department assumes no powers of arbitration unless such powers be conferred by both parties to a dispute."

Thus, you will note that the Federation stands learly for conciliation in industrial disputes and for he principle of collective bargaining. Also, you will ote, what our enemies sometimes fail to observe, hat The National Civic Federation is a voluntary ody and has no power to compel people to arbitrate heir disputes. Nor has it power to thrust itself into controversy; State Boards of Arbitration can do hat, but not voluntary boards. Nor is the Federation n arbitrative body. It has no permanent machinery with which it can arbitrate; but, when called upon, t tries first to bring about a settlement through nediation, asking for arbitration only as a last re- adopts this course for the reason that it believes a voluntary agreement is much more satisfactory to both sides than an arbitration, in which an odd man is generally called in to settle the difference, frequently pleasing neither side.

As stated, the Federation believes that the trade agreement is the most advanced and practicable plan by which employers and employes can deal with matters relating to hours, wages and conditions of employment. Certainly, you will not contend that the organized labor movement in this country does not take the same position. In fact, the trade unions had trade agreements twenty-five years before The National Civic Federation was born. That they still believe in them is proven by the fact that every one of the one hundred and thirty-five international trade unions in the American Federation of Labor either has trade agreements with the employers or is seeking to get them. I do not need to call your attention to the collective contracts made between the railway brotherhoods and 99 per cent of the railway systems of the United States, to the collective contracts made between the hundreds of thousands of union men and their employers in the building trades of this country, between the miners and the coal operators, the printers' unions and the publishers' associations, the thousands of street railway employes and the hundreds of street railway companies, the thousands of brewery workers in the United States and the hundreds of brewers, the thousands of members of the musicians' unions and the hundreds of theatrical operators, and so on. If I am not mistaken, you have yourself helped to bring about a very successful trade agreement in this city between the cloak manufacturers and the cloakmakers' union; and I believe you are one of a Board made up of representatives of the unions and the employers, with Mr. Louis D. Brandeis, of Boston, as Chairman. If this a "cheap and trivial" proposal and the Federation is wrong in endorsing it, then the one hundred and thirty-five international trade unions, composing the American Federation of Labor, and the great railway brotherhoods, are wrong in considering vital that which you consider "cheap and trivial." I do not believe, however, that you will insist on that position.

Neither "Assumed Harmony" Nor "Irreconcilable Conflict."

In the work of this Department we do not proceed upon "an assumed harmony of interests between the exploiting capitalists and the exploited workers," as you interpret the Federation's policy, nor upon the idea of an irreconcilable conflict between the employers and the workers, as you represent the Socialist position. We do not contend that the interests of the employers and the employes are always identical, but we do believe that they are generally, at some given moment, reconcilable. As you know, when a committee from an established union—which, as a rule, sends its most intelligent and keenest members—meets with a committee of employers around a table, it gets to be a good deal of a "give-and-take proposition." In these round-table conferences, the procedure runs something like this: First, the men insist upon the "living wage," which means a wage that will give them and their families the necessaries of life. Second, the employers declare that they must have enough to pay their fixed charges, such as rent, interest, taxes, insurance, repairs, provision for wear and tear on machinery, and so forth. These they call their "living wage." After these two "living wages" are established, the two sides spar for a division of the remainder of such business profits as the market conditions permit. The wage-earner wants more provision for his leisure time, the higher education of his children, and, as Mr. Gompers puts it, some of the real "good things of life." The employer also wants some of the "good things of life"—a desire common to our humanity. In arriving at an agreement on all these questions, the union committee shows just as keen an interest in the market conditions as the employer. The men know that if they were to demand a wage that would carry the cost of production to the point where the price of the product would be more than the consumer would pay or where competitive conditions with markets in other countries would interfere, such a course would stop the wheels and they would get nothing. Therefore, while the men want the best possible conditions they can secure, they do not want a wage so high that it will destroy the market. To secure a high wage scale and then have no work to do is not satisfactory to the workmen, as you and I both know. Thus, in the process of arriving at a satisfactory agreement, the interest of both might be called mutual up to the point where the two "living wages" are established. When it comes to dividing the remaining profits, the real clash comes: but it is not an "irreconcilable" one, as evidenced by the thousands of satisfactory trade agreements existing to-day. If you eliminate from the controversy between capital and labor the personality of the laborer, as you seem to have done, then to my mind it would be just as sensible to talk about the irreconcilable differences between the merchants and their customers in the millions of transactions that take place daily. The merchant naturally wants as high a price as he can get for his goods, and the consumer, equally naturally, wants to pay as little as possible, but there is no impending revolution lurking behind those daily transactions. By the natural laws of trade, the differences adjust themselves automatically.

If the public knew the thoroughness with which these questions are gone into in these trade agreement conferences, there would be less hostility on the part of the employer to this method of dealing with wages, hours and conditions of employment. For example, the joint arbitration board formed by the national officers of the American Publishers' Association and the International Typographical Union, in cases where an increase or decrease of wage is involved, goes minutely into every detail of the cost of the business and the cost of living. In a recent case, it even went so far as to have a special report made on the business conditions in the city where the paper is published, to ascertain whether the prospects for the future were good or bad. It found them good and it, therefore, ordered an increase in the wages of the printers.

"Wage-Slavery" Theory vs. Real Benefits.

Now, I am well aware that the real *bona fide* Marxian Socialists will sweep all this away as "tommyrot" in general and "wage-slavery" in particular. They will say that there should not be any wage-system or interest or profits, and assert that, under Socialism, the worker would receive the full product of his labor, etc.; but, as the entire industry of the country to-day is conducted on the other theory, and as there is likely to be no change in this and many succeeding generations, The National Civic Federation stands for helping to smooth the way of the workers on lines that are practical and on lines that are proving fairly successful. One has only to compare the conditions of the working people to-day with those of five hundred, one hundred, fifty, or even twenty-five years ago to note a progress so astounding as to furnish an answer to those who would overturn the present system and launch us, rudderless and compassless, on an unknown and untried sea.

You assert, Mr. Hillquit, that the Socialist Party is employing all efforts at its command to save the American labor movement from the undermining and diverting influence of The National Civic Federation. In this connection, I beg to send you a copy of a pamphlet, entitled "Socialism as an Incubus on the American Labor Movement," by J. W. Sullivan, one of the pioneers of the trade union movement and a recognized leader in all social reforms that affect the wage-earner. It is to his publications on "Direct Legislation" and "The Initiative, Referendum and Recall," which are regarded as standard authorities by all advocates of those measures, that Mr. U'Ren gives the credit for the beginning of the so-called "Oregon Reform Movement." So much for the qualification of Mr. Sullivan to speak on industrial reform matters. Mr. Sullivan's pamphlet, "Socialism as an Incubus on the American Labor Movement," furnishes documentary evidence from the archives of the American Federation of Labor at Washington, dating back many years, showing a persistent effort by the Socialist Party to wreck the trade union movement in this country. He makes it perfectly clear that, in his opinion, nothing in connection with that movement to-day is more vital than the saving of it from the undermining and diverting influence—not of the Civic Federation—but of the Socialist Party. As Mr. Sullivan's views were largely shared by the other labor members of The National Civic Federation, it is not strange that that organization did not take kindly to the Socialist movement.

From Mr. Sullivan's pamphlet (page 74) I make a quotation which seems to be a fitting close to this letter. The statement I quote is made by one who has forgotten more about Socialism than the writer can ever hope to know. I refer to Mr. Samuel Gompers, President of the American Federation of Labor. His statement was made at the annual meeting of that organization, held in Faneuil Hall, Boston, in 1903. Mr. Gompers' declaration, while showing clearly his opposition to the doctrine of Socialism, might also be assumed to indicate that he shared the belief of Mr. Sullivan in regard to the diverting influence of the Socialist Party on the trade union movement Mr. Gompers said:

"I want to tell you Socialists that I have studied your philosophy; read your works upon economics, and not the meanest of them; studied your standard works, both in English and German—have not only read but studied them. I have heard your orators and watched the work of your movement the world over. I have kept close watch upon your doctrines for thirty years; have been closely associated with many of you, and know how you think and what you propose. I know, too, what you have up your sleeve, and I want to say that I am not only at variance with your doctrines, but with your philosophy.

"Economically, you are unsound; socially, you are wrong; industrially, you are an impossibility."

I am, my dear Mr. Hillquit, very truly yours,

R. M. EASLEY.

The National Civic Federation Review

Vol. IV. NEW YORK, DECEMBER 1, 1913 No. 2

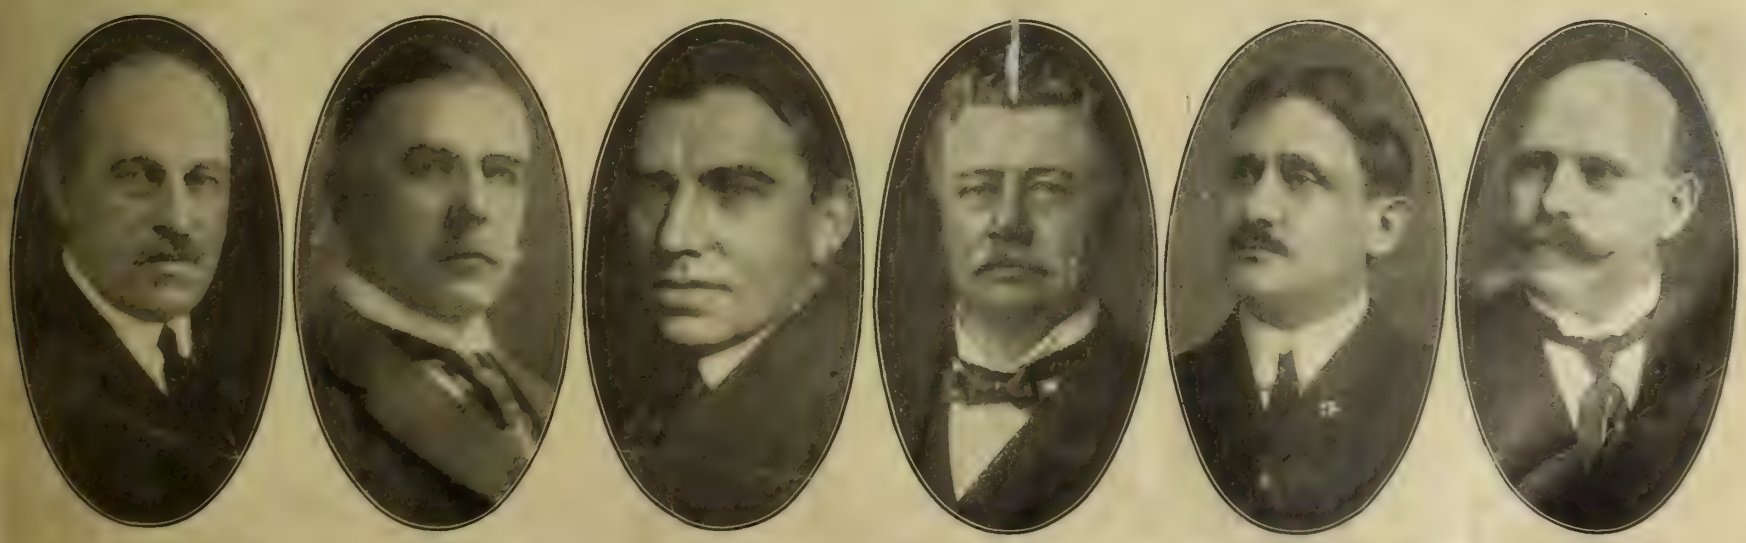
VITAL PROBLEMS OF THE HOUR TO BE DISCUSSED

ANNUAL MEETING OF THE NATIONAL CIVIC FEDERATION WILL CONSIDER PROPOSED AMENDMENTS TO SHERMAN ACT, WORKMEN'S COMPENSATION, FOOD AND DRUG LAWS, REGULATION OF PUBLIC SERVICE UTILITIES, AND INDUSTRIAL ARBITRATION

THE Fourteenth Annual Meeting of The National Civic Federation will be held at the Hotel Astor, New York City, on Thursday and Friday, December 11 and 12. The program this year will include reports from the various departments of the Federation, which reports will call for discussion and action on many important propositions of national interest that will be presented.

These departments are: the Department on Compensation for Industrial Accidents and Their Prevention; the Food and Drug Department; the Welfare Department; the Woman's Department; the Department on Industrial Mediation Laws; the Department on Regulation of Municipal Utilities; the Department on Regulation of Industrial Corporations; the Department on Industrial Economics.

The Department on Compensation for Industrial Accidents and Their Prevention has a commission of six men, who are making a study of the actual results of the working of the various forms of compensation acts. This commission consists of Messrs. Cyrus W. Phillips, J. Walter Lord, Louis B. Schram, Otto M. Eidlitz, James Duncan and John Mitchell, the two last named having been selected by the American Federation of Labor to represent it in this inquiry. The commission has confined its work to the States where the compensation law has been in effect for at least a year, which include Massachusetts, New Jersey, Michigan, Ohio, Illinois, Wisconsin, California, Oregon and Washington. The report of this commission will contain the results of a questionnaire sent to twenty-five thousand employers in these States who have either accepted the acts (which are elective) or have refused to do so. The views of the working men themselves, either through their unions or as individuals, will also be included. In the light of the information secured by this commission, the model Workmen's Compensation Bill of The National Civic Federation will be redrafted.



One session at the Annual Meeting will be devoted to the consideration of the food and drug problem. The Federation has an expert committee which will be prepared to propose an outline for work that it is hoped will prove of great assistance to the Department of Agriculture and the forty-eight State and Dairy Commissions which are charged with the administration of the Federal and State laws relating to those subjects. No question can come before this meeting of the Federation of greater importance than the securing for the people of pure food and drugs.

How adequate are the Federal and State laws today? What changes, if any, are proposed? Is the administration of the law effective in protecting the people in these matters?

At a joint conference between the Department of Agriculture and the Commissioners of Food and Drugs of forty-eight States, held in Washington, D. C., November 14 and 15, 1913, an important step was taken by the passing of a resolution of the joint body, asking Congress to amend the National Pure Food Act in the following respects: By adding a clause which will define food as being adulterated that is exposed to filth, flies or other contamination in manufacturing, transportation or serving; by striking out of the law the present guarantee clause on the label of food and drug products, this having been declared to be abused to the extent of its being practically a fraud on the public; by amending Section 8, which provides for the sale of imitations, blends and mixtures under distinctive names. The joint conference further passed two resolutions, one to memorialize Congress to empower the Secretary of Agriculture to promulgate standards of foods, which shall have the force and effect of law, and the other to the effect that, pending such authority being granted by Congress, a committee of nine be appointed, three from the National Association of Food and Drug State Commissioners, three from the Bureau of Chemistry, and three from the Association of Agricultural Chemists, whose duty it shall be to prepare standards of rules of guidance which all will follow. Representatives from these different organizations will take part in the discussion of the food and drug question at the session of December 11 of the Annual Meeting.

The Department on Industrial Mediation Laws, which was so successful in securing the passage of the Newlands Act, providing for arbitration of disputes between interstate railroads and their employees, will report a model State Mediation Bill. If this bill is enacted into law by the various States, it is believed that it will prove effective in reducing disputes in the industrial world to a minimum. In this measure will be included a special plan for dealing with strikes on public utilities. While the Newlands Act covers interstate railways, it cannot be used in a street railway controversy, because the street railways are under State jurisdiction. A plan

A NATIONAL STOCK-TAKING OF SOCIAL ASSETS AND LIABILITIES

AN EXAMINATION AND APPRAISAL OF THE RESULTS OF INDUSTRIAL AND SOCIAL PROGRESS TO BE UNDERTAKEN BY THE NATIONAL CIVIC FEDERATION

THE National Civic Federation, through its Industrial Economics Department, is about to undertake a survey of the industrial and social situation of this country, with a view to ascertaining whether recent decades have brought progress or retrogression. Features to be necessarily included in the work will be examining the principles involved in the movement for the abolition of private ownership in the means of production and distribution of wealth and studying the differences in the fundamental aims and methods of the labor movement as conducted by the trade unions, the socialists and the Industrial Workers of the World.

In a recent public statement announcing this great work, long under consideration, President Low said:

"It is believed that there could be no better time than the present to make this national inventory of social assets and liabilities. How far has the general movement of our Republic been toward progress, and what steps can be taken to establish it firmly on the way to further progress? With regard to good or imperfect performance doubtless much will be found on both sides of the ledger, and of a certainty, with a satisfactory knowledge of the assets, Americans will be encouraged to meet their remaining liabilities to the cause of human advancement."

An Advisory Council of representative men and women of all parts of the country are to aid in carrying out the investigation. Included in its membership, which numbers nearly four hundred, are people prominent in labor, agriculture and manufacturing, as well as in finance, law and medicine, and in the press, the church and the college. Many are officials in national organizations having to do with the specific problems covered by the inquiry.

The Committee on Plan and Scope consists of: Talcott Williams, chairman; J. W. Jenks, Charles R. Miller, Charles P. Neill, William D. Baldwin, Samuel McCune Lindsay, James Bronson Reynolds, Ogden L. Mills, Nicholas F. Brady, John Hays Hammond, Samuel Gompers, James W. Sullivan, Walter Laidlaw, E. R. A. Seligman, Charles Stelzle, Frank Trumbull, D. L. Cease, George B. Cortelyou, George W. Perkins and O. D. Skelton.

This committee has already made public a statement of the reasons why, in its judgment, the comprehensive knowledge this inquiry seeks has become of vital moment at just this point in our national development. For, the committee declares, the social and economic situation is disturbing to the public conscience of our Republic. It is sufficiently serious, in the opinion of many who have the welfare of this nation at heart, to make necessary an impartial, dispassionate investigation by experts into the economic changes of the last thirty years with a view to ascertaining both our national successes and failures. The course of the new economic era has been sufficient to render it wise to take an account of our national movement and condition, exactly as "account of stock" is periodically taken in business. The proposed investigation, in order to encompass the facts at issue, good or bad, should include, broadly:

1. The factors concerned in the production of wealth.
2. The methods by which the wealth produced is distributed among the several factors engaged in production.
3. The effect on industrial, social and individual progress.

In other words, let us find out just where we stand. Have we gone forward, gone backward, or are we merely marking time? The evil of the hour or the reform triumph of the day usually absorbs public attention; let us attempt to look at things in a more extended perspective. Have the eventful changes of the last thirty years brought the American people, as a whole, gain or loss? Never have the agencies of intended social improvement been so numerous and so active; school and church and press, trade union and grange, commercial organizations, women's clubs, reform societies without number, enlightened employers, and progressive government have been striving to make life easier and better for the mass of our people. Have they failed or are they succeeding?

The assumption on which the industrial structure of the progressive nations has been based is that the force and initiative of individual enterprise, restrained or instructed, where need be, by State control or by organized public opinion, make most surely for progress and general welfare. Is this assumption justified by study of the facts or must we come to

PLAN AND SCOPE COMMITTEE OF THE NATIONAL SURVEY OF SOCIAL PROGRESS.

agree, in whole or in part, with the revolutionists who find salvation only in overturning our whole political and economic structure?

Is wealth being concentrated in fewer hands? Has the organization of large corporations resulted in a great withdrawal of wealth from the people or a more general distribution of wealth? Has it resulted in the reduction of small establishments? Are the small business men being thrown into the class of propertyless wage-workers?

What of the farmer? Is he holding to the ownership of his farm, or lapsing into tenancy, or sinking under mortgage debt? How does he live to-day compared with thirty years ago, and what changes have occurred in his methods of work? Of what value to him have been the rural delivery and the parcel post?

Have the work of the American Federation of Labor, the railroad brotherhoods and the social reform organizations and the legislation secured by them prohibiting child labor and regulating conditions in factories, mercantile establishments, mines, bakeries, tenement houses and sweat shops really benefited the wageworking men, women and children of this country, or, as alleged by those who are crying out for revolution, have they been merely "a sop thrown by the capitalists to the toilers to blind them to their real condition of wage slavery"?

What special problems with relation to the well-being of the masses have we to solve in consequence of a practically unrestricted immigration?

In particular, these inquiries are pertinent: Have the children of the average American a better opportunity than he himself had? Do they start to work at an earlier or later age than he did? Are their hours of labor longer or shorter? What have been the effects of the changes in these respects upon the physical, mental, material, moral and social well-being of the wage-earning class?

How do the provisions for the wage-earners' health, safety and comfort during working hours compare with those of a generation ago? Are diseases incident to industrial life spreading or being conquered? Are the risks of accident, sickness or unemployment greater or less, and are the means of insurance against those risks adequate? Do statistics show that the American of to-day lives longer than his father, or that the pressure of our speeded-up industry forces him into an earlier grave? Is the demand of the labor organizations for a larger share in the control of the conditions of employment yielding the desired result? How do wages (or salaries) and the length of the working day compare with conditions prevailing thirty years ago? Will the wage-worker's earnings buy more or less to-day? What opportunity for education, recreation and development of his personality does he enjoy as compared with the American of the past generation?

What in general has been the outcome in the United States of the laws framed to give especial recognition to labor, such as those relating to mechanics' liens, the garnisheeing of wages, the protection of tenants in their improvements of agricultural and other holdings, and the Homestead and similar acts?

Where does America stand in the matter of gratifying the more widespread thirst for knowledge? What, in addition to its public and private schools, have been the results of its public libraries and its facilities for technical education for farm and factory?

Housing as well as working conditions should be reviewed. Are city dwellers and country dwellers securing an improved standard of decency and comfort, or light and air, as compared with the mode of living a quarter of a century ago? How about the ownership of homes and the accumulation of savings and the effect of investment through building and loan associations?

How about our political and business ethics? Are our moral standards and our aspirations higher or lower now than at any time in the past? Does the popular concept to-day of the relations to the public of industrial, railway and municipal utility corporations spell progress, as compared with the accepted view twenty years ago? Or is regulation a failure and should the State take the place of private capital? What, if anything, has been gained in the last decade through the demand of the people for publicity in the business methods of banks, insurance companies, trust companies and other private corporations? What, if any, are the gains for purity and cleanliness in politics, through regulation of primaries, publicity of campaign contributions, and other changes in election machinery? Can any qualified citizen have his vote counted as cast if he takes the trouble to cast it? How far is his right of free speech and free assemblage with his fellows protected?

Has the spending of millions of dollars by the Carnegie, Rockefeller and Sage Foundations, by the hundreds of charity societies and reform organizations, and by the churches through their institutional work, been justified by the results? Or should philanthropy be undertaken by the State? What practical value has there been in the industrial and municipal reform work undertaken by the hundreds of Boards of Trade, Chambers of Commerce, etc?

Granted that we have made great progress, what are the admittedly remaining plague spots in our industrial and social life? And are we justified by experience in hoping that we can eventually remove them or are they ineradicable? If the latter, does history give any promise of their removal by overturning the present system of society?

The Twentieth Century, it is clear, is to be devoted to the settlement of these economic issues, just as the close of the Eighteenth and the beginning of the Nineteenth Century were devoted to the solution of political issues.

A new period in the industrial development of our nation began with the formation of the trusts. Early landmarks of this period were the organization of the Sugar Trust in 1885, the enactment of the first Federal Interstate Commerce measure in 1887 and the passing of the Sherman Act in 1890.

The creation of great corporations in this period, the changes in the organization, development and management of industries, the enormous addition to the share and bonded capital of the country, the large immigration drawn from Southern and Southeastern Europe instead of from Northern and Northwestern Europe, the massing of population at centres of industry, the changes in the conditions of life in our large cities, the arrest in the increase of our agricultural population, and the fact that in the last decade for the first time in our history the population has grown twice as fast the food supply—all this has brought profound shiftings in the distribution of wealth, the relations between employer and employed and the circumstances in which people with large and small incomes live. The expenditure of the rich is more visible, and the standards of desires among people of moderate income and in the wage-earning class have risen, emphasizing a disparity in the enjoyment of life and its opportunities. The addition of large populations who have suffered from oppression and wrong in their old homes has multiplied the ranks of those prompt to put the worst construction on the motives of the more fortunate. These causes, together with the improvement in the transmission and the distribution of intelligence, making the acts of the few and their luxuries more known to the many, have brought about, in American political life, parties organized as a challenge to the existing social order and economic system.

At the last Presidential election nearly one million votes were cast in favor of an economic program calling for a revolutionary transformation of society. The party supporting this program, following a sweeping indictment of existing society, proposes the abolition of our present system of wages and private property and the substitution therefor of government ownership and operation of all the instruments of production, distribution and exchange, inclusive of land. In other words, the work of planning, direction and management now done by the farmer, manufacturer, merchant, banker, editor, mine operator, and the manager of trust and insurance companies, newspapers, grain elevators, railroads and other public utilities, Federal, State and municipal, and all other productive enterprises, are to be performed through elected government officials.

Recently an element, within the revolutionary movement referred to, has confronted this country with a yet more radical proposal. This element avowedly aims at the communistic operation of industries, which are to be confiscated through the general strike and then directly operated by the workers themselves. The adherents of this movement refuse to form agreements with employers, they reject arbitration and conciliation and preach sabotage and faithlessness to contracts, while they scout all principles of order and respect for law.

Does either of these programs point the way to progress? Does either embody the promise of a higher civilization, or does the system of liberty and property, as at present established, form a basis, subject to enlightened correction, for the true advance of mankind?

In much of the field thus briefly outlined, the main work will be bringing together the results of official and other investigatons already made. In certain respects further investigation will be required. In other cases, the facts may prove too elusive or the records too incomplete, for a wholly satisfactory report. In the greater part of the work, however, it is possible to reach definite conclusions either by statistical investigation or by authoritative descriptive summary.

On the whole there seems no room for question that it is both desirable and possible, by a thorough and impartial searching out of the facts, to measure broadly the gains and the losses of our changing time, both that we may see the need to face the evils yet to be fought and that we may take fresh heart from the good fights won.

The Plan and Scope Committee is now engaged upon a thorough analysis of the field of the inquiry, as a basis for practical organization of the work.

ADVISORY COUNCIL

OF

THE INDUSTRIAL ECONOMICS DEPARTMENT

As the survey will necessarily inquire into conditions in all sections of the country, so the Advisory Council, now in formation, is composed of representative citizens from every State in the Union. Among those who have already accepted membership are:

Ernest H. Abbott, "The Outlook," New York City.
Miss Jane Addams, Head Resident, Hull House, Chicago, Ill.
John G. Agar, Lawyer, New Rochelle, N. Y.
Stephen H. Allen, Attorney-at-law, Topeka, Kansas.
Vincent Astor, Capitalist, New York City.
Mrs. Francis McNeil Bacon, Jr., Chairman Metropolitan Section, Woman's Department, The National Civic Federation, New York City.
Liberty Hyde Bailey, Director, College of Agriculture, Cornell University, Ithaca, N. Y.
Alfred L. Baker, Banker, Chicago, Ill.
George F. Baker, Jr., Banker, New York City.
William D. Baldwin, President Otis Elevator Company, New York City.
W. J. Bayersdorfer, President United States League of Local Building and Loan Associations, Shreveport, La.
August Belmont, New York City.
Ernest P. Bicknell, National Director, American Red Cross, Washington, D. C.
Cornelius N. Bliss, New York City.
Miss Helen Varick Boswell, Chairman Political Science Committee, General Federation of Women's Clubs, New York City.
Nicholas F. Brady, President New York Edison Company, New York City.
William C. Brown, President New York Central Railroad, New York City.
James M. Buckley, Former Editor "The Christian Advocate," New York City.
Marion L. Burton, President of Smith College, Northampton, Mass.
Kenyon L. Butterfield, President Massachusetts Agricultural College, Amherst, Mass.
Nicholas Murray Butler, President Columbia University, New York City.
Homer D. Call, Secretary-Treasurer Amalgamated Meat-Cutters and Butcher Workmen of North America, Syracuse, N. Y.
Thomas H. Cannon, National President Foresters, Chicago, Ill.
Arthur Capper, Publisher, "The Topeka Capital," Topeka, Kan.
John N. Carlisle, New York State Commissioner of Highways, Albany, N. Y.
Andrew Carnegie, New York City.
Thomas N. Carver, Director Rural Organization Service, Department of Agriculture, Washington, D. C.
D. L. Cease, Editor "The Railroad Trainman," Cleveland, Ohio
Joseph H. Choate, Jr., Attorney-at-law, New York City.
Charles Hopkins Clark, President and Editor "The Hartford Courant," Hartford, Conn.
John B. Clark, Professor Political Economy, Columbia University, New York City.
William A. Coakley, President International Lithographers' Press Feeders' Association, New York City.
Rev. Henry S. Coffin, Pastor Madison Avenue Presbyterian Church, New York City.
Bird S. Coler, Banker, New York City.
L. A. Coolidge, Treasurer United Shoe Machinery Company, Boston, Mass.
George B. Cortelyou, President Consolidated Gas Company, New York City.
John D. Crimmins, Builder, New York City.
James W. Crook, Professor Economics, Amherst College, Amherst, Mass.
Mrs. J. Heron Crosman, President Patriotic Women of America, New Rochelle, N. Y.
Mrs. James S. Cushman, President Young Women's Christian Association, New York City.
R. Fulton Cutting, President Association for Improving the Condition of the Poor, New York City.
Henry P. Davison, Banker, New York City.
Charles I. Denechaud, President American Federation of Catholic Societies, New Orleans, La.
Rev. Peter E. Dietz, Secretary Social Service Commission of American Federation of Catholic Societies, Milwaukee, Wis.
James Duncan, President Granite Cutters' International Association of America, Quincy, Mass.
Samuel O. Dunn, Editor of "Railway Age Gazette," Chicago, Ill.
E. Dana Durand, Former Director of the Census, Washington, D. C.
R. M. Easley, Chairman Executive Council, The National Civic Federation, New York City.
Charles L. Edgar, President The Edison Electric Illuminating Company, Boston, Mass.
Otto M. Eidlitz, Building Trades Employers' Association, New York City.
Howard Elliott, President New York, New Haven and Hartford Railroad Company, New Haven, Conn.
E. T. Fairchild, President National Education Association, New Hampshire College, Durham, N. H.
Henry W. Farnam, Professor of Economics, Yale University, New Haven, Conn.
Rev. James M. Farrar, Pastor of "The Old First Church," Dutch Reformed, Brooklyn, New York City.
W. H. P. Faunce, President Brown University, Providence, R. I.
Henry B. Favill, President American Medical Association, Chicago, Ill.
Frank A. Fetter, President American Economic Association, Princeton, N. J.
John H. Finley, President College of the City of New York, New York City.
Irving Fisher, Professor Political Economy, Yale University, New Haven, Conn.
Walter L. Fisher, Former Secretary of the Interior, Chicago, Ill.
Henry Ford, President Ford Motor Car Company, Detroit, Mich.

HUGH F. FOX, Secretary United States Brewers' Association, New York City.
CHARLES FRANCIS, President Printers' League of America, New York City.
LEE K. FRANKEL, Vice-President Metropolitan Life Insurance Company, New York City.
ERNST FREUND, Professor of Law, University of Chicago, Chicago, Ill.
JOHN C. FREUND, Publisher "Music Trades," New York City.
WILLIAM GAMMELL, Manufacturer, Providence, R. I.
HARRY A. GARFIELD, President Williams College, Williamstown, Mass.
A. B. GARRETSON, President Order of Railway Conductors, Cedar Rapids, Iowa.
JAMES CARDINAL GIBBONS, Baltimore, Md.
JOHN GOLDEN, President United Textile Workers of America, Fall River, Mass.
SAMUEL GOMPERS, President American Federation of Labor, Washington, D. C.
F. G. R. GORDON, Immigration Expert, Haverhill, Mass.
ELGIN R. L. GOULD, President City and Suburban Homes Company, New York City.
JOHN TEMPLE GRAVES, Editor "New York American," New York City.
JOHN H. GRAY, Professor of Economics, University of Minnesota, Minneapolis, Minn.
B. J. GREENHUT, Greenhut-Siegel Cooper Co., New York City.
RT. REV. DAVID H. GREER, Bishop of New York, New York City.
CHARLES NOBLE GREGORY, Dean of Law School, George Washington University, Washington, D. C.
JOHN HAYS HAMMOND, Chairman Industrial Economics Department, The National Civic Federation, Gloucester, Mass.
MRS. JOHN HAYS HAMMOND, Former Chairman Woman's Department, The National Civic Federation, Gloucester, Mass.
MRS. J. BORDEN HARRIMAN, Member Federal Commission on Industrial Relations, New York City.
WILLIAM O. HART, Attorney-at-law, New Orleans, La.
COLONEL GEORGE HARVEY, Publisher, New York City.
DENIS A. HAYES, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia, Pa.
TIMOTHY HEALY, President International Brotherhood of Stationary Firemen, New York City.
JOHN GRIER HIBBEN, President Princeton University, Princeton, N. J.
O. D. HILL, Secretary Farmers' National Congress, Kendalia, W. Va.
CHARLES D. HILLES, New York City.
REV. EMIL G. HIRSCH, Rabbi of Sinai Temple, Chicago, Ill.
FREDERICK L. HOFFMAN, Statistician, Prudential Insurance Company, Newark, N. J.
HAMILTON HOLT, Editor "The Independent," New York City.
LEWIS R. HOVEY, Publisher "The Sunday Record," Haverhill, Mass.
ARTHUR M. HOWE, Managing Editor "The Brooklyn Daily Eagle," New York City.
CLARK HOWELL, Editor "The Atlanta Constitution," Atlanta, Ga.
WOODS HUTCHINSON, Physician, New York City.
ARCHBISHOP JOHN IRELAND, St. Paul, Minn.
J. W. JENKS, Professor of Government, New York University, New York City.
HENNEN JENNINGS, Mining Engineer, Washington, D. C.
CHARLES JOHNSTON, Author, New York City.
FREDERICK N. JUDSON, Attorney-at-law, St. Louis, Mo.
MRS. JULIUS KAHN, San Francisco, Cal.
FRANK B. KELLOGG, Former President American Bar Association, St. Paul, Minn.
H. N. KELLOGG, American Newspaper Publishers' Association, Indianapolis, Ind.
WILLIAM E. KELLY, President National Association of Letter Carriers, Brooklyn, New York City.
REV. WILLIAM J. KERBY, Catholic University, Washington, D. C.
WILLIAM J. KERR, President Oregon Agricultural College, Corvallis Ore.
J. H. KIMBLE, Secretary Jacob Tome Institute, Port Deposit, Md.
DARWIN P. KINGSLEY, President New York Life Insurance Company, New York City.
NORMAN G. KITTRELL, Judge, Houston, Tex.
CHARLES W. KNAPP, Proprietor "St. Louis Republic," St. Louis, Mo.
REV. WALTER LAIDLAW, Secretary New York Federation of Churches, New York City.
DR. SAMUEL W. LAMBERT, Dean College of Physicians and Surgeons, New York City.
WILLIAM JETT LAUCK, Chief Expert, Federal Commission on Industrial Relations, Washington, D. C.
RT. REV. WILLIAM LAWRENCE, Bishop of Massachusetts, Boston, Mass.
FREDERICK W. LEHMANN, Attorney-at-law, St. Louis, Mo.
W. G. LEE, President Brotherhood of Railroad Trainmen, Cleveland, Ohio.
ADOLPH LEWISOHN, International Smelting and Refining Company, New York City.
CHARLES F. LIBBY, Attorney-at-law, Portland, Me.
SAMUEL MCCUNE LINDSAY, Professor of Social Legislation, Columbia University, New York City.
SETH LOW, President The National Civic Federation, New York City.
JAMES M. LYNCH, former President International Typographical Union, Indianapolis, Ind.
ROSWELL C. MCCREA, Dean of Wharton School of Finance and Commerce, University of Pennsylvania, Philadelphia, Pa.
MRS. JOHN MCLAUGHLIN, Washington, D. C.
NATHAN WILLIAM MCCHESNEY, Attorney, Chicago, Ill.
CYRUS H. MCCORMICK, President International Harvester Company, Chicago, Ill.
RT. REV. WILLIAM F. MACDOWELL, Bishop Methodist Episcopal Church, Evanston, Ill.
HENRY B. F. MACFARLAND, Attorney-at-law, Washington, D. C.
JAMES H. MCGRAW, President McGraw Publishing Company, New York City.
ANDREW W. MCKEE, President National Association of Civil Service Employees, New York City.
FRANKLIN MACVEAGH, Former Secretary of the Treasury, Chicago, Ill.
V. EVERIT MACY, Publicist, New York City.
W. D. MAHON, President Amalgamated Association of Street Railway Employes of America, Detroit, Mich.
MILO R. MALTBIE, Public Service Commission, New York City.
REV. WILLIAM T. MANNING, Rector Trinity Church, New York City.
THEODORE MARBURG, Political Economist, Baltimore, Md.
MARCUS M. MARKS, President-elect Borough of Manhattan, New York City.
SAMUEL MATHER, Picands, Mather & Co., Cleveland, Ohio.
SHAILER MATHEWS, President Federal Council of Churches of Christ in America, Chicago, Ill.
REV. H. PEREIRA MENDES, Rabbi Shearith Israel, New York City.
BRADFORD MERRILL, Editor "New York American," New York City.
MRS. CHARLES F. MEYER, New York City.
GEORGE VON L. MEYER, Former Secretary of the Navy, Hamilton, Mass.
SIDNEY E. MEZES, President The University of Texas, Austin, Texas.
JOHN G. MILBURN, Attorney-at-law, New York City.
CHARLES R. MILLER, Editor "The New York Times," New York City.
OGDEN L. MILLS, Attorney-at-law, New York City.
E. A. MOFFETT, Former Editor "The Bricklayers' Journal," New York City.
MRS. PHILIP NORTH MOORE, President General Federation of Women's Clubs, St. Louis, Mo.
J. EDWIN MURPHY, Managing Editor "The New York Press," New York City.
JOHN J. MURPHY, Tenement House Commissioner, New York City.
CHARLES P. NEILL, Former United States Commissioner of Labor, New York City.
MRS. TRUMAN H. NEWBERRY, President Needlework Guild, Detroit, Mich.
THOMAS V. O'CONNOR, President International Longshoremen's Association, Buffalo, N. Y.
MRS. CYRUS PITMAN ORR, Chairman Alabama Section, Woman's Department, The National Civic Federation, Birmingham, Ala.
RT. REV. WM. FORD NICHOLAS, Protestant Episcopal Bishop of California, Berkeley, Cal.
CONDE PALLEN, Editor "The Catholic Encyclopaedia," New York City.
WILLIAM J. PAPE, Editor "The Waterbury Republican," Waterbury, Conn.
ALTON B. PARKER, Former Chief Justice Court of Appeals, New York City.
LEWIS W. PARKER, President Parker Cotton Mills Co., Greenville, S. C.
MRS. HENRY A. PECKHAM, Chairman National Government Employes' Committee, Woman's Department, The National Civic Federation, Washington, D. C.
GEORGE W. PERKINS, Publicist, New York City.
JAMES LAUGHLIN PHILLIPS, Political Economist, Washington, D. C.
FRANK L. POLK, Attorney-at-law, New York City.
ROSCOE POUND, Professor Law School, Harvard University, Cambridge, Mass.
JOHN T. PRATT, Attorney-at-law, New York City.
RALPH PULITZER, Editor "The World," New York City.
J. H. RALSTON, Attorney-at-law, Washington, D. C.
WILLIAM CHARLES REICK, Editor "The Sun," New York City.
GEORGE M REYNOLDS, President Continental and Commercial National Bank, Chicago, Ill.
JAMES B. REYNOLDS, Counsel American Vigilance Association, New York City.
MRS. GEORGE T. RICE, Chairman Massachusetts and Rhode Island Section, Woman's Department, The National Civic Federation, Westwood, Mass.
HERMAN RIDDER, Editor "New Yorker-Staats Zeitung," New York City.
W. M. RIGGS, President Clemson Agricultural College, Clemson College, S. C.
JACOB A. RIIS, Sociologist, New York City.
HAYES ROBBINS, Political Economist, Winchester, Mass.
ALLAN ROBINSON, Secretary Allied Real Estate Interests, New York City.
FRANK T. ROGERS, President United National Association of Post Office Clerks of the United States, Chicago, Ill.
ELIHU ROOT, United States Senator, New York City.
ELIHU ROOT, JR., Attorney-at-law, New York City.
VICTOR ROSEWATER, Editor "The Omaha Bee," Omaha, Neb.
LEO S. ROWE, President American Academy of Political and Social Science, Philadelphia, Pa.
REV. JOHN A. RYAN, St. Paul Seminary, St. Paul, Minn.
WILLIAM JAY SCHIEFFELIN, President American Church Missionary Society, New York City.
J. G. SCHMIDLAPP, President Union Savings Bank and Trust Company, Cincinnati, Ohio.
MRS. FREDERICK SCHOFF, President National Mothers' Congress, Philadelphia, Pa.
LOUIS B. SCHRAM, Chairman Labor Committee, United States Brewers' Association, New York City.
JACOB GOULD SCHURMAN, President Cornell University, Ithaca, N. Y.
HENRY R. SEAGER, Professor Political Science, Columbia University, New York City.
E. R. A. SELIGMAN, Professor Political Economy, Columbia University, New York City.
ISAAC N. SELIGMAN, Banker, New York City.
J. G. SHAFFER, Proprietor "The Evening Post," Chicago, Ill.
ALBERT SHAW, Editor "American Review of Reviews," New York City.
THOMAS W. SHELTON, Attorney-at-law, Norfolk, Va.
FINLEY J. SHEPARD, Vice-President Missouri Pacific Railroad Company, New York City.
REV. JOSEPH SILVERMAN, Rabbi Temple Emanu-El, New York City.
O. D. SKELTON, Professor Queen's University, Kingston, Canada.

REPRESENTATIVE PRESS OPINIONS ON THE SOCIAL SURVEY

WIDESPREAD EDITORIAL APPROVAL OF ITS PURPOSES AND POSSIBILITIES FOR PRACTICAL GOOD

THE following selections from the volume of press comments called out by early announcements of the investigation give some idea of the interest the undertaking has aroused in all parts of the country:

Chicago Record-Herald, Ill.—The scientific and non-partisan character of the inquiry is to be taken for granted. The federation represents all schools and shades of opinion, and what it wants is the truth, and nothing but the truth.

Brooklyn Eagle, N. Y.—These are questions upon which the great need of the time is light without heat, and this council of The National Civic Federation is more likely than any other agency to supply it.

New Orleans Times-Democrat, La.—The field to be explored is one that we cannot know too much about, and the knowledge gained by expert and impartial exploration must be a very valuable addition to the national equipment for handling the great questions that already are pressing for satisfactory answers.

Boston Transcript, Mass.—The movement is under direction which commands public confidence. President Low is a man of zeal and experience in such a service. The amendment of the Erdman act at a very critical time was largely the result of his generalship. As this is a volunteer movement, perhaps more interest will attach to it than though it was made through legislation or by executive order one of the formal agencies to investigate the conditions of the period. It will engage in the service, not because a definite duty has been prescribed for it, but because it is anxious to find out as fully as is possible the conditions and the tendencies in the United States of to-day.

Duluth News-Tribune, Minn.—Out of the report will come new ways and means for advancement, new methods of helping people to help themselves, new schemes of betterment and new ways for men of great wealth to spend a goodly part of their fortunes in giving back to the country what the country has so lavishly bestowed upon them.

Philadelphia Inquirer, Pa.—One of the tasks of the investigators should be to enlighten the public regarding the real character and aim of the organizations that pretend to have the interest of the laboring man

(*Continued on page* 15.)

A NATION-WIDE STUDY OF WORKMEN'S COMPENSATION LAWS

JOINT COMMISSION OF THE NATIONAL CIVIC FEDERATION IS GATHERING INFORMATION OF THE WORKINGS OF ALL STATE LAWS NOW IN EFFECT, AS A BASIS FOR PRACTICAL RECOMMENDATIONS

DURING the last four months a joint commission appointed by the Department on Compensation for Industrial Accidents and Their Prevention, of which Mr. August Belmont is chairman, has been carrying on a thorough investigation of the workings of compensation laws in the several States where such measures have been adopted and are to-day in force. This commission has already visited Massachusetts, New Jersey, Michigan, Ohio, Wisconsin, Illinois, Washington, Oregon and California, and has devoted special attention also to Kansas, Nevada, Minnesota and Rhode Island. The Washington law is of special importance in that it is

CYRUS W. PHILLIPS.

J. WALTER LORD.

the only one thus far made compulsory upon all employers and employees. The California elective law of 1911 also becomes compulsory next January, thus setting the Pacific Coast in the vanguard, so far at least as this significant feature is concerned. An amendment to the Ohio law making it compulsory takes effect January 1, 1914.

In addition to close investigation on the ground by conferences and hearings in the several States, the commission has been receiving an immense amount of direct testimony in reply to questionnaires and letters sent to some 25,000 employers and labor organizations in each of the States which have had sufficient experience under compensation laws to warrant the inquiry. The commission has made a careful analysis of the information thus far in hand, and the work when completed will provide for the first time in one body of data a complete and impartial view of the national situation up to date, in respect to the modern application of workmen's compensation.

For several years the Workmen's Compensation Department of The National Civic Federation has been advocating new and enlightened treatment of the entire ineffective and confused employers' liability and accident prevention practice in this country. It has urged legislation providing for automatic compensation in case of accidental injury to workmen and for their families in case of death resulting from such injuries. It has prepared and circulated on two occasions tentative drafts of model acts based upon a study of foreign experience and of American needs and conditions. The first of these, in December, 1910, advocated a compulsory system; the second, prepared last winter, was an elective act to meet changing conditions and the needs of States which are not yet prepared to adopt compulsory measures. Both have been circulated in the interest of uniform State legislation, and twenty-two State laws have been enacted.

The present purpose is to give to legislators and friends of the compensation movement everywhere the sifted results of the country's total experience upon the subject, in a definite form which it is believed will meet the new problems that have arisen in the workings of the more or less experimental acts now in force. This information will also be of great practical value as a basis for recommendations which may be made for the drafting of a new model workmen's compensation law.

The entire investigation has been carried on under the direction of a Plan and Scope Committee of the Workmen's Compensation Department, headed by Mr. Otto M. Eidlitz, whose enthusiasm and practical grasp of the problems involved have been invaluable to the progress of the inquiry. Other members of this committee are Mr. Louis B. Schram, Mr. Samuel Gompers, Mr. W. H. Marshall, president American Locomotive Company; Mr. Frank V. Whiting, general claims attorney New York Central lines; Mr. Timothy Healy, president International Brotherhood of Stationary Firemen; Mr. E. H. Letchworth, of the Rogers-Brown Iron Co.; Mr. M. F. Westover, secretary General Electric Company; Mr. Raynal C. Bolling, of the United States Steel Corporation.

The members of the joint commission engaged in the actual field work are:

CYRUS W. PHILLIPS, chairman, member of the former New York State Commission on Employers' Liability, and an attorney-at-law, Rochester, N. Y.

J. WALTER LORD, chairman of the Maryland State Commission on Employers' Liability and Workmen's Compensation, recently appointed by the Governor of that State; chairman of the Federation's Maryland State Council, and an attorney-at-law, Baltimore, Md.

OTTO M. EIDLITZ, New York Building Trades' Employers' Association, New York City.

LOUIS B. SCHRAM, chairman Labor Committee, United States Brewers' Association, Brooklyn, N. Y.

JAMES DUNCAN, vice-president American Federation of Labor, Quincy, Mass.

JOHN MITCHELL, vice-president American Federation of Labor, Mount Vernon, N. Y.

Mr. Duncan and Mr. Mitchell were appointed by the American Federation of Labor to co-operate with The National Civic Federation.

Mr. Phillips, in a public statement made during the investigation, describing the progress of workmen's compensation legislation, and the scope of the present inquiry, said:

"In the States so far visited the laws are elective. That is, the employer has his choice either to (1) stay under the old liability law, with the defences of contributory negligence, assumption of risk and fellow servant rule removed; or (2) accept the compensation act under which all employees receive compensation for their injuries according to a fixed schedule, regardless of fault.

"In Massachusetts, Michigan and Wisconsin, at least 75 per cent of the employers and their workmen have elected to come under the compensation act. The original Illinois compensation act was rejected by over 5,000 employers. The amended act of that State, which took effect July 1, 1913, has been rejected by only 500 employers. The Ohio law has been accepted by something like 10 or 15 per cent of the employers. This law has been made compulsory by the new act, which takes effect January 1, 1914. In the States of Massachusetts, Michigan and Wisconsin, litigation involving compensation to

JAMES DUNCAN.

JOHN MITCHELL.

employees has practically ceased to exist. To illustrate: During the year that the Michigan law has been in effect, compensation has been paid in over 10,000 cases of disability and only 8 cases have gone into the courts, and these were solely for the purpose of settling some uncertainty in the law.

"In these States the law is administered by an industrial accident board, consisting of from three to five members. All settlement agreements for compensation must be adjusted by this board and, in case of dispute, the board acts as arbitrator. The State of Michigan has had 200 arbitrations during the year. These arbitrations do not as a rule, delay the payment of compensation more than two or three weeks. Similar conditions prevail in Massachusetts and Wisconsin.

"It is claimed that the cost of medical attendance in these States has been larger than was originally anticipated and that the amount paid by employers to hospitals and physicians is at least 50 per cent of the amount paid to the injured workmen and their families. A group of employers in Detroit have organized a mutual hospital to which their employees

OTTO M. EIDLITZ.

LOUIS B. SCHRAM.

will be sent in case of accident. The subject of medical attendance will be thoroughly inquired into by the commission for the purpose of ascertaining whether the workmen are receiving skilled and effective treatment, the cost of such treatment, and whether it is excessive.

"The States visited aim to protect the employee against the insolvency of the employer by requiring some form of insurance. Michigan, Wisconsin and Illinois permit the employer, who can satisfy the board or commission as to his financial ability, to carry his risk without insurance, but require all other employers to take out insurance, either in a mutual or a liability company, or, as in Michigan, the third option of insuring in a State insurance fund is granted. Ohio requires all employers who come under the act to insure in an insurance fund handled by the State. Massachusetts does not permit an employer to carry his own risk, but requires that he take insurance either in a mutual or a liability company."

In New York State the Civic Federation's battle for advanced legislation in this matter has been fought out during the last five years by a special Workmen's Compensation Committee of the New York State Council. Ever since the first compulsory workmen's compensation act in this country on modern lines was enacted by the New York Legislature in 1910, and later declared unconstitutional, the necessary first step in any further progress has been of course to get a constitutional amendment permitting the passage of laws of this nature. The effort to this end was crowned with success last month in the adoption of such an amendment by approximately 250,000 majority. The exact nature of the law to be enacted under it is, of course, the next problem, and may prove a difficult one, but at any rate the stone wall which has until now prevented New York from taking its place in line with other States in this matter has been removed.

The direction of the Federation's part in this splendid result was in the hands of Mr. Louis B. Schram, chairman of the New York State Council's special committee on the subject. The preliminary course of the amendment through the Legislature was ably handled on its first passage by Senator Bayne, and on the second by Senator Griffin; in the Assembly on both occasions by Assemblyman Cyrus W. Phillips, who was in fact its author. The amendment reads as follows:

"*§ 19. Nothing contained in this constitution shall be construed to limit the power of the Legislature to enact laws for the protection of the lives, health, or safety of employees; or for the payment, either by em-*

ployers, or by employers and employees or otherwise, either directly or through a State or other system of insurance or otherwise, of compensation for injuries to employees or for death of employees resulting from such injuries without regard to fault as a cause thereof, except where the injury is occasioned by the willful intention of the injured employee to bring about the injury or death of himself or of another, or where the injury results solely from the intoxication of the injured employee while on duty; or for the adjustment, determination and settlement, with or without trial by jury, of issues which may arise under such legislation; or to provide that the right of such compensation, and the remedy therefor shall be exclusive of all other rights and remedies for injuries to employees or for death resulting from such injuries; or to provide that the amount of such compensation for death shall not exceed a fixed or determinable sum; provided that all moneys paid by an employer to his employees or their legal representatives, by reason of the enactment of any of the laws herein authorized, shall be held to be a proper charge in the cost of operating the business of the employer."

During the recent campaign in New York the Federation's State Council, of which Mr. V. Everit Macy is chairman, issued an appeal to voters in behalf of the amendment, in the course of which the following brief statement was given of the case against the old methods of payment for injuries and for the new method of definite and systematic compensation:

"The principle of workmen's compensation, which has long been established in foreign countries and recently inaugurated in some form in twenty-two States in this country, is based upon the theory that a workman injured in the course of his employment is entitled to some remuneration for his physical suffering and financial loss, without regard to fault.

"In Germany, the first country to bring about this proposed social reform, as in this country, employers' liability laws preceded the movement for workmen's compensation legislation; but there, as here, the liability law proved ineffectual, for under that system, if a man suffered by the malice, ignorance or carelessness of another person, only the individual immediately responsible for the disaster—usually a fellow workman or an overseer, could be called to account—not the employer. Therefore, the sufferer or his survivors could rarely obtain a fair compensation, and generally had to go away empty-handed in consequence of the poverty of the responsible party.

"There is little justice meted to workman or employer under the present wasteful, so-called liability system, which falls far short of providing compensation for the injured and their dependents, and which provokes litigation between employee and employer. The mere fact that the employee brings suit against his employer makes for discord where there should be mutual interest. Occasionally, the wage-earner, who takes a gambler's chance by bringing suit, may be awarded through a sympathetic jury a large amount for damages; but in the majority of instances, if they get anything at all, the workmen receive but a small portion of the amount to which they are entitled—the balance going for attorney's fees and other expenses. It is not always an easy matter to prove the employer at fault. The result is that when the breadwinner is killed, the widow and her children are thrown upon charity and, in the last resort, become a public charge. It is not an uncommon thing to see the case of an industrious, hard-working mechanic, who has suffered the loss of his eyes or some equally horrible affliction, thrown out of court under the present law because of the negligence of a fellow servant. On the other hand, it sometimes happens that a jury may award a verdict that will throw the employer into bankruptcy—which not only means ruin for the business man but takes employment away from the other workmen in his enterprise.

"While there is some difference of opinion as to the form which legislation shall take under the amendment if adopted, the Federation has found unanimous agreement upon the following essential points in the interest of both employer and employee:

"1. That the right to compensation and the amount of it for particular injuries or deaths should be so definite as to leave as little as possible for controversy or difference of opinion as to the amount of compensation to which the injured workman is entitled.

"2. That the workman or his family should be so protected in the making of their settlement after injuries that advantage cannot be taken of them or an unjust or delayed settlement be forced upon them.

"3. That the workman or his dependents should be secured against the insolvency of the employer or other contingency, so that the payment of his compensation will be prompt and certain; and

"4. That there should be no question as to fault, as to contributory negligence, the assumption of risk or the so-called fellow-servant rule.

"The National Civic Federation, composed as it is of men presenting all branches of human activity—employers, employees, professional men, representatives of the church, the bar, the press, economists and social experts—has decided that no adequate compensation act in this State can be secured without a constitutional amendment, and that the interests of all concerned require the adoption of this constitutional amendment. Furthermore, the Federation hopes that its adoption will lead to the enactment of a comprehensive workmen's compensation law which will be of benefit to every citizen in the State, and appeals to all citizens, without regard to their callings, actively to support and vote for the adoption of this amendment to the constitution of the State of New York."

The drafting of this statement was in the hands of a sub-committee consisting of: W. D. Baldwin, president of the Otis Elevator Company; Samuel Gompers, president of the American Federation of Labor; Daniel Harris, president of the New York State Federation of Labor; John Sullivan, president of the Central Federated Union of New York City; and Otto M. Eidlitz, of the New York Building Trades Employers' Association.

It was signed by the following representative business men, labor officials and public-spirited citizens, members of the council, in all parts of the State, typical of the remarkably varied approval the modern idea and program for workmen's compensation commands among all elements in the community:

V. Everit Macy, Chairman New York State Council, The National Civic Federation, New York City.
Louis B. Schram, Chairman the Federation's New York State Compensation Committee, Brooklyn, N. Y.
Samuel Gompers, President American Federation of Labor, New York City.
William D. Baldwin, President Otis Elevator Company, New York City.
Daniel Harris, President New York State Federation of Labor, Brooklyn, N. Y.
Francis Lynde Stetson, Attorney, New York City.
Timothy Healy, President International Brotherhood of Stationary Firemen, New York City.
A. J. Porter, President Shredded Wheat Company, Niagara Falls, N. Y.
Egbert Chamberlain, Secretary-Treasurer Order of Railway Conductors, New York City.
Edward A. Bates, Secretary-Treasurer New York State Federation of Labor, Utica.
J. Mayhew Wainwright, Chairman Former Commission on Employers' Liability and Causes of Industrial Accidents in New York State, New York City.
John Fitzgibbons, Brotherhood of Railroad Trainmen, Oswego, N. Y.
John D. Crimmins, Builder, New York City.
James P. Holland, Eccentric Firemen's Union, New York City.
Peter J. Brady, Secretary Allied Printing Trades Council, New York City.
Thomas J. Curtis, International President Tunnel and Subway Contractors' Union, New York City.
Otto M. Eidlitz, New York Building Trades Employers' Association, New York City.
Thomas D. Fitzgerald, Chairman Legislative Committee, New York State Federation of Labor, Albany, N. Y.
Charles Thaddeus Terry, Attorney, New York City.
John J. Collins, Representative United Board of Business Agents of the Building Trades of Manhattan and Vicinity, New York City.
Jesse Isidor Straus, R. H. Macy & Company, New York City.
Richard H. Curran, Iron Molders' Union, Rochester, N. Y.
Henry T. Noyes, German-American Button Company, Rochester, N. Y.
Denis J. Conroy, Molders' Union, Corning, N. Y.
Louis Wiley, "New York Times," New York City.
William C. Whish, Chairman Executive Committee, Brotherhood of Locomotive Engineers, Albany, N. Y.
William A. Coakley, President International Protective Association, Lithographic Press Feeders, United States and Canada, New York City.
Cyrus W. Phillips, Member Former State Commission on Employers' Liability, Rochester, N. Y.
John Sullivan, President Central Federated Union (Brewers' Union), New York City.
Haley Fiske, Vice-President Metropolitan Life Insurance Company, New York City.
Frederick T. Kelsey, Chairman Legislative Committee, People's Institute, New York City.
George H. Wright, President Central Trade and Labor Council, Rochester, N. Y.
John Williams, Former State Commissioner of Labor, Albany, N. Y.
J. H. Williams, J. H. Williams Company, Brooklyn, N. Y.
Michael T. Neyland, International Association of Machinists, New York City.
E. H. Letchworth, Rogers-Brown Iron Company, Buffalo, N. Y.
Edward Gould, International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, New York City.
F. S. Tomlin, Secretary Joint Labor Legislative Conference of Greater New York, Brooklyn, N. Y.
E. A. Moffett, former Editor "Bricklayers' Journal," New York City.
John Hanley, Representative United Board of Business Agents of the Building Trades of Manhattan and Vicinity, New York City.
Jeremiah W. Jenks, Professor of Government, New York University, New York City.
Hugh Frayne, Organizer American Federation of Labor, New York City.
R. M. Easley, Chairman Executive Council, The National Civic Federation, New York City.
Seth Low, President The National Civic Federation, New York City.
August Belmont, Chairman Department on Compensation for Industrial Accidents and their Prevention, The National Civic Federation, New York City.

With this appeal a campaign of education was carried on all over the State in behalf of the amendment. Copies were sent to every commercial and labor organization urging the passage of resolutions on the subject; to the newspaper press, clergymen and the chairmen of county committees of the three leading political parties, asking co-operation in whatever ways might be found possible. Calls for thousands of copies were received, and other returns from the propaganda show that extensive use was made of the material in all these directions and widespread interest aroused. The amendment adopted, it now remains to work for wisely planned legislation and in this task the forthcoming report of the Federation's Joint Commission should be of invaluable service in New York, and in all the States which have not enacted laws upon the subject.

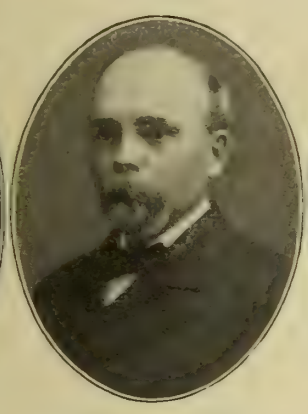
There never was a time when education on this subject was so much needed. It is believed that this investigation will not only be of benefit to the States which have not yet enacted compensation legislation, but also to those in which laws have been passed, inasmuch as it will bring out the respective merits and demerits of the various laws. It will furnish employers, employees and the public generally a more definite and exact knowledge of the benefits to be derived from this great reform, assist in its further development along just and sound economic lines, tend toward securing uniformity of legislation in the different States, and aid in bringing about a better feeling of co-operation between employer and employee and a clearer understanding of the difficulties involved.

HUMANITARIANISM IN INDUSTRY.

The one-time sporadic efforts to better the working conditions and brighten the lines of wage earners has crystallized into a movement the momentum of which is nowhere more strikingly illustrated than in the growth of the Welfare Department of The National Civic Federation. Its proportions have assumed such magnitude that the demands upon that department have made it necessary to secure additional assistance. Miss Mary G. Potter, who is exceptionally qualified to aid in carrying forward this beneficent phase of the Federation's work, has been appointed secretary, and Miss Gertrude Beeks, who has had charge of the work from its inception, has been made director.

Miss Potter is an experienced business woman, engaged in the practice of law, and has been a probation officer in New York City. Her testimony on the subject of the morality of working girls appeared in the Department Store Number of The National Civic Federation Review, and in the same connection attention was called to her investigations for the Immigration Commissioner of the United States Government in reference to the condition of employment surrounding immigrant working girls and to the importation of immigrant women for immoral purposes. She also was employed by James B. Reynolds, Assistant District Attorney, in connection with the work of the Rockefeller Grand Jury, which led her personally to look into their home conditions and later to organize the tenement house women, with a view to making them realize what they could do to protect their daughters. She found that, owing to the fact that conditions have changed since they were young, they did not realize the temptations which are thrown about girls to-day and their responsibilities as mothers. She organized a group of eight hundred tenement house mothers into the industrial membership of the Woman's Municipal League, living in their district during the first few months of her endeavor. After office hours, she gives personal advice to the members, who go to her with every kind of problem. Her co-operation will be a valuable reinforcement of the rapidly extending work of the Welfare Department.

A JUDICIAL INQUIRY—NOT A COMPROMISE.



"The present proceeding has been in every sense of the word an arbitration. Many proceedings of the kind are, in effect, little more than formal compromises; but in this proceeding the intermediate arbitrators have been obliged to pass upon the merits of every article as proposed. The result is that, in most cases, each article as adopted has been adopted by a vote of four to two, although the majority represents at times the intermediate arbitrators and the representatives of the men, and at other times the intermediate arbitrators and the representatives of the railroads."—*From award of the board in the arbitration between Eastern railroads and conductors and trainmen.*

A GREAT ACHIEVEMENT FOR INDUSTRIAL PEACE

THE CIVIC FEDERATION'S MEDIATION BILL BECOMES LAW IN TIME TO PREVENT DISASTROUS LABOR CONTEST ON THE EASTERN RAILROADS

SETH LOW,
Pres. The Nat. Civic Federation.

MARTIN A. KNAPP,
Chair'n Interstate Commerce Court.

DARIUS MILLER,
Pres. C. B. & Q. R. R.

MARCUS M. MARKS,
Chairman N. C. F. Dept. on Mediation Law.

W. G. LEE,
Pres. Brotherhood R. R. Trainmen.

A. B. GARRETSON,
President Order Ry. Conductors.

SAMUEL REA,
Pres. Pennsylvania R. R.

W. C. BROWN,
Pres. N. Y. Central Lines.

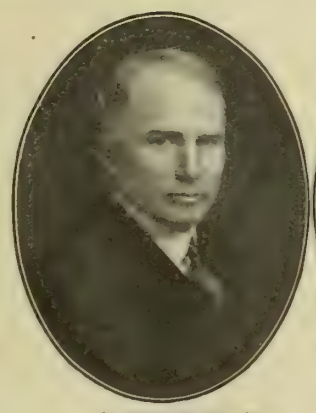
CHARLES P. NEILL,
Former U. S. Com'r Labor Statistics.

RALPH M. EASLEY,
Chairman N. C. F., Exec. Council

FRANK TRUMBULL,
Chairman Ches. & Ohio Ry.

CHARLES A. WICKERSHAM,
Pres. Atlanta & West Point R. R.

ONE of the most successful as well as most important achievements of The Civic Federation in the past year has been the work of the Department on Industrial Mediation Law. This department undertook the organization of a committee composed of railroad presidents, presidents of railroad brotherhoods and officials of the United States Government having had experience in enforcing the Erdman Act. The working of that act during the preceding five years had demonstrated that it lacked many essential features for success. This committee was made up as follows:



REPRESENTING THE GOVERNMENT—Martin A. Knapp, Judge, United States Commerce Court; Charles P. Neill, Commissioner, Bureau of Labor Statistics, Department of Labor.

REPRESENTING THE NATIONAL CIVIC FEDERATION—Seth Low, President the National Civic Federation; Ralph M. Easley, Chairman Executive Council; Marcus M. Marks, Chairman Department on Industrial Mediation Law.

REPRESENTING THE RAILROADS—William C. Brown, President New York Central lines; Robert S. Lovett, President Union Pacific Railroad; Darius Miller, President Chicago, Burlington & Quincy R. R.; Samuel Rea, President Pennsylvania Railroad; Frank Trumbull, President Chesapeake & Ohio R. R.; Daniel Willard, President Baltimore & Ohio R. R.; Charles A. Wickersham, President Atlanta & West Point R. R.

REPRESENTING THE RAILWAY BROTHERHOODS—W. S. Carter, President Brotherhood Locomotive Firemen and Enginemen; A. B. Garretson, President Order of Railway Conductors; W. G. Lee, President Brotherhood Railroad Trainmen; H. B. Perham, President Brotherhood Railway Telegraphers; Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers.

It began its work at a conference held in February, 1913, in New York City, at which the full committee was in attendance. After several weeks of careful work, a bill was drafted with the unanimous support of all the railroad brotherhoods and the representative railroad presidents just named. Concerning the vital features of this bill President Low said, at the time of its introduction in Congress:

DANIEL WILLARD,
Pres. Balt. & Ohio R. R.

W. S. CARTER,
Pres. Brotherhood Loco. Firemen.

H. B. PERHAM,
Pres. Order Ry. Telegraphers.

ROBERT S. LOVETT,
Pres. Union Pacific Ry.
(Copyright by Gessford.)

WARREN S. STONE,
Pres. Brotherhood Loco. Engineers.

THE COMMITTEE WHICH WORKED FOR PASSAGE OF THE NEWLANDS MEDIATION ACT.

"It is at once a profoundly significant and an encouraging circumstance that the great interests concerned have met together and have agreed with unanimity on a specific measure to be proposed to Congress as a satisfactory means of settling by arbitration all controversies that may arise between them. Like all measures which represent the assent of many minds, the bill as submitted to Congress represents a compromise on certain points. Both the railroads and their employees admit that the arbitration board of three, as provided by the Erdman Act, as it now stands, is too small when the interests affected are the interests of a whole section of the country and not a single railroad. All agree that when a single railroad is concerned a board of three is better than a larger board. When a larger board is desirable the number is fixed in the proposed bill at six—that is to say, two representing the railroads, two representing the employees, and two representing—if you please—the general public. It has been possible to secure the unanimous support for a board of six, and not for any other larger board.

"In the bill just presented to Congress, other deviations from the Erdman Act are proposed as the result of experience under that act. It would be impossible to bring to bear upon this subject greater familiarity with the Erdman Act and its working, than was represented in the preparation of this bill, and both Congress and the country may take it for granted that every deviation from the Erdman Act has been made for some cause growing out of experience with that act. The fact that these proposed deviations have been unanimously accepted by those most directly affected is sufficient to justify their careful consideration, for it may certainly be said that the public interest, as distinguished from the interests of the railroads and their employees, is as carefully protected under this bill as under the Erdman Act in its present form.

"The Erdman Act, broadly speaking, provides for mediation between interstate railroads and their employees at the request of either party by the Chief Justice of the Commerce Court and the Commissioner of Labor. It also provides a method for arbitration under the authority of Federal law. For several years after its enactment no appeal was made to the services of the mediators under the Erdman Act. Of late years, however, it has been increasingly resort-

ed to both by the railroads and by their employees, with the result that as to the mediation features of the law the work has become so continuous and so important that the proposed bill suggests the creation of a Commissioner of Mediation and Conciliation, to be filled by the President, by and with the advice and consent of the Senate, whose time shall be exclusively devoted to this work. With the Commissioner of Mediation and Conciliation is to be associated under the proposed bill an Assistant Commissioner of Mediation and Conciliation.

"The resort to the Erdman Act for purposes of arbitration is of still more recent development. Recent as it is, however, it has grown from the occasional arbitration between one railroad and one branch of its employes into arbitration often involving large groups of railroads and all of their employees. In order to deal effectively with arbitration, the proposed bill, therefore, provides for a Board of Conciliation and Arbitration to be composed of three members; namely, the Commissioner of Mediation and Conciliation and of two other officials of the Government who have been appointed by and with the advice and consent of the Senate, to be designated by the President. The principal function of this board is to name disinterested arbitrators who are to serve in any given arbitration in company with the arbitrators named by the railroads and by their employees respectively, in case the parties to the controversy cannot agree. This being the function of the board, it evidently is not necessary that such a board should sit continuously, and, therefore, the two other officials of the Government who, with the Commissioner of Mediation and Conciliation, constitute the Board of Mediation and Conciliation, may conveniently be designated by the President from other officials of the Government. Under the terms of the proposed bill the only limitation upon the discretion of the President in the designation of these two members of the Board of Mediation and Conciliation is that they shall have been appointed to the offices which they hold by and with the advice and consent of the Senate. This freedom of choice will enable the President to select whatever officials seem to him most available for the discharge of the delicate duties devolved upon this board.

"This proposed bill, like the Erdman Act, relies entirely upon voluntary arbitration. Arbitration which is voluntary has repeatedly proved its value in railroad experience; because, when men arbitrate voluntarily they accept the terms of the award. Compulsory arbitration on the other hand is impracticable, because not even the power of the State can compel men to work under conditions which do not command their assent. When the employers and employes of a great industry, therefore, as in this instance, are simply asking for a law which will give legal sanction to a method of arbitration which both are willing to accept, the argument in favor of such legislation is exceedingly strong."

The bill was introduced into the United States Senate by Senator Francis G. Newlands, and into the House of Representatives by Congressman Henry D. Clayton. A joint hearing before committees of the two houses was held, attended by the members of the Federation Committee.

In the meantime, a threatened strike of 80,000 conductors and trainmen on the Eastern railroads, resulting from their inability to come to an agreement in conference with the managers of the roads, accentuated the urgent necessity for prompt action in order that the law might be available for use in that controversy. There was not a quorum in the House of Representatives when action was first sought on the matter, but through the efforts of Senator Newlands the bill drafted by the Federation was unanimously passed by the Senate. In the House the bill was modified to meet the views of Secretary W. B. Wilson, of the Department of Labor, and its passage secured by Congressman Clayton, chairman of the Judiciary Committee.

By the time this action was taken official representatives of the two brotherhoods involved in the threatened strike had been called together in New York, which made it apparent that if the two houses of Congress could not be brought into agreement at once the conductors and trainmen on all the Eastern railroads would go out. President Low, Marcus M. Marks and Mr. R. M. Easley attended the meeting of the railroad men, and appealed to them, in the name of the National Civic Federation, and on behalf of the public, to delay the call for the strike and to meet the presidents of the two brotherhoods involved to a conference at the White House, which had been arranged in the meantime by President Low through Secretary of Labor W. B. Wilson.

At this conference, July 14, all the members of the Civic Federation's committee were present, as well as Senator Newlands, chairman of the Interstate Commerce Committee of the Senate; Congressman Clayton, chairman of the Judiciary Committee of the House; Senator John W. Kern, vice-president of the Senate, and Congressman James R. Mann, leader of the Republican minority in the House. President Low was chosen by the railroads and the brotherhood men alike to speak for them in presenting the situation to the President. The matter was made an emergency measure. An agreement was reached and the bill, as amended, passed both houses within forty-eight hours, and became a law.

After the signing of the law a dispute arose between the railroad managers and the men concerned in the controversy as to the questions to be arbitrated, and President Low again stepped into the breach and brought about a settlement on that point so that the matter in question went to arbitration. Although it is an unwritten law of the Civic Federation that none of its officers shall act as arbitrators, this being the first test of the new law and the Federation having been instrumental in securing its passage, President Low was morally obliged to accede to the requests of both parties and act as chairman of the arbitration board. To this work he has, together with President John H. Finley, given two months of unremitting attention, morning, noon and night.

The members of the board selected by the railroads were A. H. Smith, vice-president New York Central lines, and W. W. Atterbury, vice-president Pennsylvania Railroad; those chosen by the brotherhood men were D. L. Cease, editor Railroad Trainmen's Journal, and L. E. Sheppard, vice-president Order Railway Conductors.

Hearings began on September 11 in New York, and continued until October 10. Another month was occupied by the board in studying the testimony and preparing its report. The award, made public November 10, grants to the men an average increase of 7 per cent in wages, which it is estimated will add about $6,000,000 to the annual expense roll of the railroads. The brotherhood men had asked increases amounting to about 18 per cent, with payment for overtime at time and one-half. On the overtime matter the board fixed certain definite rates, but held that in other lines of industry where time and one-half is paid the determination of whether or not the extra time shall be worked rests with the employer. "In railroading," on the other hand, "it is quite evident that in many cases neither the management nor the trainmen can prevent overtime; and it appears to this board, therefore, that punitive overtime, as it is called, is an unsound principle when applied to the running of trains."

The board estimates the increased cost of living since the last wage adjustment in 1910, at 7 per cent, and therefore recognizes cost of living as a principal factor to be properly considered in the fixing of wage rates. Of equal or greater importance is the treatment the board gives to the matter of freight rates, which it frankly urges may need revision in order to permit the payment of the necessary basic charges and allow for improvements in equipment, for better service and greater safety.

The comments of the board on this subject make a telling statement of the problem which faces transportation companies, under present legal restrictions, all over the country:

"The board has no authority to determine the passenger and freight rates to be paid in the Eastern territory; neither is it in position to determine whether such an increase is justified, as a matter of fact, by all of the circumstances. This board, however, believes that it must make its finding as to what is a proper rate of pay to be awarded to the conductors and trainmen as a result of this arbitration without any reference to the dilemma in which the railroads are evidently placed by the laws which make it impossible for them to increase passenger and freight rates without the authority of the Interstate Commerce Commission, or of the Railroad Commissions of the various States. To take any other view of the question would be to decide that no increase of pay, while the laws remain as they are, can ever be made except voluntarily by the railroads.

"At the present time a ton of freight is moved in the Eastern territory more than three miles for the value of a two-cent postage stamp. This is the cheapest railroad service to the shipper to be found on the face of the globe. In the face of such a fact it would be unjust to say that railroad employees must continue to be satisfied only with what can be paid from freight rates as low as this. The Interstate Commerce Commission, and not this Arbitration Board, has the duty of determining whether the railroads can earn in addition to their other charges, without an increase of freight rates, the rates of pay that this board believes to be due at the present time to the conductors and trainmen."

In respect to the urgent need of improved equipment the board calls the attention of the Interstate Commerce Commission to "the connection between the decrease of hazard, the danger to life and limb, through the installation of safety appliances, by the substitution of steel for wooden cars, by double tracking and by increasing railroad facilities, as railroad business increases.

"Any policy that would make it impossible for the railroads to command this money [for improvements] would be a profound misfortune to the whole nation. Such a policy would be bad enough in its effect upon transportation, because it would reduce the efficiency of the railroads; but it would be criminal, in the sense that it would make the great army of railroad employees, who are numbered by hundreds of thousands, follow their hazardous occupation under conditions more hazardous than are necessary. No American reads the records of railroad accidents in the United States without feeling a sense of reproach. This board wishes to call the attention of the country to its belief that railroad accidents can be reduced almost precisely in proportion to the modernizing of the railroads and the improvement in their equipment."

The wage increases awarded are not based upon the demand of the brotherhood men for standardization of rates throughout the country, nor does the board definitely pass upon the merits of this contention. Here is one of the knottiest problems that has developed in the railroad labor situation in recent years, and the plan the Arbitration Board proposes for meeting it may prove in the long range the most important feature of the entire award. Two of the arbitrators noted the fact that increases on the Eastern roads may be followed by new demands west of Chicago, to equalize the differential which has always been claimed by reason of higher cost of living beyond the Mississippi. This difference, however, has more than once led to requests for a new leveling up on the Eastern roads, based on the theory of equal pay for similar work. On this matter the board says in part:

"Some public authority authorized by the Congress should make an independent inquiry as to whether there is any longer any substantial reason for the maintenance of a wage differential between the West and the East based on territorial conditions. Such an inquiry ought also to result in a recommendation, if it is found that a differential ought to exist, as to what such differential should be. . . . This suggestion does not contemplate that the body making such inquiry should attempt to fix wages; but only that it should make a study of the proper basis for the fixing of wages. Neither is it suggested for a moment that wages, when agreed upon by any process, should become unchangeable. Circumstances change and wage scales must change with circumstances like everything else; but this board does believe that, by the process suggested, some of the artificial embarrassments to the fair and equitable adjustment of railroad wages may be removed. It is possible that the Commission on Industrial Relations recently appointed by President Wilson may be competent to carry out the suggested inquiry. The Interstate Commerce Commission has recently organized a special force to consider the valuation of railroads. Possibly the Industrial Commission may see its way to organize a special force to make the inquiry suggested by this board as to standardization and wage scales between the Eastern and Western territories."

It is probable that public sentiment has been with the transportation companies in this "endless chain" predicament more largely than on any other railroad issue for many years. The cause of arbitration has suffered at the same time from the impression that it might become merely the instrument of a seesaw of Eastern and Western schedules. This, probably without intent on the part of anybody to misuse the method, would of course carry it very far from its original purpose of maintaining industrial peace with justice.

The Arbitration Board proposes a way out of the dilemma which the companies and the men alike should be prompt to accept, working together for a solution of the vexed question once for all. Such an understanding, with or without a government inquiry, would be of course in the public interest but even more in their own. It is far-sighted industrial statesmanship in the midst of a complicated mass of testimony, claims and counterclaims, to put a finger on one of the chief underlying sources of trouble and plan for its future elimination. It is also a vindication of arbitration itself in its larger possibilities, over and above all the practical difficulties which usually surround it.

The entire outcome of this critical situation, upon which the business prosperity and transportation necessities of half the population of the United States depended, is, however, the real justification for the methods so successfully employed. Compared with the enormous losses which would have been entailed by a strike on these lines, the additional costs which will result from the process of judicial inquiry based upon a study of facts instead

(Concluded on page 11.)

THE TRUTH ABOUT WAGES AND VICE

A FEW WORDS WITH CRITICS OF THE RECENT INVESTIGATION OF WORKING CONDITIONS IN NEW YORK DEPARTMENT STORES

WIDESPREAD comment upon the study of department store conditions in New York, published in the last number of the REVIEW reveals almost unanimous approval of the findings as a much-needed clarification of the subject, especially in its bearing upon the alleged relation of the wage scale to the white slave problem.

The results of this inquiry showed a much more encouraging state of affairs for the most part than the public had been led to imagine from much inferential discussion and sensational assertion.

On the other hand, so overwhelming a showing of data and opinion has not, of course, been a welcome contribution in the eyes of those who, for whatever motives, have apparently set their hearts upon proving the department stores a recruiting ground for the white slave traffic. Serious attacks upon the report and its conclusions have been remarkably few, but among these the most explicit appeared in *The Survey* of October 11th in the form of a review by Miss Mary Van Kleeck, secretary of the Russell Sage Foundation's Committee on Women's Work. We are obliged to say of this criticism that by partial quotation of the report and omission of many of its positive recommendations, an entirely wrong impression is given of the investigation as a whole, while some of the very measures advocated therein are in turn advanced by our critic in such a way as to convey the idea that the Federation is opposed to them.

While the agents and investigators who acted on behalf of the Welfare Department do not claim to be infallible, an earnest effort was made to present existing evils and to call attention to the welfare features which have been installed for the benefit of employees by these New York stores. The hours of work, for example, are not, as Miss Van Kleeck remarks, "briefly discussed." Every type of employee is covered; more than 4,000 words are devoted to the subject; an eight-hour standard is recommended, and arguments as strong as we are capable of making are presented for reduction of hours, discontinuing of overtime work, payment therefor when necessary in emergencies; Saturday closing at noon in summer and other changes in the interest of the workers.

Miss Van Kleeck announces as something of a discovery that "the use of the average is dangerous . . . and it is inevitable that their high wage rates should so overbalance the low payments . . . as to give a false impression of the earnings of the majority." This familiar truth, a commonplace of all social investigation, Miss Van Kleeck might have found reaffirmed in the very report in question, as follows: "As averages may mislead and be unfair to low wage groups because a few high salaries considerably increase the wage rate, one special table was prepared to give the **numbers receiving certain definite wages,** and it depicts the condition most impressively."

To support her contention our critic continues: "The use of the average is dangerous when the group of saleswomen in the table quoted includes nineteen earning $30.00 to $39.99; seven, $40.00 to $49.99, and one designated as $60.00 to $69.99." She does not, however, quote this sentence from the report: "The highest **wage** paid any individual saleswoman (not a buyer or assistant buyer) is $60.00 and the lowest is $3.50."

She fails also to note that the Federation secured the latest figures on high wage rates paid in manufacturing in New York City—i. e., $35.00 under the protocol arrangement in the garment industry, and compared it with $60.00, the highest rate paid to saleswomen—the type of employee for whom the greatest concern is evidenced by the public. She fails to show that the latest Government reports were secured by the Federation with a view to learning whether the conditions had changed materially since the Federation's first investigation was made, and that the median line for factory workers was found to remain somewhere between $6.00 and $6.25 as an average. The exact figures for department stores were an average of $9.31 for saleswomen in the spring of 1913, those for 1909 having been $8.84, as against $6.12 for women in factories, mills and like industries in New York City.

Miss Van Kleeck says: "Even assuming, as seems doubtful, that the duties of the highly paid women were similar to those of the majority behind the counters. . . ."

They were not only similar, but they were absolutely the same—that is, the duties of saleswomen and nothing else, as stated in the report. They do not, however, necessarily "stand behind counters"; they may be in fur departments, where the main work is in open places, or they may be behind counters selling expensive laces, which requires equally expert service and commands high salaries.

This further explanation (in the report) of the use of averages would, we think, have quite removed the point of Miss Van Kleeck's criticism had she seen fit to quote it: "The fairness of the Federation's averages must be emphasized when it is realized that in this inquiry affecting saleswomen the average rate is that of the **full complement** of the sales force in each of seventeen stores, and then of all taken together. In no other way can a correct average be secured. Investigations other than that of the Government into wages of saleswomen made in various parts of the country have not been scientific, for the reason that 'a given number of saleswomen' has been the basis. Under such a plan the full groups selected may all be getting approximately the same salaries and simply represent types from several stores. It would be an easy matter to take a group living in a particular community and to show that their average wage is $6, but in that number there may not be any getting the highest or the lowest salary."

Miss Van Kleeck informs her readers that it does not appear "that any workers were interviewed in the inquiry into wages in stores." Many were indeed interviewed during the initial steps, and the results were of assistance in pointing to methods to be employed in the wage inquiry, but it is beyond belief that a serious critic could expect the result of such questioning to be taken as definite, dependable statistics, rather than the complete payrolls which were thoroughly examined and verified by public accountants of undoubted integrity.

Almost in the same breath Miss Van Kleeck remarks that no available statistics of value exist, and commends her own "careful study" of the bookbinding trade, which the Federation accepted on the same plane of reliability as the Government statistics which she ridicules. Perhaps they cannot all be unreliable if our critics are "careful." She dismisses the Government inquiry into wages as "of the most casual sort." A reader of these exhaustive reports would find such a statement surprising. The Government figures were, in fact, thoroughly studied by three experts and selected because they were the only ones available which could be interpreted as furnishing a proper basis for comparison.

Miss Van Kleeck's objection on this point is repeated editorially in *The Survey* of November 15, the specific point being that the Federation took from Government data a weekly rate of $6.12 for women workers in factories, and ignored a corresponding wage of $6.07 for store workers, using instead the Government's figures of $8.84 in 1909, and $9.31 in 1911 for saleswomen in department stores only. Our investigators used Government statistics where none more specific were available, and were quite at liberty to compare with these, upon a proper basis, whatever special groups of facts from other sources they might consider reliable and germane to the scope of their particular inquiry. Perhaps in all this discussion the fact has been overlooked that the Federation was not attempting a study of conditions of women workers in all stores, including small retail shops, but expressly limited itself to the typical department stores which have been glaringly pictured as responsible above all others for labor conditions tending to drive their women employees to lives of shame.

To have quoted the Government wage of $6.07 for women workers in miscellaneous stores, instead of discrediting the Federation's conclusions, would merely have added confirmation from another source on this particular point, by showing a much better state of affairs on the whole in the large stores than in the small. Comparing the department store wages with the $6.12 average for women factory workers of all grades was considered proper because of several mutually offsetting items discovered by the accountants who studied both groups of data with great care, and for the further reason that, with the single exception of women garment workers under the new protocol, no such wide variety of occupations and wage rates exists among women factory workers as among store workers; so that it was not believed unreasonable to consider the $6.12 average a fairly representative one for comparison with the department store figures. It is hardly conceivable that the lowness of this rate is due to taking account of any lower groups of wages than may be found at the bottom of the ladder in the wide range of occupations in department stores, all of which were included in the department store averages.

To make allowance for losses in "slack seasons" in averaging store wages, as Miss Van Kleeck proposes, would give us nothing of value, for the simple reason that layoffs are not customary in department stores, except in so far as the temporary force during the holidays is concerned. That is the only time when "irregular employment" needs to be considered, and despite our critic's statement to the contrary, the Federation's report did take that up at length. Its figures were based upon the wage scale for one week in April, when the force is steady, and, therefore only wages of those who are employed **throughout the year** were considered. They give as accurate an index of the yearly income as it is possible to secure.

In criticising the Federation for using her own statistics on the bookbinding trade, Miss Van Kleeck states that they are taken "by the way, not from the volume on 'Women in the Bookbinding Trade,' but from the publisher's announcement of the book." Does she repudiate the Survey Associates, who published the very interesting leaflet from which, it is true, this statement was taken? Is Miss Van Kleeck willing to say that the following quotation therefrom does not represent her views on wages of bookbinders or that the Survey Associates misrepresented her?

> **"Wages Are Low.** Allowing for losses in slack season, three-quarters of the women receive less than $400 a year, and the average is $300 a year. This, as Miss Van Kleeck points out, is at the rate of about $6 a week, which is far below the generally accepted minimum of $9 a week on which a woman can support herself in New York."

In the book itself, on pages 220 and 221, Miss Van Kleeck thus emphasizes this estimate of yearly income: "Nearly three-quarters of them receive less than $400 in a year, *in spite of their finding employment in other occupations when they have no work in bookbinding.*" (Italics ours.)

Had this fact of outside employment been noted in the Federation's report it would have increased the disparity between the wages of factory girls and department store girls. Miss Van Kleeck, however, overlooks altogether this statement in the Federation's report: "Although the present average wage in department stores is higher than in factories, that fact does not prove that department store saleswomen get enough, but may rather accentuate the low wage of women in manufacture. It does reduce the cause for criticism leveled at department stores, but not the responsibility for helping to bring about a better condition."

The Federation is fully in accord, in so far as the facts bear out the description, with Miss Van Kleeck's belief that: "To go to work too young; to be used up in hard work which stunts development; to toil long hours and to walk home late at night, unprotected on the deserted streets (while your employer fights every attempt to strengthen the laws protecting women and girl workers) . . . is to be handicapped in a way which statistics can never measure . . . and an industry which makes the young working girls of the community defenceless needs the salutary effect of public discussion."

All employers, however, do not fight humanitarian legislation. It is only too true that many do, and that many fail to observe the laws when enacted. For such there can be no excuse. On the other hand, we must be fair and recognize the fact that many employers have actually assisted in securing legislation in the interest of labor.

Miss Van Kleeck admits that the Federation's report "may have valuable results in a practical way because attention has been called in so detailed a manner to welfare plans in operation in stores"; while elsewhere she ridicules and belittles the social value of welfare work as a proper object of "public suspicion." She is quite correct, however, in stating that to stimulate interest in welfare activities can only be of permanent value when a fair wage scale and a shorter work day are made the first items in any program of improvement. The Federation has, in fact, always insisted upon exactly these points, which are a definite part of its welfare program. The by-laws of the Department affirm that: "In promoting the work, it is recognized that the first essentials to the welfare of employees are steady work, an equitable wage and reasonable hours of labor; but that the employer has a further obligation."

Nothing less than a voice in determining the conditions of their own labor, Miss Van Kleeck sug-

EXECUTIVE COMMITTEE.

On the Part of the Public:

WILLIAM HOWARD TAFT (President American Bar Association), New Haven, Conn.
FRANKLIN MacVEAGH (former Secretary of the Treasury), Washington, D. C.
ELIHU ROOT (United States Senator), New York City.
ANDREW CARNEGIE (Philanthropist), New York City.
JOHN IRELAND (Archbishop of the Roman Catholic Church), St. Paul, Minn.
JAMES SPEYER (Speyer & Co.), New York City.
FRANCIS LYNDE STETSON (Attorney), New York City.
ROBERT M. THOMPSON (Chairman Executive Committee Navy League), Washington, D. C.
V. EVERIT MACY (Capitalist), New York City.
VINCENT ASTOR (Capitalist), New York City.
WALTER GEORGE SMITH (former President Conference of Commissioners on Uniform State Laws), Philadelphia, Pa.
ALBERT SHAW (Editor "Review of Reviews"), New York City.
THEODORE MARBURG (Political Ecoonomist), Baltimore, Md.
JEREMIAH W. JENKS (Professor of Government, New York University), New York City.
TALCOTT WILLIAMS (Director of the School of Journalism, Columbia University), New York City.

On the Part of Employers:

WILLIAM D. BALDWIN (President Otis Elevator Co.), New York City.
WILLIAM C. BROWN (President New York Central Lines), New York City.
GEORGE B. CORTELYOU (President Consolidated Gas Co.), New York City.
OTTO M. EIDLITZ (Building Trades Employers' Association), New York City.
ADOLPH LEWISOHN (International Smelting and Refining Co.), New York City.
SAMUEL MATHER (Pickands, Mather & Co.), Cleveland, Ohio.
OGDEN L. MILLS (Director International Paper Co.), New York City.
LEWIS W. PARKER (President The Parker Cotton Mills Co.), Greenville, S. C.
GEORGE M. REYNOLDS (President Continental and Commercial National Bank), Chicago, Ill.
HERMAN RIDDER (President New York Staats Zeitung Corporation), New York City.
J. G. SCHMIDLAPP (Banker), Cincinnati, Ohio.
LOUIS B. SCHRAM (Chairman Labor Committee, United States Brewers' Association), New York City.
FRANK TRUMBULL (Chairman Board of Directors, Chesapeake & Ohio Railway), New York City.
THEODORE N. VAIL (President American Telephone and Telegraph Co.), New York City.
HARRIS WEINSTOCK (Weinstock-Nichols Co.), San Francisco, Cal.

On the Part of Wage Earners:

SAMUEL GOMPERS (President American Federation of Labor), Washington, D. C.
WARREN S. STONE (Grand Chief International Brotherhood of Locomotive Engineers), Cleveland, Ohio.
JAMES DUNCAN (President Granite Cutters' International Association of America), Quincy, Mass.
JAMES M. LYNCH (former President International Typographical Union), Indianapolis, Ind.
A. B. GARRETSON (President Order of Railway Conductors), Cedar Rapids, Iowa.
W. G. LEE (President Brotherhood Railroad Trainmen), Cleveland, Ohio.
WILLIAM D. MAHON (President Amalgamated Association of Street Railway Employees of America), Detroit, Mich.
TIMOTHY HEALY (President International Brotherhood of Stationary Firemen), New York City.
[illegible] CARTER (President Brotherhood Locomotive Firemen and Enginemen), Peoria, Ill.
[illegible] GOLDEN (President United Textile Workers of America), Fall River, Mass.
[illegible] COAKLEY (President International Lithographic Press [illegible] Protective Association), New York City.
[illegible] TOBIN (President International Brotherhood of Teamsters), Indianapolis, Ind.
[illegible] (General President Boot and Shoe Workers' Union), Boston, Mass.
[illegible] (President International Molders' Union of North America), Cincinnati, Ohio.
[illegible] (President Glass Bottle Blowers' Association of United States and Canada), Philadelphia, Pa.

AND MEMBERS OF EXECUTIVE COUNCIL.

The Annual Meeting Dec. 11 and 12.

The topics to be considered at the Fourteenth Annual Meeting of The National Civic Federation make it certain that the occasion will be one of extraordinary interest. No subjects before the public to-day are of more engrossing concern, and none offer more encouraging opportunity for the co-operation of patriotic citizens in promoting their wise treatment, than those on the program for this meeting, notably the proposed amendment to the Sherman Anti-Trust Act, the extension and improvement of workmen's compensation laws, the revision and better enforcement of pure food and drug laws, the problem of labor disputes in the government service and among employees of public service corporations, the proper regulation of street railways, gas and electric light service, and the national inquiry to be undertaken by the Federation into the facts and results of industrial and social progress during the last generation, as well as of the theories and program of the socialist and other revolutionary movements.

Each of these is a problem which should not be a football of party politics, but demands thorough and frank discussion by competent authorities representing all views and interests, to the end that whatever policies are recommended for legislation or for voluntary action shall be genuinely in the public interest and have the largest probability of successful operation.

There will be in addition, as stated in the more detailed announcement of the meeting on the front page of this number of the Review, reports from the Welfare Department and from the Women's Department, with sessions devoted to work in progress and in prospect in each of these important phases of the Federation's work.

The annual dinner has come to be the most broadly representative and impressive gathering of citizens from all parts of the country and all walks of life held anywhere in America, and for that matter in no country to-day probably would anything resembling it be possible. It is a unique focusing of all elements taking an active and helpful part in the civic and industrial life of the republic, and epitomizes the essential democracy of the institutions under which such a gathering is possible. These occasions always tax the capacity of the available seating accommodations, and, in addition to their significance in themselves, are of great practical service in promoting acquaintance and better understanding among men and women needing each others' viewpoints and help in many lines of social and industrial effort.

The National "Stock-Taking."

"First know the facts, then go ahead," is the sound principle out of which the entire plan has developed for a national survey of industrial and social progress, announced elsewhere in this number. That rule is the recognized basis of safe, intelligent action in every line of business and civic effort, but we need to-day to apply it on the national scale. As a nation we do not know how far we have come or where we stand in the really vital matters of social welfare. A comprehensive view of our total situation has become urgently necessary to the wise planning of future policies and focusing of helpful reform work upon the places and conditions most needing it.

The great typical problems confronting us to-day are of nation-wide scope, and have come upon us so fast and with so many complications that we are little more able to judge of their total meaning than a man in the street is able to tell the prevailing drift of the crowds that surround him. This becomes clear, however, from a vantage point high enough to take in the movement as a whole. We need to-day the national vantage point, the ability to see our conditions in the large and in due proportion. To get this it is not necessary that such an inquiry be absolutely exhaustive, on the plan of a government census, but it must be sufficiently far-reaching to discount all margins of error and show conclusively the actual trend of social changes during the last generation, whether in the direction of progress or the reverse, in each subdivision of the field as well as in the general movement.

As stated in the general outline of the survey, in much of the field "the main work will be bringing together the results of official and other investigations already made. In certain respects further investigation will be required. In other cases, the facts may prove too elusive, or the records too incomplete, for a wholly satisfactory report. In the greater part of the work, however, it is possible to reach definite conclusions either by statistical investigation or by authoritative descriptive summary."

Probably no aspect of this undertaking will have greater interest or practical usefulness in the present confusion of social doctrines and revolutionary creeds than the study which is to be made of these theories, both on their merits and in the light of the economic facts the investigation will reveal. To quote again from the announcement of scope and purpose of the inquiry, on another page:

"Features to be necessarily included in the work will be examining the principles involved in the movement for the abolition of private ownership in the means of production and distribution of wealth and studying the differences in the fundamental aims and methods of the labor movement as conducted by the trade unions, the socialists and the Industrial Workers of the World."

Both the Advisory Council and the Executive Committee which will have the practical direction of the work are made up of representative men of the widest variety of interests and viewpoints, a method of supervision which has proved the best possible guarantee of accuracy, impartiality and reliability in all the Federation's studies of special subjects. Included among these, as will be seen from the list printed in connection with the outline of the survey, are large employers of labor, officers of all the leading trade unions connected with the American Federation of Labor, and of the railroad brotherhoods, college presidents and other eminent educators, clergymen, social and charitable workers, lawyers, public officials and officers of agricultural, trade, commercial and civic organizations without number.

The entire purpose of this "stock taking" is not to pile up masses of statistics, but to bring together in one compass the salient features of our national gains and shortcomings in their relation to human welfare. This should afford the most effective possible means of testing the claims upon which current social theories are based. It should prove also a tremendous practical help in locating the actual rather than the imaginary causes of evils and abuses in the social system, as well as in bringing out the features best worth preserving and developing to larger human service.

The Railroad Arbitration.

On another page appears the full story of the remarkable banding together of railroad presidents, brotherhood chiefs and citizens interested from the standpoint of the general community, in a common effort to prevent what might have been a paralysis of transportation throughout the East. Before this could be assured it was necessary at the critical moment to enlist the help of Congress and the President to procure the changes necessary in the Erdman law to make arbitration acceptable to both parties. The railroad managers and brotherhood men could hardly have stood further apart on the wage questions at stake, but in the face of impending disaster they came together as men of one interest in this successful effort to find a better way out. It is a good working illustration of the common stake of labor and capital in the stability of the industrial system, over and above all current questions of division of joint earnings—an economic truth which can neither be harangued nor ridiculed off its foundation.

Nowhere else in the world to-day would it be possible to duplicate on anything like the same scale the industrial good sense and broad-mindedness which made this kind of co-operation possible at just the time when all the direct issues in the case tended to drive the two sides hopelessly apart. Even in England, where organization of labor was something to be reckoned with for half a century before the movement really began in this country, and where the prevalence of trade agreements and collective bargaining is often contrasted with our supposed "crude methods," it has proved impossible to get the heads of the great railroad systems to meet and talk with the official representatives of the men, to say nothing of joint compacts or voluntary arbitration. There is considerable industrial history yet to be made in Great Britain, apparently, before a similar crisis would find these two elements joining hands to get a measure through Parliament enabling them to settle their differences without disturbing the business of the country.

There are serious problems growing out of this arbitration yet to be solved; the board in its award names some of them and suggests ways and means of relief. Nevertheless, had the matter been fought out to the bitter end, as some advisers believed must be done this time "once for all," the same or perhaps ten times greater problems would have remained to harass the future of railroad transportation, and with much poorer prospect of wise remedial action than now is in sight. Even had the railroads won such a battle, at terrific cost, according to all industrial experience the defeated employees would have come up again and again with the postponed issue, which in a matter of wages is far more fundamental than any question of organization or union

policies or the leadership of any particular man or men.

There is no short and easy road to escape these periodical readjustments of living costs and earning power, under whatever industrial or social system. The only practical question is whether these inevitable changes shall be handled on the basis of twentieth century intelligence and judicial inquiry, or of mediaeval brute force. The trend of civilization is compelling the sane method as a matter of economic and moral necessity.

A Congress of Labor.

Few people not connected with the trade union movement have any idea of the range of topics debated and acted upon at the annual conventions of the American Federation of Labor. How many know or imagine, for instance, that a large proportion of these subjects are not those commonly termed "labor demands" in the specific or class sense, but are literally those of common and similar interest to the great mass of American citizens in all walks of life? Here are some of the matters discussed in the report of the Executive Council at the recent thirty-third annual Convention in Seattle; workmen's compensation, seamen's legislation, immigration, safety appliances, Federal bureau of health, arbitration, child labor, industrial education, old age pensions, the Industrial Relations Commission, minimum wage legislation, proposed welfare amendments, unemployment, the Panama Exposition, occupational disease congress, international peace, the Philippines, farmers' co-operation movement, uniformity of text books, mothers' day, university extension, and conservation of natural resources.

The orderly, businesslike deliberations of this great representative body of American workingmen present a contrast to the typical inflammatory proceedings of socialist and I. W. W. gatherings, professing to represent the "wage-earning masses," which ought not to be lost upon the American public. People who still harbor the notion that any kind of a labor meeting is merely another hatching place for strikes and boycotts might well read this sane, temperate statement from the same report, in connection with the fact that the membership of unions represented in the Federation has passed the two million mark:

> "Not only has there been progress made in numbers, but for the increasing numbers there have been increase in wages, shortening of the workday, improvement in sanitary and general conditions under which the work is done, better protection for the life and health of the workers. These are fundamental factors in determining the standard of living prevailing among working people—the greater proportion of all the people. The test of the degree of civilization of any nation is the standard of living generally prevailing. There can be no question of the statement that the general standard of living among Americans has been raised year after year. The things which to-day are held to be necessities were deemed luxuries a decade ago. Furthermore, there can be no question of the statement that the organized labor movement of America has been the most potent force in bringing about this higher standard of living now prevailing among the American workingmen and women and those dependent upon them."

Even more enlightening ought to be the fine spirit of such a declaration as this:

> "You who are to transact the affairs of this movement, be fully conscious of the dignity and responsibility devolving upon you—the welfare of the human beings whom you represent. Where so much is at stake, fads, idealistic but impracticable fancy, personal interests, must give way to the larger aspects of all problems. Differences of opinion there must be, for they are inseparable from a growing movement that must adjust to the changing conditions of industry and society. For the success of the cause does not depend upon the elimination of disputes, but upon the spirit in which they are treated."

Any movement which has been able to breed among the workers themselves, mainly with the opposition instead of the help of the rest of the community, a habit of self-control evidenced in sentiments such as these has its place among the useful and necessary factors in American industrial life. Backing up words with deeds, the convention put itself again on record as a bulwark against the revolutionary enemies of society by re-electing Samuel Gompers for the twenty-eighth time, and continuing the main outlines of its trade policies under the opportunities offered by the industrial system of which it is a part.

This great business convention of independent workingmen does not and could not spring from a nation of "wage slaves," of socialist imagination. It is really the congress of the only kind of industrial democracy which has any substantial value or meaning in the productive organization of the community.

An Inside View of I. W. W. Methods.

For a really blistering indictment of I. W. W. leaders and policies it is no longer necessary to interview citizens of Paterson or to look up police records. The following lifelike picture of the true inwardness of things appeared on August 23 in a communication signed "L. C. R.," printed in the leading position and with double leads on the editorial page of SOLIDARITY, official organ of the Industrial Workers of the World. There was no accompanying disavowal or criticism, and the article must be taken, therefore, as in accord with the editorial views of the publication. It will relieve the minds of any just-minded citizens who may have imagined that the I. W. W. leaders were a band of zealots painted much blacker than they deserve by the "capitalist press." It brings to light also some of the rocks of dissension upon which this whole movement of industrial anarchy is going to wreck all over the country:

"If the Industrial Workers of the World is going to organize the working class then we will have to make a great change in our attitude toward the labor movement and in the methods that we are now using. At present we are to the labor movement what the high diver is to the circus. A sensation, marvelous and nerve thrilling. We attract the crowds. We give them thrills, we do hair-raising stunts and send the crowd home to wait impatiently for the next sensationalist to come along. As far as making Industrial Unionism fit the everyday life of the workers we have failed miserably. The crowd expects the sensational from our speakers or organizers; the members expect it, and our speakers, if they intend to remain as such, have got to supply them or go out of business. We measure the success or failure of our speakers by the number of spectacular stunts that they are able to pull off. It is child's play to stand in front of some factory and convince the slaves that they have a grievance. Capitalism is generous in that respect. The speaker sheds tears over their misery, he opens the floodgates of sentiment, and, lo, Mr. Speaker becomes a strike leader. With cheap phrases and flowery language the strike leader appeals to the emotions of the crowd, lashing them into a religious frenzy, for he knows well that if he ever allows the strikers to cool down the boasted solidarity will disappear and the men will crawl back into the factory. Take the speaker away from the strike and it will go up in smoke unless the workers or some part of them have been previously organized. Arrest the speaker or strike leader and the crowd will remain firm until another one gets on the job. The new speaker does not have to know anything about the shop conditions to make good. He raves about persecution and the brutality of the police. It is surprising how you can revive the dying enthusiasm of a crowd by a tirade against the police or the army.

"While the crowd is still enthusiastic we take in many members, many of whom would just as soon join the Salvation Army as the Industrial Workers of the World, providing that the S. A. had sense enough to use the same cheap weapons that we are forcing our speakers to use. To stampede a bunch of slaves who are working for $1.62 per day is easy, and spectacular. How often do we hear around our halls a conversation like the following:

"Slim (who has just blown in)—'Gee, this town is dead; we got to start something,' meaning, of course, something sensational. What we really need is less of the sensational and more quiet organization. Organizers that can work and a membership that will allow them to work without a brass band. Had we kept as many organizers in Lawrence after the strike as we had during the strike we would have an organization that could carry on the next battle without the aid of press agents or sensationalists. In Akron it was the same story; the members cried for sensation; Haywood was sent for. He filled the bill, but after the strike was over every organizer was called to other points to supply the thrills called for by the rank and file.

"Not one was left to build up an organization in Akron.

"It is getting to be a habit, and the speakers are catering to it. In Pittsburgh I heard one of our principal speakers give voice to the following: 'Do you think that I am going to come here and talk to 200 people when I can stay in New York and talk to 10,000 people direct and have my speeches carried to thousands more by the capitalistic press?' The poison of sensationalism had entered his veins; his standard of success was the standard of the rank and file who measure the success of an organizer by the noise he is able to make and by the spectacular stunts he is able to pull off. Let the hated capitalistic press give a front page column to the antics of some organizer and he immediately becomes the God of the leaderless rank and file. The cheapest gallery play, idle threat or giant boast is applauded by the members who would disdain to say a kind word for the men who plod along trying to build up a local union that will stand and fulfil its function without the aid of a 'high diver.' If you dare say a word about the efficient work of our present general secretary around a hall, some one will immediately ask, 'What did he ever do?' The hard and thankless routine of organization work means nothing to them. What does it matter to them if he is the ablest man in the movement? He has failed to monopolize the front pages of the daily press, so he is a failure. If he fails to get the necessary funds to keep the sensationalist in the field, we feel as if we had been cheated out of our just due. How we do howl! What does it matter if we have editors who are able and capable of making our papers real propaganda sheets? We want some one who will feed us scandal, gossip, and, above all, sensationalism. We must have it now that we have developed the taste for it. Give it to us or we will elect some one who will. In the choice between ability and sensation, we pick the latter to win.

"Don't think for a minute that because we are growing numerically our present sensational method is right. Oh, no; we are growing in spite of it. The principles of industrial unionism are mighty strong, and even we have not been able to kill the organization. The fault does not lie with the general officers, but with you, the members of the rank and file, who make gods of the 'high divers' and abuse the men who refuse to sacrifice organization for front page articles in the capitalist press. Unless we can organize the workers without doing the spectacular, we are doomed. It is up to you. The organizers and speakers are what you make them. Demand the straight goods and hard work and you will get it. Keep on as you are doing now and don't whine when you get stung."

German Socialists and Militarism.

Even among those who would honestly like to know, the difficulty increases of getting at any one statement of socialist doctrine as likely to find acceptance with any other faction as the simon-pure creed. Professor Simkhovitch no sooner tells us that German socialism to-day has practically discarded the Marxian cornerstones of faith, than word comes of socialist support for the Kaiser's expansive military policy. "The German workingman of to-day," according to a statesman of the Fatherland, quoted in the *Literary Digest* from *The Liberte* (Paris), "is convinced that the economic supremacy of Germany, on which his own prosperity is based, depends on the powers of the army, and especially of the navy, whose prestige secures an outlet and a market for national industries. It is this frame of mind that compels the great leaders of the Social Democracy to vote in the Reichstag for the military laws and led the recent Socialist Congress at Jena to take an attitude and pass motions which delighted the Kaiser above every one. . . . Germany is solidly united in aspiring after the creation of a greater Germany. This is the keystone on which all classes are cemented by patriotic enthusiasm whose tendency grows more and more decided toward increased militarism."

Socialist orators have long been in the habit of treating the idea of the brotherhood of man as a private possession, interpreting it to mean not merely the end of militarism, in which they would have many sympathizers not of their cult, but also the wiping out of national barriers and even of "flag patriotism" as an ancient trick of the exploiters to breed strife and divide the world's workers against themselves. If all this is to be painted off the banners in the birthplace and stronghold of the faith, will the leaders of the cause everywhere or anywhere else do likewise and put bayonets into the creed, or give over "pointing with pride" to Germany and German advanced thought? "Every stoic was a stoic," said Emerson, "but in Christendom where is the Christian?" To-day it would take a philosopher indeed to tell us where in socialism to find the correct brand of socialist.

A Great Achievement for Industrial Peace

(*Continued from page 8.*)

of a resort to force are not of decisive moment. They do, however, give new force to the railroads' claim for relief in the direction of a fair and proper readjustment of operating charges in the light of constantly increasing costs of operation. It is a significant fact in this connection that a marked change has come over the attitude even of the commercial and mercantile bodies, most of which have stood determinedly against any change in rates. There is a growing popular appreciation that safety and good service and fair compensation to labor cannot be permanently assured without adequate revenue. This and the question of arriving at a more stable basis for determining wage rates in various sections of the country are the problems next ahead, and they demand the most serious consideration in a spirit of co-operation on the part of the companies, the employees and the public.

THE TRUTH ABOUT WAGES AND VICE

(Continued from page 9.)

gests, "will satisfy the social conscience of a democracy," implying that the report in question recognizes no such need. It does, on the contrary, urge upon the department stores the wisdom of a "Conciliation or Adjustment Board—composed of several heads of departments and several from the rank and file appointed by the firm, or selected in some satisfactory method by the employees." In this, our investigators appear to have gone quite as far as their critic, only in rather more definite and practical terms.

Miss Van Kleeck affirms that the attempt to find a direct "relation between an industry and prostitution in a community is to pursue a 'will-o'-the wisp,' and that the moral effects of any occupation . . . defy statistical treatment." It is indeed difficult to arrive at exact conclusions in any line of social investigation. Nevertheless, in so far as the lumping together of scattered incidents and unproved inferences may be termed "statistics," it is precisely the method employed from the first by the well-meaning people who are endeavoring to show just this direct relation between working conditions and the social evil.

Our critic is disturbed by the published statement of thirty-seven social workers to the effect that: "It is our general belief that low wages of working girls are scarcely ever a direct cause of loss of chastity." She declares reprovingly that: "Social workers should be the first to realize the danger of any final statement on this subject just now, especially if it be negative in character." Nevertheless, the opinions of these unprejudiced authorities, including many of the most representative and practical social workers in the country, upholding the character of working girls and discrediting the idea that any appreciable proportion of them would sell their souls for food and clothing, will enjoy, we are forced to believe, a larger measure of public confidence than Miss Van Kleeck is able to accord them. We take occasion to name again some of the signers of this opinion:

JEREMIAH W. JENKS, Professor of Government, New York University, Former Chairman of Committee of the United States Immigration Commission in charge of investigation of importation of women for immoral purposes.

GRAHAM TAYLOR, President Chicago School of Civics and Philanthropy.

HUBERT WORK, Physician, Medical Superintendent of Woodcroft, a private hospital for the mentally deranged; former President of American Medical Psychological Society, Pueblo, Colorado.

C. R. HENDERSON, Member of the Vice-Commission of Chicago.

GEORGE J. KNEELAND, Director of Investigation, the Vice Commission of Chicago; author of "Commercialized Prostitution in New York City."

SOPHIE C. BARCLAY, Superintendent Margaret J. Bennett Home, Baltimore.

M. EDITH CAMPBELL, Director The Schmidlapp Bureau for Women and Girls, Cincinnati.

KATHERINE BEMENT DAVIS, Superintendent, New York State Reformatory for Women, Bedford Hills, New York.

JAMES BRONSON REYNOLDS, Counsel American Vigilance Association, New York.

MARY M. BARTELME, Assistant Judge of Cook County Juvenile Court, Chicago.

H. W. HERBERT, City Magistrate, Women's Night Court, New York.

ALICE C. SMITH, Probation Officer, New York.

THOMAS ESTILL, Commissioner The Salvation Army, Chicago.

KATE WALLER BARRETT (Mrs. Robert S.), President National Florence Crittenton Mission, Alexandria, Virginia.

ROSE SOMMERFELD, Superintendent Clara de Hirsch Home for Working Girls, New York;

and many others.

"Why will the report tell us so little," inquires Miss Van Kleeck, "about the observance of the State law requiring seats for sales-girls, while merely remarking that 'the problem is a vexing one, from whatever standpoint it is viewed'?" The report, directly to the contrary, does state that seats are provided in all stores, and the subject is referred to more than once. Mention is also made of the fact that zealous buyers (heads) sometimes urge constant activity on the part of the clerks, which prevents them from sitting to any extent; while the policy of [illegible] is to *request* employees to be seated when not busy. In some instances, companies are given credit for providing more seats than the law requires, and attention is called to the fact that seats [illegible] be provided for bargain tables, though not required by law and not given by any store in New York.

Criticism of the report was contributed to the *New York Evening Post* of August 1 by Miss Elizabeth Dutcher, of the New York Retail Clerks' Union, in comment upon a *Post* editorial on the subject. Miss Dutcher is claimed as a Socialist by *The New York Call*. Several of her objections have already been discussed in connection with Miss Van Kleeck's review, but certain others call for further remark. "We object," said Miss Dutcher, "to welfare work that is a mere device to impress the public." The Civic Federation would equally condemn that type of welfare work wherever found, but it happens that not a single instance of the kind exists in the establishments covered by the report. In only one case has a firm even mentioned its welfare features in the catalog sent to customers, and without approving this exception there is at least to be said in extenuation that the particular work described was so far in advance of anything found in any similar New York institution that a real educational service may be rendered even through this ordinarily undesirable means of spreading information. The welfare work of several of the firms which have actually done the most on this line has been unknown to the public precisely because of their refusal to exploit its details.

Miss Dutcher makes the surprising assertion: "The report has almost nothing to say about long hours," and alludes to what seems to her its "inscrutable reserve" on the overtime question. As already pointed out, the report deals at length with the whole subject of hours, declares in positive terms that the working day is too long and urges that it be shortened in all stores. It recommends further that overtime be abolished entirely, but that when necessary, in emergencies, it be paid for, which would in itself tend, of course, to check the practice on the part of department heads.

Miss Dutcher's observation that lights may be seen burning in different stores after hours is the sort of "evidence" which, had it appeared in the Welfare Department's report, would have immediately occurred to our critics, we fear, as a case of "seeing things at night;" certainly a highly unreliable method of statistical inquiry. Illumination, of course, is needed for janitor work and often for the use of night watchmen, and while it may, in some cases, also indicate overtime work, we submit that inside rather than outside evidence is the proper basis for conclusions on that subject.

Miss Dutcher's statement that eighty-four hours a week "for eight weeks at a stretch is not unusual" seems to imply that the Federation's investigation ignored or denied such a condition, whereas it expressly reports porters and night watchmen found working fourteen hours per day, six nights in the week, and the night watchmen on Sundays, also.

"The store that employs a welfare secretary during the daytime and keeps its employees working until one o'clock in the morning," would be, indeed, as Miss Dutcher remarks, "in an anomalous position." As a matter of fact, we know of but one department store in New York employing a welfare secretary, and here no such 1 A. M. practice exists. The natural inference from the quotation would be, however, that some stores regularly keep their entire force at work until that preposterous hour.

The New York Call, official organ of the Socialist party, naturally condemns the report, as it would any showing of data of optimistic bearing upon an existing condition. "The report neglects to state just what stores it investigated," says the *Call*. Its study of the document must have been expeditious, indeed, since the full list of all stores investigated appears on the front page of the report. The only other specific criticism appears to be that the report includes the wages of the highest-paid saleswomen handling the costly fabrics. We do not know that the *Call's* ready assumption of "whitewashing," based on this discovery, demands any other comment than the fact that the data in question also includes, in the averages obtained, the lowest-paid salesgirls—in fact, the entire selling force—and that tables are presented showing the actual numbers receiving various rates of pay, from the lowest to the highest.

Mrs. Maud Nathan, president of the Consumers' League of the City of New York, writing to the *Evening Post* from the Hague under date of August 19, offers further criticisms of the investigation, based, as she states, upon Miss Dutcher's letter in a previous issue rather than upon the report itself, which at the time she had not seen. Assuming from her source of information that "deceitful" averages characterized the Federation's report, Mrs. Nathan suggests that: "A fairer statement would show how many saleswomen received $6 a week, how many $7, etc." As already noted, the report does show exactly these classified wages, by tables and charts, in great detail.

Mrs. Nathan mentions a wage investigation made by the Consumers' League, showing that of some two hundred and twenty-five saleswomen in New York nearly 60% receive less than $6.50 per week, 33% between $6 and $6.50, and 84% less than $8. Whether this small group was in any way representative of the total body of saleswomen in the various grades of low, medium and high-wage positions does not appear, and we greatly doubt if the League itself, with the best of intentions, could determine the point. The Federation report, on the other hand, is based on the wages of some 8,867 saleswomen, and includes the entire number of such in the various establishments studied. Reliance upon very narrow premises for broad conclusions is even more deceptive than the all-too-common misuse of averages, and Mrs. Nathan will herself agree, we feel sure, that a statistical pyramid should rest on its base rather than its apex. There can be no quarrel, however, with her statement, after commending the progress of improvements in many New York stores, that the League "cannot in justice to those employees who have real grievances, remain silent in regard to the evils of long hours and low wages in other stores, when those evils exist."

Criticism of an investigation tending to upset a mistaken theory, however sincerely held, is of course to be expected, but the prevailing tone of public comment in this matter was by no means such as the foregoing discussion might imply. It was voiced, on the contrary and in the main, by the editorial opinion of the *Evening Post* already referred to, as follows:

> "The thanks of everybody who has been left in a state of confusion and disgust by such 'investigations' as that of Lieutenant Governor O'Hara, of Illinois, are due to The National Civic Federation for its report upon 'Working Conditions in New York Stores.' The report fills the thirty-two pages of the last number of The National Civic Federation Review, and is just what such a document should be. It goes after the main things; it is detailed, but has numerous tables and summaries; it is careful to supply the sources of its information and conclusions; and it is judicial without being colorless. Its presentation of masses of facts and series of inferences constitutes the sort of knowledge upon which, and upon which alone, we ought to base agitation for legislation and individual improvements . . .
>
> "It thus appears that if the department store is responsible to any extent for 'white slavery' it sins in a large company. And this, in the opinion of the Federation's experts, is exactly the impression which it is sought to make. Nothing less than an indictment of our whole industrial system, and with it our whole political system is the aim of those who are raising the alarm. Such persons cannot be expected to fasten their rolling eyes upon so stolid a thing as a fact, still less upon a bit of reasoning. Others, however, and this still means the mass of us, will find something very rational in the comment of an employer who, as a young man, believed rumors of this kind. 'It would be poor business policy,' he remarks, 'for how could a company expect employees to deal honestly with it if those employees were induced by it to lead lives of shame?' The strange thing of these reckless charges is the evident supposition that only a soulless corporation was being attacked, the possible slander upon scores of thousands of girls and women not being even remotely perceived. This phase of the attacks is not absent from the minds of the Civic Federation's investigators, however, and they demolish the whole rotten structure with a completeness that ought almost to convince even the wildest of those who set it up. For, column after column, one impartial authority after another gives testimony to the falsity of any supposition that there is any important connection between occupation and immorality, or even want and immorality, among women.
>
> "The department store is not the last word in industrial organization. Yet it seems to be, not merely no worse than its fellows, but rather better. We have considered only the most damaging of the criticisms that are leveled against it, saying nothing about what it is doing to improve working conditions for its employees. Yet eighteen of the thirty-two pages of the report are upon 'Welfare Work and General Recommendations for Improvements.' These pages bristle with details of what these stores are doing to make life more livable for those dependent upon them, ranging from the distribution of a cooled beverage twice a day in summer to saving and lending arrangements which make mightily for thrift and self-respect. Doubtless no store is doing all it can in this direction. Doubtless every store needs to be under the eye of the fire inspector, and to take heed to what this report has to say, for instance, about long hours. But what was required before all else was more light and less heat, and this the Federation's clear-headed examiners have given us."

CHAIRMAN WELFARE DEPARTMENT.

TO STUDY CAUSES OF INDUSTRIAL DISCORD

THE NEW FEDERAL COMMISSION WILL ALSO SEEK PRACTICAL MEANS OF PROMOTING BETTER RELATIONS BETWEEN EMPLOYER AND EMPLOYED

FRANK P. WALSH.

JOHN R. COMMONS.

MRS. J. BORDEN HARRIMAN.

FREDERICK A. DELANO.

THRUSTON BALLARD.

HARRIS WEINSTOCK.

A LONG step forward toward more intelligent and effective dealing with the causes of discord in the industrial world was made possible when the last Congress authorized the appointment of the Commission on Industrial Relations, which is just now organizing for work. The results of this commission's inquiries promise to be of value not alone in the first-hand problems of organized capital and organized labor, but in the shaping of legislation having to do with a wide variety of working and living conditions.

The make-up of the commission, appointed in June by President Wilson, and confirmed by the Senate in September, gives the best possible guarantee of its fairness, independence and capacity for usefulness. It is interesting to note the widespread acknowledgment of this fact, even among critics of the idea and program of the commission itself.

JAMES O'CONNELL.

A. B. GARRETSON.

JOHN B. LENNON.

THE FEDERAL COMMISSION ON INDUSTRIAL RELATIONS.

The chairman, Mr. Frank P. Walsh, of Kansas City, a man better known in the West than as yet in the East, has made a notable record as a fearless, determined fighter for civic reforms and worker for social welfare. Mr. Walsh was a member of the first tenement commission in Kansas City, and originated the idea of the Board of Public Welfare, a sort of municipal directing center of various lines of social service; and he has been its general counsel and moving spirit from the first. He has also, upon occasion, served as arbitrator in industrial disputes, and any man who has filled that most difficult of voluntary judicial positions is presumably equipped with a kind of close-to-the-bone experience which ought to stand him in good stead in such work as lies ahead of the new commission.

Professor John R. Commons, of the University of Wisconsin, is one of the strongest additions that could have been made to such a board, in which the help of a trained economist and social investigator will be, of course, of the first importance. Mrs. J. Borden Harriman, the third member named to represent public interests, and since elected resident commissioner of the board, was one of the leading organizers of the Women's Department of The National Civic Federation, and has for a number of years given most valuable service as chairman of that department's National Committee on Welfare Work for Industrial Employees.

Mr. Harris Weinstock, of San Francisco, the directing head of a number of large department stores; Thruston Ballard, president of the Employers' Association of Louisville, Kentucky, and Frederick A. Delano, of Chicago, receiver and former president of the Wabash Railroad, are the employer members of the commission. Mr. Weinstock was appointed by Governor Gillette , of California, to investigate labor and industrial conditions in Australia and Europe, with special reference to arbitration experience, and was also appointed by Governor Johnson to investigate the I. W. W. "free speech" riots in San Diego. Mr. Weinstock is a member of the Executive Committee of The National Civic Federation, and knows the practical side of social and civic issues from long service as a volunteer in many good causes. Mr. Ballard is a large employer of labor in the milling business, and is a member of the Welfare Department of the National Civic Federation.

The three labor members, Mr. James O'Connell, head of the Metal Trades Department of the American Federation of Labor; Mr. John B. Lennon, treasurer of the American Federation of Labor, and Mr. Austin B. Garretson, president of the Order of Railway Conductors (as well as Mr. Delano, of the employers), were among the nominees originally sent to the Senate by President Taft. Their reappointment by President Wilson gives a genuinely representative balance to the commission, whose duties, it will be remembered, are mapped out in the law establishing it, as follows:

> "The commission shall inquire into the general condition of labor in the principal industries of the United States, including agriculture, and especially in those which are carried on in corporate forms; into existing relations between employers and employes, into the effect of industrial conditions on public welfare and into the rights and powers of the community to deal therewith; into the conditions of sanitation and safety of employes and the provisions for protecting the life, limb and health of the employees; into the growth of associations of employers and of wage earners and the effect of such associations upon the relations between employers and employees; into the extent and results of methods of collective bargaining; into any methods which have been tried in any State or in foreign countries for maintaining mutually satisfactory relations between employees and employers; into methods for avoiding or adjusting labor disputes through peaceful and conciliatory mediation and negotiation; into the scope, method and resources of existing bureaus of labor and into possible ways of increasing their usefulness; into the question of smuggling or other illegal entry of Asiatics into the United States or its insular possessions, and of the methods by which such Asiatics have gained and are gaining such admission, and shall report to Congress as speedily as possible with such recommendation as said commission may think proper to prevent such smuggling and illegal entry. The commission shall seek to discover the underlying causes of dissatisfaction in the industrial situation and report its conclusions thereon."

This is a broad program, and the commission is at present making a preliminary study of the field of inquiry. It has already appointed as general managing expert Professor William J. Lauck, formerly of Washington and Lee University and later connected with the industrial survey of the Immigration Commission. Chairman Walsh, in the course of an interview in the *New York Evening Post* of November 1, outlined the manner in which the commission will approach various subjects, particularly the underlying causes of strikes and lockouts and the relation of judicial decisions to industrial disputes and labor laws.

"We are studying," Mr. Walsh said, "the effects of judicial decisions on industrial questions and how statutes affecting labor are being construed by the courts. We are trying to determine the part common law plays in industrial disputes, and to sift the oft-repeated reports that the courts are unfair to organized labor or are unfair to capital. Any understanding of the influence of the judiciary in these matters involves a survey of all the judicial decisions in injunction cases. Constructively we will try to find out how much friction may be allayed by modifying court rules and procedure, and what changes may be made in the common law. The trend of the courts in sustaining laws for the protection of workers will be looked into, and the practicability of the Government's establishing free legal aid bureaus. . . .

"Our attempt will be to avoid the statistical mire. We will try to get typical situations in various industries by learning the employers' and employees' side of the disagreement, which will be done by sending our investigators out among the men.

> "Another thing which will tend to simplify our labors is our determination not to go into fresh disturbances and current labor disputes with the idea of straightening out local situations, such as have recently existed in Michigan, West Virginia and at Paterson and Lawrence. Of course, we will put our investigators into those fields, but it will be with the purpose of detecting the underlying principles at work. From these, we hope to draw conclusions for our final report. Specific matters are not a part of our province. Our function is more general."

The commission is, of course, getting all manner of advice and prejudgment of its work, not all of it either friendly or fair. Bearing upon this, Mr. Walsh described in *Collier's Weekly* of October 18th what he believes the fair and proper attitude of the commission in its effort to discover facts which shall be of practical service in remedial work, rather than to rake the ashes of old controversies. Referring to the opinions, among others, of W. J. Burns and W. D. Haywood, quoted from *The Survey*, with regard to the commission, Mr. Walsh declared, for instance, that it would be no part of its business to find what, if any, relation organized labor had to the McNamara outrages. "Under no circumstances will the commission consider itself as a sleuth or a prosecuting attorney." Quoting, on the other hand, Haywood's "denunciation of the commission before he knows anything about our hopes and intents," Mr. Walsh continued: "There you have warning of a malign division. On one side your Haywoods, sullen and distrustful, and on the other your Burnses, eager for pursuits and prosecutions. It is an alignment that must be prevented, if possible, for I can conceive of nothing that will so hamper the work of the commission as being compelled to run the class gauntlet. Some word must be found that will bring a sense of our essential oneness home to every man, woman and child in the country, so that we may have co-operation, not antagonism."

If the work of the commission is carried forward in the spirit manifested by Mr. Walsh and amply assured in the personnel of the entire board, we shall have a right to expect from it a valuable contribution to industrial and social progress in this country.

SENIORITY PROMOTION—WHAT ARE THE FACTS?

FITNESS AND MERIT ARE ALSO IMPERATIVE TESTS ON ALL ROADS—PRECEDENCE BY LENGTH OF SERVICE A COMMON PRACTICE IN OTHER FIELDS

By HAYES ROBBINS

WHEN Governor Foss, of Massachusetts, launched a broadside of condemnation against the locomotive engineers of the New Haven Railroad for their supposed willingness to order a strike on the seniority issue, he probably voiced a widespread feeling that the "limit" had been reached. Almost any settled practice, forced suddenly to the front in the heat of an acute discussion, is pretty sure to bring down a torrent of public criticism which may or may not be justified, but very seldom rests upon a careful, unprejudiced study of the facts. There is not time in two or three days of excited debate either to get at the underlying truth of an unfamiliar situation or to reach safe conclusions.

It developed, for instance, that this particular controversy, later adjusted through negotiation and mutual concessions, did not hang primarily on the seniority question, but grew out of several important changes in the rules made rather unexpectedly in the course of reorganization of the service, all of which the Brotherhood men believed should have been subjects of further conference and agreement. The rule of seniority as a basis for promotion was among these, and in the course of further deliberation between this and other companies and their men it may, of course, undergo other modifications than those already attached to it.

However this may be, and whatever the actual merits and demerits of the rule, it is but common fairness to recognize that widely different opinions may be and are honestly held on this very issue, and that the idea behind it is no more an invention of union labor than the practice itself is confined to the railroad service.

Illustrating the need of a better common understanding of just what the seniority rule implies and how it works, take this typical objection from Governor Foss's letter to the engineers and firemen at New Haven:

> "Promotion and the assignment of duties according to seniority without regard to fitness lower the efficiency of the labor force, make it impossible for the railroad to maintain discipline and impair the ability of the railroad to serve the public. . . . The real issue is not between the railroad and its employees, but between the employees and the people of this Commonwealth; and the question is whether the lives of the people shall be placed in jeopardy by the maintenance of the seniority rule, and whether, in order to enforce this rule, our people must submit to the evils incident to a railroad strike."

In reply to which the Brotherhood men, in the course of a statement signed by Assistant Grand Chief L. L. Griffing, of the engineers, and Vice-President P. J. McNamara, of the firemen, had this to say:

> "Seniority rules have been in effect upon all railroads for many years and have been to the traveling public the greatest possible assurance that only employees of experience and tested ability could be placed in charge of trains. We are of the firm belief that if the traveling public but realized the increased dangers that would exist under operating rules that would permit of favoritism, that is not only possible but probable under the revival of old customs, it would submit to the evils incident to a strike rather than to permit of the revival of the old conditions."

Carrying their defence further, these gentlemen tell the Governor that:

> "No one appreciates more deeply than do those whom we represent that the safety of the traveling public is paramount to all other requirements and it is not a question of 'advantage' with them. It is a question of placing the responsibility for safe operation where it should properly rest."

Here, it must be acknowledged, a fair question is raised. Why should a man have been kept in the service at all if, after a term of years under the watchful eye of the management, he is not believed safe to intrust with larger responsibilities? If the superintendent, when the turn of such a man comes for advancement, does not dare put him in charge, for instance, of a fast express instead of a local accommodation, ought he to have been intrusted with the lives of passengers on any train, slow or fast? It is quite as possible for the engineer of a local as of an express to forget orders or bungle the emergency brakes or overrun signals. In other words, and without championing seniority as an ideal rule of selection, it is still possible to see that a more careful process of weeding out, in the regular course of operating practice, as already provided for in some of the promotion regulations, might bring us to the point where seniority and superior fitness would practically always mean the same thing. That they do already in a large majority of cases, probably most operating officers would themselves readily grant. It is the small but important proportion of exceptions that creates the real problem.

But is the matter after all as bad as it is commonly represented? Is it true that the Brotherhoods rigidly insist upon seniority as the sole determining factor in promotions?

There is no literally uniform rule on this matter, but the following extracts from working agreements actually in force on various roads are typical of the prevailing practice.*

The promotion of railroad trainmen, for instance, is governed by provisions such as these:

Pittsburgh & Lake Erie Railroad—"Rule 22. All trainmen will be considered in line for promotion according to their time of continuous service, *merit, competency and capacity for increased responsibility.* However, to obtain promotion, capacity must be shown for greater responsibility, and *employees must not rely upon mere seniority. The best interests of the company demand that vacancies be filled by men who have shown themselves most worthy of promotion by loyal and faithful service, and intelligent and economical performance.* The limit of promotion will be confined to conductorship as far as seniority is concerned.

"A candidate for promotion to conductorship in the regular line—that is, following the last conductor promoted—will be given ten (10) days' notice to prepare himself. Failing to pass the first examination he will be given thirty (30) days to further prepare himself. If he then passes the examination he will be the senior of any younger employee who may have been promoted in the meantime. Failing to pass the second examination, *he may be dismissed from the service.*"

Norfolk & Western Railway Co.—"Article M, Rule 2. They will be considered in the line of promotion. The oldest in the service shall have preference: First—Fitness for position. Second—Previous record for faithful service. Third—Length of such service."

New York Central & Hudson River R. R.—"Rule 5. Promotion in train service shall be from the oldest eligible freight conductor to extra passenger conductor, and from extra passenger conductor to passenger conductor . . . . *when they are able to pass proper examinations and are otherwise qualified.* After a man has been appointed a passenger conductor it shall be probationary for one year, *and his continuance as such after that time shall depend wholly upon his efficiency, courteousness and appearance.*"

St. Louis & San Francisco Railroad Co.—"When necessary to increase the number of conductors, the oldest brakeman in service will have preference in line of promotion, *merit and ability being considered.* If it is ruled by a Superintendent, Assistant Superintendent or Trainmaster that a conductor or brakeman lacks the ability for promotion to higher service, the Superintendent, Assistant Superintendent or Trainmaster will notify him, giving the reason for so ruling in writing, if requested."

Nothing very alarming here! In each case severe tests for merit and efficiency go hand in hand with the seniority rule.

How is it with the conductors? The promotion rule, according to President Garretson, of the Order of Railway Conductors, "varies in language on very many roads, but the sense is virtually the same the country over." Mr. Garretson states that the rule considered as fair as any and that recognizes the general position of the conductors on the subject, is that in force on the New York, New Haven & Hartford Railroad, as follows: "Ability, fitness and seniority will entitle a man to promotion when the opportunity offers, provided, in the opinion of the superintendent, he is qualified therefor."

"That rule," says Mr. Garretson in comment, "makes ability the first requirement for promotion and seniority the last. Under the application of that rule on the line the superintendent of the road has the right to object to the man who stands next for promotion, and if he can reasonably demonstrate the grounds of unfitness the man will not receive the promotion, but he is not permitted to set up simply a whim or personal dislike, nor, when he has demonstrated the unfitness of a man can he choose at will some individual whose interests he desires to forward for any one of many reasons, but he must take the next man in seniority unless unfitness is also shown on his part. It is a parallel for the civil service practice that obtains in regard to fitness . . . there is not a place where the evidence of unfitness will not deprive the man of advancement to responsible position."

In the case of engineers, practically the standard rule is that seniority should govern, merit being equal. In other words, where the qualifications of two men are all right, the older in the service has the choice of runs and layovers.

The rule in force on the Atchison, Topeka & Santa Fe Railway (Coast Lines) reads that: "Engineers will be promoted according to seniority *and ability,* in their respective districts."

On the Chicago, Milwaukee & St. Paul Railway, the rule reads: "Promotion of engineers will be made according to their seniority *and ability when found competent and worthy.* When the ability of an engineer in line for promotion is questioned, he may be given an opportunity to prove his competency."

In many of the agreements, the test examinations for promotion are not named in direct connection with the seniority rule, but are elsewhere prescribed and, according to Grand Chief Stone, of the Brotherhood of Locomotive Engineers, "The operating official is the man who decides whether or not the man is qualified, we reserving the right to appeal from his decision if we think any injustice has been done."

In the case of the firemen, the standard rule on forty western roads covered by the Chicago Agreement of 1910, is: "Firemen shall be examined for promotion according to seniority on the firemen's roster; and *those passing the required examination* shall be given certificates of qualification, and when promoted shall hold their same relative standing in the service to which assigned."

This provision, as President Carter, of the Brotherhood states, "in no manner restricts the railroad companies in their educational requirements or severity of examination in order to ascertain the fitness of a fireman before promotion." On the contrary: "Ordinarily, when a fireman fails to pass a satisfactory examination for promotion to position of engineer, he is penalized, the penalty varying on different roads."

On the Missouri Pacific Railway it is provided that: "All hostlers and firemen *shall stand an examination* on machinery and timecard before promotion to position of engineer in switch or road service." Then follow various rules on the nature of the examinations, both mechanical and physical. Another rule states that the senior eligible fireman shall stand first for promotion "provided he first passes the required examinations."

On the Erie Railroad, Rule 41 reads: "In filling the position of hostler, preference will in general be given to firemen according to their age in the service, the company reserving the right to fill such positions otherwise in special cases."

On the Missouri, Kansas & Texas, it is provided in the rules that: "The right to regular engines, to position of switch engineer and hostler, also the right and preference to regular runs will be governed by seniority *and ability* in regular road service on the respective districts to which firemen may be assigned."

The test examinations are no perfunctory affairs. On the contrary, several hundred technical questions must be answered, including a large number requiring a fireman to state what he would do as engineer in various unusual or emergency situations. On one large system, it is reported that more than one thousand technical questions are asked of firemen before promotion, relating to mechanical matters, books of rules, signal systems, etc.

The railroad Brotherhood men urge that in addition to all these exacting tests seniority is of itself a strong evidence of fitness, in that it usually means long service under managers who could at any time have used the power of dismissal for incompetence or neglect of duty. This is, of course, not so simple a matter as may appear on the surface. Railroad managers have insisted that the real trouble comes not so much in the wording of promotion rules as in the practical handling of this or that man's individual case. The difficulty of proving a man unfit,

*Italics in all the regulations quoted are ours.

in whom the superintendent may, nevertheless, lack confidence for various reasons, may be so great that the regular custom is allowed to govern rather than incur the wrangling, bad blood and threats of trouble involved in setting it aside. This is a parallel to the well-known difficulty of getting rid of the occasional man in the civil service who is not equal to the requirements, yet against whom it may be almost impossible to "prove charges."

Any arrangement, however fair on paper, can of course be made narrow and arbitrary in the hands of narrow and arbitrary men. Nevertheless, it must be an exceedingly small number of actually unfit or unreliable men that railroad managers would acknowledge having promoted to responsible positions under compulsion. Unless workingmen are to give up entirely the right of a hearing and appeal in cases of what they believe unjust treatment, it is hard to see how more or less argument and disagreement and perhaps occasional bad feeling can be avoided in any of these practical adjustments of employment relations involving thousands of men under complex conditions. It is a part of the work-a-day experience with human nature all along the line.

Even with the seniority provision entirely abolished, it would still be necessary to decide between rival applicants for the higher positions, perhaps with this man or that backed by some faction among the force, and with the constant likelihood of incurring suspicion of favoritism, whether that motive is actually present or not. There is, at any rate, room for argument whether selections having regard to seniority, after due tests for knowledge and fitness, are any more likely to give us the occasional employee who disobeys orders and invites disaster than would be the case were appointments left solely to a superintendent's estimate of "fitness," an elusive term into which may enter various side issues known only to the official himself, and which the public least of all has any way of checking up or analyzing.

How did the seniority idea get such a foothold in the railroad world, in the first place? Probably the common impression is that the practice was forced upon the companies as the arbitrary whim of a powerful labor aggregation. The powerful labor backing was there, indeed, but very few industrial policies of such scope and importance arise from the "whims" either of individuals or groups. In the main it is true that seniority rules came into being as a measurable escape from evils which tended to grow by what they fed upon.

A generation ago the relations of railroad managers both to the public and to their men were very unlike those of to-day. Commodore Vanderbilt may never have used the famous language credited to him, but the sentiment no doubt was typical of the actual feeling of very many magnates of the rail of that day. Equally arbitrary, to a large extent, was the relation of minor officials to the men further down. Favoritism was a routine commonplace, and the habit still unfortunately common in certain rough occupations of paying for a job or for promotion was not unknown in the railroad world. There were (and may still be) railroad officials who openly favored the seniority idea as one way of stamping out the petty favoritism, parcelling out of jobs to family relatives, and occasional graft, which had become sources of more or less constant ill-will and friction in the service. These facts are recalled as a matter of history.

Every social or industrial arrangement is entitled to be judged, not from the standpoint of what might be under ideal conditions, but in relation to the particular situation it fits, and out of which it has grown. It may not be the wisest device that could be imagined for the purpose, but may still mark a real advance over the practice or custom it replaced. The curse of every known "free hand" system of hiring and promoting employees on a large scale has always been the temptation to give weight to other factors than the good of the service. The only practicable escape from this evil, whether in public or private employment, has been in the direction of some more or less automatic system, with the range of personal choice on the part of appointing officers cut down to definite limits.

Theoretically, the trained, disinterested manager, knowing his men and knowing the work they must do, should be the ideal instrument for building up an ideal force of workingmen. In the smaller, relatively compact and keenly competitive industries, he often is just that. If the same results could be relied upon in the handling of large masses of men, one-man power would remain the best selective method, but the strength of the small enterprise is apt to become the weakness of the large. So many new problems and obligations crowd into the large situation that the managing head is forced to delegate authority, without, however, the power of sub-dividing himself, his own personality, sense of responsibility and singleness of purpose.

The case of industry is much like that in government affairs. The "benevolent despot" may give us efficiency, economy and justice on a plane not often reached under democracy, but we have no way of knowing how long the "benevolent" streak will persist. The next in line may omit it entirely. Therefore, we take our chances with a lower but steadier average of efficiency and equity under popular rule and promptly find that even here the "free hand" of our own elected officials is quite as likely to build up a personal machine as an efficient public service. After government appointments had gone by way of politics, graft and favoritism to the limit of endurance, we resorted to the competitive civil service system, and why? Certainly not because any mechanical scheme of examinations can be trusted to pick the most competent candidate, best fitted by natural ability and general "horse sense" for the work to be done. It did sift out the impossibilities and guarantee a certain average of capacity, and was therefore an improvement on the previous regime of corruption and rank incompetence. Nobody today questions the wisdom of the new system; the only argument now is on ways and means of extending it to practically all the remaining unclassified list.

Railroad employment has come to have certain points of likeness to civil service. In fact, the nearer we get to a type of industry operating under fixed rules, hemmed in by many regulations and dividing authority among a hundred and one subheads, the "free hand" becomes less and less practicable. Many details of management are reduced to rule and system through the sheer necessity of keeping up uniform standards and guarding against the personal ambitions and trouble-making capacities of men in posts of petty authority. Merit examinations have proved the best available defence against all this in the public service; the seniority rule is one of the attempts, admittedly imperfect, to cope with it in the railroad service. Both have features of rigidity which sometimes give bad results and both are capable, no doubt, of progressive improvement.

In the army and navy promotion has long been a matter of automatic precision, and as it happens on the very basis of seniority, commonly thought of as a labor union invention. The law of October 1, 1890, provides: "That hereafter promotion to every grade in the Army below the rank of brigadier general throughout each arm, corps, or department of the service, shall, subject to the examination hereinafter provided for, be made according to seniority in the next lower grade of that arm, corps, or department."

Congress itself gives us the seniority idea in a form which could hardly be more rigid if a matter of law instead of invariable custom. The ranking members of the House and Senate committees automatically move toward the chairmanship under the force of a tradition which is no more influenced by questions of superior fitness than the rotation of the seasons is affected by the daily advice of the Weather Bureau.

As in nearly all social experience, the psychology of the matter goes far to explain its many outworkings. This should be the case certainly with an idea rooting back into human nature at so many points as does that of seniority as a just ground for preference. Men have always taken for granted a close connection between age, experience and fitness. The oldest male was the head of the patriarchal tribe by common consent. The "elders" of the church are at least in theory what the name implies, and even the college senior enforces the inherited rights of his venerable rank with an iron hand!

All through the ranks of industrial service the feeling crops out that a man who has served long and faithfully ought to stand next in line when vacancies occur higher up. One of the sources of keenest discontent and demoralization of the *morale* among large bodies of employees has been the feeling that tried and trusted service would stand little chance against the sons, nephews or family friends of directors and high officials of the company, not to mention soldiers of fortune with a political "pull." This has been in fact a common cause of attack upon corporations in general by a large part of the same newspaper press which, when a labor organization is concerned, savagely assails the railroad managements for systematically recognizing length of service.

Without this practically certain "reward for faithful service," the cry has been: "What incentive has any man to stand by, year after year, learning patiently all the rounds and duties from the bottom up, in the hope of due recognition by the time he has become fit for nothing else?" Many indignant and touching editorials to this effect could be quoted without doubt from the same columns that have bristled with scorn for the whole "vicious seniority incubus" upon the railroad service.

Whether it is an incubus or not, especially by comparison with any practical alternatives in sight, and considering that fitness tests must also be passed, invariably, would be a hard matter to determine. The problem is receiving new consideration to-day at the hands of the public as well as of railroad men, and out of the discussion may come some new elements of flexibility in the workings of the rule. Meanwhile, to understand the history and causes of the situation as it stands is the first thing needed, both for intelligent criticism and constructive help in bringing about better conditions.

Representative Press Opinions on the Social Survey

(*Concluded from page 4.*)

at heart A true picture of the concern called the Industrial Workers of the World, for instance, should be of value to every man who believes in our form of government, whether he be a workingman or an employer of workingmen.

Boston Herald, Mass.—The far-reaching industrial and social survey which The National Civic Federation, through its Industrial Economics Department, purposes is an attempt to apply for the first time the Grecian philosopher's "know thyself" on a national scale.

New York Herald, N. Y.—By all means give us an official report in many volumes telling us that the country has advanced in thirty years. It may stifle the voices of misrepresentation raised for mischief and in malice.

Boston Globe, Mass.—If The National Civic Federation can find satisfactory answers to its own questions it will deserve a vote of thanks. But somehow they will have to be answered.

Philadelphia Bulletin, Pa.—An accurate comparison of present and past will be healthful, if only it shall serve to stop some of the whining and complaining. Stock taking will not find the world in such bad condition as some of those who would have it put in receivers' hands for the conservation of its remaining moral and social assets would have the rest of us believe it to be.

Houston Chronicle, Tex.—The Chronicle has taken pleasure in calling attention frequently in the recent past to the work of The National Civic Federation, an organization which is doing a wholly unselfish and altruistic work for the public good.

Lynn News, Mass.—The task is a most interesting one, and one which should yield results. If it is well done we shall not be obliged to guess as to conditions—we shall know. And deliverance will be at hand from the misrepresentations of every sensational agitator who, for the moment, gets the centre of our stage.

New York Telegram, N. Y.—It is a great work, and its value will be greatly enhanced if the facts arrived at are stated so concisely and simply that every one can read and understand them.

Peoria Herald-Transcript, Ill.—The final report on the survey should have a tremendous effect upon the thought of the country.

Concord Patriot, N. H.—May be a season of reforms will follow this period of investigation.

Buffalo Commercial, N. Y.—A national survey of the industrial and social progress made in this country during the last few decades, as proposed by The National Civic Federation, will probably show that such organizations as the I. W. W. increase and fatten on the hordes of uneducated immigrants that swarm to the land of the free.

Christian Science Monitor, Boston, Mass.—The purpose of the Civic Federation's enterprise is to obtain the facts at their sources, and to present them, when found, unvarnished and unpolished. This purpose is laudable. We believe that the ascertained facts on every point will support and justify the optimist, but whether they do or not, it is of much greater importance that the truth shall be known than that any individual, group or class shall be pleased.

Chicago Tribune, Ill.—It may be made a great human document that will help the whole nation to practical betterment.

Portland Oregonian, Ore.—If The National Civic Federation's industrial survey of the country is carried out in the spirit of the plan made for it the results can hardly fail to be of the first importance. The federation is a society known to everybody for its impartial catholicity. Among its members are representatives of all classes and parties in our complex social organism. Such men as John Mitchell, who stands for organized labor; Talcott Williams, who speaks for social economics, and Charles Stelzle, who expresses the advanced Christian opinion of the country upon industrial questions, are typical of its membership. Even those who feel most confident that the Civic Federation's survey will bring forth a vindication of society as it is now organized do not expect that it will demonstrate perfection. Far from it. Glaring iniquities will come to light. Injustice will be detected poisoning the springs of social life. Wealth and poverty will be found standing in totally different positions before the courts. Many such facts will be discovered, and frankly admitted. But they do not condemn the system as long as they are not irremediable. If the patient is sick, he can still be cured.

AN OBJECT LESSON FROM FRANCE.

"A remarkable decrease in membership has occurred in the French railwaymen's organization. Before their late disastrous strike they had a membership of 60,000. After the battle it had dwindled to 16,000. This strike, which was conducted along the methods advocated by the I. W. W.'s, should prove another valuable object lesson to the workers everywhere. All the I. W. W. theories go to pieces when the acid test is applied. Trade unionism stands for constructive—slow—but sure methods. I. W. W.-ism encourages and practices destruction, wreck and ruin."—*United Mine Workers' Journal.*

A LABOR MAN'S STORY OF THE PATERSON STRIKE

AFTERMATH OF THE I. W. W. REIGN OF VIOLENCE, INTIMIDATION AND GRAFT

By F. G. R. GORDON

FOUR months ago the I. W. W. leaders promised the twenty-four thousand silk workers of Paterson an eight-hour workday; to-day all of the silk factories of that city are being operated on a ten-hour basis. Four months ago the I. W. W. leaders promised the workers of Paterson an increase of 25 per cent in wages; to-day they are working for practically the same wages, with few exceptions, that they received prior to the beginning of this six months' industrial strike. In a few instances manufacturers in certain grades of work gave a slight increase in wages after the strike was practically broken and the workers had returned to the mills.

For several months before the strike the Industrial Workers of the World and the Socialist leaders had discussed the prospect of a gigantic and successful strike, and together they had encouraged the I. W. W. movement to carry on a general propaganda in the city of Paterson for "one big union." They knew there was dissatisfaction on the part of some of the dyers and something like 5 per cent of the weavers, the latter objecting to the three and four loom system, so-called.

At the first meeting of the I. W. W. the leaders promised the workers an eight-hour day and an increase of 25 per cent in wages. As the meeting progressed it grew enthusiastic and violent language was used. Finally, a resolution was passed that when the meeting broke up they should march in a body to the mills and call upon the workers employed to join the strike, and that if they did not come out voluntarily they should be forced out. As Captain McBride of the night watch said, "This was a direct challenge to the police that violence was to be resorted to in case any one refused to obey the commands of the I. W. W. leaders." Captain McBride and other police officers, Mr. Thomas Morgan, leader of the Textile Union affiliated with the American Federation of Labor; merchants and manufacturers, public-spirited citizens and labor leaders in general all agreed that there were violence and intimidation on the part of the I. W. W. from the commencement of this great strike to its close. Said Mr. Morgan: "There wasn't a day when from ten to fifteen were not beaten up by this mob element." Hundreds of complaints were made to the police as a direct result of the assault. The police were able to protect the workers at the mills and generally upon the streets, but they could not protect them at their homes, nor could they prevent the thousands of threats made by the strikers who sent letters to the homes and often pasted on the doors a threatening notice of bodily harm if the workers dared to go into the mills. There were 1,473 arrests in the Paterson strike.

The public meeting called by the clergy of the city was broken up and free speech absolutely prevented by the howling mob. At the great meeting at the armory, attended by from twelve to fifteen thousand, there was a premeditated and successful attempt for an hour and thirty minutes to prevent free speech. Fifteen hundred I. W. W. men had marched into the armory, taking seats in the front, and the moment the meeting was opened by the American Federation of Labor leaders they set up a howl, a din of shouting, stamping of feet and calling of vile names, absolutely preventing anything resembling free speech until the police reserves were brought into the hall and with their nightsticks moved everybody out into the streets. After this a peaceful meeting was had at which President John Golden and others made speeches.

This strike was started by the I. W. W. leaders in the hope that they could build up a powerful union in all the silk mills throughout the country. The strike began in Henry Doherty's mill, where the employees were against the four-loom system, but only about twenty-five weavers came out of this mill. It was generally stated by the local labor leaders of Paterson that not over 5 per cent. of the silk workers of that city were dissatisfied when this strike began.

Just about a year before, the I. W. W. had attempted a strike in Paterson which resulted in a complete failure.

On March 8 "Big Bill" Hayward at a large meeting of the strikers called upon them to remain out until the eight-hour day was granted, and with wild enthusiasm they voted to follow his advice. The next day, at another large meeting, Hayward scored the Stars and Stripes in a violent speech, saying that the red flag would take its place. This caused the citizens to make a great display of the Stars and Stripes. Seeing the sentiment which Hayward's speech had aroused, the local leaders procured a flag which they raised with the huge inscription: "We live under this flag. We will fight under this flag, but we will not scab under this flag."

By the middle of March many of the strikers were in serious want, and it was their muttered threats of returning to work that caused the first relief store to be opened on the 27th, and this was shortly followed by others. Every one who asked for food was given staple groceries without regard to whether he was a striker or not.

It was in March that Mr. Doherty, in whose plant the strike had begun, offered to take back all of his old workers, giving them the same jobs that they had before the strike on a co-operative basis, practically giving to them everything. This offer seemed to increase the violent demands and to encourage a general strike for the city. Adolph Lessig, the local I. W. W. leader, advocated that they "get out" the workers in the electric plant, the gas plant, power houses, etc., and plunge the city into darkness and create a reign of terror.

Policeman Nathaniel Love just about this time was beaten up by the strikers. Bomb throwing was indulged in, some of these bombs being exploded so near to the police station that the intonations were plainly heard by the officers on duty at the station.

On June 13, at the Sixth Avenue bridge, a large body of the I. W. W. attempted to prevent a number of strikers from returning to work. They showered them with stones and sticks, clubs and everything they could lay their hands to, many of the police being hit by flying missiles. As the strike was prolonged and the strike funds were insufficient to satisfy hundreds of workers who were in want and privation, there was a growing, insistent demand on the part of many for an accounting of the strike funds, and more especially a detailed accounting of the Madison Square show. I. W. W. followers in Paterson who had attended the Madison Square show had reported that there was a packed house and that people were turned away from the doors unable to gain admission. From these reports the strikers were naturally led to believe that there ought to be at least a few thousand dollars profit from that great meeting. Reed, who managed the Madison Square show and its finances, suddenly departed for Europe before any financial report was rendered. When the report was forthcoming, however, it showed a profit of barely $300, and the last report of this big show attempts to prove that there was an actual loss of more than $600. There is still wide dissatisfaction over the outcome of this affair, and hundreds of silk workers who were formerly identified with the I. W. W. swear by all that is good and bad that they are through with this kind of an organization, and through forever.

During the strike Mr. Arthur Price, who employs some fifty hands turning out a special grade of product, offered to take back his former employees, giving them an eight-hour workday and the increase in wages demanded. He was able to do this, or at least thought he was, by reason of the special goods which he produced. His offer was bitterly assailed and opposed by the I. W. W. leaders, and hundreds of threats were made on all sides that violence would result from any attempt of his former workers to return to the mill.

In the early part of the strike the I. W. W. leaders got out a rubber stamp to be placed on a scab notice, which, when filled in, would read something like this: "This informs you that ——— is a scab," the intent of which was to frighten any "scabs" from going to work for fear of a coming vengeance at the hands of the I. W. W. mob.

I said to Tom Morgan, the able, earnest and sincere business agent for the Textile Workers of Paterson, who are affiliated with the American Federation of Labor "What has the I. W. W. accomplished in this six months' strike?" "Absolutely nothing," said Mr. Morgan. "The strikers have lost more than five million dollars in wages. They are back to work under practically the same conditions that prevailed when they came out on strike. Their organization, so far as we can learn, is absolutely destroyed, and, in my judgment, the working people from a legitimate trade union standpoint have received at the hands of the I. W. W. untold misery, and suspicion and distrust of one another and of the labor movement in general."

"What have you got to say, Mr. Morgan, to the charge made by the I. W. W. leaders, the Socialists, the near-Socialists and the uplifters in general, that the American Federation of Labor unions have not attempted to organize the unskilled and low-wage employees?" "That is an absolutely untruthful statement," said Mr. Morgan. "We have literally spent thousands of dollars in the city of Paterson in the effort to organize every branch of the silk industry, and, what is more, we have organized them on several occasions. That they were not organized when this I. W. W. strike broke out is due to the fact that they didn't stick to the unions, just as they have not stuck to the I. W. W."

I asked President John Golden, of the United Textile Workers of America, the same question. In reply Mr. Golden said: "During the past six or eight years we have spent more than ten thousand dollars in the city of Paterson. In 1905 we sent Organizer Mills into Paterson. He spent fourteen months there, and with the help of Business Agents Morgan and Strak and other local leaders we organized 1,100 weavers and several hundred other silk workers.

"I asked Business Agent Morgan about the charge that the American Federation of Labor had such high initiation fees that it discouraged the workers from joining that organization. "Why," said Mr. Morgan, "we have never charged an initiation fee over twenty-five cents, and many times we have offered to the silk workers of Paterson the opportunity to join our union absolutely free. On the other hand, the I. W. W. organization collected thirty-five cents from every member, twenty-five cents to join and ten cents to purchase an I. W. W. button."

The charge made by certain uplifters, Socialistic cranks and other faddists that the American Federation of Labor has not attempted to organize the silk workers is exactly the opposite of the plain truth. Not only have the United Textile Workers of America sent their general organizers into Paterson and other silk towns hundreds of times, but the A. F. of L. organizers have often been engaged in the same work of organizing this industry.

The dyers came out on strike for an eight-hour workday and 25 per cent increase in wages, and are now working ten hours per day for exactly the same wages that prevailed before the strike. In 1902 the dyers were voluntarily granted an increase in wages of $1 per week by the manufacturers. In 1907 the manufacturers gave them an increase of another dollar per week, and in 1912 still another increase of a dollar, making $3 per week increase in wages in this branch of the industry during the past ten years.

Mr. Morgan, the very intelligent labor leader, who keeps thoroughly in touch with wages and conditions throughout the country in the silk industry, informs me that during the past thirty years the wages of the silk workers of Paterson have been increased by something like $8 per week per worker, and he adds that to-day the silk workers of Paterson, taking everything into consideration, receive an average wage 30 per cent higher than any other silk workers in the world, and that it is 35 per cent higher than in many of the silk centres of Pennsylvania and other States.

I asked one of the largest of the local manufacturers what the I. W. W. had accomplished for the workers in Paterson. He made the same reply that Tom Morgan made, "Absolutely nothing." But he added: "They have accomplished something for us. It was the I. W. W. organization, their tactics and their demands, which have resulted in the formation of a solid organization, 'one big union,' if you please, of the silk manufacturers and their allied industry. Up to just recently we had six or eight different organizations in the city, not always in complete harmony and weakened by this division. To-day, however, we are solidly organized in a stronger position than ever to support and defend our interests, and that is the one thing the I. W. W. accomplished in the city of Paterson."

Manufacturers in general expressed themselves as in sympathy with what they called "reasonable demands" of the workers in their industry. They say that whenever business conditions warrant they will increase wages and shorten hours, but they add that they are under a fierce competition from the low-wage silk centres of Pennsylvania and other places.

At the beginning of the strike the Socialist party leaders rushed to the front in the effort to capitalize political prestige and voters on Election Day. They did, perhaps, more than any other organization to raise funds to carry on the struggle, furnishing bonds to many of those who were arrested and assuming an equal partnership with the Industrial Workers of the World in the domination of the strike contest, but to-day there are discord and bitterness on the part of the Socialist leaders. They

are denouncing the I. W. W. organization as an "ungrateful gang."

Dr. Maurice Korshet, of Passaic, and Mr. Jacob Panken, of New York, have roundly denounced the I. W. W. leaders in the columns of the Socialist party organ, the *New York Call*. Dr. Korshet, in a two-column article in the *New York Call*, ends his story this way: "If the Socialist party does not proffer enough help the I. W. W. sets up an awful howl. If the party does too much, then it is accused of seeking political notoriety. In either case the help of the Socialist party is never appreciated or acknowledged, and as soon as the I. W. W. wiggles out of trouble it turns upon its Socialist friends with the viciousness of a snake. The Socialists of Passaic have learned their lesson."

The demagogic tactics of the Socialist party leaders have won their just reward, and the I. W. W. leaders, from "Bill" Hayward down, are declaring that never again will they advise political action.

During the strike Assemblyman John L. Matthews, managing editor of the Paterson Daily Press, took a bold and uncompromising attitude, bitterly assailing the policy and principles of the I. W. W. Naturally, he incurred their enmity, and they boasted very loud and very long that this was the end of Mr. Matthews's political career; that they would defeat him at the primary election, or, failing to do that, they would defeat him at the November election. At the primaries, held on September 23, there were seventeen candidates for the Assembly, and Mr. Matthews received the largest vote among all of those candidates. The Socialists and the I. W. W. men charged that Matthews and the *Daily Press* had been subsidized by the manufacturers, and made all sorts of other indecent and violent remarks about that paper and its editor. As a matter of fact, there isn't any question of doubt that the manufacturers of Paterson owe a big debt to Editor Matthews and his paper, but it is a debt that nobody has any idea of paying, and during the six months of this great industrial struggle not a single penny nor any undue influence was offered on the part of the manufacturers or anybody else to Mr. Matthews or to the *Daily Press*. It was simply the fight of a big, patriotic, red-blooded American citizen against a revolutionary gang of pirates who were seeking to not only destroy the city of Paterson from an industrial and political standpoint, but the whole nation as well.

Mr. John Nolan, another Assemblyman, who likewise took a bold and uncompromising attitude, fighting side by side with Mr. Matthews, was also a candidate for renomination at the primaries. His vote was larger than he ever received and very near to the high mark obtained by Mr. Matthews. Mr. Nolan is the business agent of the Bartenders' Union, a staunch union man who had the confidence of the legitimate trade union movement and, knowing the right, dared to take the stand.

The big economic fact about this strike was that with the loss of $240,000 per week in wages the city seemed to keep on an even keel—only a few small business men went to the wall. The big reason for this was explained by an English weaver, who said: "We economized some, of course, and I had a savings bank account and so did most of my neighbors. We simply drew funds from the bank to live on." That tells the story. In the Paterson Institute of Savings on January 1, 1913, there was a total of $12,687,185.12 on deposit, and the total funds of the people held on deposit in Paterson aggregated $34,687,000. This is equal to $265.50 for every man, woman and child in the city. There are few cities in this country that can show a higher record for thrift than this great silk city of New Jersey.

To-day the mills are all running, though some machinery is idle, due to the fact that the trade changed its demand from skein dyeing to piece dyeing during the strike, and also to the fact that there is a shortage of help. There are whole columns of "Help Wanted" in the daily papers, and the manufacturers say that it is impossible to obtain sufficient skilled hands to operate all their machinery. The character of the working population of the city of Paterson has greatly changed in the past twenty years. Up to the early 90's the bulk of the silk workers were Americans, English and French. The French have almost entirely returned to France, and the Americans and English have been largely succeeded by Italians and Russian Jews, these latter constituting nearly 65 per cent of the Paterson workers at the present time.

I was unable to find any evidence from the manufacturers or labor people that sabotage is being practised in Paterson, although this was advocated openly by several of the I. W. W. leaders. Mr. Frederick Boyd advised the strikers, in case they were defeated, to return to the mills with a bottle of vinegar and sprinkle it on the warps. This would rot the silk threads and thus spoil the cloth or yarn. For saying this and other advice along this line Mr. Boyd has just been declared guilty by Judge Klenert and is being sentenced to a jail term, though it is claimed that the case will be carried to a higher court.

The beginning of the I. W. W. troubles took place eight years ago, when the Detroit faction attempted to organize one of the factories. They were defeated by the American Federation of Labor unions, and the organization went to pieces.

The net result of this six months' strike has been the destruction very largely of all organized labor in the city of Paterson, so far as the silk industry is concerned, and possibly has prevented any organization under any banner from being successful for some time. The bombastic I. W. W. leaders inaugurated this strike with a promise to the workers of Paterson of an eight-hour workday and an increase of 25 per cent in wages. They have been squarely defeated, their organization has been broken up, they have neither power nor influence in the city of Paterson, their poor, deluded followers have lost between five and six millions of dollars in wages. This is the organization that boasts of the "victory" in the city of Paterson.

During the past several years, however, the Socialists have been very active in the circulation of literature and general agitation by the party leaders. Thousands of dollars' worth of Socialist papers, books, pamphlets, leaflets, etc., have been placed in the homes of the working class, and almost nothing has been done to combat the misrepresentation so widely circulated. And so, it is not surprising that the Socialist party now boasts of nearly 5,000 votes cast in the recent election.

Coming now to the larger field of trades union effort, I have to cite the fact that during the past ten years the United Garment Workers' Union has expended more than $200,000, directly and indirectly, for organization purposes, and a detailed examination of the expenditures of this vast sum shows that 95 per cent of it has been expended for the purpose of organizing the unskilled low-wage employees of that industry.

Since the organization of the Boot and Shoe Workers' Union, in 1895, more than $600,000 has been expended for organization purposes, largely in the low-wage districts of that industry; 99 per cent of all the people employed in the boot and shoe industry are skilled or semi-skilled.

During the past twelve months, in Greater New York and vicinity, the American Federation of Labor has organized 65,000 people, most of whom are under the head of unskilled low-wage or semi-skilled workers. It is perhaps pertinent to say that during these twelve months twenty-eight strikes took place, of which twenty-five were successful, bringing a reduction of hours which averaged six per week and an increase in wages ranging from 5 to 35 per cent. The three strikes which were lost were due to the fact that the strikers were imbued with I. W. W. principles, and in the conduct of the strike refused to obey the rules of the American Federation of Labor and insisted upon more or less violent tactics.

It is well to cite the experience of the barbers and waiters of Greater New York, who engaged in a gigantic strike contest under the banner of the I. W. W. These two strikes resulted in a disastrous defeat, great loss of wages and loss of employment by more than 2,000 people.

An important item connected with the Paterson strike is the fact that almost 80 per cent of the money which was contributed to aid the strikers in their contest was given by unions affiliated with the American Federation of Labor. In all of the large strikes conducted by the Industrial Workers of the World no real accounting of funds is ever submitted either to the strikers themselves or to the public who contribute the money. Investigations of the many affiliated unions connected with the American Federation of Labor demonstrate the fact that during the past ten years literally millions of dollars have been expended for the purpose of organizing the unskilled and low-wage workers of this country, and during the past twelve months the garment workers alone have expended more money for this purpose than the I. W. W. has expended in all its history, from the foundation of the notorious organization down to the present time.

As in Paterson so in Lawrence, Hopedale, Ipswich, New York, McKees Rocks and wherever the I. W. W. have waged strike contests they have resorted to mob rule, riots, the destruction of property, brutal assaults upon defenceless men, women and children, and a general reign of terror.

No wonder decent people organize vigilance committees, for every thoughtful citizen must recognize that this I. W. W. is not only an organization of traitors to the laws and the Constitution and the flag of the nation, but that they are traitors to their own class—the workers.

As in Paterson so in all their strike contests we find little or no accounting of contributed funds. On the other hand, there almost invariably follow charges of graft and large sums paid to crooked leaders. In the famous Lawrence strike the facts cited by the Master for the Court who investigated the funds contributed show that the sum of $18,695.86 was never used for the purposes for which it was contributed.

In the I. W. W. barbers' strike it is known, and a sworn affidavit is at hand to prove, that one boss barber was given permission to conduct business on payment to a local I. W. W. leader of $5. Wherever the I. W. W. organize and conduct a strike you hear the same story—riot, destruction of property, assaults and grafting by the leaders.

Vital Problems of the Hour to be Discussed

(*Continued from page 1*)

will also be proposed by the Department on Industrial Mediation Laws, providing a method for dealing with strikes of employees of the Government—Federal, State or municipal.

The Department on Regulation of Municipal Utilities will report its proposed model bill for the regulation by the State of street railways, gas, electric light and other municipal utilities. The department has been at work on this question for eighteen months, and it is hoped that the result of its labors, as embodied in this bill, will go far towards answering the question: What is adequate regulation of public utilities? The work of this department is a logical sequel to the report of the commission of twenty-one of The National Civic Federation that studied in this country and Europe the comparative merits of private and public operation of municipal utilities. The committee that has had charge of this work represents all the interests involved and consists of Messrs. Emerson McMillin, Chairman; Franklin Q. Brown, John H. Gray, Franklin K. Lane, Blewett Lee, Milo R. Maltbie, Arthur Williams, Edward M. Bassett, Martin S. Decker, Halford Erickson, Bruce Wyman and F. C. Walcott.

The Department on Regulation of Industrial Corporations, of which President Low is chairman, will present a proposed bill supplementing what is popularly known as "the Sherman Anti-Trust Act." The presentation of this bill will be preceded by a discussion of many of the questions in respect to this subject that are foremost in the public mind to-day.

Some of these questions are: Shall the size of industrial corporations be limited? If so, what shall be the limit? Is there a point at which corporations become so large that they are unwieldly and therefore inefficient? What answer is there to the showing of the Census of 1910 that the output of individually owned concerns and small corporations has been produced at a less cost than that of their competitors, the large corporations? What is the difference between restraint of competition and restraint of trade? Granted that destructive competition is undesirable and uneconomic from the standpoint of the public, how can competition be so regulated as to prevent its reaching that point? Can a regulatory system be devised that will be effective in protecting the public from the evils that flow from a monopoly or a near-monopoly? Should a manufacturer be permitted to fix the price at which a retailer may sell to the consumer? Is the price-cutting of department stores and other mercantile establishments a benefit or an injury to the public? Is the fixing of prices or the limiting of output by farmers, through co-operation or other form of organization, permissible under the Sherman Act? Are agreements between organizations of working men and organizations of employers, fixing rates of wages, hours of labor and conditions of work, in violation of the Sherman Act? If they are illegal to-day, should they be made legal to-morrow? Should there be an Interstate Trade Commission, fashioned somewhat after the Interstate Commerce Commission, which would have power to pass upon trade agreements, whether of labor, agriculture or commerce? Should large corporations be compelled to take out a Federal license, their acts to be supervised by an Interstate Trade Commission?

The Department of Industrial Economics will report upon its plan for making an investigation of the industrial and social progress in this country during the last three decades and an inquiry into the theories and proposals of the different kinds of socialism. This work, which will be one of the largest that The National Civic Federation has ever undertaken, was authorized by the Executive Committee of the Federation last summer.

The Woman's Department, which is a rapidly growing part of the Federation's organization, will report on its various activities in its different branches. A presentation of the work of the New York and New Jersey, the Washington, and the Massachusetts and Rhode Island Sections alone would make an inspiring showing. The department, however, has eight sections and they cover a very large range of country and all are doing useful service.

The developments of the year in Welfare Work, which have been enormous, especially among large corporations, will be a part of the report of the Welfare Department. It will also propose a permanent exhibit to give to employers standards that may be followed, as it has been found that many who are desirous of establishing proper working conditions have small knowledge of successful features now existing in various enterprises.

The Annual Dinner will take place on the evening of Friday, December 12, at the Hotel Astor.

BETTER CONDITIONS FOR WOMEN WORKERS

PROVISIONS FOR HEALTH, COMFORT AND PROTECTION OF WOMEN IN INDUSTRY DISCUSSED AT FIFTH CONFERENCE OF WELFARE WORKERS

THE conferences of workers actually engaged in the management of welfare features in large industrial and mercantile establishments have proved of increasing value, both to those taking part in the discussions and to beginners and special students of the subject. The fifth of these conferences, held in the Assembly Hall of the Metropolitan Building, New York City, was devoted to the topic "The Welfare of the Woman Worker." Those who participated in the morning session were:

Mrs. L. H. Brittin, of The Joseph & Feiss Co., Cleveland, Ohio.

Miss Antoinette Greely, of the Bush Terminal Co., Brooklyn, N. Y.

Miss Mabel Easton, of the General Electric Co., Harrison, N. J.

Miss Frances Ford, of Dunn & McCarthy, Binghamton, N. Y.

Mrs. Laura L. Ray, of the Greenhut-Siegel Cooper Co., New York.

Dr. Lucy A. Bannister, of the Westinghouse Lamp Co., Bloomfield, N. J.

Miss Helen H. Snow, Curtis Publishing Co., Philadelphia, Pa.

Mrs. G. H. Furman, of Gimbel Bros., New York.

Miss Gertrude S. Waters, of the New York Edison Company, New York.

MRS. T. C. CRAVEN.

Miss Ella Phillips Crandall, of the Department of Nursing and Health, Teachers' College, New York.

Miss Florence E. Trigge, of the Western Electric Company, New York.

Miss Diana Hirschler, of R. H. Macy & Co., New York.

Mrs. T. C. Craven, of Gimbel Bros., Philadelphia.

At the afternoon session an interesting lecture was given by Rev. Frank J. Milman, of Newark, N. J., on the "Mining of Anthracite Coal." Mr. Milman was himself once a breaker boy and is, therefore, able to describe conditions from personal knowledge. His remarks were illustrated by 130 colored stereopticon slides, showing mining methods, the problems of light, water and gas, scenes of the miner at work a thousand feet or more under the earth, and incidents connected with his daily toil; the life of the mule and how he lives under the earth, scenes of first aid work and rescue of injured men, and illustrations of the living conditions of the mining population.

The chairman at the afternoon session was Mr. Emerson McMillin, vice-chairman of the Welfare Department, who pointed out the value of conferences of practical workers in that they are able in this way to learn of the successes and failures of others, instead of being obliged to rely entirely upon their own isolated experiences. Mr. McMillin brought out the interesting point that some of the men and women who supervise welfare work began by taking charge of that phase for which their professional training equipped them.

The topic for the morning session was selected at the urgent request of one of the leading men superintendents of welfare work, who believed from his own perplexity in the matter that great good would come of a discussion closing with definite, practical recommendations of steps which might be taken in industrial plants for the comfort of women workers. The suggestion was carried out and more than justified by the interest and profit of the conference, in spite of the fact that only women welfare directors evidenced by their presence interest in the physical environment of working women. Even the welfare superintendent who suggested the topic failed to present himself. Therefore, the scope of the discussions was broadened.

Mrs. L. H. BRITTIN gave her experiences during three years of welfare work in the large garment factory of The Joseph & Feiss Company, Cleveland, explaining that at first she spent her time simply in getting the confidence of the girls. "I discovered troubles which the managers and foremen did not know existed, and that helped secure the friendship of the employees. We established first our rest and sick room. We have a payroll of approximately eight hundred women and two or three hundred men. We find the sick room brings us our greatest personal contact. Men and girls come there for all sorts of ailments, and ask all sorts of questions pertaining to illness at home. Much working time is saved, both for the company and the employees, through the advice and treatment supplied."

A branch of the public library was put in at no expense to the firm except for the services of Mrs. Brittin's secretary, who takes charge of the books. "The only thing we do is to try to supervise the selection of the books, but we very often find that we judge poorly, and that they enjoy books we would not have thought of suggesting to them." A penny bank, established not quite two years, began with the posting of a notice that deposits would be taken from a penny up. In a very short time it was found that besides pennies they brought in nickels and dimes. The depositors get six per cent interest a year on any sum of one dollar or more that has been on deposit three months or more. The interest actually paid has been small, for the reason that the employees save for specific expenditures, so that the money is seldom there long enough to draw interest. Deposits of over one hundred dollars are not accepted. The money is loaned out to employees, "which gives us a great point of personal contact and confidence. A man comes to borrow ten or fifteen dollars before pay-day, and in as tactful a way as possible I inquire into this, and very often find conditions that we are usually able to help—cases of sickness, and troubles of all sorts that we usually investigate. I find they are almost always willing to tell why they want this money. They understand that we want to know simply for the purpose of helping them out. We have loaned from that bank on an average of three hundred dollars a month to our employees, in sums anywhere from fifty cents to fifty dollars, and the only security we have is our personal knowledge of the employee's character. In the two years of the bank's existence we have lost only seven dollars. I have only denied loans in the case of a couple of young men without families, whose salaries were sufficient and who had abused the privilege, coming every week for from five to ten dollars."

The interest charged is a cent on the dollar, all of which goes to the account of the six per cent paid on deposits. It does not go to the firm. In regard to repayment of loans, the employees usually ask the firm to deduct a certain amount from each week's pay. Nearly all the loans, it was found, were asked for legitimate reasons such as doctors' bills or expenses of moving, when salaries were not due on the day needed. When an employee leaves, his pay envelope is made out and, if possible, the sum that has been loaned is deducted.

"In the gymnasium a box of one hundred cigars—'stogies'—was put on the table, and the men were told as they took a cigar to drop a penny in the box. They have used something like 100 boxes, and not a penny has been lost, with absolutely no one in charge of it." A large lunch room accommodates the entire working force at one time, and in the back of the room are tables covered with magazines and newspapers, foreign and English, also dancing space and a piano. Besides the noon dancing and on Friday afternoons at 5, the employees in different departments arrange one or two evening parties each week during the Winter, with suppers provided by themselves.

The first year the penny bank was in existence it reduced the loan sharks' garnishees on the people's wages 58 per cent. It was found also that the noon and Friday afternoon dancing materially reduced the attendance at dance halls in the evening.

There is in summer a very popular baseball league for the men and one for the girls. Once a year a large shop picnic is held. Every one can attend and bring relatives and friends. The only club in existence at the plant is a sewing club of about twenty-five members. "The girls embroider underwear, collars, belts, and clothes for their personal use, and many of them do exquisite drawn work and embroidery. People become interested in the work and give orders for drawn work, tablecloths, sheets and pillowcases, and some of the girls, who spend their evenings in that manner anyway, are glad to get the extra money."

Mrs. Brittin has charge of all the sanitation in the factory, which is scrubbed and cleaned by women during the day and by porters at night. In the dining room, coffee or tea is served with milk and sugar for a cent, which pays the cost of the material; milk, a half-pint for two cents; a large bowl of good soup for two cents. The wholesale selling end of the business has also decided to put in lunch equipment, and a large company manufacturing women's clothing in Cleveland has been looking into the welfare question thoroughly and decided to go into it to the very fullest extent, with Mrs. Brittin's co-operation and supervision.

MISS FRANCES C. FORD.

Miss DIANA HIRSCHLER, then in charge of the educational work at R. H. Macy & Company's, said, in part:

"We are co-operating with the Vacation Savings Fund in providing the best sort of vacation places at low rates. The Woman's Department of the Metropolitan section of The National Civic Federation originated this excellent idea. Their Vacation Savings Fund issues stamps and the girls save money in small sums for the summer outing. It is a fine idea to help a girl to a good place for the summer; to see that she has a real good, free and jolly time. This means better work for the rest of the year and better health in which to enjoy it.

"We hold that to make the employee more efficient puts him in a position for advancement and promotion. We hold classes during business hours for the sales force and have regular systematic courses of training for better service. You know to give good service in selling means developing the

finer woman or the finer man. Every facility that educates and develops a woman, every grace or charm of person makes her a better saleswoman. We have both the men and women in this kind of work.

"Our house protects the morals of our girls. There has been a good deal written by splendid social workers about store life being a source of temptation, about strange men coming in and inviting sales people out. It is utterly and completely false. But the only thing that is never pointed out is the danger that arises among fellow employees. I wish to say that our house dismisses a man if he does not treat the girls properly, no matter what position he occupies; valuable or not valuable, he is literally put out of the house.

"I have been in many stores, I conduct work in other stores throughout the country, by mail, and I know there is a wonderful inside movement among the retail stores to protect their workers from anything that would be insulting or debasing. Good business is back of it, also. A man who will insult a girl will tend to commit other improprieties. We even go out of our way to look after this. Do not believe that the salesgirl has continuously to combat temptations by outsiders and that she is falling often by the way. If you ladies go shopping in those stores and think: 'This is an immoral lot,' does your intuition back you up? Of course, not! You know you are dealing with girls who are just as clean as you or I. There is no more temptation in the retail stores than in other lines of work where the sexes are thrown together, not so much as in a private office or factory or mill.

"In the retail store, the fact that all conduct is open to the public gives small opportunity for a man to introduce himself. To-day, when a man comes in and loiters around a counter, the floorman just comes up and looks at him and he vanishes. I know a store, for instance, that will not permit a fellow workman to put his hand on the shoulder or the arm of a girl worker, even in the elevator. That man is instantly taken care of by a committee for that purpose; and also I know of a store where the girl is protected from the customers, where a girl may go and touch a button, and when the bell rings a member of the committee steps forward and takes charge of the customer."

Miss FRANCES C. FORD told of the very recent beginnings of welfare work in the shoe manufacturing plant of Dunn & McCarthy, Binghamton, N. Y., employing 600 to 700 girls and 800 to 900 men. Of the girls probably not more than one hundred are foreigners. "The firm suddenly awoke to the realizing sense that to keep a steady working organization something must be done besides furnishing the work and the machine." Thus far only a cloak room has been provided, in the way of accommodations, but this is to be followed by a recreation, emergency and lunch room.

"I advise the girls on various things. They come to me with their little troubles, and I try to straighten them out. I have done a good deal of home visiting to get the confidence of the girls. The American factory girl is very suspicious of patronage. They told me afterward that they thought I was going to be the kind who would say, 'Where were you last night, and what were you doing?' And I said: 'It is not any of my business where you are at night, so long as you are decent and respectable; otherwise you can't work here.'

"The first thing I did was to go out and see the people who were staying out half a day or a day at a time. I said, 'We need your work and you need our money, and the two things can only be brought about by your being there.' They stayed away just because they did not feel like coming to work, or did not feel like getting up in time to get there, or because they had to go and buy something. We work nine hours, from seven to five o'clock, and there was no reason why they could not go and buy after five o'clock. If they were really ill, I could excuse them but when the reasons were purely foolish I would say: 'Why, we all have to be there. Each one of you is an important part of that factory. You have a machine to run and if you are not there the girl next to you who takes your work is delayed and then her work is held up, and so on, and before we get through the whole factory is out of gear.' They could see that. Now they try to come and when they cannot they telephone to us. I think it is just because they feel there is something being done for them besides urging them to make shoes."

Miss Ford reported that during the forenoon all operators stop work for a short rest period, while windows are opened, a custom which ought to be far more general than it is in manufacturing plants.

Welfare work for some 5,000 of the employees of the Bush Terminal, in Brooklyn, according to Miss ANTOINETTE GREELY, began with the supplying of drinking water on the beaches. The men had to go half a mile, sometimes, to get a drink of water, and the saloons were nearer. Later a lunch room was provided, serving good food, although the speaker believed there should be a more reasonable scale of prices. The company has two sets of tenements, the model and those that are far from model. The model tenements are not so well occupied as they should be; the construction and arrangement of rooms are not good, and the prices are too high. Rents are being reduced, and the old tenements are to be made a little more livable, but much cannot be done because at any time they may be torn down to make room for factories.

Loaning money to employees, Miss Greely stated, was very much opposed at first, the fact not being appreciated that the only other resort in case of emergency needs was the loan shark. About six hundred dollars have been loaned, and only six dollars lost, this in the case of a man suddenly discharged. Through the Penny Provident Savings Fund the children have saved about $244 in six months, in pennies, practically money which would have gone for candy or moving pictures. "We have a benefit society which the railroad men have run most successfully. About a year ago the firm offered them financial help and it was declined. Since I have been in charge they have come to me and asked if I would see if the firm cared to help them financially. This means we are getting the confidence of the people, without which we can do nothing.

Mrs. T. C. CRAVEN stated that at the time Gimbel Brothers decided to put in welfare work, in the Philadelphia store, she had been five years doing clerical work in the office. Mrs. Craven was in the employment office for a number of years, interviewing applicants for positions, and also for a short time sold goods. It was her belief that any woman taking up welfare work in a department store should know it from the beginning. "Oftentimes, when the salespeople come and say: 'You don't know, you never did it,' I am able to say: 'Ah, but I do know, I have done it.' That, I think, is a very great help to them." As one part of her work at present she gives short lectures each morning on scientific salesmanship, teaching the employees to help themselves as well as the company through more efficient and pleasing methods of dealing with customers.

Two lunch rooms are provided in the Gimbel store, the larger being on the cafeteria plan, which has proved very successful. The employees are quickly served and the menu is quite extensive: "They have shad roe sometimes, creamed chicken, all sorts of delicacies if they wish, vegetables, all kinds of light cakes and drinks, a choice of two ice creams, and tea, coffee and milk—every day a specialty of some kind." In warm weather employees have access to a roof garden equipped with awnings, rocking chairs, swings and hammocks. Luncheon is served there from 11 till 3.

"The employees come to me with their difficulties and trials when they want a little matter straightened out between them and the buyer or the head of the department. Many times the firm will be criticised for things they know nothing about, and I am very glad to say in our store all are made to understand that, if Mrs. Craven says a thing is right, they are to respect that opinion. I have the backing of every member of the firm.

"A girl can lie down and rest if she is sick; in case she is unable to resume her duties I only notify the head of the department that I have sent such and such a person home. We have a visiting nurse and our own physician who prescribes for and treats our people free. Through the work of the visiting nurse untold good has been done.

"We have a wonderful insurance beneficiary association; it is compulsory, which, in my opinion, is the only kind to have. They get each year fourteen weeks of benefits, costing ten cents a week for those getting five dollars or over; under that, five cents a week. There is also a death benefit of $100. We have two beds in the Chestnut Hill Hospital for tuberculosis.

"In connection with the beneficiary association we have a special relief committee. Sometimes we see some one come in in the morning who looks tired; we talk to her and find there is trouble at home—father out of work, several children in the family and she the only one working. We look into the case, and if we find the rent is due, scarcely any coal in the house, and only the salary of the girl or boy for the family support, we pay the rent, put coal in the cellar, put food in the house, and help the man to get a position or employ him, if we can. Last year we helped about seventy people in that way; I myself sent out, through a fund I have charge of, 125 Christmas baskets. Some of the money comes from the beneficiary association, and the firm donates for this purpose."

A "home talent" entertainment is provided every Friday morning, and there is an orchestra, made up of men and boys employed in the store. The salesgirls and other employees all have a chance to attend, although not all on the same Friday. Opportunities for playing baseball are provided in summer and for basketball in winter.

This firm was one of the first to take up the question of getting its employees out of the hands of the loan sharks. Money is now loaned by the firm, but no interest is charged. "We have notices posted saying, 'If you need money, please avoid loan sharks —see Mrs. Craven,' and I take it up for them. I know the people generally; I know about what salaries they are getting, and we always want to know why they want the money. I do not think we have lost a dollar, and I do not think the money has ever been borrowed for a foolish purpose; the people have paid it back in their own way—so much a week, or so much in two weeks. It is taken out of their salary. They say, 'I want to pay so much each week; deduct that.' Then they do not have to bother any more about it."

In respect to moral conditions in the stores, Mrs. Craven wished to emphasize Miss Hirschler's testimony "that the standard of morality in the department stores is far higher than it is generally believed to be. Many people say to me: 'I am so sorry for the poor girls—what temptations they have.' We want to emphasize the fact that the temptations there are not any greater than in social life, nor do I think they are as great. I know whereof I speak, as we have five thousand people, and I have been their welfare manager for a number of years."

"Help the employee to help himself," has always been the motto of the welfare work at the Greenhut-Siegel Cooper store, said Mrs. LAURA L. RAY, the welfare secretary. Mrs. Ray described first the new hospital, perfectly lighted and ventilated, equipped with the most sanitary hospital furniture and every appliance needed for the physician's work. The hospital contains a separate sick room for the men and women, a large bathroom and an X-Ray room.

"We also have a professional nurse. She is most capable and sympathetic and is doing splendid work. It is my duty to visit the sick in their homes; and in hospitals when it is necessary to send them there; to keep in close touch with all sick cases, supplying their immediate need. This gives me an insight into their home conditions; and a wonderful opportunity to do a great deal of good for my firm. I am provided each month with a fund for these very needs." In the well ventilated and cheerful rest room there is a branch of the New York Circulating Library, and a woman is in charge of this room. It is reached by going through the conservatory, giving the girls an opportunity to enjoy the ferns and flowers each day.

Speaking of the moral conditions, Mrs. Ray also corroborated other speakers in respect to the standards maintained in the department store. "I have been doing welfare work in the Greenhut-Siegel Cooper Company's store for seven years, and do not know of a safer place for a young girl or woman to earn her living. Our men respect a good girl, and the management protects them in every way possible. The welfare office is the strongest evidence."

Mrs. Ray has found it absolutely essential to have a list of good boarding places for the girls, especially for those who come to New York from country places. A list of good boarding places at the seashore, mountains and farms for summer vacations is almost equally important, and Mrs. Ray mentioned that she had been wonderfully helped in this matter by the Vacation Savings Fund Committee of the Federation's Woman's Department.

"About 3,600 people, over 2,000 of whom are girls, are employed on the grounds of the General Electric Lamp Works at Harrison, N. J.," said Miss MABEL EASTON. Miss Easton has been managing a little club among the General Electric girls, which met one evening each week in the company's lunch room and the men's clubhouse, and upon taking up the company's welfare work, as secretary of the Y. W. C. A., paid by the company, she at first simply continued and enlarged this work, which for a time many thought was established merely to amuse the girls during off hours. "Little by little, however, the new department is being recognized as something far more vital and has made some advance toward the betterment of working conditions."

A dispensary, with an attendant and a visiting nurse, is provided; also a factory lunch, with a large space in the midst of the plant given over to the girls' club, partitioned off into a reading room, class room, kitchen and big gymnasium. These rooms are open every noon to club members and twice a week to every girl. The two rooms, open to all, are devoted to special programs. These entertainments are most popular and offer almost limitless opportunities for educational purposes.

A factory paper is published, appearing each month, and is distributed free of charge to every employee. It represents all the varied interests of the factory, including the Fire Department, the Salvage Corps, the Men's Club, and the Girls' Club, and aims to be a unifying factor. Social items and health articles are incorporated. It is popular. If a day late in being issued, the employees ask for it.

"One of the ideals of our club organization," said Miss Easton, "is to make the girls work for each other—in other words, to do welfare work themselves," regarding it as not merely an exclusive affair for a few, but as having a broader outlook and connection with all the welfare work of the plant. "This is an ideal, of course, and I suppose a good many of the girls are not ready for it as yet, but some have glimpsed it and are working along splendid, unselfish lines."

WHAT CAUSES FATIGUE?

By THOMAS DARLINGTON, M.D.

The following interesting and instructive discussion of the causes of bodily fatigue among industrial workers, by Thomas Darlington, M.D., formerly Commissioner of Health of New York City, appeared in the November number of the Medical Times. Dr. Darlington is the secretary of the Welfare Committee of the American Steel and Iron Institute, and a member of the Welfare Department of the National Civic Federation. The article in part is as follows:

In modern industry there is no question of more importance, so far as human activity is concerned, than that of bodily fatigue. To understand fatigue, and the various factors of its causation, we must understand those physiological facts known as metabolism, the building up process being called anabolism, and the breaking down process catabolism.

In some respects the development of energy in the body is analogous to the development of steam in a boiler or the operation of a gas engine. There must be fuel, such as coal, oil or gas; there must be a supply of air containing oxygen, and there are the ashes as waste.

Muscular energy depends largely upon three things:

1. The amount of fuel stored and the ability of the system to bring it into use.
2. The ability of the system to furnish oxygen to burn the fuel.
3. The ability of the system to carry off waste or other toxic substances.

Conversely, fatigue is due primarily to the failure of the system to perform properly one or more of these functions.

Storage of Fuel.

First, fatigue may be caused by anything that interferes with the storage of fuel. This may arise from a lack of fuel. Under this head would come underfeeding, improper feeding, indigestion of food, lack of assimilation of food, and incapacity of the liver and muscles to store sufficient glycogen.

It requires no argument to prove that if fuel is lacking energy must also be lacking. So if one does not have sufficient food he cannot store enough energy. This may also be the case when a large enough quantity is eaten, but not of the proper kind or quality. One has learned much who has learned what food to purchase. For example, cabbage is a very common article of diet, but there is little energy to be derived from it.

To regulate the food according to the demands of the body, to have a properly balanced dietary, comes only as the result of study. Education along these lines in connection with industrial plants is best given in the form of household instruction by trained nurses or domestic educators.

True, since Knoop has shown that the system can change one food into another, an excess of one kind of food is probably converted in the system into others. But physiological tests have shown that a mixed diet is best for the needs of the system. The body is very adaptable, but we should not put upon it unnecessary alimentary burdens.

All of these things relate to the question of the wise selection of food for energy and the needs of the system. An examination of many lunch buckets has indicated to me that sometimes but little thought is given as to the kind of food that goes into them, provided there is quantity. Many times the food in lunch buckets, such as yeast bread, becomes sweated, and milk in the coffee undergoes more or less fermentation. This bears directly upon energy.

After food reaches the stomach there is often much needless waste, particularly of the sugars, due to fermentation in the stomach. The sugars are split into acids before reaching the tissues, and so are partly lost for energy. The fermentation is due to two causes: First, to a lack of gastric juice; and, second, to an excess of bacteria. A lack of gastric juice, and therefore indigestion, is due to an improper selection of food, to a disturbed mental condition (anger, grief, worry) or to reflex disturbances of the gastric nerves from chronic appendicitis, etc. Or there may be an excess of bacteria. This is due either to fermented or putrid foods, or to the addition of bacteria to the food from unclean mouths and bad teeth or dirty hands. Over-eating and rapidity of eating also affect digestion, and therefore promote fatigue.

Lack of Oxygen Causes Fatigue.

Secondly, fatigue is caused by anything that interferes with the carrying of oxygen to the tissues. This may be a diminished amount of oxygen in the atmosphere, diminished carrying power of the blood, diminished lung capacity, or interference with the circulation of the blood.

The two factors which relate especially to diminished amount of oxygen in the atmosphere are bad ventilation and altitude. The main effect of bad ventilation, especially where there are a number of people in a room, is to increase the humidity. The detrimental effect of this humidity, which will be considered at greater length later in this paper, is of more importance than any diminishing of oxygen or increase in carbon dioxide.

From diminished oxygen, altitude produces fatigue. In industry we are more concerned, however, with the diminished oxygen-carrying power of the blood. Anemia is produced by a variety of causes, among which are deficient light, insufficient iron in the blood, insufficient variety of food, irregularity of the bowels, as the sequel of disease (particularly infectious diseases) and of metal poison, such as lead. So, working at night, or in dark buildings or dark rooms, is injurious to the blood.

Carbon Monoxide.

A matter of particular importance to those in the iron and steel industry is the fact that the oxygen-carrying power of the blood is very much diminished if there is any carbon monoxide in the air breathed by the men. The deleterious effect of this gas is due to its combination with the hemoglobin in the blood, thus injuring the oxygen-carrying function. The affinity of the hemoglobin for carbon monoxide is much greater than its affinity for oxygen, forming a compound with carbon which is a much more stable compound than that formed with oxygen.

Carbon monoxide often produces a fatal effect. So we must guard against poisoning by this gas. This is a product of the furnaces, and is especially dangerous in bad weather, coming down the side of the furnaces. It also occurs in engine rooms from leaky gas engines; and we find it in plants where open fires, such as salamanders, are used for heating purposes in winter, or from blacksmiths' fires. Even though the quantities breathed are small, this gas, breathed constantly, will, in time, produce anemia. So gas engines should be watched. For heating purposes other methods than open fires should be adopted. And blacksmiths' fires should be hooded to carry away gases.

Accumulation of Waste Causes Fatigue.

The third great cause of fatigue is poisoning by accumulated waste in the muscles or poisoning by toxic substances. This accumulation may be due to too rapid formation of the products of waste, or it may be due to the inability of the blood or system to carry away the waste products. If the nerve of a muscle is constantly stimulated, the muscular contractions become smaller in extent and finally cease. The muscle is then said to be fatigued. The sugars and glycogen have been burned, producing energy and leaving as wastes carbon dioxide and lactic acid. Unless eliminated these materials act as poisons.

When a muscle is fatigued there is more, however, to be considered than the local poison. The products of fatigue pass into the blood and poison all parts of the body, including the nervous system.

Drinking of Water Lessens Fatigue.

Perhaps no means of lessening fatigue is of more importance than a proper supply of drinking water. The products of waste, carbon dioxide and lactic acid are taken up by the fluids of the body and carried to the lungs and kidneys for elimination. The accumulation of waste products is often due to insufficient use of drinking water. It has been noticed in the army that the man who falls from heat stroke is the one whose canteen is empty.

Poisons that are very dilute have, as a rule, but little detrimental effect upon the system. The most powerful acids, if sufficiently diluted with water, are no longer caustic. And self-generated poison in the body will, if sufficiently diluted, probably have less effect.

If water is too cold, it is retained for a longer time in the stomach, and its benefits are not so quickly felt. Sometimes if water is too cold it brings on cramps, and sometimes if too large a quantity is taken it is rejected. So the water supply for drinking purposes must not only be pure in quality and ample in quantity, but it must be kept at the proper temperature.

Cold Showers Lessen Fatigue.

Not only internally, but also externally water plays a part in lessening fatigue. So the benefits derived from general bathing should be mentioned. These have been recognized for many centuries, and the therapeutic use of the bath is as old as the art of medicine itself. The public baths of the Greeks and Romans were a prominent feature of their civilization. Recently hydrotherapy has received much study and has become more of a science. The capacity of water for heat makes it valuable for use in extracting heat or in applying heat.

As the skin covers a network of blood vessels and nerves, water can be used to effect a physical reaction.

By means of shower bath the skin is mechanically stimulated by the striking drops. This combined with thermic influence increases the effect of the bath upon the heart and respiration. It also affects metabolism. It increases the production of animal heat. The heart action is increased in force. The secretion of the skin is diminished. It increases the urine and other internal secretions. Examination of the blood shows certain changes in the elements of the blood itself. Thus water, through the skin, affects secretion, excretion and the heat regulating function.

Shower baths may, therefore, be used to eliminate more rapidly the products of waste, to promote secretion, to relieve fatigue, to restore the normal functions to various organs of the body, to restore the body temperature to the normal, and produce a redistribution of the blood when there is congestion in any one part of the body.

Heat and Humidity Affect Body Temperature.

Every one knows that on a hot, humid day a man is much less efficient than on a cool, dry day. The reason for this, however, has only recently been shown by scientific investigation. Ordinarily body temperature is maintained at a fixed level with but little deviation. The control of the production of heat and the regulation of its dissipation rest primarily in the brain and nervous system. On hot days when there is excessive humidity, the body temperature rises. Rise of temperature may occur in three ways: Heat production may increase while heat loss remains constant, or heat production may remain constant, while heat loss may be diminished, or heat production may increase while heat loss diminishes. There is increase of heat production after the absorption of a full meal. Muscular work also increases heat production enormously.

By radiation, by conduction, and by the evaporation of water, there is loss of body heat from the skin. Heat is also lost by the moisture of the breath. When there is much humidity, sufficient to prevent evaporation of sweat and the elimination of the heat which is constantly being produced within the body, the internal temperature rises and fever results. The elimination of heat by the breath also depends somewhat on humidity. Dr. Denison, of Denver, has shown that fully eight ounces more water is lost by the breath during twenty-four hours in Denver than in New York. And, according to my own experience and observation in Arizona, this amount is increased in that drier climate. Conversely, on a humid day we do not eliminate as much moisture by the lungs. Heavy clothes preventing evaporation from the skin increase this rise of temperature.

Observation of those who work in heat and excessive humidity shows that they soon pass into a condition of fatigue. That is, fever produces a condition of fatigue. This fatigue which comes from fever is brought about by the energy-forming materials in the muscles being burned up rapidly and the poisonous products of such combustion accumulating within the body. And, what is of great importance, if there is not a sufficient amount of carbohydrates for use there is destruction of protein material similar to that found in excessive work, due to the direct action of high temperature. In addition, the blood is drawn to the surface of the body, leaving the brain, the spinal cord, and the internal organs correspondingly anemic. This lessens the normal impulses to the muscles, and in itself will give a tired feeling.

Other poisons besides those generated in the muscles produce fatigue. Fermentations in the intestinal canal produce poisons which have a fatiguing effect. Thus indol, and possibly other substances, have been proven to induce fatigue. Indol is found in the large intestine as the result of bacterial putrefaction. It is eliminated in part from the bowels; but is in part absorbed in the blood and subsequently eliminated in the urine, in the form of indican. As indol is produced by the fermentation of certain kinds of albuminous foods, diet is again an important factor. That the products of waste in the intestinal canal should be rapidly excreted is self-evident.

Effect of Lack of Sleep.

Sleep is the period of repair and growth, the time when the building up process exceeds the breaking down process. During sleep less carbon dioxide is eliminated and less oxygen is absorbed. Experiments upon dogs show that if starved even for several weeks, they will recover, but that they die from loss of sleep in five days. Loss of sleep is much more damaging than starvation. Loss of sleep is a common cause of fatigue.

Thus badly ventilated rooms, and over-heated rooms in summer, crowding of rooms, with noise and other discomforts, and the hours of sleep are matters requiring careful consideration by those who employ labor.

Fatigue Lessens Resistance to Disease.

One of the most important results of fatigue is that it lessens resistance to disease. It has been shown that after the death of an animal from fatigue the body undergoes rapid putrefaction. Clinical experience and experiments on animals have shown that people who are fatigued are much more subject to contagious and infectious diseases. There is, therefore, a physiological, a chemical and a psychological basis of fatigue.

THE NATIONAL CIVIC FEDERATION REVIEW

Vol. IV. NEW YORK, MARCH, 1914 No. 3

SOCIAL SURVEY ENLISTS NATION-WIDE SUPPORT

TWENTY-FIVE COMMITTEES OF EXPERTS AND REPRESENTATIVE CITIZENS TAKE UP MAIN DIVISIONS OF INQUIRY, AND THE WORK COMMANDS ENDORSEMENT AND CO-OPERATION THROUGHOUT THE COUNTRY

THE Executive Committee in charge of the national survey of industrial and social progress during the last generation has completed the permanent organization of this great undertaking, and the work is now in active progress.

At a meeting of the committee held at the headquarters of The National Civic Federation last week, the main divisions of the inquiry were determined and the range of subjects to be studied under each classification was gone over in detail. Announcement was made at the same time that Dr. Roland P. Falkner, the committee's choice for director of the survey, has consented to accept the post and will enter upon its responsible duties immediately. There was also announced the membership of the committees which will have charge of the leading divisions of the investigation. The list of these committees published below demonstrates that the inquiry will have the supervision of the strongest volunteer group of representative authorities and trained experts in every sphere of our national life that has ever been gathered together for a great civic achievement.

In public announcements of this survey, and in the last number of the REVIEW, the reasons were pointed out why it is believed of supreme importance at just this point in our national development that the American people should seriously take "account of stock." Has the social movement of recent years been in the direction of economic justice and a larger human welfare, or the reverse? Upon the answer to this vital question must depend the trend and form of our future public policies, alike with reference to the encouragement of wholesome tendencies, the rooting out of survivals of unfit conditions and the correction of incidental abuses which have grown up amid our new and rapidly changing conditions. As expressed by President Seth Low in a public statement relative to the survey: "Much will be found on both sides of the ledger, and of a certainty, with a satisfactory knowledge of the assets, Americans will be encouraged to meet their remaining liabilities to the cause of human advancement."

Included in the scope of the inquiry, as its natural outgrowth, will be a study of the various economic interpretations and social programs which have grown up alongside the industrial and social changes of the period and require the same test which the survey will apply to the workings of all of our existing institutions—that of verified facts.

In securing the services of Dr. Falkner the committee feels that it has been singularly fortunate in meeting one of the chief conditions of success. Dr. Falkner comes to the task with an exceptional equipment. Trained for statistical work in three German universities, he came into thorough command of the entire field of American and European statistical literature as chief of the division of documents in the Library of Congress. He conducted, as statistician, the colossal investigation into prices by the United States Committee of Finance in 1891. Both in Porto Rico and in Liberia, as well as in other important official positions, he has come in contact with practical administrative problems. As assistant director of the census of 1910 he came into direct contact, as in some of his other work, with the cost of conducting statistical investigations, the limits within which they must be kept and the methods by which efficiency and accuracy can be secured with economy. Those who have conducted such investigations are aware that this indispensable qualification is extremely rare. In Dr. Falkner's case it is united with unusual administrative capacity.

Professor Jeremiah W. Jenks, of New York University, chairman of the Executive Committee of the Industrial Economics Department, presided at the meeting, and Dr. Talcott Williams, chairman of the plan and scope committee, called attention to the large number of letters already received from members of the Advisory Council throughout the country, making suggestions of pertinent topics which should be included in the inquiry and indicating available sources of authentic information. Dr. Williams pointed out that the inquiry requires to only a very limited extent new investigation; rather, it consists almost wholly in bringing together facts already of record, but which have never been coordinated.

JOHN HAYS HAMMOND,
Chairman Industrial Economics Department.

D. L. CEASE,
Vice-Chairman Industrial Economics Department.

ROLAND P. FALKNER,
Director of the National Survey.

JEREMIAH W. JENKS,
Chairman Executive Committee Industrial Economics Department.

TALCOTT WILLIAMS,
Chairman Plan and Scope Committee.

EXECUTIVE COUNCIL.

The members of the Executive Council of the Industrial Economics Department are as follows:

JOHN HAYS HAMMOND, *Chairman.*
JEREMIAH W. JENKS, *Chairman Executive Committee.*
TALCOTT WILLIAMS, *Chairman Committee on Plan and Scope of Social and Industrial Survey.*
ROLAND P. FALKNER, *Director.*
HAYES ROBBINS, *Associate Director.*
JAMES LAUGHLIN PHILLIPS, *Executive Secretary.*
ISAAC N. SELIGMAN, *Treasurer.*
VINCENT ASTOR, *Chairman Committee on Food and Drugs.*

William D. Baldwin, *Chairman Committee on Collective Bargaining and Methods of Mediation and Arbitration.*
George E. Barnett, *Chairman Committee on Industrial Profit Sharing.*
August Belmont, *Chairman Committee on Workmen's Compensation.*
Kenyon L. Butterfield, *Chairman Committee on Agricultural Conditions.*
Paul D. Cravath, *Chairman Committee on Tenement House Conditions.*
Irving Fisher, *Chairman Committee on Public Health.*
Samuel Gompers, *Chairman Committee on Labor Conditions.*
Elgin R. L. Gould, *Chairman Committee on Industrial Loans and Savings.*
Jeremiah W. Jenks, *Chairman Committee on Immigration.*
Adolph Lewisohn, *Chairman Committee on Penal and Correctional Institutions.*
V. Everit Macy, *Chairman Committee on Child Labor.*
W. G. Mather, *Chairman Committee on Employers' Welfare Work.*
Charles R. Miller, *Chairman Committee on Improvement in Political Ethics.*
Ogden L. Mills, *Chairman Committee on Business Ethics.*
William J. Pape, *Chairman Committee on the Theory of Surplus Value.*
Alton B. Parker, *Chairman Committee on Free Speech and Right of Assembly.*
George W. Perkins, *Chairman Committee on Social Insurance.*
A. J. Porter, *Chairman Committee on the Minimum Wage.*
James B. Reynolds, *Chairman Committee on Enforcement of Law and Order.*
E. R. A. Seligman, *Chairman Committee on Distribution of Ownership in Investments.*
O. D. Skelton, *Chairman Committee on Theory of Government Ownership and Operation of Public Utilities and Private Industries.*
William H. Taft, *Chairman Committee on Judicial Procedure.*
Charles R. Towson, *Chairman Committee on Institutional Church Work.*
Frank Tucker, *Chairman Committee on Efficiency of Organized Social Service.*
George E. Vincent, *Chairman Committee on Educational Opportunities.*
Clinton Rogers Woodruff, *Chairman Committee on Municipal Government.*

THE MAIN DIVISIONS OF THE INQUIRY.

Some idea of the far-reaching scope of the survey may be had from the following outline of its general divisions, each of which, of course, requires much more extended space for adequate analysis. In connection with each subject is given the committee which will have its investigation in charge.

LABOR CONDITIONS.

How do wages, hours of labor and the physical conditions of the factory and the home compare with those of thirty years ago? Have the work of the American Federation of Labor, the railway brotherhoods and the social reform organizations and the legislation secured by them prohibiting child labor and regulating conditions in factories, mercantile establishments, mines, bakeries, tenement houses and sweat shops really benefited the wage-working men, women and children of this country?

Committee.

Samuel Gompers, President American Federation of Labor, Washington, D. C.
Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland, Ohio.
James M. Lynch, New York State Commissioner of Labor, Albany, N. Y.
T. V. O'Connor, President International Longshoremen's Association, Buffalo, N. Y.
W. L. O'Brien, Kansas State Commissioner of Labor and Industry, Topeka, Kan.
James D. Beck, Member Wisconsin Industrial Commission, Madison, Wis.
W. S. Carter, President Brotherhood Locomotive Firemen and Enginemen, Peoria, Ill.
Fred Lange, Member Ohio Bureau of Labor Statistics, Columbus, Ohio.
Joseph F. Valentine, President International Molders' Union of America, Cincinnati, Ohio.
Charles F. Gettemy, Chief, Mass. Bureau of Labor Statistics, Boston, Mass.
David Ross, Illinois State Commissioner of Labor Statistics, Springfield, Ill.
H. M. Stanley, Georgia State Commissioner of Commerce and Labor, Atlanta, Ga.
James Byrnes, Louisiana State Commissioner of Labor and Industrial Statistics, New Orleans, La.
John Golden, President United Textile Workers of America, Fall River, Mass.
John Williams, President International Association of Factory Inspectors, Albany, N. Y.
James J. Murphy, Factory Inspector for the First District, New York.

EMPLOYERS' WELFARE WORK.

How do the provisions by employers for the wage-earners' health, safety and comfort, recreation, education, housing and insurance compare with those of a generation ago?

Committee.

W. G. Mather, President Cleveland-Cliffs Iron Company, Cleveland, Ohio.
Cyrus H. McCormick, President International Harvester Company, Chicago, Ill.
H. M. Byllesby, H. M. Byllesby & Co., Chicago, Ill.
J. J. Donovan, Bloodel Donovan Lumber Mills, Bellingham, Wash.
Charles L. Edgar, President Edison Electric Illuminating Co., Boston, Mass.
Pierre S. du Pont, E. I. du Pont de Nemours Powder Company, Wilmington, Del.
Paul Feiss, The Joseph & Feiss Company, Cleveland, Ohio.
F. W. Dohrmann, Dohrmann Commercial Company, San Francisco, Cal.
Frederick S. Fish, Chairman Executive Committee, The Studebaker Corporation, South Bend, Ind.
Haley Fiske, The Metropolitan Life Insurance Company, New York.
F. R. Hazard, President The Solvay Process Company, Syracuse, N. Y.
Edwin M. Herr, President Westinghouse Electric and Air Brake Companies, Pittsburgh, Pa.
James T. McCleary, American Iron and Steel Institute, New York.
William C. Muschenheim, President Hotel Astor, New York.
Thomas F. Parker, President Monaghan Mills, Greenville, S. C.
Theodore P. Shonts, President Interborough Rapid Transit Company, New York.

CHILD LABOR.

Has it increased or diminished in recent decades? What has been the effect of State legislation upon age limits, hours worked and opportunity for education?

What is being done by voluntary effort for child welfare, and in what directions is further progress most needed?

Committee.

V. Everit Macy, Publicist, New York.
Hugh Frayne, Organizer American Federation of Labor, New York.
Samuel McCune Lindsay, Professor of Social Legislation, Columbia University, New York.
Ben L. Lindsey, Judge Juvenile Court, Denver, Col.
Mrs. Clarence Burns, President The Little Mothers' Aid Association, New York.
Mrs. John K. Ottley, Woman's Department, The National Civic Federation, Atlanta, Ga.
F. G. R. Gordon, Immigration Expert, Haverhill, Mass.
Rev. Peter E. Dietz, Secretary Social Service Commission, American Federation of Catholic Societies, Milwaukee, Wis.
Joseph A. Hill, Bureau of Census, Washington, D. C.
Ernest H. Abbott, *The Outlook*, New York.
Rev. Charles Stelzle, Consulting Sociologist, New York.
Charles P. Neill, Director, Chairman Labor Committee, American Smelting and Refining Company, New York.
William F. Willoughby, Former President American Association for Labor Legislation, Princeton, N. J.

AGRICULTURAL CONDITIONS.

Is the farmer holding to the ownership of his farm, or lapsing into tenancy, or sinking under mortgage debt? How does he live to-day compared with thirty years ago and what changes have occurred in his methods of work? Of what value to him have been the rural delivery and the parcel post? What is being accomplished by the new movements for betterment of rural life, such as co-operative buying and selling?

Committee.

Kenyon L. Butterfield, President Massachusetts Agricultural College, Amherst, Mass.
L. H. Bailey, Former Dean College of Agriculture, Cornell University, Ithaca, N. Y.
C. F. Sanford, President Farmers' National Congress, London, Ohio.
Oliver Wilson, Master National Grange, Patrons of Husbandry, Peoria, Ill.
Charles S. Barrett, President Farmers' Educational and Co-operative Union of America, Union City, Ga.
John J. Dillon, Editor *The Rural New Yorker*, New York.
Henry Wallace, Editor *The Farmer*, Des Moines, Iowa.
William C. Brown, Former President New York Central Railroad Company, New York.
Edward N. Breitung, Ore Producer, Negaunee, Mich.
J. L. Coulter, United States Department of the Census, Washington, D. C.
Thomas N. Carver, Director Rural Organization Service, Department of Agriculture, Washington, D. C.
F. D. Coburn, Commissioner of Agriculture, Topeka, Kansas.

TENEMENT HOUSE CONDITIONS.

Are city dwellers securing an improved standard of decency and comfort, of light and air, as compared with the mode of living a quarter of a century ago? What has been accomplished and what remains to be done?

Committee.

Paul D. Cravath, Lawyer, New York.
Lawrence Veiller, Director Department for Improvement of Social Conditions of the Charity Organization Society, New York.
John J. Murphy, Tenement House Commissioner of the City of New York, New York.
Alfred T. White, New York.
Jacob A. Riis, Sociologist, New York.
Frederic B. Pratt, New York.

IMMIGRATION.

What special problems with relation to the well-being of the masses have we to solve in consequence of a practically unrestricted immigration?

Committee.

Jeremiah W. Jenks, Professor of Government, New York University, New York.
W. S. Bennet, Lawyer, New York.
Willard D. Straight, Banker, New York.
Edward A. Ross, Professor of Sociology, University of Wisconsin, Madison, Wis.
Cyrus L. Sulzberger, Director Jewish Agricultural and Industrial Aid Society, New York.
Robert M. Thompson, Chairman Executive Committee, Navy League, Washington, D. C.
W. Jett Lauck, Immigration Expert, Washington, D. C.
Thomas N. Carver, Director Rural Organization Service, Department of Agriculture, Washington, D. C.
Samuel Gompers, President American Federation of Labor, Washington, D. C.
Oliver Wilson, Master National Grange, Patrons of Husbandry, Peoria, Ill.
Walter E. Weyl, Economist, New York.
F. G. R. Gordon, Immigration Expert, Haverhill, Mass.

COLLECTIVE BARGAINING, MEDIATION AND ARBITRATION.

What has been the effect of the development of the trade agreement upon industrial discord? To what extent have our industries and the public benefited by the work of voluntary mediation agencies, national and state arbitration bureaus?

Committee.

William D. Baldwin, President Otis Elevator Company, New York.
W. G. Lee, President Brotherhood of Railroad Trainmen, Cleveland, Ohio.
Timothy Healy, President International Brotherhood of Stationary Firemen, New York.
Otto M. Eidlitz, Building Trades Employers' Association, New York.
Marcus M. Marks, President of the Borough of Manhattan, New York.
Herman Ridder, Editor *New-Yorker Staats Zeitung*, New York.
Franklin MacVeagh, Former Secretary of the Treasury, Chicago, Ill.
William D. Mahon, President Amalgamated Association of Street Railway Employees of America, Detroit, Mich.
H. N. Kellogg, Chairman Standing Committee American Newspaper Publishers' Association, Indianapolis, Ind.
Louis B. Schram, Chairman Labor Committee United States Brewers' Association, Brooklyn, N. Y.

EDUCATIONAL OPPORTUNITIES.

Where does America stand in the matter of gratifying the more widespread thirst for knowledge? What, in addition to its public and private schools, have been the results of its public libraries, free lecture courses, correspondence schools, and facilities for technical education for farm and factory?

Committee.

George Edgar Vincent, President University of Minnesota, Minneapolis, Minn.
Jacob Gould Schurman, President Cornell University, Ithaca, N. Y.
Miss Virginia C. Gildersleeve, Dean of Barnard College, Columbia University, New York.
Harry P. Hutchins, President University of Michigan, Ann Arbor, Mich.
Sidney E. Mezes, President University of Texas, Austin, Texas.
Edwin A. Alderman, President University of Virginia, Charlottesville, Va.
Benjamin Ide Wheeler, President University of California, Berkeley, Cal.
Charles R. Van Hise, President University of Wisconsin, Madison, Wis.

EFFICIENCY OF ORGANIZED SOCIAL SERVICE.

Has the spending of millions of dollars by the Carnegie, Rockefeller and Sage Foundations, by the hundreds of charity associations and social settlements,

resulted in benefit or injury? Should organized voluntary philanthropy be replaced by State charity?

Committee.

FRANK TUCKER, Vice-President Provident Loan Society, New York.
ROBERT A. FRANKS, Director The Carnegie Foundation, New York.
HUGH H. FOX, Secretary U. S. Brewers' Association, New York.
REV. DR. WM. J. KERBY, Secretary National Conference of Catholic Charities, Washington, D. C.
GRAHAM TAYLOR, President National Conference of Charities, Chicago Commons, Chicago, Ill.
HOMER FOLKS, Member Central Council The Charity Organization Society, New York.
ROBERT A. WOODS, Head Worker South End House, Boston, Mass.

DISTRIBUTION OF OWNERSHIP IN INVESTMENTS.

Is wealth being concentrated in fewer hands? Has the organization of large corporations resulted in a great withdrawal of wealth from the people or a more general distribution of wealth? How about the ownership of homes, and the effect of investment through building and loan associations, national and State banks and savings banks?

Committee.

E. R. A. SELIGMAN, Professor Political Economy, Columbia University, New York.
HENRY P. DAVISON, J. P. Morgan & Co., New York.
GEORGE M. REYNOLDS, President Continental and Commercial National Bank, Chicago, Ill.
HENRY L. HIGGINSON, Banker, Boston, Mass.
GEORGE F. BAKER, JR., Vice-President First National Bank, New York.
PAUL M. WARBURG, Banker, Kuhn, Loeb & Co., New York.
HENRY A. SCHENCK, President Bowery Savings Bank, New York.
EDWIN R. L. GOULD, President City and Suburban Homes Company, New York.
FRANK TRUMBULL, Chairman Board Directors, Chesapeake & Ohio Railroad Company, New York.
THEODORE N. VAIL, President American Telephone and Telegraph Company, Boston, Mass.
FRANK A. FETTER, President American Economic Association, Princeton, N. J.
JOHN T. PRATT, Lawyer, New York.
JAMES SPEYER, Banker, New York.
E. A. BANCROFT, Counsel for the International Harvester Company, Chicago, Ill.
F. C. WALCOTT, Wm. P. Bonbright & Co., New York.
A. H. SMITH, President New York Central Railroad Company, New York.
CHARLES M. KEYS, Financial Writer, New York.
SAMUEL MATHER, Pickands, Mather & Co., Cleveland, Ohio.
WM. P. HAMILTON, Editor *Wall Street Journal*, New York.
L. A. COOLIDGE, Treasurer United Shoe Machinery Company, Boston, Mass.
ALBERT W. ATWOOD, Editor Financial and Insurance Department, *McClure's Magazine* and *Harper's Weekly*, New York.
W. J. BAYERSDORFER, President United States League of Local Building and Loan Associations, Shreveport, La.

FREE SPEECH AND PUBLIC ASSEMBLY.

How far is the citizen's right of free speech and free assemblage with his fellows protected? The extent and grounds of police interference. Abuses of the privilege and abuses of local authority. Interpretation of constitutional guarantees.

Committee.

ALTON B. PARKER, Former Chief Justice Court of Appeals, New York.
STEPHEN S. GREGORY, Former President American Bar Association, Chicago, Ill.
FREDERICK N. JUDSON, Lawyer, St. Louis, Mo.
PETER W. MELDRIM, Lawyer, Savannah, Ga.
HENRY ST. GEORGE TUCKER, Former President American Bar Association, Lexington, Va.
WILLIAM M. IVINS, Lawyer, New York.
JAMES BRONSON REYNOLDS, Counsel, American Social Hygiene Association, New York.
J. H. RALSTON, Lawyer, Washington, D. C.
CHARLES L. JEWETT, Lawyer, New Albany, Ind.
JOSEPH H. CHOATE, JR., Lawyer, New York.

BUSINESS ETHICS.

How do standards of business honor compare with those of a generation ago? What has been gained in the last decade through the demand of the people for publicity in the business methods of banks, insurance companies, trust companies and other private corporations.

Committee.

OGDEN L. MILLS, Lawyer, New York.
J. G. SCHMIDLAPP, President Union Savings Bank and Trust Company, Cincinnati, Ohio.
JOHN WANAMAKER, Merchant, Philadelphia, Pa.
FINLEY J. SHEPARD, Vice-President Missouri Pacific Railroad Company, New York.
ARTHUR WILLIAMS, Chairman Association of Edison Illuminating Companies, New York.
LYMAN P. POWELL, President Hobart College, Geneva, N. Y.
CHARLES G. DAWES, President Central Trust Co. of Illinois, Chicago, Ill.
HENNEN JENNINGS, Mining Engineer, Washington, D. C.
WILLIAM H. INGERSOLL, American Fair Trade League, New York.
ALFRED L. BAKER, Banker, Chicago, Ill.
JOHN H. WIGMORE, Dean of the Law School, Northwestern University, Chicago, Ill.
JOHN GRANT DATER, Financial Writer, *The Evening Sun*, New York.

POLITICAL ETHICS.

What are the gains for purity and cleanliness in politics through regulation of primaries, publicity of campaign contributions, the secret ballot and the civil service merit system? Are legislative bodies thwarting or responding to popular demands? What is to-day's concept of the relations of government to industry in respect to enforcement of law, restriction of monopolistic and competitive abuses, railroad rebates and passes, etc., compared with standards of a generation ago?

Committee.

CHARLES R. MILLER, Editor *The New York Times*, New York.
OGDEN M. REID, Editor, *New York Tribune*, New York.
CHARLES W. KNAPP, Proprietor *The St. Louis Republic*, St. Louis, Mo.
CLARK HOWELL, Editor *The Atlanta Constitution*, Atlanta, Ga.
JOHN H. FINLEY, New York State Commissioner of Education, Albany, N. Y.
GEORGE B. CORTELYOU, President Consolidated Gas Company, New York.
OGDEN L. MILLS, Lawyer, New York.
JOHN P. FREY, Editor *International Molders' Journal*, Cincinnati, Ohio.
WILLIAM ALLEN WHITE, Editor *The Emporia Gazette*, Emporia, Kan.
ARTHUR CAPPER, Editor *The Topeka Capital*, Topeka, Kan.

INSTITUTIONAL CHURCH WORK.

To what extent and with what results are the churches engaging in social and civic betterment work as compared with the earlier scope and emphasis of their activities?

Committee.

CHARLES R. TOWSON, Secretary Industrial Department, International Committee of Young Men's Christian Associations, New York.
REV. WALTER LAIDLAW, Executive Secretary New York Federation of Churches, New York.
CONDE B. PALLEN, Editor *The Catholic Encyclopaedia*, New York.
REV. CHARLES S. MACFARLAND, Secretary Federal Council of Churches of Christ in America, New York.
REV. DR. HYMAN G. ENELOW, Rabbi Temple Emanu-El, New York.
RIGHT REV. DAVID H. GREER, Bishop of New York, New York.
JOHN, CARDINAL FARLEY, Archbishop of New York.
RIGHT REV. JOHN E. VINCENT, Bishop Methodist Episcopal Church, Chicago, Ill.
CHARLES I. DENECHAUD, President American Federation of Catholic Societies, New Orleans, La.

MUNICIPAL GOVERNMENT.

How far have the efforts of civic reform movements for cleaner and more efficient municipal government yielded substantial results? What of the provision of parks, play-grounds, public baths, the care of streets, etc.?

Committee.

CLINTON ROGERS WOODRUFF, Secretary National Municipal League, Philadelphia, Pa.
HARRY A. GARFIELD, President Williams College, Williamstown, Mass.
GEORGE BURNHAM, JR., Philadelphia, Pa.
H. D. W. ENGLISH, Chairman Pittsburgh Civic Commission, Pittsburgh, Pa.
WALTER L. FISHER, Former Secretary of the Interior, Chicago, Ill.
J. L. HUDSON, Detroit, Mich.
JOHN A. BUTLER, Milwaukee, Wis.
DWIGHT F. DAVIS, St. Louis, Mo.
REV. CHARLES N. LATHROP, San Francisco, Cal.

JUDICIAL PROCEDURE.

What has been accomplished towards greater simplicity and clarity in legal procedure? What efforts are under way and what can be done to render the administration of justice more prompt and certain for all citizens?

Committee.

WILLIAM H. TAFT, President American Bar Association, New Haven, Conn.
EVERETT P. WHEELER, Lawyer, New York.
WILLIAM E. CHANDLER, Lawyer, Concord, N. H.
CHARLES NOBLE GREGORY, Dean of Department of Law, George Washington University, Washington, D. C.
WILLIAM O. HART, Former President American Bar Association, New Orleans, La.
FREDERICK W. LEHMANN, Former President American Bar Association, St. Louis, Mo.
LAWRENCE MAXWELL, Former Solicitor General, Cincinnati, Ohio.
ROSCOE POUND, Professor Law School, Harvard University, Cambridge, Mass.
THOMAS W. SHELTON, Lawyer, Norfolk, Va.
HANNIS TAYLOR, Professor of Law, George Washington University, Washington, D. C.
ELIHU ROOT, JR., Lawyer, New York.

PUBLIC HEALTH.

Do statistics show that the American of to-day lives longer than his father or that the pressure of our speeded-up industry forces him into an earlier grave? Are diseases incident to industrial life spreading or being conquered? What of the work of boards of health, hospitals, medical societies and health education movements?

Committee.

IRVING FISHER, Professor of Political Economy, Yale University, New Haven, Conn.
W. H. WELSH, Professor of Pathology, Johns Hopkins University, Baltimore, Md.
HERMANN M. BIGGS, New York State Commissioner of Health, Albany, N. Y.
HENRY B. FAVILL, Former President American Medical Association, Chicago, Ill.
LUTHER H. GULICK, Director Parks and Playgrounds Association of the City of New York, New York.
WILLIAM C. WOODWARD, President American Public Health Association, Washington, D. C.
M. E. JAFFA, Director State Food and Drug Laboratory, University of California, Berkeley, Cal.
SAMUEL W. LAMBERT, Dean, College of Physicians and Surgeons, Columbia University, New York.

ENFORCEMENT OF LAW AND ORDER.

Is the security of the citizen in person and property greater or less than thirty years ago? What of our methods of dealing with vagrancy and social vice? What are the effects of changes in penal legislation upon statistics of crime?

Committee.

JAMES BRONSON REYNOLDS, Counsel, American Social Hygiene Association, New York.
FREDERICK L. HOFFMAN, Statistician, Prudential Insurance Company of America, Newark, N. J.
CHARLES C. NOTT, JR., Assistant District Attorney, New York.
HENRY DE FOREST BALDWIN, Lawyer, New York.
CHARLES C. BURLINGHAM, Lawyer, New York.
ARTHUR P. HILL, Former District Attorney, Boston, Mass.
WILLIAM H. WADHAMS, Lawyer, New York.

PENAL AND CORRECTIONAL INSTITUTIONS.

Are the changes in methods and management of prisons, reformatories and correctional schools in the direction of progress? What lines of further improvement are suggested by experience?

Committee.

ADOLPH LEWISOHN, American Smelting and Refining Company, New York.
THOMAS MOTT OSBORNE, Manufacturer, Auburn, N. Y.
E. STAGG WHITIN, Chairman Executive Committee, National Committee on Prison Labor, New York.
NICHOLAS MURRAY BUTLER, President Columbia University, New York.
MRS. AUGUST BELMONT, Executive Committee, Woman's Department, The National Civic Federation, New York.
MRS. FRANCIS MCNEIL BACON, JR., Chairman Metropolitan Section, Woman's Department, The National Civic Federation, New York.
MISS HELEN VARICK BOSWELL, Chairman Political Science Committee, General Federation of Woman's Clubs, New York.

INDUSTRIAL PROFIT SHARING.

What have been the lines of development both in the theory and the practice of profit-sharing in this country, during the last generation? What are the advantages, the danger points and the future possibilities of the system, as suggested by experience?

Committee.

GEORGE E. BARNETT, Professor of Political Economy, Johns Hopkins University, Baltimore, Md.
F. R. HAZARD, President The Solvay Process Company, Syracuse, N. Y.
JAMES C. BRADY, Director American Tobacco Company, New York.
JAMES W. SULLIVAN, The American Federation of Labor, New York.
PIERRE S. DU PONT, The E. I. du Pont de Nemours Powder Company, Wilmington, Del.
JOHN T. PRATT, Lawyer, New York.

Ernest H. Abbott, *The Outlook*, New York.
Daniel J. Tobin, President International Brotherhood of Teamsters, Indianapolis, Ind.
Harris Hammond, Gloucester, Mass.
Walter B. Clark, Professor of Political Economy, College of the City of New York, New York.
Denis A. Hayes, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia, Pa.

SOCIAL INSURANCE.

What has been accomplished by way of provision against invalidity, unemployment and old age disability, through savings and provident funds, mutual relief associations, pension systems of industrial and financial corporations, and trade union benefit funds? To what extent and through what means is the wider application of social insurance possible?

Committee.

George W. Perkins, New York.
Frederick L. Hoffman, Statistician, Prudential Life Insurance Co., New York.
A. B. Garretson, President Order of Railway Conductors, Cedar Rapids, Iowa.
P. Tecumseh Sherman, Lawyer, New York.
J. N. Redfern, Superintendent, Relief and Employment Departments, C. B. & Q. R. R., Chicago, Ill.
M. W. Alexander, General Electric Company, Lynn, Mass.
M. G. Scott, International Typographical Union, New York.
Arthur Williams, Edison Company, New York.
Henry Abrahams, Secretary Cigar Makers' Union, Boston, Mass.

WORKMEN'S COMPENSATION.

What is the significance to the wage-worker of the widespread adoption of accident compensation as a charge upon industry, in place of the individual litigation method under liability laws? What further effects may be credited to the new system in respect to equalization of risks and prevention of accidents?

Committee.

August Belmont, Chairman Department on Workmen's Compensation, The National Civic Federation, New York.
George Sutherland, United States Senator from Utah, Washington, D. C.
Cyrus W. Phillips, Chairman Joint Commission on Workmen's Compensation of The National Civic Federation, Rochester, N. Y.
J. Walter Lord, Chairman Maryland State Commission on Employers' Liability and Workmen's Compensation, Baltimore, Md.
Otto M. Eidlitz, New York Building Trades' Employers' Association, New York.
Louis B. Schram, Chairman Labor Committee, United States Brewers' Association, Brooklyn, N. Y.
James Duncan, Vice-President American Federation of Labor, Quincy, Mass.
H. E. Wills, Ass't. Grand Chief Brotherhood of Locomotive Engineers, Cleveland, Ohio.

INDUSTRIAL LOANS AND SAVINGS.

What do the records of savings banks and the industrial departments of insurance companies reveal in respect to the accumulation of savings on the part of workingmen and people of small means? What is being done to enable the wage-earner to borrow for legitimate needs without resort to the loan shark?

Committee.

Elgin R. L. Gould, President City and Suburban Homes Company, New York.
Oscar S. Straus, Former Ambassador to Turkey, New York.
Theodore P. Shonts, President Interborough Rapid Transit Company, New York.
Edwin S. Marston, President Farmers' Loan and Trust Company, New York.
Sam A. Lewisohn, Adolph Lewisohn & Sons, New York.

FOOD AND DRUGS.

To what extent is the public protected against frauds and impurities in the supply of food products and drugs as compared with earlier decades? What have been the effects of Federal and State legislation and municipal regulations on the subject?

Committee.

Vincent Astor, New York.
Dr. Carl L. Alsberg, Chief Bureau of Chemistry, Department of Agriculture, Washington, D. C.
J. H. Wallis, President National Association of State Food and Dairy Commissioners, Boise, Idaho.
Dr. S. S. Goldwater, Commissioner of Health, New York City.
Miss Maude Wetmore, Chairman Woman's Department, The National Civic Federation, New York.
Mrs. S. R. Crockett, Chairman Food and Drug Department, General Federation of Women's Clubs, Nashville, Tenn.
Samuel Gompers, President American Federation of Labor, Washington, D. C.
John M. Stahl, Farmers' National Congress, Chicago.
Edward N. Breitung, Ore Producer, Negaunee, Mich.

THE THEORY OF SURPLUS VALUE.

Does the difference between labor cost and selling price represent employer's profit? What changes have taken place in the proportionate return to labor and capital in the gross earnings of industry?

Committee.

William J. Pape, Editor *Waterbury Republican*, Waterbury, Conn.
Oscar D. Skelton, Professor of Economics, Queen's University, Kingston, Ontario, Canada.
Vladimir G. Simkhovitch, Professor of Economic History, Columbia University, New York.
John B. Clark, Professor of Political Economy, Columbia University, New York.
John G. Agar, Lawyer, Mount Vernon, N. Y.
Rev. John A. Ryan, St. Paul Seminary, St. Paul, Minn.

THE THEORY OF THE MINIMUM WAGE.

What have been the results of experiments in minimum wage legislation? What of the economic merits of the proposal?

Committee.

A. J. Porter, President Shredded Wheat Company, Niagara Falls, N. Y.
Percy S. Straus, R. H. Macy & Company, New York.
Mrs. H. B. Beale, Woman's Department, The National Civic Federation, Washington, D. C.
Lee K. Frankel, Vice-President Metropolitan Life Insurance Company, New York.
H. J. Conway, Secretary-Treasurer Retail Clerks' International Protective Association, Lafayette, Ind.

ACTIVE CO-OPERATION OF THE ADVISORY COUNCIL.

More than one hundred letters have been received from members of the Advisory Council, indicating pertinent lines of inquiry suggested by their experience in many fields, and expressing emphatic approval of the object and general plan of the survey. It is possible to reproduce here only brief excerpts from a few of these communications, but they are typical of the wide range of suggestions offered and indicate the interest the work is developing in all parts of the country.

CHARLES NOBLE GREGORY, Dean of the Department of Law, George Washington University, Washington, D. C.:

"It has seemed to me as if it would be of great value in a time of great discontent to review the immense progress that has been made, not for the rich alone, but for all except those in extreme poverty, and in some respects even for them, in the comforts, conveniences and safeguards of life; for instance, in common supply of pure water delivered under pressure, in good drainage, in common systems of house lighting, in street lighting, in road making, also the great change in cleanliness, in comforts of temperature, and in means of communication, both by sending and receiving goods, by transporting persons and by delivering messages; also the tremendous improvement in the variety and distribution of food.

"My father was a lawyer in good practice at Madison, Wis., with good social station at the capital of Wisconsin. I grew up there in a community where only a very few of the largest houses had baths. Now all except the very humblest are provided. Every one there drew water by bucket from a local well and rainwater from a cistern when I was a boy, and the drainage passed into a cesspool on his own place if any provision were made. Now a fine water system and complete drainage system, with drainage disposal works, are instituted.

"In my youth not a family in the city had soup every day for dinner, and very few persons took a daily bath. Now the daily soup and daily baths are common with all above the rank of laborers, I think.

"When I was a boy tropical fruit was a comparatively rare luxury. Now it is abundant and cheap throughout the year. So I may enumerate in many ways the very great change in the comforts of living, not for the rich alone, but for the great volume of people. When I first knew that city there was not a macadamized or paved street in the city, and the city did not control an acre of park land. She now has many miles of paved streets and macadamized streets and hundreds of acres of fine parks. . . .

"When I was a boy every house in town, substantially, was so cold at night that in Winter water froze all over the house. Now almost all are comfortably heated by night and by day, either by furnaces or by base burning coal stoves. So I might enumerate the tremendous changes which in my own life I have witnessed and which have resulted in a distinct increase of the average duration of life as well as in the comfort of living.

"I think an able, broad and specific representation of these changes and advances and of the benefits thereby conferred either upon all of the people or on the great majority of the people, would be worth while, and there would be no argument for stagnation, but for reasonable contentment with the progress, and it would tend to mitigate the great bitterness sometimes springing up between classes differently situated."

HARRY A. GARFIELD, President of Williams College, Williamstown, Mass.:

"The work which the department is undertaking to do is not only most interesting but, to my mind, vital, and I sincerely trust that the colleges and various organizations represented will each contribute its part."

A. B. GARRETSON, President Order of Railway Conductors, Cedar Rapids, Iowa:

"The high cost of living is charged against the trusts, it is charged against a multitude of other agencies, but I have a belief that the real solution of that difficulty lies in the machinery between the producer and the consumer. If this belief is well founded, intelligent investigation should demonstrate the fact."

WILLIAM GAMMELL, Manufacturer, Providence, R. I.:

"It would seem to me that one part of the proposed survey might include the comparatively recent influx of non-English-speaking foreigners to the population of the manufacturing centers of New England. Some twenty-five years ago nearly all the mill operatives of New England, other than natives, were English, Irish or French Canadians, the majority of whom were easily assimilated with the rest of the population and became, as a rule, useful citizens. At the present time the conditions are very different, especially in the large manufacturing towns. And a continued segregation of this new foreign element, retaining their old standards of living and subject only to leadership from those who speak their languages, would be, in my opinion, a serious menace to the future welfare of New England. An investigation of the tendencies of this new element might be attended with useful results."

MRS. FRANCIS M'NEIL BACON, JR., Chairman Metropolitan Section, Woman's Department, The National Civic Federation:

"In the field of industrial and social progress two problems seem to me of very vital importance, as they lie at the heart of what our future citizenship will be. To put this under two concise headings, I would say trade schools and farm colonies. The former opens the way for the boy or girl toward greater efficiency. The subject is a large one, including as it does vocational, part time and continuation, as well as trade schools. The farm colony idea seems to me to offer the only remedy for that endless returning into society of the unfortunates we punish and corrupt. We must punish, at all events we must protect society, but we should see to it, and without delay, that in so doing we not only do not corrupt, but that we make the best possible use of the human material given into our keeping."

HARRIS WEINSTOCK, Member Federal Commission on Industrial Relations, San Francisco, Cal.:

"The Census shows that, taking the country as a whole, the urban population has increased out of all proportion to the rural population. This tendency carries with it a serious menace to the future of the nation. It is one explanation, doubtless, of the increased cost of living. It means many more city mouths to feed and fewer and fewer country hands to produce the food. It seems to me that it is thoroughly worth the while of your committee to inquire into the causes for this condition and to suggest remedies."

W. O. HART, Former President American Bar Association, New Orleans, La.:

"In my judgment the principal questions before the American people at this time which ought to be studied and considered are, prohibition of child labor or, at least, minimizing it as much as possible; prison reform, to the extent at least of opening the door of hope to the criminal; workingmen's compensation, including perhaps mothers' pensions and old age pensions; and good roads. These, I think, are more important than the tariff, currency reform, anti-trust legislation and the Mexican situation, which all present temporary questions, whereas the others affect the very life of our people."

DANIEL J. TOBIN, President International Brotherhood of Teamsters, Indianapolis, Ind.:

"First, I believe that the immigration question today is one of the most serious confronting our American working men and women. . . . . I attribute a great deal of non-employment to the fact that there are hundreds of thousands of individuals coming to this country who are willing to work for anything and everything under any condition. Second, if employers could be educated to the necessity of dealing with legitimate trade unions and with the men who are at the head of those trade

unions, who are honest and sincere, I believe that the industrial revolutions that have occurred to a small extent in our country within the past few years, and that have occurred to a large extent in European countries, could be prevented in the future.

JOHN B. CLARK, Professor Political Economy, Columbia University, New York:

"What is the social income in its entirety? How much wealth is annually brought into existence in the United States and how much in each department of industry? No one knows. The inquiries of the census were not pushed far enough to determine it, though they throw a large amount of light on it. It is information which it is very difficult to get, but I have thought that the Civic Federation possessed special facilities for obtaining it. My own claim, based on a study of the census and on some other information, is that if the capital were nationalized the gain per capita of the working classes would be very far below the amount expected. . . . I do not think that any organized body of public-spirited citizens could do another work that would be comparable in value to the work of determining what income exists at present which, under socialism, would pass over to the working people.

CHARLES R. TOWSON, Industrial Secretary, International Committee, Young Men's Christian Associations, New York:

"Four points in particular have impressed me: First, the importance of demonstrating the present status of our country as to its character standards. Second, the progress in cultural standard. Third, the importance of making the report of the work 'effective,' and the last point is akin to this, viz., the importance of making the results obtained available and pervasive. . . . I trust that in some small measure the Young Men's Christian Association may be helpful in extending the benefits of the knowledge of the facts to be discovered and reported."

HENRY W. FARNAM, Professor of Economics, Yale University, New Haven, Conn.:

"There are a number of elements in our civilization which for a long time have seemed to me sore spots and well worth considering in estimating progress. Among these I should mention crime, divorce, the drug and narcotic habit, changes in the birth and death rate, especially among different social strata, labor disturbances and strikes, etc. On some of these subjects we are much in need of accurate information. I do not suppose that any one can positively say whether crime is or is not increasing. The newspaper accounts lead one to think that it is, and yet we lack definite figures."

MRS. GEORGE T. RICE, Chairman Massachusetts and Rhode Island Section, Woman's Department, The National Civic Federation, Boston, Mass.:

"One of the most growing needs seems to be for a better housing of people in general. I have seen so many instances of where the mills might have the finest possible sanitary conditions, ventilation, modern improvements and machinery, rest rooms and many other advantages; but in going further into the question I find that the homes of the operatives are so often where the seed of disease is spread, and not in the mills. . . . My experience in going about the State is that the employers are most ready to welcome suggestions, and not only to welcome, but also to carry them out."

STEPHEN H. ALLEN, Lawyer, Topeka, Kansas:

"The home may safely be taken as the central point of every inquiry in the survey. It is of the utmost importance to gain a definite knowledge of every condition that unduly retards the building of homes by the young, or that tends to contaminate or disintegrate homes already started. Vice and crime should be studied chiefly with respect to their relation to homes, and home conditions should be studied to gain an understanding of the environments that may produce criminals.

JAMES M. LYNCH, New York State Commissioner of Labor, Albany, N. Y.:

"Has the formation and development of trusts during the last generation rendered employment steadier or otherwise? Can the workers count upon a reasonable amount of employment in the year as a whole? Obviously, accurate determination of the extent of unemployment is difficult, nevertheless some statistical material exists which, because of the importance of the question, should be carefully considered.

"Improvement in the conditions of employment during the last generation is manifest in several directions. An examination would show marked progress toward a shorter workday, greater regard for the safety of workers, both as to accidents and industrial diseases, much done to abolish the exploitation of the labor of children and to suppress or regulate 'sweated' labor. It would be well, also, to trace the growing tendency to accomplish these improvements by collective agreements between the employers and the employees, by conciliation and arbitration, by legislation and by peaceful means generally instead of by resort to the more warlike methods of the strike."

J. G. SCHMIDLAPP, President Union Savings Bank and Trust Company, Cincinnati, Ohio:

"From my own experience, I believe that more can be accomplished by housing than in any other way. . . . This work I want to see carried so far that it will lead to ownership, and as soon as we can get the wage earner in this class it will be difficult for the socialist to enlist him. I draw such a conclusion as this from the peasantry of Germany, where the majority of the farmers own less than five acres, yet the socialists have never been able to make any inroads upon this citizenship."

BOOKER T. WASHINGTON, Principal Tuskegee Normal and Industrial Institute, Tuskegee, Ala.:

"In connection with the investigation which the Federation is making I very much hope that a careful study will be made of the progress which the negroes have made in organized labor, the difficulties met and how they have been overcome in different parts of the country. I call attention to an article which I wrote, 'The Negro and the Labor Unions,' in the *Atlantic Monthly* for June, 1913. I believe you will find in this article a number of points which have direct bearing upon the work which the Federation is trying to do."

DELOS F. WILCOX, Public Utility Expert, New York:

"The continued growth of cities is a phenomenon of first-rate importance in the development of our civilization. What are the essential advantages and disadvantages of urban life in our civilization and what is the relative importance of each? To what extent is the increase in the cost of living due to the increase in the relative proportion of the population which is removed from direct access to the food supplies of the country?"

HENRY B. F. MACFARLAND, Lawyer, Washington, D. C.:

"I should put first the renaissance of conscience in business and politics and the consequent twentieth century view of rights and duties. I should put second the similar awakening in the church using that word in its broadest meaning, and manifestations of that awakening in all their many forms, especially respecting men and boys."

FOR AN INTERSTATE TRADE COMMISSION

PROPOSALS SUBMITTED BY THE NATIONAL CIVIC FEDERATION IN CONNECTION WITH PENDING LEGISLATION

WITHIN the last few months a bill supplementary to the Sherman Act, providing for an Interstate Trade Commission, has been prepared by the Department on Regulation of Industrial Corporations of The National Civic Federation, as the result of the work of a sub-committee consisting of President Seth Low as Chairman, Professor Jeremiah W. Jenks, Professor John B. Clark and Dr. Talcott Williams. The Interstate Trade Commission proposed in the bill would have, among other powers, the right under certain conditions to grant a Federal license to large corporations doing an interstate business.

In view of the fact that the national administration had drafted certain bills designed to cover the questions involved in what is known as the "trust problem," the committee decided not to offer its bill to Congress, but President Low testified at length before the Interstate Commerce Committee and the Judiciary Committee of the House, and submitted the bill with an explanatory memorandum to these committees for such use as they might desire to make of them.

The memorandum is as follows:

It is evident that an Interstate Trade Commission could be created without any reference to a Federal license for interstate trade, and many believe that such a commission would be useful for the administration of the Sherman Law without regard to a Federal license. It is desirable, therefore, to point out, first of all, why this bill proposes to demand a Federal license from very large corporations engaging in interstate trade.

At the present time there is no government at all in the United States which controls both the interstate business that is carried on and the agent that does it. The State which charters the corporation creates the agent, but the State cannot control the interstate business that is done. The Congress, on the other hand, can, and to a great extent does, control the business that is done; but it cannot control the agent that does it. What is fundamentally needed, therefore, is to bring the agents that do interstate business under the control of the Federal government, but only so far as may be necessary, so that the same government which controls the business done shall also be able to control the agents that do it. This result can be accomplished either by requiring Federal incorporation as a condition for the right to do interstate business, or by requiring that State-created corporations, so far as may be necessary, must take out a Federal license if they engage in interstate trade. Through a Federal license the national government can readily accomplish several things which are very greatly in the public interest. It can secure publicity; it can prescribe in advance the essential conditions with which all corporations doing interstate business must comply; and, on the other hand, it can at any time, by means of a license, bring about uniformity of protection for stockholders in all the States by defining the essential features that are necessary in a State charter to entitle a State-created corporation to engage in interstate trade, just as the currency law indicates the conditions upon which State banks may come under the national system. It is a well-known fact that in recent years several of the States have competed with each other in the effort to make charters that would be attractive to promoters and organizers. Such charters, however attractive in such direction, have frequently been made so at the expense of their stockholders by depriving them of the protection to which they are reasonably entitled. If a State wishes to do this sort of thing as to business done within its own borders, that is the affair chiefly of those residing in the State; but if a State launches upon interstate trade a corporation which does not adequately protect its stockholders, and if, as has often happened in the past, the State attempts to give to such a corporation powers that it has no authority to confer, incalculable mischief is done to residents outside of the State that forms the corporation. This sort of thing has been done on a great scale in recent years. Perhaps, for the moment, it is done less now than of late; but what has been done once may be done again, if not in the same form then in some other equally disadvantageous to the public interest. We think that, in this connection, a permanent commission is needed to pass upon and follow up all questions arising under the license, just as the Federal Reserve Board passes upon all questions involving the compliance of the State Banks with the Federal statute.

The proposed bill recognizes that to install a Federal license immediately with reference to all interstate trade would be an undertaking so vast as to be beyond accomplishment. It therefore proposes that such a license be required only for the very large corporations engaged in interstate trade. Such an application of the plan is evidently practicable, and from the operation of it in the course of a few years it would become evident to what extent the system could be and should be enlarged. Any limitation of the application of the system must be arbitrary. This bill proposes a unit which it is believed would limit the application of the law to not fewer than two hundred and not more than five hundred corporations. The size of the unit to be affected by the bill is evidently a matter for discretion; but it is important to point out that every corporation coming within the scope of the bill would be controlled by the terms of the law, should the bill be placed upon the Statute book. The history of the Interstate Commerce Commission in its dealings with the railroads indicates how satisfactorily the system proposed can be administered, year after year. The Sherman Law needs for its administration precisely the same sort of board, for the very reason that its mandates are couched, and must be couched, to a great extent in general language. Only a commission can bring the significance of a general mandate home in detail to the person whom that mandate may affect. The proposed bill, therefore, instead of attempting to define certain practices as forbidden by the Sherman Anti-trust Law, relies upon the general language of the Interstate Commerce Law, which forbids any one to "make or give any undue or unreasonable preference or advantage to any particular person, company, firm, corporation or locality; or to subject any particular person, company,

(Concluded on page 20.)

SHALL THE GOVERNMENT OWN THE RAILROADS?

PRESIDENT LOW DISCUSSES NEW AND CRITICAL PHASES OF THE RAILROAD PROBLEM, AT ANNUAL MEETING OF THE NATIONAL CIVIC FEDERATION.

IN his opening address at the Fourteenth Annual Meeting of The National Civic Federation, President Low devoted his attention chiefly to recent developments in the railroad situation, in their bearing upon national policies and the menace of government ownership.

Referring briefly to the efficient and useful work of the several departments of the Federation, Mr. Low described the preparation and passage of the Newlands Arbitration Law as perhaps the most significant work which has been carried to completion during the past year. The history of the Federation's part in this achievement was given in some detail in the last number of the REVIEW, and with it an account of the first arbitration held under the new law, that between the eastern trunk line roads and the conductors and trainmen. By request of both the railroads and brotherhoods, Mr. Low acted as chairman of this arbitration, which brought under review practically the whole field of operating costs, revenues and conditions of service.

In addition to this adjustment, Mr. Low enumerated twelve other controversies which have been set tled or put in the way of settlement, through the United States Board of Mediation and Conciliation during the four months of the new law.

Arbitration is not necessarily a compromise, Mr. Low pointed out, but the fact remains that in the three principal arbitrations in the eastern territory the operating expenses of the roads have been heavily increased, and it is, of course, obvious "that a railroad cannot have its fixed charges indefinitely increased against its will unless it can at some time or another increase the rates which it will charge for service." Mr. Low then entered upon a discussion of these larger aspects of the problem as follows:

"The actual situation of the railroads, at the moment, seems to me so serious that, if this application for an increase of freight rates is declined, I fear the demand for the public ownership and operation of the steam railroads of the country will be inevitably strengthened. In a spirit of despair, men who know better will be apt to say, 'That is the only way'; and out of despair, I need not remind you, wise counsels seldom come. I make no apology, therefore, for pointing out briefly, on this occasion, some of the difficulties attaching to government ownership and operation of railroads in a country like ours, with a Federal government evolved as ours has been, covering half a continent. Such information as I can command leads me to believe that in Germany, France, Australia, Italy and Austria, the earnings of the state-owned railroads in each country barely equal, if they do equal, the sums paid in taxation by the railroads of the United States. The freight rates prevailing in those countries are uniformly higher, I believe, than the freight rates prevailing in the United States. In some cases they are more than double, but it is noticeable that the average passenger rate, disregarding the division by classes obtaining there, is lower in some, and, I think, in all, of those countries than here. This is largely due, no doubt, to the fact that the multitudes there travel third class, and are given accommodations that would not be acceptable here.

"It is needless for my purpose to pursue this comparison into detail. What I wish to point out is, that in our country, by reason of its vast extent and by reason of its Federal government, and its historic evolution, the problem of public ownership, and, not less, the problem of public operation, are surcharged with difficulties that do not exist under different conditions. Leaving out of account altogether the difficulty of securing wise and economic management under the democratic conditions prevailing in the United States, the first point to emphasize is the difficulty of acquiring effective control of the railroads even if desired. Most of the railroads, if not all of them, are incorporated by the different States. This means that every railroad is given the authority by each State to operate within its own borders, and that every such road is equipped with the right of eminent domain to condemn land for railroad purposes within such State. What authority is to compel the States, or rather, what appeal is to induce the people of the various States to permit the railroads to surrender State charters in favor of national ownership; and in addition to grant to the national government authority to equip railroads so chartered with the power of eminent domain in every State of the Union? Without such power of eminent domain it would be impracticable for railroads to be enlarged or for new roads to be constructed. If, on the other hand, each State were to absorb its own railroads, we should have a condition in this country out of which it would be impossible to bring effective unity of action and a railroad service operated for the general good. Imagine, for example, the New York Central Line from New York to Buffalo owned and operated by the State of New York and the Lake Shore & Michigan Southern owned and operated in fragments by the States of Pennsylvania, Ohio, Indiana and Illinois. Who can think for a single moment that the result in public service would be either adequate, economical or satisfactory? Moreover, if the national government, despite every difficulty, were to succeed in absorbing the railroads of the entire Union, every State would lose the control of its intrastate traffic that it now enjoys; and every State would lose all the income which it now collects from the railroads by taxation, because United States property is not subject to taxation in any State. Every State, therefore, in such a case, would be confronted with both an economic and a social problem, born of our Federal system, and the scale upon which these effects would be felt would greatly magnify the embarrassments.

"But, assuming for a moment that this great economic and social change had been sanctioned and actually put into force, try to imagine, if you can, how the conflicting interests of different parts of the United States could be harmonized when the same

SETH LOW,
President of The National Civic Federation.

government is responsible for railroad operation everywhere. The annual bill for the construction of public buildings for the Federal government has acquired the popular name of 'pork-barrel' because it is so universally recognized that appropriations for this purpose are made to gratify local sentiment and to promote the interests of individual congressmen more than upon the merits of the matter, as determined by careful inquiry. What possibility is there that the administration of a system of national railroads would be, or could be, carried on under our democratic government in any other spirit? And in what possible way could the general interest of the people of the United States, in the matter of transportation, be less well served? Furthermore, the political consequences of centering such power in Washington are beyond calculation . . . .

Our privately-owned railroads are themselves largely responsible for the strength of the popular feeling in the United States [in favor of government ownership] . . . No doubt, the rebate system, so long practiced, accounts for most of this feeling. Happily, by virtue of the Interstate Commerce Law and the creation of the Interstate Commerce Commission, that which was a nation-wide abuse has become a rare exception, and it will become more and more rare. In other words, without public ownership, but through public regulation, we have substantially secured equality of treatment at the hands of the railroads for every shipper, large or small, in whatever State he may be. . . .

"It is hard to speak with moderation of the financial abuses connected with railroad management which have done so much to create and to strengthen the demand for the public ownership and operation of railroads. The public has seen railroads loaded with charges for the profit of individuals responsible for the conduct of the roads, charges which add permanently to the cost of transportation. Increases of value, largely created by the public, have been absorbed entirely for private benefit; and all of this has gone on upon so great a scale and for so long a time as to have cost railroad management, to a great extent, but often unjustly, both the respect and the confidence of the people. It is a case where the innocent suffer with and for the guilty. If government regulation can successfully put an end to these evils no doubt private ownership and operation of railroads may long continue in the United States; but, if government regulation falls short of being as effective in these directions as it has fortunately been in the ending of rebates, the tendency toward government operation, despite all its difficulties and dangers, is not unlikely to grow, unchecked. If the railroads wish to escape public ownership they must consent to the public regulation, for the future, of the issue of stocks and bonds; and it is greatly to be hoped that instead of placing every imaginable difficulty in the way of such legislation, they will cordially co-operate to see that effective and fair legislation to prevent the repetition of the abuses of the past is quickly made a part of the law of the land.

One further observation is legitimate in this connection. If not completely, still very largely, the actual management of railroads in this country has passed, and is constantly passing, out of the hands of financiers and into the hands of practical railroad men who are less and less affiliated with the stock market. It is reasonable, therefore, to hope that we are passing out of the old era into a better order of things. The practical question also arises whether it is not better now to "let the dead past bury its dead" and to turn with united and courageous front towards the better future. An attempt to uncover all of the past, and to try to do ideal justice now for wrongs that were committed long ago, is certain to be very costly to the country as a whole, as well as to the unhappy stockholders, who, without personal fault, find themselves involved in such a predicament. Mr. Evarts used to say that "there are vested wrongs as well as vested rights," which was a wise man's way of saying that some wrongs are so costly to undo that it is better to leave things as they are and turn over a new leaf. . . .

"There is one aspect of public ownership and operation which it seems to me legitimate to point out to the railroad employees who are so largely represented in our membership, and that is its probable effect upon wages. Railroads that are publicly owned have available for wages only such sums as are appropriated by law. In a country of the vast extent of the United States that this difference is substantially certain in wages, as established by law, when they have once been fixed. Working conditions will also then be much more difficult to change than when the railroads are under private management. The cost of living is so different in different parts of the United States that this difference is substantially certain to be reflected in an average wage below that which the railroads can pay under private management. The agricultural interests of the country are enormous, and one of their greatest difficulties comes from the fact that agriculture cannot afford to pay as large wages as transportation and many other occupations pay now. This is, in fact, one great reason for the high cost of food products, that agriculture cannot command the labor that it needs in order to cultivate as it should, and to produce and to harvest larger crops. As long as railroads are privately owned, agriculture must take its chances; but, in this country, if railroads were publicly owned, the granges and other combinations of farmers would certainly be on the job to keep railroad wages as low as possible. They would have to be or they could not work their farms at all. There is a rigidity about law that makes it difficult to change conditions once established; and it is equally hard, under the provisions of law, to take into consideration local qualifying conditions. Such considerations as these satisfy me that railroad employees are not only better off now, under the private administration of railroads than they would be likely to be under public administration, but also that under existing conditions they can hope for a betterment in pay and rules of service which it would be vastly harder to realize from a Federal government constituted like ours."

CITIZENS AND OFFICIALS UNITE FOR BETTER FOOD REGULATION

THE NATIONAL CIVIC FEDERATION ORGANIZES A COMMISSION TO WORK FOR UNIFORMITY AND EFFICIENCY IN FOOD AND DRUG CONTROL

PRESIDENT SETH LOW of The National Civic Federation has named a Commission to make a study of the operation of the Federal and State food and drug laws. This action was taken in accordance with a resolution adopted at the recent annual meeting of the Federation after a discussion of the subject by experts on all phases of the problem.

The members of the Commission are as follows:

VINCENT ASTOR, Chairman, New York.
DR. CARL L. ALSBERG, Chief, Bureau of Chemistry, Department of Agriculture, Washington, D. C.
J. H. WALLIS, President National Association of State Food and Dairy Commissioners, Boise, Idaho.
DR. S. S. GOLDWATER, Commissioner of Health of the City of New York.
MISS MAUDE WETMORE, Chairman Woman's Department, The National Civic Federation, New York.
MRS. S. R. CROCKETT, Chairman Food and Drug Department, General Federation of Women's Clubs, Nashville, Tenn.
SAMUEL GOMPERS, President American Federation of Labor, Washington, D. C.
JOHN M. STAHL, of the Farmers' National Congress, Chicago, Ill.
DR. E. K. DUNHAM, Chairman New York Milk Commission, New York.
EDWARD N. BREITUNG, Ore Producer, Negaunee, Mich.

VINCENT ASTOR.

JOHN M. STAHL.

S. S. GOLDWATER.

The Federation believes that there is no public duty greater than the securing of pure food and pure drugs for the American people. The wealthy who are able to pay the highest prices are less likely to be imposed upon by purveyors of injurious or adulterated foods and drugs than the masses who have no other protection than that which is accorded by the Federal pure food and drug acts, the various State acts and the ordinances and regulations of municipalities.

While a very great improvement has been wrought in the situation since the passage of the Food and Drug Act in 1906, the administration of this and other laws and regulations by the Federal, State and municipal authorities is greatly hampered by the lack of sufficient inspectors and effective machinery to detect violations, and in some cases, it is alleged, by corrupt alliances between the officials and the manufacturers and sellers of rotten food-stuffs and adulterated drugs.

Recent exposures in different cities in this country indicate the far-reaching character of the violation of the food and drug laws. Not only have the poor been defrauded by adulterated and impure food, but they have been cheated in measurements and weights. The monthly bulletins issued by the United States Department of Agriculture describe hundreds of convictions secured annually by that Department (generally on the confession of guilt by the manufacturers or dealers), which are enough to arouse the indignation of all good citizens, and all the more so because of the utterly inadequate fines imposed by the courts.

The Federation was impelled to take up this question because of representations made to it showing the prevalence of these conditions. The representations came alike from large employrs of labor, who had felt it their duty to examine both the dinner pails of their workmen and the stores patronized by them, in order to prevent the employees from being robbed in quality or in weight in their food supplies, and from officials of labor organizations, who had made similar investigations with equally disturbing results. The Commission named by President Low will, as an initial step, make a survey of the situation for the purpose of ascertaining to what extent the people are being imposed upon in these respects.

In addition to studying the extent of misrepresentation the Commission will inquire into the need for additional Federal legislation and consider to what extent there should and can be uniformity between the law of the Federal government and the laws of the various States, as well as between the laws of the States themselves. There are organizations of food and drug manufacturers and of food and drug dealers who represent the best elements in both trades and who have signally assisted the efforts which have resulted in the enactment of better food and drug laws. They can be relied upon to contribute to the success of all legitimate endeavors towards the reform of existing conditions.

Dr. Carl L. Alsberg, in urging The National Civic Federation to appoint a Commission to study this question, said:

"There is one need in food control which is so vastly more important than all others that I propose to urge it alone upon your consideration. It is adequate sanitary and hygienic control of food.

"By the sanitary and hygienic control of foods I mean the prevention of traffic in foods dangerous to health. To prevent this traffic is far more difficult than to prevent mere fraud in food products. Fraud may usually be detected by a chemical analysis. The danger to health that may lurk in a food can easily be detected in this way unless, indeed, the food contain some simple poison like arsenic or lead. If, however, the food be manufactured in unsanitary surroundings, or if it be the bearer of tuberculosis, typhoid, measles, or scarlet fever, this can hardly be detected. Hence, in my opinion, foods such as milk and butter, meat, fish and shell fish, which are capable of this kind of contamination, should receive the greatest attention.

"The only safeguard against these sources of danger is inspection of the place of production and medical supervision of the workmen. It should be impossible, for example, for a dairyman with a case of typhoid in his family to ship milk.

"Obviously the exercise of such control of the sanitary conditions of food production is a task for the individual States. I would, therefore, urge upon you to use every effort to secure such sanitary control of food production in every State. I can conceive of nothing more important.

"If such a sanitary control is to be established, you must clearly understand that to be effective it must rest upon an adequate health service. Outside of our larger cities such a service is most unusual. Most small towns and rural communities are without adequate health protection. The greatest need of the country to-day is an adequate staff of well-trained, well-paid, full-time health officials in every county in every State. With this must go laws that are enforced for the recording of vital statistics of communicable diseases. Until all this is done there can be no adequate sanitary control of foods. Just so long as we do nothing for the health of our country people just so long will typhoid and similar diseases be imported into our city."

Mr. James H. Wallis, President of the National Association of State Food and Dairy Commissioners, in accepting a position on The National Civic Federation's Commission on Food and Drugs, said:

"There is not a food and drug official of experience who does not know that ninety per cent. of the violations of food and drug laws, both State and national, have been caused largely by the ignorance or carelessness of the manufacturer and not with a wilful intent to produce and dispose of adulterated and misbranded articles. Ten per cent, perhaps, of the prosecutions are against manufacturers who deliberately offer debased, deleterious, adulterated and misbranded foods and drugs, and as against this latter class of manufacturers the penalties provided in various laws have been woefully deficient. But how about those manufacturers who have sinned because of ignorance? Have we done our full governmental duty when we say, let the manufacturer beware, let him put out foods and drugs at his peril? Does not such a policy lose sight of the end sought to be attained, which is to secure as quickly as may be possible a pure food and drug supply for the people? Shall we not attain that result more quickly if we educate our manufacturers, show them how to produce pure foods in a cleanly manner, and spread information regarding methods of adulterating drugs, largely perpetrated by the foreign producer upon the American importer who buys in good faith?

"The great majority is honest. It is not right, it is not even politic, to confound the great mass of honest manufacturers with the sordid, dishonest minority. A distinction should be made. Increase the penalties against the dishonest and educate the honest.

"The food and drug control work in the United States is not fifty per cent efficient. This is startling, but it is true. Where is the trouble? How is it possible with a mass of food and drug legislation, with zealous, competent and honest officials attempting to enforce the laws, with generous appropriations, with public opinion strongly behind the work and with a friendly press and helpful judges, that there is not greater efficiency?

"The answer is found in defective organization and utter lack of correlation of several branches of what really is but one subject. The trouble has its root in the laws of the Federal government and in the laws of the States.

"This is where The National Civic Federation can help us food officials. We must secure basic changes in these national and State laws, and this association can help materially."

ANNUAL DINNER OF THE NATIONAL CIVIC FEDERATION

At the Hotel Astor, New York City.

THE ANNUAL DINNER A NOTABLE GATHERING

PROMINENT SPEAKERS EMPHASIZE THE ESSENTIAL DEMOCRACY OF THE NATIONAL CIVIC FEDERATION AS AN OUTGROWTH OF THE AMERICAN SPIRIT

ABOUT 800 members and guests of the Federation attended this notable function at the Hotel Astor on Friday evening, December 12. These gatherings have no counterpart in this or any other country as a democratic intermingling of men and women representing nearly every phase of industrial interest and all manner of civic and political viewpoints.

There was manifest through this unique diversity, as has always been the case upon these occasions, that spirit of unity for the common good in which lies the best possible augury of the safe and progressive development of American institutions.

At the conclusion of the dinner Chairman SETH LOW, in opening the speechmaking, called attention to various interesting aspects of the discussions that had been in progress during the day sessions of the annual meeting. Bearing especially upon the subject of social insurance, which is to be studied by a new department of the Federation, Mr. Low said:

"Mr. P. Tecumseh Sherman, who is one of the best informed men that I know of on the subject of social insurance, has pointed out that the philosophy underlying workmen's compensation requiring the burden of an accident to be borne by the industry, is one thing, while the idea of social insurance against sickness and the ills of life not related to industry in any direct way, is quite a different thing. I am happy to be able to say that Mr. George W. Perkins has accepted the chairmanship of our new Department of Social Insurance, so that the inquiry will be carried on by a man of great ability who is in complete sympathy with all that is best in our industrial life.

"I would like to suggest a single thought on this subject of social insurance. In 1877 and 1878 there was a great agitation in the city of Brooklyn on the subject of outdoor relief—aid given by the city to people living at home who needed assistance. Volunteers were called for to make visits on behalf of the Commissioner of Charities, and I happened to be one of them. In the course of my calls upon applicants for aid I visited a woman who had an apple stand near the ferry. Her room gave every evidence of comfort. It was neat as a pin, and there was no outward indication that she was in any need. I suggested this to her, and, as her eloquence did not seem persuasive, she went to the closet and handed me an apple. I said: 'Madam, if you are rich enough to give me an apple, you are not poor enough to be helped by the county.' Her daughter, who was there, said: 'Mother, he has got you.' Her whole attitude—and she very frankly expressed it—was that if anything was going she wanted her share.

"I quite recognize that social insurance is a very different thing from that, and I think a much better thing than the sort of aid that is given simply because people are poor. I confess that my spirit answers with a great 'amen' to the idea that the whole community act by some system of insurance in which those who are to be insured shall bear their part when they are strong and well; that we do something to preserve the self-respect of such people, and not only preserve their self-respect but make some adequate provision for their hours of sickness and for their old age. But I recognize, as indicated by that experience which I have just related to you, that there are qualities in human nature that are not easily changed, and I think that in our study of social insurance, in all its aspects, if we are to legislate wisely we must remember that human nature does not become strong simply by receiving gifts. It must itself co-operate in the results to be achieved, if the effect upon the individual is to be happy. In this matter, especially, we must not let our hearts run away with our heads."

The chairman's happy introductions of the several speakers and running comments upon incidental points in the discussion kept the great company in most genial mood throughout the evening, apart from the interest of the formal addresses, which are here summarized in brief.

The Future of the Woman's Department.

MISS MAUDE WETMORE, chairman: This is not the first time you have been asked to listen to the achievements of the Woman's Department of The National Civic Federation. The good work continues, and since we last met much that is new has been undertaken and is being carried to successful conclusion. The alleys of Washington, the Vacation Committee, with its 13,000 depositors, the investigation of mills and factories, the completed report on the schools of New York, and the partly finished one on the treadle occupations, all this work speaks for itself and needs no one to boast or brag in its behalf. Full details will as usual be found in our annual report.

What I am now about to ask is your attention to study, for a moment, the future of our Woman's Department. You may think me an enthusiast, but as an actual fact The National Civic Federation offers the women of this country the greatest opportunity for good this land has ever known. Here is an organization which knows no creed or class; any woman joining it can become a factor, no matter what her walk in life may be. The spirit of co-operation is in the air, and through it must succeed much that has failed in the past.

The close relationship which the Woman's Department has always entertained as regards the administration in Washington is a big factor in one part of our work, and its usefulness cannot be easily overestimated. The very real interest which Mrs. Woodrow Wilson has again and again shown us can only be really appreciated by those who for years have striven to make the Woman's Department what it is to-day. Mrs. Wilson, as Mrs. Taft in the past, has lately consented to become its honorary chairman.

[Miss Wetmore described the enlargement of the scope of the Woman's Department during the past year, and among the special phases of new work under way called attention to the prison problem, particularly the evils of contract labor and the lease system. The Woman's Department, in co-operation with the Prison Labor Association, is undertaking a far-reaching work for the reform of these conditions.]

This is a fair sample of national work, and it is in connection with national work that the Woman's Department asks your co-operation. You come from all parts of the country; you would not be here to-night if the solving of problems of this kind did not appeal to you. Have you ever thought what the getting together of organizations, all fighting for the same cause, would mean to a community?

Co-operation for a Larger Industrial Welfare.

FRANK P. WALSH, chairman of the National Commission on Industrial Relations: I consider it a privilege to speak to The National Civic Federation, which, if I catch its spirit, is attempting to perform the same work in its private sphere that our commission has been called upon by the President of the United States to perform in a public way. The thing that has impressed me most is the essential democracy of this organization, the welding together of all manner of views and all manner of men. It seems to me in a most significant manner to be a step in the great onward march of democracy.

The Federal Commission, of which I am a member, is about to enter upon its work with an open mind, coolly, dispassionately, to get the facts, to present them to you, and to your representatives in the State and national legislatures. We are required by the law to inquire into the formation of labor unions, into the construction of employers' associations, and into the relations of such organizations with each other. Of course, under this head come the subjects of collective bargaining, of vocational education, the application of laws affecting combinations in restraint of trade, the question of whether or not this country should adopt anything like the English trades' dispute act. It involves also an intensive study of all of the government agencies at present at work for the amelioration of industrial irritation, the work being done by the State labor bureaus and other organizations of a similar character. Our work, under the law, is to undertake to ascertain the cause of the industrial unrest. This, I take it, makes necessary an investigation of that great mass of unorganized labor engaged in seasonal occupations, an investigation of State employment bureaus, of the migrations of labor, of the militant organization of labor, represented in the syndicalist movement. We have conceived it to be our duty furthermore to investigate the attitude of capital and labor toward the law and the judiciary. Is it true that workmen as such have a contempt for organized society, as expressed through the judiciary? Is it true that those who come in conflict with them have the power of using the law in their own interest? It is the belief of the commission that there is a broad pathway for intelligent and honorable men to take; and our work is to make an investigation of both sides of these questions and a fearless recommendation to Congress of a remedy, if such a thing is possible, based on absolutely ascertained facts.

Justice to Employees in the City Service.

HON. JOHN PURROY MITCHEL, Mayor-elect of the City of New York: In casting about for the reason why I was honored by this invitation this evening, I concluded that perhaps you felt I would be especially sympathetic with the purposes of the Civic Federation because I come to you to-night myself as the result of a species of civic federation in this city—a federation of the forces of honesty and efficiency in government against the forces of corruption and maladministration. We must attack the tremendous task that is now before us with all of the energy we possess, with the firm purpose to carry out the program that we laid before the people in the campaign, and to fulfill to the letter the promises that we made.

Many of the great problems of capital and labor to which this Federation gives its attention are not found in the same form in the city government in which they are presented in private employment. But the fundamental problem common to both is that of giving to the employee a just and fair compensation for his labor, and in securing for the employer full and adequate return for the salaries that are paid. I hope to see New York become a model employer. The work of salary standardization has been more generally misunderstood than any undertaken by the present Board of Estimate. It was generally circulated that the purpose was to make wholesale reductions in the salaries of municipal employees. Quite the contrary. Our object was to establish standards of service and standards of pay that would secure to each municipal servant the assurance of a compensation based on his service and not on political pull, and to the people of the city a full measure of service for the salary paid.

The next administration will try to carry out that purpose by studying the work of each classified service in each department, and then measuring the compensation and adjusting it accurately to the work done. If we do that, the result will be that many a man who has found himself passed by for others who have been advanced over his head, not because of better service rendered, but because they had friends at court, will get in the future compensation that has been denied him in the past. And we shall find, too, that some men whose salaries have been fixed solely because of their friendship with some one influential in politics will be reduced to a sum more accurately related to the kind and character of service that they render.

When that work is done the great body of city employees will find nothing of which to complain, and the taxpayers and citizens will find that they are getting the kind of service to which they are entitled and that the expenses of the city government have been measureably reduced.

Labor's Share in the National Progress.

In presenting Mr. Samuel Gompers as the next speaker the Chairman said:

"The other day in Seattle Mr. Gompers was elected for the thirtieth time the president of the American Federation of Labor, and this year unanimously, the representative of that great body of organized workmen. Let me tell you one other thing about him. The last time that I spoke with Speck von Sternberg, the late German Ambassador to this country, he said to me: 'I look upon Mr. Gompers as a really great man. I read everything he says because it seems to me that his discussions of the labor question are truly philosophical,' and he added, 'that is the great question of the day in every civilized country in the world.'"

SAMUEL GOMPERS, president of the American Federation of Labor: It was my pleasure to be at the Seattle convention to which our president referred, and the work of that convention I submit, with my associates, to the judgment and to the conscience of the American people. It was of a constructive, humanitarian and patriotic character. It dealt not only with the every activity of the wage-working masses of America, but with the great questions of political economy, of sociology, of statesmanship, of human rights, of the policies which should be pursued by the States and by the nation. Although we may differ upon some details of the questions with which the convention dealt, I am sure

(Concluded on page 11)

RAPID GROWTH OF THE WOMAN'S DEPARTMENT

ORGANIZATION OF NEW SECTIONS IN CHICAGO, MILWAUKEE AND ST. LOUIS MARKS THE STEADY EXPANSION OF ITS WORK FOR NATIONAL CO-OPERATION OF SOCIAL AGENCIES

THE remarkable showing of growth and broadening activities of the Woman's Department, evidenced in the reports submitted at the annual meeting of the National Civic Federation, is further borne out by the energetic campaign of organization now under way in western cities.

During the month of January the president of the Department, Miss Maude Wetmore, in company with Mrs. Rogers H. Bacon, secretary; Miss Anne Morgan, treasurer, and Mrs. Lyndsay Van Rensselaer, executive secretary of the Woman's Council, met with groups of several hundred of the most representative women prominent in the social and civic life of Chicago, Milwaukee and St. Louis, and presented the work and aims of the Department.

In each case there developed an immediate and enthusiastic response to the central idea of the national co-operation of the many helpful agencies of women's work for social amelioration. It was pointed out that these movements in their several local fields are developing distinctive ideas and methods of social service which might be not only strengthened through larger co-operation, but also given a many-fold multiplied value through the interchange of ideas and experiences possible only by organized association in the national field.

Committees were formed in each of the three cities, and the resident officers are already enlisting a large membership of leading women interested in the program of social welfare which the Department is carrying forward. The motive of bringing to a focus the countless unrelated and often duplicating efforts of women of broad outlook and humanitarian impulse throughout the country—in brief, of making what is found most useful anywhere available everywhere—has been recognized wherever presented as a universal need and one of the most promising opportunities of the hour.

CHICAGO.

The Chicago meeting was called by Miss Jane Addams, whose attitude of working "not for but with people," was emphasized by Miss Morgan as the spirit of the democratic movement the Woman's Department seeks to establish. As the immediate outcome of the meeting, representatives were named from a large number of leading organizations and groups in the city, who in turn took the first steps towards permanent organization by the election of a temporary committee consisting of Mrs. Charles H. Betts as Chairman, Mrs. George Bass Vice-Chairman; Mrs. George A. Soden, Secretary; Mrs. Franklin E. Nelles, Treasurer; Mrs. Frederick C. Bartlett, Chairman of the Membership Committee, and Mrs. Benjamin Carpenter, Chairman of the Vacation Fund Committee.

MILWAUKEE.

In Milwaukee three crowded meetings were held in one day, attended by several hundred leading women of the city and State, and resulting in the formation of a section under the chairmanship of Miss Sherman, Chairman of the Committee of Wage Earning Women in the Central Council of Social Agencies. The work in Wisconsin is to have also the active co-operation of Miss Lundberg, Chief Factory Inspector, which means, of course, to the wide public familiar with Miss Lundberg's work, that the new movement begins with the most promising assurance of fruitful results.

ST. LOUIS.

In St. Louis the meetings for organization were arranged by and held under the auspices of Mrs. Philip N. Moore, former President of the General Federation of Women's Clubs; Mrs. Charles Nagel, wife of the former Secretary of Commerce and Labor, and Mrs. Markham. Some 350 were in attendance and a full working organization for Missouri was perfected, with the following officers:

Chairman, Mrs. Frank V. Hammar; Vice-Chairmen, Mrs. Elliott W. Major, wife of the Governor of Missouri; Mrs. David R. Francis, Mrs. Thomas K. Niedringhaus and Mrs. W. E. Fishel; Treasurer, Mrs. George F. Steedman; Secretary, Miss Florence Haywood; Executive Committee, Mrs. Charles Nagel, Miss Lionberger, Mrs. Henry Scott; Chairman Membership Committee, Mrs. Benoir; Chairman Vacation Committee, Mrs. John Tilden Davis.

Commenting editorially upon the organization of this movement, *The New St. Louis Star* said:

"The formation of a Missouri Branch of The National Civic Federation will be looked back upon in after days as one of the big accomplishments of the year 1914. * * * This big work has been successful in the East. It does not use militant methods. * * * The Federation works to bring employers and the women employed closer together for their mutual benefit. Looked upon with some distrust at first, in the States where branches now thrive, employers soon realized that anything which promoted the health and happiness of their employees increased in the same ratio the employees' efficiency. And so, the employers are now the most enthusiastic supporters of The National Civic Federation. * * *

"The splendid body of Missouri women who organized the State branch will see to it that The National Civic Federation in Missouri accomplishes as much if not more than it has in other States. To the employers of women in Missouri, *The New St. Louis Star* commends most heartily the newly organized branch of The National Civic Federation."

WORK IN THE EAST AND SOUTH.

The Woman's Department already has in its working organization sections in New York and New Jersey, Massachusetts and Rhode Island, the District of Columbia, Virginia and West Virginia, North and South Carolina, Georgia and Florida, Alabama and Mississippi. The addition of these principal cities in the middle west is a further step in the plan and intent to make the work truly national in extent as in spirit, affording, as Miss Wetmore declared in her address at the annual dinner of the Federation in December, "the women of this country the greatest opportunity for good this land has ever known."

NEW YORK AND NEW JERSEY.

In connection with the work of the Metropolitan Section (New York and New Jersey) a course of lectures has been given during the month of January, in continuation of similar courses during the past three winters. Miss Elisabeth Marbury is chairman of the committee in charge of these lectures, the first of which was delivered at the residence of Mrs. Reginald de Koven, by Mrs. J. Borden Harriman, of the Federal Commission on Industrial Relations, who described some of the problems the Commission is to investigate. The other lectures of the course were given at the Colony Club, by Miss Ida Tarbell on "Efficiency and Welfare." Mrs. Maud Ballington Booth on "Lights and Shadows of Prison Life," and Miss Jane Addams, of Hull House, Chicago.

The committee in charge of the vacation fund in New York consists of Miss Robinson Smith, Chairman; Mrs. August Belmont, Vice-Chairman; Miss Anne Morgan, Treasurer, and Miss Maud Rives Borland, Secretary. There is also an advisory committee of seven men, of which Mr. Henry W. Taft is Chairman. Under the auspices of the Vacation Committee, a building at No. 38 West Thirty-ninth street, together with two adjoining houses on Thirty-eighth street, has been opened as headquarters for the vacation work and a social center for the evening gatherings, entertainments, clubs, singing classes and other features of this rapidly developing idea. More than 700 people attended the housewarming reception at the new headquarters during the afternoon and evening of New Year's Day. Mrs. Frederick J. Brockway will be the director in charge of the work. As pointed out by Miss Wetmore in her report at the annual meeting of the Federation, the vacation savings fund in the Metropolitan Section has already 120 stations with 14,000 accounts; a total of more than $100,000 has been deposited by working girls in two years since the movement was organized.

DISTRICT OF COLUMBIA.

The work of the District of Columbia Section has been attracting national attention this winter, chiefly by reason of its extremely active campaign in behalf of the improvement of the alleys of Washington, a reform in which it has had the effective personal co-operation of Mrs. Woodrow Wilson, Honorary Chairman of the Woman's Department, and of Miss Margaret Wilson. Other matters which the District of Columbia Section is taking up are an educational campaign with reference to pure foods, and the more thorough supervision of prison management. In connection with the meetings of the District of Columbia Section, lectures or talks are being given, the first two in the series thus far having been delivered by Dr. Carl Alsberg, Chief of the Bureau of Chemistry of the Department of Agriculture, and Mr. E. Stagg Whitin, of New York, who launched the idea of a Federal Bureau of prison management.

Mrs. Archibald Hopkins has been elected Chairman of the District of Columbia Section; Mrs. Theodora North McLaughlin, Vice-Chairman; Mrs. J. W. Pilling, Secretary, and Mrs. J. F. Frazer, Treasurer.

MASSACHUSETTS AND RHODE ISLAND.

The work in Massachusetts and Rhode Island is developing the enthusiastic interest of a large and growing membership. In Boston and Worcester the Vacation Savings Fund is already firmly established. A course of lectures is in progress in Boston, under the auspices of the Lecture Committee, of which Mrs. Malcolm Donald is chairman. The speakers and topics for the course are:

Miss Gertrude Beeks, Director of the Welfare Department of The National Civic Federation, on "Women in Industry and the Social Evil."

Mr. John Graham Brooks, on "The Real Work of The Civic Federation."

Mr. E. A. Hartman, Secretary of the Massachusetts Civic League, on "The Relation of Housing to Industries."

Dr. David L. Edsall, on "Occupational Diseases."

The Executive Council of the Massachusetts and Rhode Island Section is made up as follows:

Mrs. George T. Rice, Chairman; Mrs. Charles S. Hamlin, Vice-Chairman; Mrs. Bradford Norman, Vice-Chairman; Mrs. Matthew Bartlett, Treasurer; Mrs. George R. Agassiz, Miss Mary S. Ames, Mrs. Harold Brown, Mrs. Spencer Borden, Jr., Mrs. W. Murray Crane, Mrs. T. James Bowlker, Mrs. George Crompton, Miss Helena Dudley, Mrs. Walter N. Eldridge, Mrs. L. Carteret Fenno, Mrs. Edwin Farnham Greene, Miss Alice W. Hunt, Miss Louisa Loring, Miss Ida Mason, Miss Elizabeth S. Porter, Mrs. Robert Russell, Mrs. Channing Simmons, Mrs. Eva W. White, Miss Mary C. Wiggin, Mrs. Robert A. Woods, and Mrs. Roger Wolcott.

NATIONAL OFFICERS OF THE DEPARTMENT.

The widening scope and influence of the work of the Woman's Department is further indicated by the list of officers and committee members elected at its annual meeting of December 11 and 12, held simultaneously with that of The National Civic Federation. Among the members of the Department from other States who were present at this meeting were Mrs. George T. Rice, Westwood, Mass.; Mrs. Roger Wolcott, Readville, Mass.; Mrs. Henry L. Higginson and Mrs. W. W. Vaughan, Boston, Mass.; Mrs. A. J. George, Brookline, Mass.; Mrs. Anna C. Bird, East Walpole, Mass.; Mrs. Rodman E. Griscom, Haverford, Pa.; Mrs. Bayard Henry, Philadelphia, Pa.; Mrs. Thomas S. Crago, Waynesburg, Pa.; Mrs. John McLaughlin, Mrs. Henry A. Packham, Mrs. Arthur Willett and Mrs. J. Nota McGill, Washington, D. C.; Mrs. G. Huntington Williams, Baltimore, Md.; Mrs. J. Allison Hodges, Richmond, Va.; Mrs. B. Frank Mebane, Spray, N. C., and Mrs. Albert Thornton, Atlanta, Ga.

The officers and committee members elected at the annual meeting are:

Officers and Executive Council.

Mrs. WOODROW WILSON, Honorary Chairman.
Miss MAUDE WETMORE, Chairman, Rhode Island.
Mrs. ROGERS H. BACON, Secretary, New York City.
Miss ANNE MORGAN, Treasurer, New York City.

Woman's Council.

Mrs. AUGUST BELMONT, New York City.
Mrs. AUGUSTUS P. GARDNER, Hamilton, Mass.
Mrs. MARY HATCH WILLARD, New York City.
Mrs. ROBERT W. LOVETT, First Vice-Chairman, Boston, Mass.
Mrs. CHARLES S. HAMLIN, Second Vice-Chairman, Washington, D. C.
Mrs. ALFRED E. BATES, Third Vice-Chairman, Washington, D. C.
Mrs. BAYARD HENRY, Fourth Vice-Chairman, Philadelphia, Pa.
Miss MAUD RIVES BORLAND, Fifth Vice-Chairman, New York.
Mrs. EVA McDONALD VALESH, Sixth Vice-Chairman, New York.
Mrs. FRANCIS McNEIL-BACON, Jr., Chairman Metropolitan Section for New York and New Jersey, New York.

Mrs. ARCHIBALD HOPKINS, Chairman, District of Columbia Section, Washington, D. C.
Mrs. J. ALLISON HODGES, Chairman, Virginia and West Virginia Section, Richmond, Va.
Mrs. GEORGE T. RICE, Chairman, Massachusetts and Rhode Island Section, Boston, Mass.
Mrs. CYRUS PITTMAN ORR, Chairman, Alabama and Mississippi Section, Birmingham, Ala.
Mrs. B. FRANK MEBANE, Chairman, North and South Carolina Section, Spray, N. C.
Mrs. JOHN K. OTTLEY, Chairman, Georgia Section, Atlanta, Ga.
Mrs. WILLIAM BROOKS YOUNG, Chairman Florida Section, Jacksonville, Fla.
Mrs. H. S. B. BEALE, Chairman, National Industrial Employees' Committee, Washington, N. C.
Mrs. HENRY K. PECKHAM, Chairman, National Government Employees' Committee, Washington, D. C.
Mrs. ROGERS H. BACON, Chairman, National Vacation Committee, New York.
Mrs. LYNDSAY VAN RENSSELAER, Executive Secretary, New York.

Executive Committee.

Mrs. GEORGE R. AGASSIZ, Boston, Mass.; Mrs. ARCHIBALD ALEXANDER, Hoboken, N. J; Mrs. AUGUST BELMONT, New York City; Mrs. HAROLD BROWN, Newport, R. I.; Mrs. ORTON B. BROWN, Berlin, N. H.; Mrs. ANDREW CARNEGIE, New York City; Mrs. E. W. COLE, Nashville, Tenn.; Mrs. W. MURRAY CRANE, Dalton, Mass.; Mrs. WILLIAM H. CROCKER, Burlingame, Cal.; Mrs. GEORGE, CROMPTON, Worcester, Mass.; Mrs. ARTHUR M. DODGE, New York City; Miss ISMAY DOOLY, Atlanta, Ga.; Mrs. WALTER ELDRIDGE, Newport, R. I.; Mrs. L. CARTERET FENNO, Rowley, Mass.; Mrs. AUGUSTUS P. GARDNER, Hamilton, Mass.; Mrs. EDWIN FARNHAM GREENE, Boston Mass.; Mrs. LINCOLN N. KINNICUTT, Worcester, Mass.; Mrs. OVERTON LEA, Nashville, Tenn.; Mrs. ARTHUR LEE, Elkins, W. Va.; Mrs. V. EVERIT MACY, New York City; Miss ELISABETH MARBURY, New York City; Mrs. MARCUS M. MARKS, New York City; Mrs. LAWRENCE MAXWELL, Cincinnati, Ohio; Mrs. CHARLES F. MEYER, New York City; Mrs. BOWMAN H. McCALLA, Washington, D. C.; Mrs. CYRUS H. McCORMICK, Chicago, Ill.; Mrs. MEDILL McCORMICK, Chicago, Ill.; Mrs. J. NOTA McGILL, Washington, D. C.; Mrs. A. F. McKISSICK, Greenwood, S. C.; Mrs. WILLIAM F. McKNIGHT, Grand Rapids, Mich.; Mrs. JOHN McLAUGHLIN, Washington, D. C.; Mrs. GILBERT MONTAGUE, New York City; Mrs. PHILIP N. MOORE, St. Louis, Mo.; Mrs. LINDSAY PATTERSON, Winston-Salem, N. C.; Mrs. SAMUEL SPENCER, Washington, D. C.; Mrs. OSCAR STRAUS, New York City; Mrs. W. WARD THORON, Colorado Springs, Colo.; Mrs. EDMUND LEIGHTON TYLER, Anniston, Ala.; Mrs. RICHARD WAINWRIGHT, Washington, D. C.; Mrs. BENJAMIN I. WHEELER, Berkeley, Cal.; Mrs. ARTHUR WILLERT, Washington, D. C.; Mrs. G. HUNTINGTON WILLIAMS, Baltimore, Md.; Mrs. TALCOTT WILLIAMS, New York City; Mrs. ROGER WOLCOTT, Readville, Mass.

AN INTERNATIONAL CONGRESS ON SOCIAL INSURANCE

THE plans which have been in formation during the past two years for the first meeting in America of the International Congress on Social Insurance have reached the stage of permanent organization. This Congress was established as a result of the legislation in Germany, followed by other countries, establishing insurance of workmen against accidents, sickness, invalidity and the like. It is primarily an official body, composed of delegates of the various governments of the world; but others who are interested in the subject may become members and, subject to such rules as may be adopted, are permitted to take part in discussions.

The International Congress was invited to hold its next meeting in the United States by President Taft, under a special authorization of Congress, which also made an appropriation toward the expenses, which must, however, be provided for chiefly by means of subscriptions.

The Congress will meet in Washington in October, 1915. The Committee on Organization is composed of 120 members selected from different parts of the United States on account of their prominence in connection with matters related to social insurance or on account of their well-known interest in the subject. They are representative of all classes in the community, employers and employed, professional and business men, professors, insurance men, etc., with a view to enlisting as broad an interest as possible. This committee, at a meeting held at the Union League Club, New York, recently, elected the following general officers:

Honorary Chairmen

Hon. Wm. G. McAdoo, Secretary of the Treasury, Washington, D. C.
Hon. Wm. C. Redfield, Secretary of Commerce, Washington, D. C.
Hon. Wm. B. Wilson, Secretary of Labor, Washington, D. C.

Chairman

Hon. Franklin MacVeagh, Ex-Secretary of the Treasury, Washington, D. C.

Vice-Chairmen

Hon. Royal Meeker, Commissioner of Labor Statistics, Washington, D. C.
Miss Jane Addams, Chicago.
Samuel Gompers, President American Federation of Labor, Washington, D. C.
Miss Anne Morgan, Treasurer Woman's Department, The National Civic Federation, New York.
Dr. Wm. H. Tolman, Director American Museum of Safety, New York.
Hon. C. H. Crownhart, Chairman Industrial Commission, Madison, Wis.
Hon. A. J. Pillsbury, Chairman Industrial Accident Commission, Piedmont, Cal.
Hon. Floyd L. Daggett, Chairman Industrial Insurance Commission, Olympia, Wash.
Hon. Wallace D. Yaple, Chairman Industrial Commission, Columbus, Ohio.

Secretary-General

Miles M. Dawson, Consulting Actuary, New York.

Treasurer

Arthur Williams, Chairman Public Policy Committee, National Electric Light Association, New York.

Executive Committee

Edward T. Devine, Chairman, Professor of Social Economy, Columbia University, New York.
Louis D. Brandeis, Attorney-at-Law, Boston, Mass.
Robert Lynn Cox, President of National Association of Life Insurance Presidents, New York.
Miles M. Dawson, Consulting Actuary, New York.
Ralph M. Easley, Chairman Executive Council, The National Civic Federation, New York.
Henry W. Farnam, Professor of Economics, Yale University, New Haven, Conn.
Lee K. Frankel, Vice-President Metropolitan Life Insurance Company, New York.
Samuel Gompers, President American Federation of Labor, Washington, D. C.
Frederick L. Hoffman, Statistician, Prudential Insurance Company of America, Newark, N. J.
Edward M. House, Publicist, Austin, Texas.
John E. Kinnane, Chairman Industrial Accident Board, Lansing, Mich.
Julius Kruttschnitt, Chairman Board of Directors, Southern Pacific Railway Co., San Francisco, Cal.
James A. Lowell, Chairman State Commission on Compensation for Indust'l Accidents, Boston, Mass.
Royal Meeker, Commissioner of Labor Statistics, Washington, D. C.
John Mitchell, Former President United Mine Workers of America, Mount Vernon, N. Y.
Miss Anne Morgan, Treasurer Woman's Department, The National Civic Federation, New York.
Charles P. Neill, Director and Chairman of Labor Committee, American Smelting and Refining Company, New York.
George Pope, President National Manufacturers' Association, Hartford, Conn.
W. H. Powers, President National Fraternal Congress of America, Washington, D. C.
Mrs. Raymond Robins, President National Woman's Trade Union League, Chicago, Ill.
Henry R. Seager, President American Association for Labor Legislation, New York.
William H. Tolman, Director The American Museum of Safety, New York.
Frank P. Walsh, Chairman Commission on Industrial Relations, Kansas City, Mo.
Arthur Williams, Chairman Public Policy Committee of the National Electric Light Association, New York.
H. E. Wills, Assistant Chief, Brotherhood of Locomotive Engineers, Washington, D. C.

Congresses on this subject have been held now for twenty-five years. The International Permanent Committee, with headquarters in Paris, celebrated in October of this year the anniversary of the first meeting held in Paris in 1889. Since then Congresses have been held in Berne, Milan, Brussels, Paris, Dusseldorf, Vienna and Rome, besides conferences at The Hague, Dresden, Zurich and Ghent.

The European membership of the Congress embraces the leading experts upon all phases of the subject in the different countries of Europe. They have conferences annually and are all kept in touch with what is going on through a Quarterly Bulletin published by the International Permanent Committee, of which M. Raymond Poincare was chairman

(Concluded on page 13.)

THE ANNUAL DINNER.

(Concluded from page 9.)

that it will challenge the best judgment of the best men and the best women of our country, as being conductive to the welfare of the people as a whole.

In becoming members of this National Civic Federation no one surrenders his right of judgment and of action. It is an effort to try and find a middle ground upon which men and women of all sorts and notions may unite in a common effort for the common good. It has been my pleasure to be associated with its work since its foundation, and with the men who have given it character and purpose. I am not given to flattery, but I do want to take advantage of this opportunity of saying that in my judgment no man is better fitted for its leadership than our honored President, Mr. Seth Low. Experience, disposition, character, temperament, all have combined in making him the ideal president of our Federation.

May I indulge myself with a few words in regard to the question of free assemblage and free speech? Of course we know that if free assemblage is carried to "the limit" it is likely to sometimes inconvenience us, but it is equally true that freedom enjoyed and exercised brings with it a greater degree of conscious responsibility, and of responsiveness to the general good. It is better even that we suffer inconvenience sometimes than it is to close down the throttle and sit on the valve.

It is something not yet fully understood how perfectly safe freedom is. This is a republic in which the people are supposed to be sovereigns. Sovereignty implies responsibility, experience, education, knowledge. Without these it is impossible to conduct for any great length of time a government founded upon the consent of the governed. May I express this fervent wish: That this republic of ours may not only be the haven of religious and political liberty, but that it may inaugurate an industrial freedom that shall be in truth a chart and a guide in civilization for the people of the whole world.

The National Civic Federation an Outgrowth of the American Spirit.

TALCOTT WILLIAMS, Director of the School of Journalism, Columbia University: The existence of The National Civic Federation and the fashion in which it has drawn together in this hall those who represent every phase of American life, is possible not because of the Federation, not even because of the reconciling voice and constant labors for the public good of its President, but because the very atmosphere of American institutions brings men and women together, seeing eye to eye, forgetting everything except that they are Americans and have a common country to serve.

Such a Federation comes into being here and does its work without government sanction, because this is the land of initiative and individual opportunity, and every man feels at heart what Lincoln said was the test of democracy: "Not, I am as good as you are, but you are as good as I am."

[Dr. Williams noted briefly the varied activities of the Federation since its inception and the far-reaching results of the service rendered in many fields. Outlining the scope of the national survey of industrial and social progress, to be undertaken by the Federation, he stated some of his own impressions of the conditions a thorough and impartial inquiry of this nature is likely to show.]

I believe it will furnish facts which will end the declaration that the rich are growing richer and the poor growing poorer. I believe it will be shown that the savings of the poor have quadrupled while the population grew one-half; that the increase of the owners of property has gone on at a rate which, in a great corporation like the Steel Trust, makes those who own its shares more numerous than those who labor for it, as is true also of many of our railroads to-day. And I believe the child is living to-day who will see in this nation so universal a distribution of property that, while at present half the families of the United States live in homes that they own, and at least 60 per cent. own property which returns them an income, it will be the exception that a family has not property enough to be secure against the future, and it will come to be literally true that no man or woman who desires to work within the limits of the United States is without the opportunity. I think it will be shown without question that during the last thirty years there has been an advance in the comforts of the home, in the education of the child, in the protection of both women and children, in the diffusion, not alone of the necessities but of the joys of life. These advances have come through the work, not of one, but of the American people as a whole.

D. L. CEASE, Secretary.

EXECUTIVE COMMITTEE.

On the Part of the Public:

WILLIAM HOWARD TAFT (President American Bar Association), New Haven, Conn.
FRANKLIN MacVEAGH (former Secretary of the Treasury), Washington, D. C.
ELIHU ROOT (United States Senator), New York City.
ANDREW CARNEGIE (Philanthropist), New York City.
JAMES SPEYER (Speyer & Co.), New York City.
FRANCIS LYNDE STETSON (Attorney), New York City.
ROBERT M. THOMPSON (Chairman Executive Committee Navy League), Washington, D. C.
V. EVERIT MACY (Capitalist), New York City.
VINCENT ASTOR (Capitalist), New York City.
WALTER GEORGE SMITH (former President Conference of Commissioners on Uniform State Laws), Philadelphia, Pa.
ALBERT SHAW (Editor "Review of Reviews"), New York City.
THEODORE MARBURG (Political Economist), Baltimore, Md.
JEREMIAH W. JENKS (Professor of Government, New York University), New York City.
TALCOTT WILLIAMS (Director of the School of Journalism, Columbia University), New York City.

On the Part of Employers:

WILLIAM D. BALDWIN (President Otis Elevator Co.), New York City.
WILLIAM C. BROWN (former President New York Central Lines), New York City.
GEORGE B. CORTELYOU (President Consolidated Gas Co.), New York City.
OTTO M. EIDLITZ (Building Trades Employers' Association), New York City.
ADOLPH LEWISOHN (International Smelting and Refining Co.), New York City.
SAMUEL MATHER (Pickands, Mather & Co.), Cleveland, Ohio.
OGDEN L. MILLS (Director International Paper Co.), New York City.
LEWIS W. PARKER (President The Parker Cotton Mills Co.), Greenville, S. C.
GEORGE M. REYNOLDS (President Continental and Commercial National Bank), Chicago, Ill.
HERMAN RIDDER (President New York Staats Zeitung Corporation), New York City.
J. G. SCHMIDLAPP (Banker), Cincinnati, Ohio.
LOUIS B. SCHRAM (Chairman Labor Committee, United States Brewers' Association), New York City.
FRANK TRUMBULL (Chairman Board of Directors, Chesapeake & Ohio Railway), New York City.
THEODORE N. VAIL (President American Telephone and Telegraph Co.), New York City.
HARRIS WEINSTOCK (Weinstock-Nichols Co.), San Francisco, Cal.

On the Part of Wage Earners:

SAMUEL GOMPERS (President American Federation of Labor), Washington, D. C.
WARREN S. STONE (Grand Chief International Brotherhood of Locomotive Engineers), Cleveland, Ohio.
JAMES DUNCAN (President Granite Cutters' International Association of America), Quincy, Mass.
JAMES M. LYNCH (former President International Typographical Union), Indianapolis, Ind.
A. B. GARRETSON (President Order of Railway Conductors), Cedar Rapids, Iowa.
W. G. LEE (President Brotherhood Railroad Trainmen), Cleveland, Ohio.
WILLIAM D. MAHON (President Amalgamated Association of Street Railway Employees of America), Detroit, Mich.
TIMOTHY HEALY (President International Brotherhood of Stationary Firemen), New York City.
W. S. CARTER (President Brotherhood Locomotive Firemen and Enginemen), Peoria, Ill.
JOHN GOLDEN (President United Textile Workers of America), Fall River, Mass.
WILLIAM A. COAKLEY (President International Lithographic Press Feeders' Protective Association), New York City.
DANIEL J. TOBIN (President International Brotherhood of Teamsters), Indianapolis, Ind
JOHN F. TOBIN (General President Boot and Shoe Workers' Union), Boston, Mass.
JOSEPH F. VALENTINE (President International Molders' Union of North America), Cincinnati, Ohio.
DENIS A. HAYES (President Glass Bottle Blowers' Association of United States and Canada), Philadelphia, Pa.
T. V. O'CONNOR, President International Longshoremen's Association, Buffalo, N. Y.

AND MEMBERS OF EXECUTIVE COUNCIL.

A Great Meeting The Fourteenth Annual Meeting found The National Civic Federation carrying on in many directions work of increasing magnitude and national significance. The bare recital of results achieved in the fields of industrial conciliation, workmen's compensation, trust regulation, control of municipal utilities, welfare work, reform in legal procedure, and in behalf of the many humanitarian causes engaging the attention of the Woman's Department, make a total presentment of social service such as has been possible at no previous annual stocktaking of this character. Very little of this, indeed, could have been foreseen by any of the public-spirited citizens who united fourteen years ago to try the experiment of replacing the narrow and partisan treatment of our common problems by a patriotic co-operation of the best minds and most representative leaders in all our civic and industrial groups. The results are an impressive demonstration that just such an unprecedented grouping was a prime need of American public life at that time, and by the same sign never more so than to-day.

Report of the Compensation Commission The report now in press of the Joint Commission, which has been studying the workings of compensation laws throughout the country, will make a volume of some 200,000 words, dealing with every significant phase of the development of this great movement in theory and in practice. On another page will be found Chairman Phillips' description of the extent and character of this investigation. The net results of the work will have a two-fold value. It will make clear the comparative fruits of our most significant experience in this country on the subject, and in so doing it will also enable public opinion, in quarters where the movement has made little or no headway, to select the most available and successful features of compensation legislation and work for their enactment from the standpoint of knowledge rather than of experiment.

To Study Social Insurance The investigation of the subject of social insurance upon which The National Civic Federation is entering is a logical continuation and expansion of the study it has been giving for several years to the most important phase of this problem, through its Department of Wage Earners' Insurance. The fact that Mr. George W. Perkins, chairman of this department, will have the direction of the work in the broadened field, gives assurance of substantial results. It means, as President Low expressed it in his remarks at the annual dinner, "that the inquiry will be carried on by a man of great ability, who is in complete sympathy with all that is best in our industrial life." It is expected that the investigation will include a study of European experiments in social insurance by a commission of four experts, to go abroad during the coming season for that purpose.

The question of how far and in what manner provision of relief for causes of disability of a general, rather than directly occupational, nature may be afforded under American conditions is fraught with many difficulties, demanding exact knowledge of the workings of foreign experiments, and of the attempts to meet the situation which have been made by many industrial corporations in this country. It will require also for its wise solution the thoughtful judgment of economists and men of affairs, familiar with the temperament as well as the needs and social habits of our own cosmopolitan population. The Federation's inquiry in this field has, by the way, a peculiar timeliness in view of the approaching International Congress of Social Insurance, which is to meet in Washington in October, 1915. By that time it is believed the nature and scope of the problem in this country may be given a much more adequate presentation than has been possible thus far or is possible to-day.

Baseless Charges Refuted. The hard pressed socialist faction in the trade union movement is apparently growing desperate over its continued failure to gain control of the American Federation of Labor. The attempt to make an issue of the alleged personal habits of Samuel Gompers is the latest outbreak of wrath in that quarter, a line of attack everywhere recognized as confession of defeat. So far as concerns the charge itself, made by a delegate to the recent Indianapolis convention of the mine workers, that President Gompers was intoxicated during the A. F. of L. convention last November, the testimony of R. C. McCormick, proprietor of the New Richmond Hotel in Seattle, if indeed any testimony were needed, may be regarded as sufficiently conclusive. Mr. McCormick, in the course of a public statement on the subject, says:

"I know positively that Mr. Gompers never was intoxicated during his stay in Seattle, and I know further that no complaint was made to the night manager that there was unseemly disturbance in his rooms. . . . I consider McDonald's statement malicious in the extreme and probably based on the disagreements that arose here on the convention floor, echoes of which were heard about the hotel during the entire convention."

A Socialist Challenge Squarely Met. The "challenging" habit of some of our socialist friends, especially of the free-lance variety, has apparently received a rude setback in the recent open correspondence between Upton Sinclair and Vincent Astor. As a means of getting publicity for long expositions of socialist ideas it was a line of propaganda that seemed to promise much, on the assumption, of course, that "capital" has no answer to the economic theories of the cult and is debarred by its very position from casting any doubt upon the extraordinary picture of industrial society as it is not, upon which the demand for revolution is based. Least of all have any of these cocksure gentlemen imagined that any conspicuous capitalist himself would come into the open with a frank and broad-minded discussion of the issues.

But in his last "trouble hunting" excursion Mr. Sinclair found that this is precisely what one of them was perfectly ready to do. What is more, for another unforeseen result the Sage of Halcyon Hall emerges from the encounter much the worse for having sought it and roundly scored by other leading lights of socialism for getting outside the breastworks without a safer intellectual equipment. Morris Hillquit, for instance, the recognized head of the Socialist Party in New York, has not only repudiated the Sinclair tale of increasing misery, but frankly acknowledges in the main the improvement in working class conditions shown by the testimony of labor itself, to which Mr. Astor refers in his reply.

In calling upon Mr. Astor to join the socialist movement the zealous Sinclair neglected to furnish any concrete definition of what the movement is or what it actually proposes. This program, however, Mr. Astor says he finds, from his study of socialist literature, boiled down in the following statement by Mr. Hillquit, which comes at least from an authoritative source:

"Stated in more concrete terms, the socialist program requires the public or collective ownership and operation of the principal instruments and agencies for the production and distribution of wealth—the land, mines, railroads, steamboats, telegraph and telephone lines, mills, factories and modern machinery. This is the main program and the ultimate aim of the whole socialist movement and the political creed of all socialists. It is the unfailing test of socialist adherence, and admits of no limitations, extension or variation. Whoever accepts this program is a socialist, whoever does not is not."

It so happens that in common with many thousands—the great majority, in fact—of men of large interests, Mr. Astor is personally interested in various lines of social and civic work, and in some of these has become associated with many of the leaders of the great trade and railroad labor organizations. Not one of these, he tells Mr. Sinclair, "accepts your philosophy as a cure for the evils which we all recognize and deplore." In evidence of this he sends with his reply copies of the American Federationist, the official organ of the American Federation of Labor, for September and October, 1913, and January, 1914, containing the record in great detail of the actual improvement in the various crafts and the gains in National and State legislation during 1912. He calls attention further, as most impressive of all, to the following statement by the Executive Council of the Federation of Labor in its report to the annual convention in Seattle last December:

"Not only has there been progress made in numbers, but for the increasing numbers there have been increase in wages, shortening of the workday, improvement in sanitary and general conditions under which the work is done, better protection for the life and health of the workers. These are fundamental factors in determining the standard of living prevailing. There can be no question of the statement that the general standard of living among Americans has been raised year after year. The things which to-day are held to be necessities were deemed luxuries a decade ago."

"These," Mr. Astor comments, "are the views of men who speak with knowledge and authority for millions of American wage earners"—a right, by the way, which they have yet to confer upon their various volunteer spokesmen of the Sinclair fraternity. Mr. Astor confesses himself unable to see how any one could read such a statement and still assert that we are "moving to-day with the speed of an avalanche into one of the most terrific cataclysms in the history of mankind."

Neither, it is safe to say, could Mr. Upton Sinclair, but for the relative insignificance of facts to the socialist mind.

DOCTOR BABSON AND HIS I. W. W. NIGHTMARE

WE have recently received a letter from a manufacturer in Chicago who seems to be almost scared out of his wits about the terrible things that are going to be done to this country by the Industrial Workers of the World. He enclosed a clipping describing a speech recently made in that city by a university professor, which seems to have been the cause of the gentleman's alarm.

Another recent outbreak on this subject is from Roger W. Babson, a financial writer who has been occupying many pages of valuable space in newspapers and magazines with his voluminous disquisitions, tables and charts. This gentleman, it seems, furnishes financial letters to bankers. In a recent one, after describing the destructive character of the I. W. W. and explaining that their aim is the ultimate ownership of factories, banks, stores and all other industries by the workers themselves, he coolly announces his belief that they are right and will win, and advises the manufacturers and bankers to get in line with the idea that all they have is soon to be confiscated by the workers. He says:

"The great fundamental question between capital and labor will never be settled by arbitration boards nor through the joint control of industries by representatives of labor and capital. One of these two opposing interests must and will ultimately rule. Wise are the bankers, manufacturers and investors who recognize that it will be labor which is to rule. If so, that means that labor must ultimately acquire the industries, as capital will not much longer rest content with present conditions. The Industrial Workers of the World state frankly that ultimately there can be but one head—either capital or labor must rule—and that we are to see a fight to the finish. I regret to admit it," says the learned doctor, "but I nevertheless believe that the I. W. W. theory is the more correct, and many great manufacturers reluctantly agree."

In other words, capitalists are becoming so dissatisfied with their present condition that they are willing to have the syndicalists, anarchists, I. W. W., Babsons, Haywoods and Ettors seize their property and operate it for them. Undoubtedly this would make these capitalists feel considerably relieved, if not entirely so. And yet this gentleman is selling to supposedly hard-headed business men letters containing this advice. It might be remarked that a banker who has no more sense than to pay for such stuff ought to be relieved of his property because he has already been relieved of his common sense.

It might be interesting for Doctor Babson and the sympathetic editors, writers and social workers, as well as our manufacturing correspondent from Chicago, who have become so alarmed over this terrible power, to look inside where "the wheels go round." Just how big is this giant of destruction? Tom Mann, the English syndicalist, who has just completed a twenty-two weeks' visit to this country to study the question, covering the territory from Maine to California, confesses his sad disappointment at finding that there were only 14,000 members in the I. W. W. organization, as shown at the national convention last September, and adds: "Does not the case call for inquiry as to whether the present lines are the right ones?"

Speaking of the delegates to this same convention, who are described as "having arrived in special cars, cattle or box," Ben L. Reitman, the King of the Hobos, himself a delegate, says:

"As I sat in the hot, stuffy, smoky room of the convention hall day after day, and heard the discussions, and saw how little regard the delegates had for grammar and the truth, and realized that most of the delegates knew as much about the real labor movement as they did about psychology, and that they cared little about the broad principles of freedom, and did not have a vision of a new society, where the worker would enjoy the fruit of his labor in freedom and beauty, I marvelled at the big things the I. W. W. have done during their short career. And I said to myself, 'God, is it possible that this bunch of pork-chop philosophers, agitators who have no real, great organizing ability or creative brain power, are able to frighten the capitalistic class more than any other labor movement ever organized in America?'"

But a better statement than that of Tom Mann as to the utter impotency of the I. W. W. as an organization and the causes for such impotency may be found in the following editorial, which appeared in *Solidarity*, the official organ of the I. W. W., about the time that Mr. Babson was sending his lucubrations to his banker subscribers:

"If the Industrial Workers of the World is going to organize the working class then we will have to make a great change in our attitude toward the labor movement and in the methods that we are now using. At present we are to the labor movement what the high diver is to the circus. A sensation, marvelous and nerve thrilling. We attract the crowds. We give them thrills, we do hair-raising stunts and send the crowd home to wait impatiently for the next sensationalist to come along. As far as making Industrial Unionism fit the everyday life of the workers we have failed miserably. The crowd expects the sensational from our speakers or organizers; the members expect it, and our speakers, if they intend to remain as such, have got to supply them or go out of business. We measure the success or failure of our speakers by the number of spectacular stunts that they are able to pull off. It is child's play to stand in front of some factory and convince the slaves that they have a grievance. Capitalism is generous in that respect. The speaker sheds tears over their misery, he opens the floodgates of sentiment, and, lo, Mr. Speaker becomes a strike leader. With cheap phrases and flowery language the strike leader appeals to the emotions of the crowd, lashing them into a religious frenzy, for he knows well that if he ever allows the strikers to cool down the boasted solidarity will disappear and the men will crawl back into the factory. Take the speaker away from the strike and it will go up in smoke unless the workers or some part of them have been previously organized. Arrest the speaker or strike leader and the crowd will remain firm until another one gets on the job. The new speaker does not have to know anything about the shop conditions to make good. He raves about persecution and the brutality of the police. It is surprising how you can revive the dying enthusiasm of a crowd by a tirade against the police or the army.

"While the crowd is still enthusiastic we take in many members, many of whom would just as soon join the Salvation Army as the Industrial Workers of the World, providing that the S. A. had sense enough to use the same cheap weapons that we are forcing our speakers to use. To stampede a bunch of slaves who are working for $1.62 per day is easy, and spectacular. . . .

"Had we kept as many organizers in Lawrence after the strike as we had during the strike we would have an organization that could carry on the next battle without the aid of press agents or sensationalists. In Akron it was the same story; the members cried for sensation; Haywood was sent for. He filled the bill, but after the strike was over every organizer was called to other points to supply the thrills called for by the rank and file.

"Not one was left to build up an organization in Akron.

"It is getting to be a habit, and the speakers are catering to it. In Pittsburgh I heard one of our principal speakers give voice to the following: 'Do you think that I am going to come here and talk to 200 people when I can stay in New York and talk to 10,000 people direct and have my speeches carried to thousands more by the capitalistic press?' The poison of sensationalism had entered his veins. . . . Let the hated capitalistic press give a front page column to the antics of some organizer and he immediately becomes the god of the leaderless rank and file. The cheapest gallery play, idle threat or giant boast is applauded by the members.

This ought to jar the good Dr. Babson's philosophy, and the last paragraph should also furnish the answer to Mr. Ben L. Reitman's question as to why "this bunch of pork-chop philosophers" are able so to frighten the capitalist class. But Dr. Babson is not the only one who has been thus "flim-flammed" by this terrible bogey man. The organ of the charity workers is so pleased with itself for having published so many sympathetic articles on syndicalism that it recently boasted in its columns of having done so; and one of its board of editors, a woman, wrote a ten-page article, sympathetically explaining the sabotage, violence and murder proposals of the Industrial Workers of the World.

A large number of the religious publications of the country have been making it a point to give space to the exploitation of "this great movement for the men lower down, who are shut out from the real labor movement because of its high dues and aristocratic tendencies." It is a favorite allegation of these writers, the falsity of which could easily be ascertained by a most superficial study, that the big labor organizations of the country are devoted to the interests of the high class mechanic. They glibly talk of "industrial unionism," without the slightest suspicion of what it would mean to society if worked out along I. W. W. lines. By "industrial unionism" these people mean "one big union" of all classes of labor in any one establishment. In a printing office, for example, the compositors, stereotypers, pressmen, delivery wagon drivers, scrubwomen, office boys, reporters and editorial writers, all would be thrown together in a single aggregation, with the certainty of endless wrangling among themselves, the magnifying of petty grievances and the paralysis of order and efficiency in the running of the business.

If these writers want to learn the truth about the syndicalist movement they need only study the syndicalist (I. W. W.) newspapers throughout the country—that is, those that are still in existence—and they will find that the organization, instead of becoming an important feature in the industrial life of the country, is already "shot to pieces" and has now become almost a negligible factor in the industrial situation. At the annual convention in Chicago last September, referred to by Ben L. Reitman, the delegates spent two weeks fighting the question of organization *versus* anti-organization, which means that it was a fight between the inside ring, composed of Haywood, Vincent St. John and other officers, and the rank and file, who, being anarchists, wanted to run the machine without any organization.

In other words, the Industrial Workers of the World are going through the same fight that the Socialist Party is going through. The Haywoods and Ettors, who were "fired" out of the socialist organization because of their fight on the machine, now have a machine of their own from which sooner or later they will be fired. The American Federation of Labor and the railway brotherhoods, with their three millions of members, pay absolutely no attention to these wonderful "high divers" and "hair-raising thrillers" who seem to make such a tremendous impression upon Mr. Roger W. Babson and a few impressionable magazine writers who ought to know better.

A SIDELIGHT ON PUBLIC EMPLOYMENT.

At the conference on "Working Conditions of Municipal Employees in New York," during the recent annual meeting of The National Civic Federation, Mr. Solomon Hecht, Associate Editor of the *Civil Service Chronicle*, offered testimony out of his knowledge and observation which ought to be of interest to workingmen with a leaning to the universal State ownership program. "It is a fact," said Mr. Hecht, "that for some reason municipalities are the worst corporations on earth to raise wages. * * * It is like pulling teeth to get a municipal corporation to take a hundred men and raise them one hundred dollars apiece. * * * When making up the budgets at the end of the year the only idea the Board of Estimate has is the tax rate. * * * It does not make any difference how much merit there is in regard to the salary rate. They may believe in it, but the budget is made up four days before election, and they are going to cut it out." For fifty years the New York firemen have been unable to secure any relief from conditions under which "the bravest men in the city of New York are kept on duty twenty and one-half hours a day four days out of five." This has been due in part again to the tax rate obstacle, and in part to general public suspicion of graft or a "loafing job" motive behind the demand for a two-platoon system.

Our socialist prophets would have us believe that there will be no more of this unbrotherly neglect of uninfluential odds and ends in the coming industrial commonwealth. They have not been able to show us in what respect the self-interest of this same general public will be different under "scientific distribution" from the self-interest which already so largely controls its attitude towards appeals from dissatisfied groups of public employees when they happen to be relatively few in number. Every such concession will reduce the fund available for everybody else and furnish the "social whole" with exactly the same ground for suspecting the motives and resisting the claims of minor groups which may not feel disposed to accept their assigned place and portion without protest.

If "the need of one is to become the concern of all," something more radical will have to come into the situation than any change the socialist program effects in the basic relation of the few to the many.

AN INTERNATIONAL CONGRESS ON SOCIAL INSURANCE.

(Concluded from page 11.)

until he was elected to the presidency of the French Republic. The chairman at this time is M. Bourgeois, formerly Premier of France. A large attendance of European experts is expected, and will be arranged for, affording the first and only opportunity on this side of the water for a free comparison of American views and ideas with those which have been born of experience in other countries.

Already in the United States within five years there have been enacted laws in no less than twenty-two States changing the basis of liability of employers from that of negligence to compensation for all industrial accidents; and in a large number of these States provision has also been made for insurance in State funds or in mutual funds under State supervision either as the only method or with choice of companies. By the time the Congress convenes there will be a considerable volume of American experience, which, although new and incomplete, will be valuable for purpose of comparison with the riper results of European experience.

THE "RULE OF REASON" IN TRUST REGULATION

THE PROBLEM OF JUST AND EFFECTIVE CONTROL OF COMBINATION AND COMPETITION DISCUSSED BY SPEAKERS AT CIVIC FEDERATION CONFERENCE

The problem of corporation regulation as affected by recent developments in the industrial and political situation occupied the second day of the Fourteenth Annual Meeting of The National Civic Federation. The conference was opened by President Low Friday morning, December 12, and continued during the greater part of the day. The report here given of this most timely and enlightening discussion is necessarily much condensed, but, as elsewhere stated, certain portions have been published verbatim in pamphlet form.

General Aspects of the Trust Question.

JEREMIAH W. JENKS, Professor of Government, New York University, said that in endeavoring to understand the question at issue we need first of all to free ourselves from the tyranny of words. Competition is not always a public benefit, nor is combination always a curse to the community. When competition results in the cutting of prices in certain localities while they are kept up in others, for the specific purpose of destroying a small rival, it is an evil and should be stopped. It is also true that competition between rivals of equal strength sometimes brings ruin to both and injury to the public. Eventually it is practically sure to lead either to an understanding between the competitors or to a formal combination.

Professor Jenks held also that where there are many small competitors in an industry, even with more or less understanding between them, it is, after all, competition that regulates the price. The opinion was cited of a prominent corporation manager, that the bringing into his combination of each additional member had increased the total efficiency and made it possible both to manufacture and to sell the product more cheaply. The same manager, on the other hand, agreed that the buying up of rivals simply to get control of an industry did not increase efficiency, and it was his belief that the burden should rest upon whoever attempted to form a combination, to show that it would lessen costs and result in public benefit. Professor Jenks considered this a sound test, but in applying it did not favor the fixing of a uniform percentage of output for all industries as the limit within which combination should be permitted. It should depend upon the circumstances in each case, and should stop at the point—whether 25 per cent or 75 per cent—where further increase of size would not add to efficiency.

More than half the industry of the country, the speaker believed, was of a nature such as could never be brought into combination dangerous to the community. This is true especially of industries which are chiefly dependent for success upon individual attention to small matters. Where very large capital is required to get the best results, combination is inevitable. What is needed is some public body through which to regulate injurious competition upon the one hand, and upon the other see that combination does not grow into monopoly, but is permitted wherever and so long as it can show that the public is sharing the benefit of the cheaper production.

"Should a manufacturer be permitted to fix the price at which the retailer may sell to the consumer?"

"Is the price cutting of department stores and other mercantile establishments a benefit or an injury to the public?"

E. W. BLOOMINGDALE, counsel of the New York Retail Dry Goods Association, in opposing the view that a manufacturer should be permitted to fix the price at which the retailer sells, maintained that when a manufacturer sells his goods he parts not only with ownership but with control. The dealer must then assume the entire risk, and if he happens to buy more than the trade will absorb, or if the demand falls off, or the season is unfavorable, what is he to do when his bills fall due and he is prevented from selling his stock for what he can get, under these conditions?

The fact that an article is widely advertised, the speaker urged, does not justify the assumption that it is commercially worth the price it is sought to charge for it. The retailer may properly, if he chooses, put the article on a price quality with other goods of equal merit upon which great sums have not been spent in advertising. His ability to do this, moreover, is a matter for which the manufacturer himself is largely responsible by reason of the discounts to large buyers. Instead of protecting the retail merchant, the fixed price system would in reality enable the manufacturer, after his goods were well introduced, either to raise his price to the merchant or reduce the market selling price and drive the retailer out of existence.

Mr. Bloomingdale pointed out that the large modern store must handle its stock as a whole, with varying profits on different lines of goods and at different times of the year in order that merchandise may be kept moving and the force steadily employed. The public gets the benefit of the special price reductions. These cannot be offset by higher prices on goods of a general nature, because in these days of sharp competition such an expedient would be apparent to the most inexperienced shopper.

Mr. WILLIAM H. INGERSOLL, of the Executive Committee of the American Fair Trade League, took the ground that justice both to the manufacturer and the small dealers demand protection against cutting of prices on proprietary articles. Mr. Ingersoll pointed out the pronounced tendency toward concentration in the retail field, citing especially the cigar and drug trades and the department stores with their later development of chains of stores throughout the country. Some ten thousand of these chain store systems are now doing business in the United States according to Boyd's City Dispatch. Attention was called also to the remarkable growth of mail order houses, and the speaker urged with reference to all these types of large scale business that the time may come when these great new middlemen will be able to dictate what the consumer shall buy and what he must pay for it, and what the manufacturer shall receive for his goods. If the success of these large enterprises is due to unworthy tactics, where dollars overbalance skill and the contest is merely a matter of brute force, then there is no evidence of their superior fitness in an economic sense over the smaller concerns.

This practice of offering standard goods, often below cost, creates the idea that they can be profitably sold at that price, and people are thereafter unwilling to pay their real value. Other dealers who cannot make these reductions and find themselves unable to sell the goods at the standard price cease to handle them. The community is then unable to get the goods conveniently and the market for the manufacturer has been injured.

The speaker held, therefore, that unnatural price cutting is really a restraint of trade. The manufacturer, he believed, should be entrusted with the duty of determining the price at which his goods shall be sold. To have a uniform price on an article of a given brand is no injury to the public so long as the manufacturer has no monopoly of the market. Such monopoly is impossible so long as he must sell his goods in competition with similar articles of other make. In place of dishonest advertising and ruinous price cutting we should have a measure permitting the regulation of prices by those responsible for the goods sold.

EDMOND E. WISE, counsel for R. H. Macy & Co., in the controversy between that firm and the American Book Publishers' Association, discussed the subject from the legal standpoint. The restricted price idea, he said, bears in it the menace that all trade-marked or branded articles will come under the control of combinations of manufacturers who will dictate the price, not by what they think is reasonable, but by what they think the traffic will stand. Mr. Wise did not believe that the great body of retail stores is suffering as had been claimed and pointed out that the trade of the small retailer is mostly in unprotected articles in which there is the utmost free play of competition. The fact was cited as significant that in a copyright case recently decided by the United States Supreme Court, an association of retailers, including 90 per cent of the trade, although parties to the action, refrained from appearing.

The right of price control, Mr. Wise stated, has been condemned as unlawful by four decisions of the United States Supreme Court. The prevailing principle of commerce and of law is that whoever purchases and pays for an article becomes its absolute owner for all purposes.

The speaker regarded as groundless the fear that the public will not be able to buy a useful article because of unrestricted competition in its price. Some one will be ready to supply whatever is in demand, and an article of merit will always find its market. The attempt to establish the first foothold in ultimate price control should meet with determined resistence or it will be followed by combination to establish such control on a wide scale with appalling possibilities of resulting evil.

In the course of further discussion of points involved, Mr. INGERSOLL urged that, as in the case of real estate, a sale may be made with restrictions as to what may be built upon the land, etc., so, he believed it proper that a manufacturer have the right to sell his goods under such agreements as will protect his other customers. He did not recommend price maintenance except with the safeguard that those who exercise it do not have a monopoly and do not favor some buyers over others, but that they shall take goods back if not salable at the price established. He did not believe we should permit the abuse of the names of standard articles of merchandise through wholesale price cutting by large dealers. This puts too great a hardship on those with small resources.

TALCOTT WILLIAMS contended that the right of price control can only be granted if a manufacturer will make his business so public that everybody will be certain that the restriction is not used to increase profits beyond a fair point. There is a fair profit as there is a fair wage and a fair rate for money. Until the manufacturers and the retail stores will open their books and make it clear that only a fair profit is asked, neither can be allowed to restrict prices nor take steps which will lead to monopoly.

In conclusion Mr. INGERSOLL made the point that it is very difficult when a given price is fixed to get more than that price. In other words, in establishing such price it is practically a maximum as well as a minimum. This he regarded as one of the great safeguards to the public.

Should the Sherman Anti-Trust Act Be Amended?

JOHN HAYS HAMMOND, chairman of the Federation's Department on Industrial Economics, characterized large scale production as the genius of modern industry. It places in the hands of captains of industry great power for good and for evil. The power for evil lies in abuses such as the unlawful restraint of trade, stifling of competition and controlling of prices, all tending to monopoly. Because of these abuses the term "trust" has earned much opprobrium, and trust-busting has become a powerful instrument in the hands of unscrupulous demagogues.

Mr. Hammond favored maintaining the basic principle of the Sherman law, but held that it needed further definition and modification. A Federal incorporation law or Federal license, for example, would insure control of one of the chief evils of big business, namely, the over-capitalization of corporations There would be much less cause for public complaint if government regulation began at the point of incorporation of large concerns, instead of attempting later on to "unscramble the eggs." Another important benefit of Federal incorporation would be the protection of investors in securities and the confidence which would result from publicity.

The speaker acknowledged that there is a point at which large scale production may actually become inefficient and uneconomic, but did not believe that legislation could determine that point. Expansion will be checked by purely business considerations when the limit of economy is reached. Neither should limits be put upon the size of corporations expanding by development within rather than through combinations with other concerns which had been in competition. Corporations should be judged not by their magnitude *per se*, but by their dominant purpose, their methods, and how these affect the public welfare.

Unrestrained competition, the speaker held, often works irreparable injury to industrial communities in the form of lower wages, fluctuations in prices and loss of investments. By way of illustration, conditions in the bituminous coal mining field were cited. On account of the ruinous competition there prevailing, nearly one-half the coal cannot be mined except at loss, and is left in such condition that it can never be recovered. Germany and Belgium, through the Cartel system, have put the coal mining industry on a profitable basis which prevents this waste and has permitted improvements greatly reducing the loss of life.

The regulation of corporations involves problems so complicated and comprehensive that the laws governing them should be left to an Interstate Industrial Commission. Such commission should consist chiefly of business men, experts on economic subjects, and lawyers. The dignity of the commission should be on a parity with that of the Supreme Court, in which case it would appeal to the ambition of men of the highest ability.

The Trend of Proposed Legislation.

GILBERT H. MONTAGUE, of the New York Bar, reviewed at some length the various measures pending in Congress with reference to control of large combinations of capital. These bills, the speaker suggested, might be classified under four heads, following the lines of President Wilson's program of trust legislation outlined in his message to Congress of December 2d last, namely: "Further and more explicit legislation" in the "debatable ground" around the Sherman law; legislation to "clarify" the act; legislation to "facilitate its administration," and legislation to "make it fairer to all concerned."

Under the first head would come the bills dealing with practices not now forbidden under any construction of the Sherman law; besides numerous bills prescribing the organization and powers of corporations engaged in interstate and foreign commerce.

Most of the bills to "clarify" the act, Mr. Montague pointed out, have been drawn upon the assumption that the "rule of reason" established by the Supreme Court in the Standard Oil and Tobacco cases, recognizes two kinds of restraint of trade—reasonable and unreasonable. This assumption, the speaker believed to be inconsistent with much that the court said in these and subsequent cases, but it explains most of the bills designed to "clarify" the act.

Under the recommendation of legislation to "facilitate" administration of the Sherman law belong all the bills establishing trade commissions; and among those which may be classed as attempts to make the law "fairer to all concerned" are the measures exempting certain kinds of corporations. Senator Williams's bill, for instance, proposes to exempt corporations engaged in the business of education, common carrier, banking, insurance and supply of water, light, heat or power; Representative Henry's provides that the law shall not apply to members of organizations not for profit and without capital, nor to agricultural products or live stock in the hands of the producer or raiser.

Attention was called to the investigation about to be made by the Bureau of Corporations under the direction of the President, to determine how far economies have been attained in large scale production, and whether there is a point beyond which increasing organization induces waste instead of economy. Upon these facts, the speaker believed, must depend the whole trend of proposed anti-trust legislation.

The Bituminous Coal Industry and the Sherman Law.

C. M. MODERWELL, of the American Mining Congress, declared that laws or economic systems which result in the waste of our coal supply are wrong in principle and cannot be defended. This great industry, which produces for our factories the cheapest fuel in the world, is suffering because those engaged in it are not allowed to co-operate but must compete. The result is an average return of only 2½ per cent upon an investment of almost a billion dollars.

Because of inability to get a sufficient price, only the easily mined coal is produced, and in many cases 50 per cent is left in the ground and will never be recovered, or, if at all, at tremendous cost. According to the United States Bureau of Mines, 250,000,000 tons of coal were wasted in this manner in 1911.

Admitting the duty of the government to safeguard our coal deposits, ought not co-operation to be permitted under such regulation as will enable the operators to save for future generations the coal now ruthlessly wasted? The speaker showed by concrete illustration the struggling condition of various types of corporate and individual interests engaged in soft coal mining, which could only have the result of crushing the weaker producers out of existence and leaving the survivors with a monopoly of the market.

Agreements which would permit a reasonable return on the investment cannot be made as the law stands. They would not, the speaker believed, result in monopoly, by reason of the vast area of the coal deposits.

Mr. Moderwell advocated an Interstate Trade Commission on the lines of the bills suggested by The National Civic Federation and by the American Mining Congress. Such a commission would have power to inquire into all agreements and contracts to determine whether they unlawfully restrain trade or tend to monopoly. The plan for such a commission is designed to permit business men to conduct their business in accordance with economic principles and yet live within the law.

Are Agreements Between Organizations of Workingmen and Organizations of Employers, Fixing Rates of Wages, Hours of Labor and Conditions of Work, in Violation of the Sherman Act?

A. B. GARRETSON, chief of the Order of Railway Conductors, stated that the idea of bringing labor unions under the provisions of the Sherman act is of later growth than the relation of that act to other interests involved. He did not believe that at the time it was passed it was ever intended to apply to associations of workingmen. He was ready to admit that if such associations indulged in practices against the common good they should be punished, but the issue is, whether the means they employ are of a character that properly bring them under the act. Mr. Garretson believed that if the laboring man, utilizing the only power at his disposition to better his condition—that of combination—comes under this law, then the law is faulty instead of the man. The law applies to the employer only with reference to his products, not his individual ability and experience. The labor of the laborer is to him precisely what the administrative ability, experience and ingenuity of the manufacturer is to him. If the manufacturer wishes to withhold or enter into a combination to withhold his ability from the production of goods, he does not come under the provisions of the act.

If the laborer's one resource is to be counted a marketable commodity, then the Emancipation Proclamation was a mistake. If the combination of a large body of men is a greater sin than combination of a small number, then the railroad men and their employers are undoubtedly guilty in a greater degree than any other industrial class, since the agreements between the railroad companies and the men extend over half a continent and will undoubtedly be continued either until the term "unreasonable" is clarified by law or the courts have declared such agreements illegal.

Whenever it is apparent that laws of this character, instead of protecting the interests of the great body of the people which consists chiefly of laboring men, recoil upon them, they will demand the modification of such enactments. Mr. Garretson believed in government regulation, and considered the exercise of this power more needed in the matter of over-capitalization than in any other direction. With that abuse once removed, two-thirds of the evils now dealt with under trust legislation would disappear. No opportunity was asked for labor men to do illegal or criminal acts, but the right of any man to get the best that he can for his labor should not be made a crime. The speaker alluded to the failure of English legislation through many centuries to control or fix wages of labor, there having been more than 300 such enactments during the period from Henry II. to Henry VIII. There can be no real prosperity, he maintained, unless it affects the body of the people. Any measure that paralyzes the energy and progressive efforts of three-fourths of the people is an influence to destroy rather than upbuild the general prosperity of the nation.

SAMUEL GOMPERS, president of the American Federation of Labor, declared that already one organization of wage earners has been dissolved by order of the courts; that workmen have been indicted in New Orleans for affording co-operation to fellow workmen in another trade where wage reductions were threatened; that in Jacksonville, Florida, workmen have been indicted as conspirators because they withheld their labor from their employers; that President White and other officers of the United Mine workers have been indicted because of endeavoring to protect the interests of the miners in getting a fair wage.

The great coal strike of ten years ago, with all its hardships, brought changes in the material, social and moral wellbeing of the miners and their families that compensated them and compensated the community. In Mr. Gompers's opinion, not even President Baer, their stoutest opponent during that struggle, would now want to go back to the former conditions prevailing among the miners. To-day, nevertheless, all that they have gained is threatened by a combination of mine owners; and because the officers of the union have advised with the miners' representatives and sent them money with which to make the fight of resistance, they are accused of criminal conspiracy under the Sherman act. If put on trial and found guilty they may be imprisoned for a year and fined $5,000, and may be proceeded against civilly, their organization dissolved and their funds confiscated.

The American Federation of Labor and the Bucks Stove & Range Company have been jointly sued by C. W. Post under the Sherman act for the sum of $250,000, claiming $750,000, or three-fold damages, on the ground that the company and the Federation of Labor had come to an agreement, ending a long dispute. About three years ago a number of ladies in Philadelphia who wanted to help the girls in that city who were striking against sweat-shop conditions, were sued for $50,000 and three-fold damages by the shirt manufacturers, and the case is still in court.

The American Federation of Labor, it is true, has gained more than 250,000 in membership during the past year, but it is, nevertheless, true that there is not an organization of labor in the country which does not exist at the sufferance of the Government. Under the interpretations of the Sherman law there has grown up the judicial injunction limiting or prohibiting freedom of assemblage, freedom of speech, freedom of the press, and freedom of association—rights which should be jealously guarded, not only by workingmen but by all the people.

Mr. Gompers predicted that if these rights are denied to the working masses the community will have to contend with other and more dangerous elements. The movement of the working people to protect themselves is essential in this day of concentration of wealth and power in industry, with subdivision and specialization of work. They have no other hope than through this associated effort and collective bargaining to strive against oppression and to secure better conditions for the men and women who toil, better safeguards and opportunities for their children.

"Is the Protocol Between the Manufacturers in the Cloak, Suit and Garment Industry and their Men and Women Employees, which is Designed to Abolish the Sweatshop, Against Public Policy and Illegal Under the Sherman Act?"

JULIUS HENRY COHEN, counsel for the Cloak, Suit and Skirt Manufacturers' Protective Association, of New York, pointed out that many of the decisions against labor unions had been rendered under the common law, irrespective of the Sherman act, and therefore that no amendment of that act excluding unions from its operation would meet the situation.

In the English common law at present there are two diametrically opposite tendencies. Under it men may not combine to fix prices and eliminate competition, but, on the other hand, a group of people interested in improving their condition may combine and fix standards for that purpose. The fact that labor is not a commodity creates the possibility of a distinction between these two principles of the law, but the difficulty lies in the fact that we have developed our legal principles upon an economic philosophy which is now being outgrown. We are recognizing to-day the necessity of collective effort; that a manufacturers' trade association or a trade union can have just as worthy purposes as, for example, The National Civic Federation.

In a case like that of the protocol in the New York garment industry, where a group of manufacturers and a group of workingmen join hands to make conditions decent and establish arbitration, the agreement is attacked by manufacturers and non-union workers who do not wish to become parties to it. It would be a very serious legal question whether a combination could be made that provided for excluding non-union men from an industry, but under the protocol it is agreed merely that the employers will prefer union men, while the union, on the other hand, maintains an open membership.

Mr. Cohen believed that The National Civic Federation should co-operate with the United States Commission on Industrial Relations in its study of this whole problem, with a view to legislation, the end being to harmonize the tendencies of the law so that manufacturers may join to raise the conditions of an industry and working people may unite to raise their own conditions, and the public be protected not only against the danger and cost of strikes, but, as in the clothing trade, for example, against the wearing of unsanitary garments. There must be some clear determination of what the law should be with reference to these joint agreements, rather than an exemption amendment to the Sherman act, which would not cover the case, but would merely furnish opportunity for arousing public opinion. The speaker agreed with Mr. Gompers that serious results would be likely to follow the stifling of the opportunity of business men to organize or of workingmen to raise their standards.

WORKING CONDITIONS OF MUNICIPAL EMPLOYEES IN NEW YORK CITY.

The remainder of the afternoon session was devoted to a discussion of the needs of municipal employees, by Mr. Joseph J. O'Reilly, editor of *The Chief*, and Mr. Solomon Hecht, associate editor of *The Civil Service Chronicle*.

Mr. O'Reilly gave a forceful account of the situation in respect to such matters especially as the appointment of new policemen and firemen, importance of extending the merit system, protection from unjust removal, an equitable retirement law, standardization of equipment, vacations, more definite and certain employment for the large army of per diem men in the irregular service of the city, better wages for patrolmen, street cleaners and firemen, and the two-platoon system for firemen.

Mr. Hecht discussed many of these matters in further detail and urged, in addition, the semi-monthly payment of salaries and stricter rules covering the selections for promotion in the civil service. Mr. Hecht pointed out some of the defects in the workings of the firemen's pension system, and made a strong argument for the two-platoon system for firemen, to remedy conditions which are "keeping the bravest men in the city of New York on duty twenty and one-half hours a day, four days out of every five."

CO-OPERATION THE NEED OF THE HOUR IN PURE FOOD CAMPAIGN

EMINENT AUTHORITIES PRESENT THE SITUATION AND URGE THE NEED OF UNIFORMITY AND MORE EFFICIENT REGULATION

During the conference on Pure Food and Drugs at the afternoon session, December 11, 1913, of the fourteenth annual meeting of The National Civic Federation, the following resolution was offered and unanimously adopted:

"Resolved, that in the interest of greater purity, proper labeling and honest advertising of foods and drugs, The National Civic Federation be requested to organize a commission for the study of the subject of foods and drugs, and for the purpose of furthering co-operation between the Federal and State officials, the consumers and the producers."

In accordance with the above resolution The National Civic Federation is now engaged in organizing a commission to work for these important objects, and public announcement of its personnel and plans appears elsewhere in this number.

The chairman of the special session on food and drug control was Mr. Samuel Gompers, President of the American Federation of Labor. The subject was discussed by the following speakers, whose remarks are summarized below:

James H. Wallis, President of the National Association of Food and Dairy Commissioners.
Dr. Harvey W. Wiley, Former Chief of the United States Bureau of Chemistry, Department of Agriculture.
Dr. George Ditewig, Inspector in the Bureau of Animal Industry, United States Department of Agriculture.
Charles Wesley Dunn, Author of Dunn's Pure Food and Drug Legal Manual.
Miss Laura A. Cauble, Bureau of Food Supply, Association for Improving the Condition of the Poor.

Papers which could not be read on account of the lateness of the hour were submitted by:
Louis Runkel, President of the American Specialty Manufacturers' Association, and
Albert Plaut, former President of the National Wholesale Druggists' Association.

James H. Wallis.

The first difficulty in the way of efficient enforcement of food and drug laws has been a lack of effective co-operation among food and drug control officials. We have been deficient also in the quantity and quality of educational work. True, we have sent our bulletins to the consumer, warning him against the frauds and impositions which we have detected in his food supply and in his drugs, and in these same bulletins we have given him the names of those food and drug manufacturers and dealers who have sold him the adulterated and misbranded articles. We have informed him of the dire consequences which the officials of the State have visited upon these manufacturers in the way of fines and other penalties.

This has been good work, but it has not gone far enough. There is not a food and drug official of experience who does not know that ninety per cent of the violations of food and drug laws, both State and national, have been caused largely by the ignorance or carelessness of the manufacturer and not with a wilful intent to produce and dispose of adulterated and misbranded articles. Ten per cent, perhaps, of the prosecutions are against manufacturers who deliberately offer debased, deleterious, adulterated and misbranded foods and drugs, and as against this latter class of manufacturers the penalties provided in various laws have been woefully deficient. But how about those manufacturers who have sinned because of ignorance? Have we done our full governmental duty when we say, let the manufacturer beware, let him put out foods and drugs at his peril? Does not such a policy lose sight of the end sought to be attained, which is to secure as quickly as may be possible a pure food and drug supply for the people? Shall we not attain that result more quickly if we educate our manufacturers, show them how to produce pure foods in a cleanly manner and spread information regarding methods of adulterating drugs, largely perpetrated by the foreign producer upon the American importer who buys in good faith?

The great majority is honest. It is not right, it is not even politic, to confound the great mass of honest manufacturers with the sordid, dishonest minority. A distinction should be made. Increase the penalties against the dishonest and educate the honest. If this be done there will be fewer court cases, because there will be fewer violations of the law.

The food and drug control work in the United States is not fifty per cent efficient. This is startling, but it is true. Where is the trouble? How is it possible with a mass of food and drug legislation, with zealous, competent and honest officials attempting to enforce the laws, with generous appropriations, with public opinion strongly behind the work and with a friendly press and helpful judges, that there is not greater efficiency?

The answer is found in defective organization and utter lack of correlation of several branches of what really is but one subject. This trouble has its root in the laws of the Federal government and in the laws of the States.

This is where The National Civic Federation can help us food officials. We must secure basic changes in these national and State laws, and this association can help materially.

To be efficient we must have all of the activities relating to the protection of the bodily welfare of the citizens combined into one organization. It must be done in the nation and it must be done in each State. I do not care whether we have a national department of health with its head sitting as a cabinet officer. It is not the name and position that count. It is the effective organization which, no matter what it may be called, can group together this widely scattered work and combine under one head and one direction all of these separate forces really working for a common end.

Consider the deplorable condition which exists now. Each activity has its own administrative and executive force, separate clerical and inspecting forces, separate laboratories and experts, separate filing and housing. Think what this means in waste of money and energy, and that is by far the lesser waste. The paralyzing thing is the absence of one broad, far-reaching plan which takes into account all that can be done by each separate line of endeavor and welds the whole into one irresistible engine of progress.

First, we must have national legislation which shall recognize the principle by placing within one organization the various and many health activities of the Federal government. This organization, when created, must be directed to co-operate with the State organizations which will be patterned after it. Every dollar of appropriation for health work must be made to do its work. In cities and towns where government laboratories are located the municipal and State laboratory work should be done in the government laboratory. The Federal government should clothe the State inspectors with all the powers held by Federal inspectors, and the State likewise should make the Federal inspector the agent of the State. The legislation, Federal and State, should be uniform, and if the States are to follow the national law the latter must be progressive and adequate to remedy evils which must be met. When these things are done we shall secure results.

Dr. Harvey W. Wiley.

I want to emphasize first of all my enthusiastic adherence to the program of future work in this great field of ours, which has been outlined by President Wallis. I have for many years been preaching the doctrine that all the health activities of this great government should be centred in one, but there is a very bitter opposition in this country to making any more effective the laws to protect human health. Some of it is religious in its attitude, some of it is academic, some of it is ignorant, and a lot of it is vicious.

The interests which were affected by the passage of the Food and Drug Law were determined in some way to paralyze its effectiveness. They first came to me and said: "You do not intend to carry into effect these doctrines you have been preaching before the committees of Congress? You do not intend to keep preservatives and coloring matters out of foods?" I said: "I am going to do the best I can at it. I have nothing to say about it, except to bring a case, and the Bureau of Chemistry is the only authority in the Federal government that can bring a case. I am going to cite every one of you who continues these practices before the courts." And they said: "That will ruin our business!"

"Yes," I said, "I am going to ruin a business which is striking at the very fundamental principle of human happiness, health and life. You are feeding to the people of the country drugs which they should only use when they are ill and sometimes not then, and giving it to them without their knowledge, and to everybody, young and old, and if I have my way about it you are going to stop it."

I was not simply guessing at it. Many years before this law was enacted I saw the prophecy of it and thought I would be ready for it, so in 1902 I organized that body of young men afterward famous as the "Poison Squad." For five or six years I kept feeding these healthy young men these things which the manufacturers were putting into foods—borax and salicylic acid and sulphate of copper and burning sulphur—and I never failed to find them injurious, sooner or later.

So these people went above me to the Secretary of Agriculture and to the President of the United States. That was in 1907. They told their story in their own way, that if I were not shackled and gagged their business would all be ruined. The President and the Secretary did not know the facts. They listened to these men, who were influential men, business men in high standing. The law said that all questions in regard to adulteration and misbranding should be decided by the Bureau of Chemistry, but they made a new law. It happened often in those days; all you had to do was to sign an executive order. So the President signed an order creating a board to decide the very questions which the law said I, as chief of the Bureau of Chemistry, should decide. He took all these things they wanted him to take out of my hands. Borax and salicylic acid they let go, and borax and salicylic acid are unknown to-day in the foods of this country. The Remsen Board was created—men of eminence in their professions. The question of whether or not these things were adulterations and injurious to health was put into the hands of a body of men unknown to the law, and the law was ordered suspended until they should report. They overruled me on benzoic acid and there is not a manufacturer in this country to-day, if he wants to, who cannot shovel all the benzoate of soda he wants into every product he makes. Fortunately the people of this country would not stand for it. Public opinion was so outraged that we refused to eat these benzoated foods, and they are now almost unknown in this country through the force of public opinion.

The whiskey manufacturers wanted a dispensation and they got the Secretary of Agriculture on their side. Then I went straight to the White House, an act of disobedience for which I should have been removed then and there. I saw Mr. Loeb and the President promised that he would not give any decision without first consulting me. Then the delegations came from all over the country—every "rectifier," every man that diluted alcohol, that colored it with calomel, and made ten-year-old whiskey in a minute—they came to the President, urging him to approve this decision of the Secretary of Agriculture. But I got a message, some six weeks after this, to come to the President's office, and he listened to me for two hours and a half. He referred all the briefs and papers to the Attorney-General, whose decision sustained the Bureau of Chemistry in every particular.

Immediately we placed the law in force against the rectifiers. They went to court and tried to get out an injunction to prevent the execution of this order. We had fought that in eight Federal courts and had received an affirmative opinion in every single instance from Baltimore to Peoria. Every one of them appealed it to a higher court, and then there was a change of Presidents. When Mr. Taft came into office he questioned this decision on whiskey and ordered a new hearing before Solicitor-General Bowers; then held a hearing of his own in the White House with the Secretary of Agriculture and Attorney General Wickersham. The decision was absolutely in favor of the rectifier on every point, and orders were issued to change all the old regulations. Appeals were dropped, and to-day whiskey is any kind of old alcohol you want, colored and flavored, as far as official pronouncement is concerned.

There is only one legal interpretation of the food law, and that is what the court says about it, but the only way for the court to act is either through a State official or through the Bureau of Chemistry. Here I was stopped, but a State official carried the benzoate question to the courts. The Department of Agriculture sent the whole referee board to testify in this case against the State of Indiana that benzoate of soda was a perfectly harmless substance.

The Secretary was asked to allow me to testify on the side of the State, and he refused to let me go. They moved the court to Washington, and I was

to appear with the young men whom I had ex-ented on, and we did, and we won the case. It carried to the Circuit Court, and the Circuit unanimously affirmed the decision, and now it be carried, I have no doubt, to the Supreme

orney-General Wickersham himself, before he ffice, gave an opinion to the Secretary of Agri-re that the opinions of the Remsen Board had nding effect on anybody. Yet there are about een or twenty of these decisions, legalizing all of offenses against the law, and saying they ot misbranding or adulteration.

through the whole list of concessions, the food has been maimed and paralyzed. Therefore, we ask our friends, the State officials, to come us and have uniformity of legislation let us have clean hands. The Secretary of Agricul-says he is going to ask Congress to restore the o its pristine vigor and give back to the Bureau emistry its rights. Hold the chief of the bureau nsible (and I think he is a good one) as I l have been held responsible, and gladly would e assumed the responsibility for administering great law in the interests of the people of the d States.

elieve from the bottom of my heart that all these ies for the protection of health should be ght under one head, but meanwhile let us do est we can with what we have, and not lie su-y idle waiting for a better law. Let us get all ood we can get out of the present law. We get a f it.

e greatest wealth of this nation is its health. I think by joining forces with the State officials with the great public opinion we can correct all evils. We will put the law above the interests will put it in a position where no mercenary in-ts can touch it, because it will be a law for the re of the people of this whole country.

Dr. George Ditewig.

deral meat inspection is limited to the product tablishments that are engaged in interstate or gn commerce. It is estimated that a little more one-half of the total meat supply of the United s comes under Federal inspection. Most of the inder receives no inspection whatever, while a on is subjected to a limited inspection by State cal officers. It is a duty which the State or icipality owes to its citizens to install and main-a system of meat inspection that will afford ade-e protection against diseased and unwholesome ts, so that all meat sold locally which has not ed the Federal inspection will come under the irements of an efficient local inspection system. e effect of the Federal inspection has been to e the owners of diseased or suspicious-looking uals to send them for slaughter to an uninspected e rather than to an establishment where they d have to run the gauntlet of strict inspection. these reasons it is certain that the percentage of ase is much higher among animals slaughtered ne small local places than among those slaugh-d under Federal inspection.

inspected slaughter houses, as a rule, have y features that are not only objectionable but gerous to health. The conditions at some of the try slaughter houses are inexpressibly foul and y. Usually there is no protection to the meat nst rats, flies, other insects and vermin, and this dition is a dangerous source of contamination and ction. Even in some of the large cities there are er abattoirs which do a purely local business, and hich the conditions and methods are exceedingly nitary, and where a very poor class of live stock aughtered.

a system of local inspection is to provide ade-te protection to the health of the community it uld cover absolutely all meat offered for public and which has not been subjected to Federal ther competent inspection. All places of slaugh-should be subjected to inspection and regulation, permitted only by license. If the sale of un-pected meat is allowed, or if any slaughtering e is allowed to remain uninspected, there will be ger to the health of the community.

Dr. Ditewig in conclusion showed a large number stereopticon pictures illustrating the work at ghter houses under Federal inspection as con-ted with the bad conditions at places operated hout inspection.]

Charles Wesley Dunn.

he need for uniform food and drug legislation has n urged continually and earnestly by all who have en any consideration to the subject. In 1904, two rs before the enactment of the Federal Food and gs act, Dr. Harvey W. Wiley addressed the Com-sioners on Uniform State Laws, earnestly urg-them to consider the uniformity of food and g laws. Since the enactment of the Federal law the Commissioners have recorded their recommendation each year that the food and drug laws be uniform. In 1904 and in 1909 the Committee on Purity of Articles of Commerce reported to the same effect. The American Bar Association has concurred in these recommendations.

The National Civic Federation in 1910 called a national conference in Washington to promote uniformity of commercial legislation, and by resolution strongly urged that the food and drug laws be uniform. Many other organizations have taken similar action. This general, spontaneous and insistent movement for uniformity through various agencies demands respect and consideration.

There exist in this country three kinds of food and drug regulation—national, State and municipal. And as products are subject to both the special and general laws (where there is no special law) we have at present a bewildering and rapidly increasing mass of legislation difficult to follow even to those who are somewhat familiar with this class of legislation.

[Mr. Dunn quoted at length from government statistics showing the variations in standard bushels for a large number of the common necessities of life, and in the legal standards for dairy products in the several States and Territories. Differences in the laws of many States were also pointed out with reference to various food products and drugs.]

There should be a national poison law on the statute books, carefully and scientifically framed to safeguard the sale of poisons by labelling or whatever requirements in particular instances may appear just and equitable. Such a national law would serve as a model, and would stimulate similar State legislation. A national narcotic law would serve a similar purpose and a uniform pharmacy law would equally regulate the trade in medicinal and poisonous preparations.

Standardizing of regulation will establish rules of guidance for the various administrative officials, who, through collaboration, may all be equally possessed of the information necessary for their work. An efficient, fair and just uniform law protecting the consumer and placing no unnecessary or unreasonable hardship on the manufacturer and dealer is not a burden to the manufacturer or dealer, as it merely indicates the practice of the honest man.

I am deeply impressed with the magnitude and completeness of this meeting, probably the most important, from many aspects, that has ever been held in the consideration of this subject. It is a matter of the greatest satisfaction and pride to the people of this nation that such an organization as this exists, and is a living vital force, the melting pot of all those interests and influences which are in any way connected with this field, official, commercial or lay, to mold and cast public opinion, as it were, and bring forth the greatest good for the greatest number.

Miss Laura A. Cauble.

Miss Cauble discussed the subject from the standpoint of domestic science. She described briefly the conditions encountered in her work among the poor, on behalf of an association which has for years expended annually about $60,000 in the direct provision of food. Miss Cauble pointed out the need of domestic science training adapted to the needs of children in the common school grades. Especially is this important in the poorer districts, where the great majority of the children do not get beyond the first year in the high school, and where the children of parents who cannot speak English become very often the family buyers of food products. Alongside the need of pure and wholesome food products, in other words, is the importance of their better utilization in the home, through education in marketing, in economical use and in proper methods of cooking.

Louis Runkel.

The products manufactured by members of the American Specialty Manufacturers' Association cover almost the whole field of packaged foods and are produced in enormous quantities. I would like to call to your attention the fact that the advent of the branded food has been one of the most potent factors for better foods in this country. A manufacturer who puts out his foods over his own signature, under his own brand, thereby standardizes his products, and their subsequent sale depends entirely upon their merit. Purity, wholesomeness, quality and honest weights or measures, and honest labels, once borne home to the consumer, backed by the reputation so earned, make the manufacturer's name the most valuable asset in commerce—whose mere mention means the confidence of the consumer.

The American Specialty Manufacturers' Association originated some five years ago. Our constitution pledges us to co-operate in the enactment and enforcement of just and equitable food laws, and I am proud to state that we have endeavored to live up to our constitution in every way. If our methods may be improved, if our conditions of manufacture may be made more sanitary, if our formulas may be bettered, if any improvement is possible, mechanical or otherwise, we would heartily welcome it.

As in any other calling of life, you will find dishonest food manufacturers, men who will cheat and defraud, and even, I am sorry to say, injuriously adulterate their products. But I am sure that that class is small and becoming smaller, and that the majority of the food manufacturers of this country are honest, law-abiding and God-fearing manufacturers and citizens.

Our association is as much against such fraudulent manufacturers and dealers as are the national and State governments, as we realize that, aside from public considerations, a special weakness reflects upon us all to some degree, and we offer you our hearty support against such practices.

Honest weights and measures legislation is a subject in which we have been actively interested. We have always firmly believed that the consumer is entitled to know the quantity he is receiving and thereby assuring full weights and measures. Such a practice is ordinary honesty, and claims no more merit than any proper action should claim. When the question arose of a weights and measures law for New York State, we at once took an active interest in encouraging and aiding this proposed law, and we did not cease working until the present law was enacted.

One of the greatest difficulties food manufacturers have to contend with is the lack of uniformity in the pure food laws. The legislation in this field is very extensive. We do not object to regulation, no matter how severe, either as to manufacture or labelling, if it is at all reasonable and just and equitable in the final interest of the consumer, but we do ask most earnestly that such a regulation when determined should be uniform throughout the land, so that we may most economically distribute our products, which is to the benefit of the consumer.

On behalf of the American Specialty Manufacturers' Association I pledge to all who are represented here to-day that our association as a whole and each individual member, will offer you any aid in our power to the end that the pure food laws of this nation shall be more effective, more efficiently administered and more fully complied with.

Albert Plaut.

I do not agree with the statements which are frequently made that notwithstanding the enactment of the Food and Drugs act, adulteration of food and drugs is carried on in a wholesale way and that the public health is thereby endangered. The affairs of the drug business I know intimately, and I deny that there are any evidences of adulteration or misconduct coming under the Food and Drugs act which ought to cause alarm to anybody.

Ninety-five per cent of the drugs sold in the United States are supplied in a wholesale way by comparatively few manufacturers and dealers. These are all large and responsible firms, having staffs of chemists in their employ constantly watching their output, and I am sure that the public is well served as far as its supply of drugs and medicines is concerned.

In substantiation of these statements I need only refer to the small number of convictions that have been obtained under the Food and Drugs act on drug products. I have looked over the notices of judgments issued by the United States Department of Agriculture from No. 1500 (June, 1913) to No. 2572 (to date) and among them I have found only 25, surely a very insignificant percentage.

Among these many have been obtained through the desire of government officials, not so much to ameliorate existing conditions, as for the moral and political force of the number of convictions. The casual observer and a goodly number of people who have to be fed on sensationalism will naturally be more impressed by a large number of convictions obtained by the department, showing its diligence, than by an actual betterment of conditions and few convictions.

The lack of standards for food products and those drugs not found in the pharmacopoeia has helped the Department of Agriculture in obtaining a large number of convictions. Manufacturers and dealers will willingly comply with the standards if they are known to them. We have to give Dr. Alsberg credit for promulgating such standards now; if they had been furnished from the beginning, the manufacturers, the dealers and the public would have benefited far more than from convictions obtained for infractions of the law caused by the lack of standards.

I am against all amendments of the Pure Food and Drugs act at the present time. It has given the Government the necessary authority to control the manufacture and sale of foods and drugs, and nobody can say that the law is not well administered. In my opinion, it would require quite an effort on the part of any druggist to obtain in the open market anything but pure and standardized drugs and drug products, for I for one do not know where any other can be purchased.

LEADERS CONFER ON WORKMEN'S COMPENSATION

REPORT OF THE JOINT COMMISSION AND DISCUSSION UPON THE OPERATION OF STATE LAW METHODS OF INSURANCE AND ACCIDENT PREVENTION

The subjects of workmen's compensation and accident prevention occupied the third day, Saturday, December 13, of the Fourteenth Annual Meeting of The National Civic Federation. AUGUST BELMONT, Chairman of the Federation's Department on Workmen's Compensation, in opening the conference, called attention to the fact that during the last six months the Federation's Joint Commission on Workmen's Compensation had made an exhaustive study of compensation legislation in this country. Representatives were present at the conference from several of the States visited by the commission and whose experience under the new acts has been of significant interest.

Work of the Joint Commission.

The members of the Joint Commission, whose report is now in press, are:

Chairman, Cyrus W. Phillips, member of the former New York State Commission on Employers' Liability; Rochester, N. Y.

J. Walter Lord, Chairman of the Maryland State Commission on Employers' Liability and Workmen's Compensation; Chairman of the Federation's Maryland State Council, Baltimore, Md.

Otto M. Eidlitz, of the New York Building Trades Employers' Association, New York City.

Louis B. Schram, Chairman Labor Committee, United States Brewers' Association, Brooklyn, N. Y.

James Duncan, Vice-President American Federation of Labor, Quincy, Mass.

John Mitchell, Vice-President American Federation of Labor, Mount Vernon, N. Y.

Chairman PHILLIPS' report for the Commission recalled the fact that the first real recognition in this country of the principle that the cost of industrial accidents should be charged to the industries causing them was given in the report of the New York Commission on Employers' Liability, created by the Legislature of 1909. Since then, compensation laws have been enacted in twenty-two States, and more than five million men and women have come under their protection. Two million more would be added on January 1 by the new compulsory acts in California and Ohio.

The objections raised by either employers or employees, before the enactment of these acts, said Mr. Phillips, have been mostly removed by experience under them. Employers have freely stated to the Commission that although the new law costs them more they were mistaken in their original opposition and would oppose any effort to repeal it. They are very strong, however, in desiring uniformity of laws. They have often asked, also, in States where the law was elective, that it be made compulsory in order to put all employers on the same competitive basis.

Employers generally prefer that the law cover all their work people in order to avoid uncertainty as to whether an injured employee comes under the compensation act or the liability law. Where the act is limited to hazardous trades, it often happens that employees in a business coming under the act will receive compensation for comparatively slight injuries, while others suffering much more serious injury in a trade not classed as hazardous receive no compensation. Workmen will not understand the reasons for these conditions.

The speaker described the different practices in the several States in regard to medical attention and hospital aid. The charges for this service have often proved excessive, and plans are being considered for regulating and reducing the cost without injury to the workman.

In order to insure prompt payment of the compensation without litigation or expense, industrial accident boards have been created in a number of States. All settlement agreements between the employer or an insurer and the employee must be filed with and approved by these boards. The Commission found that these boards are giving general satisfaction, and, by contrast, that in States where no such safeguard is provided the door for fraudulent imposition upon the workmen is open. The case of New Jersey was cited, where the Commissioner of Labor has no power to investigate and it is evident that only part of the settlements are reported to him. Many of those reported show that the employees do not receive the amounts to which they are entitled, and the Commissioner estimates that nineteen per cent of the New Jersey settlements are contrary to the compensation schedule fixed by law.

The amount of compensation in different States varies from fifty to sixty-six and two-thirds per cent of the wages of the injured employee. Not much complaint has been heard from employers in States paying the higher rates, the important thing appearing to be that the schedules be scientifically drawn and that the terms of the laws be definite and certain, and, as already stated, uniform as between the States.

Upon the difficult problem of protecting injured workmen against insolvency of the employer, the Commission found great diversity of views. There was agreement that the workman was entitled to as full protection in this respect as possible, but at the same time a strong feeling among employers against being restricted in their method of insuring. Many wish to carry their own risk, some want power to create mutual insurance companies, and in most States laws have been passed permitting this. Others prefer to insure in stock companies and some in a State insurance fund created by assessment upon employers. It was generally felt that with industrial accident boards passing upon all settlements, both employer and employee would be protected under any of these three methods and the employer would receive the benefit of the competition between them.

The Situation in Maryland.

J. WALTER LORD, a member of the Joint Commission and Chairman of the Maryland State Commission on Workmen's Compensation, stated that Maryland was the first State to enact a law (in 1902) partaking of the nature of a compensation act, and intending to secure exclusive compensation in case of death in certain extra hazardous industries. In 1910 an act was passed limited to coal and clay mining, under which employers and employees were required to contribute largely to a fund from which the injured man, or his dependents in case of death, were paid compensation. This was a compulsory act and has proved satisfactory, but is limited in scope and inadequate in amount of indemnity.

The Legislature of 1912 considered many compensation bills, but the subject was little understood and no satisfactory measure was passed. Last May the Governor of Maryland appointed a Commission to study the subject and draft a bill for submission to the next Legislature, to meet January 1, 1914. This Commission has given six months of very careful study to the problem and has reported its proposed act, which has been printed and circulated not only in Maryland but outside the State.

The Commission in its report favors a compulsory act applying to all trades, but for constitutional reasons permits employer or employee under certain conditions to elect whether its terms shall apply.

The Commission in preparing this bill was unanimous in the opinion that State insurance would not be the best form of compensation, particularly in the State of Maryland, both on account of the narrow average of risk and the probability that State insurance would not tend to reduce the number of accidents, as does direct compensation.

California's New Compulsory Law.

WILL J. FRENCH, of the Industrial Accident Board of California, explained that the new compulsory compensation act in that State, to go into effect January 1, had three essential features: Compulsory compensation, a State insurance fund and a safety department. The 65 per cent rate of compensation provided in the existing elective law is retained in the new legislation. The California law will have a new feature, so far as this country is concerned, in that it will take into account in case of accidents the nature of the injury or disfigurement, the age and the occupation. The loss of earning power will be considered and a schedule is being prepared for each industry, so that both employer and employee will know the amount that should be awarded in given cases. For instance, Mr. French pointed out, a bookkeeper who might lose a foot would receive less than a structural iron worker for the same accident, not because in the large sense any man can be compensated for such a loss, but because the bookkeeper can still go on with his work, while the iron worker must find some other occupation.

The employer will have the option of insuring with the State against compensation risk, or with one of the regular companies authorized to do business, or with a mutual company, or may carry his own risk. To provide against the contingency that an employer may not be able to pay compensation, the law makes certain provisions which the speaker illustrated in the case of the building trade. I sub-contractor is unable to pay compensation, principal contractor is held liable, and if nec sary the owner of the building, the result of wh is that no owner will let a contract and no c tractor a sub-contract unless each respectively ries insurance.

The safety department in the California law considered very important. Negotiations are u under way with a safety engineer to go to C fornia from the Middle West. In place of the m usual practice of specific safety laws, Califor follows the Wisconsin plan of permitting the Ind trial Commission to issue rules and regulations a hearings at which both employers and employ may be present.

Mr. French stated that in California there been a marked change in sentiment, which is n practically unanimous in the belief that trans ence of the burden for industrial accidents deaths to the industry is the better way of h dling the problem.

State Insurance on Trial in Ohio.

WALLACE D. YAPLE, Chairman of the Ohio Ind trial Commission, in discussing the new compuls compensation act of 1913 in that State declared t in his judgment the most vital question involved a compensation law is whether each employer sh bear his own burden of insurance, or choose the fo of insurance, or be required to adopt some par ular form of insurance. The present compuls act was made possible by the passage of a con tutional amendment in 1912.

The speaker maintained that the people of O thought that if it is a proper exercise of the pol power of the State to provide workmen's comp sation, it is also a proper governmental function provide the machinery by and through which compensation is paid. It was felt that a law sho not only provide for compensation, but should m its receipt certain and definite through the medi of a fund administered by the State. Mr. Ya presented a comparative table for many different dustries, giving the compensation rates now char under the Ohio State plan and by private insura companies in Michigan and Wisconsin, tending show that the rates in Michigan are more t three times those under the Ohio system, and Wisconsin almost four times.

The law requires employers to contribute to State insurance fund unless the Industrial Comm sion finds that a given employer making appli tion is financially able to pay compensation and f nish medical attendance direct, in which case necessary authority may be given him. An e ployer who contributes to the State fund is liable to damages unless the injury or death of employee is caused by the employer's wilful act is due to the violation of safety laws, in which c the employee may, if he choose, enter a suit in courts instead of filing a claim under the compe tion act. However, out of more than 15,000 injur under the new system thus far the Commission h been advised of only five such suits. In connect with the State fund there is an organized medi and claims department through which awards made on an average within nineteen days after filing of the claim.

Under the elective act of 1911 more than 3,0 employers, employing nearly 200,000 wage earne have become subscribers to the State insura fund, contributing thereto nearly $1,000,000. It estimated that more than 20,000 employers, hav more than 1,000,000 employees, will be affected by new compulsory act and that annual contributi to the State fund will be not less than $3,500,000.

The speaker made the point that under the O system a claim for compensation does not assu the nature of a controversy between the emplo and employee, since the claim of the latter is agai the insurance fund, and every honest employ while interested in protecting that fund from ploitation, is also interested in seeing his injur employee receive the exact amount of compensati provided by law.

Another View of the Ohio Experiment.

CLARK B. FIRESTONE, President of the Fi stone Bank of Lisbon, Ohio, was unable to appr the State monopoly of industrial insurance, which characterized as the distinguishing feature of t Ohio law. In that respect he considered it t worst law in the country, by reason of its den of American traditions of free association service or profit and its rejection of the benefits

npetition. He had never heard any reason for s feature except the assertion of Governor Cox t the accident and casualty companies of Eng- d and Holland were trying to rule Ohio. The aker suggested this "vision of the Dutch peril" l undoubted frauds in the referendum petition as bable reasons for the Governor's refusal to grant people of the State the right to vote upon the ject.

Mr. Firestone maintained that the figures which been given by the previous speaker were com- isons, not with what Ohio had proved it could do the line of economic management, but with what noped to do in the future. He considered any fig- s misleading which are based upon what insur- e companies pay under employers' liability in nparison with rates under workmen's compensa- n.

With the general principle of workmen's compen- ion Mr. Firestone was heartily in accord. Atten- n was called to the fact that inequalities in many our laws must be remedied and that an undue or to an injured workman does injustice to the njured, by loading his industry with burdens ich will make it suffer in competition with ers. Mr. Firestone figured that under the Ohio as much as $30,000 might be paid in cases of l disability.

The Ohio law, he believed, when amended in re- ct to the State fund, would do more than com- sate for injury; it would prevent it. It has vi- zed neglected portions of the factory act and led ployers to instal safety appliances and protect nts of danger. The speaker also believed that leaders of labor may be confidently expected to ng home to their followers the necessity for oubling their caution in avoiding accident, lest y entail upon industry a burden which would nper its ability to pay the living wage.

A Labor Opinion on the Michigan Law.

CLAUDE O. TAYLOR, President of the Michigan te Federation of Labor, maintained that the im- tant end to be attained in compensation laws is the paying of money to the injured employee, but preventing of accidents in the first place. The chigan law, which he believed the best in the ntry, has reduced fatal accidents during its first r from two a day to less than one and a half, during the last six months to less than one. n-fatal accidents have been reduced from one ndred a day to less than sixty-five. The Michi- law is so equitable that it has not caused hard- p to the employer, who is able to adjust conditions spread the expense upon the cost of production. e success of the law, in the speaker's opinion, was to the fact of co-operation both in the planning the passage of the act. Organized labor met h the large employers and there were two labor n on the Commission appointed by the Governor, ose report was adopted without change by the islature.

Under the Michigan law an employer may insure self through State insurance, self insurance, mu- l insurance, or stock company insurance. Mr. Tay- was at first in favor of State insurance, but stated t in Michigan it is practically a farce, for the rea- that when a case comes to the Industrial Acci- t Board for appeal, recourse is allowed to the At- ney General's office against the employee as to ether he should receive compensation from the te fund or not. The mutual companies and the -insured employers and stock companies are do- the chief work for the prevention of accidents, in Detroit one large corporation pays $5,000 a r to a safety expert. "Safety first" is also the ob- t of the mutual companies. In Lansing $38,000 has n spent in the last six months for the prevention accidents. Michigan intends to keep an eye on s passed in other States with a view to possible provements in its own law, but in studying the ults of other acts the significant points would not how much is saved to the employer or the te, but how much is given to the man for whom compensation is written; how many accidents prevented, and how many workmen are saved their families.

stacles to Compensation Legislation in Pennsylvania.

Prof. FRANCIS H. BOHLEN, of the University of nsylvania, Secretary of the Pennsylvania Indus- l Accidents Commission, regretted that Pennsyl- ia experience at least did not confirm the belief t the principle of workmen's compensation is now epted everywhere without question. He had found t among the State senators, most of them law- s of the old school, the idea of responsibility hout fault was repulsive in the last degree. The nsylvania compensation act failed in the last islature, and the line-up in the Senate seemed be largely that of city against country, the sup- t coming mainly from the cities. Prof. Bohlen not, however, consider that this was due to the lusion of agricultural employees in the act. Personally he could not see why agriculture and domestic service should be excluded. The decisive opposition came from a class of employers who had been for years practically free from legal responsibility in respect to accidents. The Pennsylvania Commission is still in existence, however. A compensation bill would be introduced in the next session of the legislature and the speaker had confidence that it would pass.

The Weak Point in the New Jersey Law.

LEWIS T. BRYANT, Commissioner of Labor of the State of New Jersey, declared the compensation law in that State to be one of the most practical and workable in the country, but greatly limited in effectiveness by the fact that employers and employees may enter into settlements at variance with the compensation schedules in the law. Settlements are constantly being made for amounts less than the law provides that an injured workman shall receive. In illustration of this, Commissioner Bryant cited cases in which $425 was due and $250 paid; $168 due and $151 paid; $282 due and $257 paid; $114.25 due and $41.50 offered, of which $14 was to be returned to the employer; $1,500 due a family for death of a workman and $380 paid; $1,500 due and $650 paid. Of the settlements actually reported to the department, nineteen per cent are found contrary to the legal schedules. Mr. Bryant maintained that some proper authority should have supervision and power of approval of all such settlements in order that injured employees may be protected in their rights.

PREVENTION OF INDUSTRIAL ACCIDENTS.

LOUIS B. SCHRAM, Chairman of the Compensation Department's Committee on Improvement of State Inspection of Factories with Special Reference to Safeguarding Machinery, opened the second division of the day's program. Mr. Schram pointed out that the work of The National Civic Federation in connection with accident prevention had taken on several phases. For one thing, the accumulation of accident statistics had been advocated for a long time in the belief that the work of prevention would be effectively aided by systematic recording of accidents and study of their causes.

Mr. Schram believed that the mutual insurance feature provided for in the new compensation law in New York would do much not only to solve the question of workmen's compensation, but to bring about more effective prevention of accidents. Opportunity would be given for grading premiums according to the safety of various plants, and an employer would soon find that the fewer his accidents the lower would be his premium rate.

The National Civic Federation also has advocated the establishment of museums of safety. State museums such as exist in many European countries are an important factor in showing employers the best ways and means of avoiding accidents. These exhibits tend to remove the wrong impression many employers have that safeguarding machinery means expenditure of large sums of money.

In speaking of the model safety act which had been prepared by the Federation, Mr. Schram explained that it was not to be regarded as a perfect measure, but that it is the result of the best available thought and practice as a pattern for legislation in the several States.

Safety Management Must Accompany Safety Devices.

JOHN CALDER, former President of the International Motor Car Company, of New York, and former inspector of factories in Scotland, said that at one time it was thought a sufficient protection against accidents merely to provide physical safeguards. The speaker knew from his experience as manager of large establishments employing from 3,000 to 8,000 men that seventy per cent of the accidents have nothing to do with unprotected machinery. After the physical safeguards are provided there must be safety management. If the foremen are careless or neglectful, accidents will continue. The foreign laborer especially does not know the risk; the things men will do from sheer ignorance are almost unbelievable. That can be removed by good supervision. With the machinery once protected the greatest hope for accident prevention is the permeation of our industrial plants and their managers with a sense of social responsibility; that they have not discharged their duties unless they have delivered the product to the consumer and the man to his home.

Mutual Compensation Insurance in Massachusetts.

DAVID S. BEYER, of the Massachusetts Employees' Insurance Association, said that any employer in the State may become a member of the association, but retains the option of insuring with one of the authorized liability companies, or of staying outside the provisions of the act entirely and relying upon his common law rights.

The membership of the association has more than doubled within a year, and it now numbers more than 900 subscribers, employing about 130,000 working people, or about one-fifth of all the employees in manufacturing industries in the State. Only one of the twenty commercial liability companies writing workmen's compensation insurance in the State on an equal basis of rates exceeded the volume of business handled by the new association during its first six months, although it was working on a purely competitive basis without State aid of any sort.

The Employees' Insurance Association has made safety of employees its first consideration. It has nine trained safety engineers, each insured plant is inspected from two to five times during the year, 7,660 specific safety recommendations have been submitted to subscribers, covering more than 20,000 danger points, and more than 97 per cent of these have been adopted by the members. This indicates first that the recommendations were practical, and second, that the members were quick to realize the advantage of carrying them out and thus cutting down accident loss.

State insurance, the speaker held, arouses suspicion on the part of business men from the danger of inefficient management and political influence. With a mutual company the subscribers themselves have complete supervision of the management, and it is clear to the members that every accident prevented means a direct saving to them in the form of increased dividends.

Settlements have been upon a liberal basis, and in more than 90 per cent of the cases the regular compensation payment has been made promptly the first of each succeeding week. In only 43 cases out of about 15,000, or 99.78 per cent, has it been necessary to call upon the Industrial Accident Board for a decision. In all others the association has made settlements automatically under the act. This is in striking contrast to the long delays, costly litigation and incidental injustice and discontent prevalent before the act was passed.

The rates first put into effect have been reduced, but dividends of 20 to 30 per cent have been paid to subscribers on all expiring policies. Liberal reserve allowances have also been made. The association has a system of merit rating which gives a plant the benefit of reduction in premium for specified safety conditions, and this system has since been adopted practically in all details by nineteen of the leading stock liability companies for use in Massachusetts.

Safety and Health Promotion.

DUDLEY M. HOLMAN, of the Massachusetts Industrial Accident Board, was called away during the conference, but submitted a copy of his address. It is estimated by those who have made a study of the subject, Mr. Holman states, that 50 per cent or more of industrial accidents are preventable; that 25 per cent can be avoided by adoption of safety devices, and 25 to 40 per cent eliminated by educational work.

In Massachusetts during the year ending June 30, 1913, there were 476 deaths from industrial accidents, and 89,694 accidents reported to the Industrial Accident Board. If one-half these accidents were preventable, nearly 250 lives might have been saved, and an army of employees would have been kept at work. Under the compensation act practically $1,677,380.82 was paid out during the first year for compensation and medical attendance. The cost of insurance under the act during the same period is estimated at $4,000,000. If compensation and medical treatment alone could have been reduced 50 per cent $838,690.41 would have been saved to Massachusetts employers.

The Massachusetts legislature has empowered the Board of Labor and Industries and the Industrial Accident Board, jointly, to order the installation of safety devices and to make rules and regulations covering occupational diseases. In carrying out this work the Board has decided to establish a museum of safety as a clearing house of information for employers and employees. Among other educational means for promoting industrial safety stereopticon lectures, moving picture slides and education in the schools are considered of great value. Safety experts agree that the mere installing of safety devices will not suffice without the hearty co-operation of superintendents, foremen and the employees and their shop committees.

Mr. Holman favors the requirement that machinery manufacturers shall put on proper safety appliances before the machines leave the factory, as already provided by law in some States. There should also be insistence on fire drill, both in schools and business places, and upon the equipment of buildings with fire escapes and automatic fire prevention sprinklers.

The obligation to provide proper safeguards in respect to sanitation and industrial hygiene, as well as machinery, should rest upon the employers and machinery makers, and not upon the inspectors, who can only be occasional visitors. Special bulletins of various trade risks and practical remedies, such as are already being sent out by The National Civic Federation, the National Association of Manufacturers and other agencies, should form a part of our educational task.

DEPARTMENT STORE REPORT SUPPORTED BY CRITICAL ANALYSIS

PRESIDENT LOW REVIEWS THE OBJECTIONS RAISED BY THE CONSUMERS' LEAGUE, AND STATISTICIAN JOSEPH A. HILL SUSTAINS THE ACCURACY OF THE REPORT AT EVERY POINT.

SINCE the publication of the last number of the REVIEW, some of the criticisms upon the report of the Welfare Department on working conditions in New York department stores, discussed in that issue by Mr. W. R. Willcox, chairman of the Department, have been repeated by Mrs. Frederick Nathan, president of the Consumers' League of New York, in a letter sent to members of the Executive Committee of the National Civic Federation. Under date of December 29, President Low replied to Mrs. Nathan's communication, enclosing a statement from Mr. Joseph A. Hill, head of the Division of Statistics in the Bureau of the Census, Washington, to whom the department store report and the criticisms upon it had been submitted for critical analysis and opinion. Mr. Hill is recognized as one of the most competent experts in his profession in the country.

PRESIDENT LOW'S REPLY.

The principal portions of President's Low's reply to Mrs. Nathan's letter are as follows:

December 29, 1913.

"Your letter of December 10, addressed to me and to many other members of The National Civic Federation, has been referred to me for reply. In view of your most unusual course in communicating with the Federation otherwise than through its president, I must ask you to let me have a list of those to whom your letter was sent, so that my reply may surely fall into the hands of those who have received your unfavorable comments upon the report of the Welfare Department of The National Civic Federation with reference to department stores.

"Let me observe, in the first place, that the Welfare Department does not claim for its report any other weight than that to which it is entitled upon its merits. The Department has been scrupulously careful to inform the public that the expenses of the investigation were met by the department stores themselves; it has given the names of the public accountants who are responsible for the figures as regards wages; and it has also given the name of every expert employed or consulted in connection with the investigation. The public, therefore, by the action of the Welfare Department itself, is perfectly equipped to form its own opinion upon the merits of the report.

"So far as I am informed, neither you nor any other critic has questioned the accuracy of a single fact stated in the report. If any inaccuracy is pointed out the Welfare Department will be glad to admit its mistake; for the Welfare Department is anxious, above everything else, to have this question considered by the public in the light of facts rather than of theories.

"In view of the criticism of the Department's report made by Miss Van Kleeck, the secretary of the Committee on Women's Work of the Russell Sage Foundation, the Department's report and Miss Van Kleeck's criticism and the various *Survey* articles were sent to Mr. Joseph A. Hill, head of the Division of Statistics in the Bureau of the Census, Washington, with a request that he examine both the report and the criticism and give to the Federation the benefit of his opinion. I have the pleasure of handing you herewith Mr. Hill's reply, which I have been authorized to use in this way. Mr. Hill was turned to as a competent and presumably unbiased judge of the statistical questions involved in Miss Van Kleeck's criticism and the various *Survey* articles tains the assumptions and the arguments of the Welfare Department upon every point raised by Miss Van Kleeck; and he makes clear that, upon every point discussed in the Welfare Department's report, which has also been covered by governmental inquiry, the conclusions reached by the Department on the basis of this investigation coincide with the conclusions of the governmental investigators.

"In response to your observation that it is undesirable to have any part of the expenses of such an inquiry as was made by the Welfare Department met by the firms under investigation, let me point out that in making the fact public the Department relieved itself of any just criticism that might otherwise attach to this course. Your comment must mean then, either that the public accountants would be swayed from their duty because they were paid by the Federation with money received from the Dry Goods Association; or else, that the Department itself could not be impartial in its conclusions because the investigation was made possible in this way. So far as the accountants are concerned, the examinations of banks and insurance companies in the State of New York are, by law, paid for by the companies examined. The reputation of an accounting firm is at stake in each investigation it makes. So far as the Welfare Department is concerned, you have failed to notice, I think, that the Department, in undertaking to make the investigation upon these terms, specifically pledged itself to report what it found, whether its findings helped or hurt. I regret that any of our fellow workers in the field of social uplift should attempt to discredit the report of the Welfare Department under those conditions on this ground. The fact that the conclusions reached by the Welfare Department on the basis of this investigation coincide so closely with the conclusions of the United States investigators, carried on from time to time under the authority of the Government, should, however, serve to set your mind at rest in this particular instance.

"You protest that any report on the general conditions of wage earners which does not go more thoroughly into the subject of overtime, and puts, on the other hand, so much emphasis on welfare work, is of necessity misleading in its general conclusions. I am greatly interested to know whether this statement is based upon exact information in your possession on the subject of overtime, or whether it is a mere impression. The Welfare Department frankly stated that the information secured as to overtime did not cover all the stores examined. The report, however, distinctly recommends that overtime work be discontinued except in cases of emergency; and that overtime be paid for on the basis of time and a half for evening work and double time for holidays and Sundays. If you have facts in your possession which justify a different conclusion, I shall be greatly obliged if you will furnish them to me so that the Federation may make such a study of them as the importance of the subject deserves; but if the facts are not at command, how is it possible for you, or any one else, to say, with authority, that the report of the Welfare Department is misleading in this particular?

"You suggest that 'such subjects as ventilation and sanitation should not be regarded as welfare work but as basic requirements in all establishments, and that to refer to them as welfare work gives a false impression to employers and the public.' I agree with you in thinking that ventilation and sanitation are basic requirements; but I think you are mistaken in assuming that the effort to improve sanitation and ventilation is not properly described as welfare work. George William Curtis used to say that 'the only way in which a man could be as good as his father was to be better than his father;' by which he meant, I suppose, that the standards of each generation ought to be higher than the standards of the generation before. It is evident that buildings which may have met reasonably well the standards of five, ten, fifteen or twenty years ago do not come up to the standards of our own time. It seems to me, therefore, that it is welfare work of the most useful character to encourage improvement in ventilation and sanitation in all existing buildings, and to encourage the provision of the most desirable arrangements in all new buildings; so that each new building constructed may carry the standard of actual practice upward and forward as far as possible. I think you are mistaken in believing that to call efforts such as these welfare work gives a false impression to either employers or the public.

"It is scarcely necessary for me to add anything to Mr. Hill's comment upon the headlines of the Welfare Department's report. Yet it seems desirable to point out that there is a school of thought which believes that every social ill is traceable to an economic cause. Writers of this school have not hesitated, very recently, to place a stigma upon the many thousands of women working in department stores in the effort to induce the public to accept the correctness of their theories. At least, I can imagine no other explanation of many of the articles and items which have appeared recently in some of the magazines and in our newspapers. If, therefore, you think that the headlines of the Welfare Department's report are scarcely consistent with a serious and scientific study, I submit that they are at least very human and well calculated to help to dispel an opinion which is cruelly unjust to every good woman employed in a department store.

"What you call 'the inaccuracies and misinterpretation of the data of this report, which have been pointed out in detail by Miss Van Kleeck,' are shown by Mr. Hill to be, on the contrary, inaccuracies and misinterpretation of the report itself on the part of Miss Van Kleeck.

"While I have attempted to show that the unfavorable comments of the Consumers' League upon the report of the Welfare Department of the National Civic Federation are not well founded, I wish to assure you, for myself and for my colleagues in the Federation, that we have the highest possible appreciation of the aims and purposes of the Consumers' League; and we regret that the League and the Federation do not see eye to eye in this particular."

MR. HILL'S STATISTICAL ANALYSIS.

The report by Mr. Joseph A. Hill, enclosed with President Low's letter, is a study in close detail of the several features of the report called in question by Miss Van Kleeck, including the use of average in the comparisons between wages in department stores and in factory occupations, and the facts and expert testimony upon which the Federation based its conclusion that the department stores are not a recruiting ground for white slavery. By reason of lack of space, it is not possible to present Mr. Hill's statement in full, nor is it practicable to give in abstract an adequate impression of its exhaustive and convincing character. It is perhaps sufficient to note that as the net result of his examination, Mr. Hill reaches the following conclusion:

"In the report of the Civic Federation the presentation of wage rates for the women employed in the department stores in the City of New York appear to be reliable, complete and scientific. The source of data are frankly stated. The stores included are given by name so that any one may have an opportunity to judge whether the results may be accepted as typical. The wage earners are classified according to kind of work done, and then according to rate of pay, with percentages to show what proportion of the total falls within each pay group. Averages are presented for the totals of all establishments combined and also for each individual establishment. I can see no indication either in text or tables of an attempt to mislead the reader or disguise the facts

AN INTERSTATE TRADE COMMISSION.

(Concluded from page 5.)

firm, corporation or locality to any undue or unreasonable prejudice or disadvantage in any respect whatsoever."

This general phraseology has enabled the Interstate Commerce Commission to put an end to every unfair practice in railroading as any such practice is brought to the notice of the Commission. A hearing is had, the actual thing complained of is passed upon, as to whether it is fair or unfair, lawful or unlawful, and then the defendant is told what he must do, as to the particular thing complained of, in order to bring his action within the law. There is nothing uncertain about it; there is nothing arbitrary about it. On the contrary, the general phrase is given a specific meaning, the significance of which no one can misunderstand. There is, of course, an appeal to the courts from the determination of the Commission; but the appeals that are taken are few in comparison with the number of objectionable practices that have been abated by virtue of this authority. It is believed that an Interstate Trade Commission, acting under general authority such as this, could put an end to one unfair practice after another, existing in actual business, as such practices were brought to its attention either through its own discoveries or upon complaint. It is submitted that language such as this, which has been repeatedly interpreted by the Supreme Court of the United States, is both more searching and more comprehensive than any specific definitions could be, and that this plan is desirable in continuation of the work so well begun by the Attorney-General, in addition to any specific definitions concerning what is unlawful under the Sherman Law, if such definitions are made.

There appears to be no way except through the agency of an Interstate Trade Commission to secure uniformity of interpretation of the Sherman Act and uniformity in its application to business through a series of administrations. The proposed law, therefore, so far from being an agency for the arbitrary control of business, is to be an agency to help business men to determine whether what they are doing or proposing to do, is probably lawful or unlawful and we believe it to be of not less importance to the consuming public. For to them it would afford an agency, always accessible, for the full and public consideration of serious complaints.

A REMARKABLE YEAR OF PROGRESS

SUMMARY OF REPORTS OF DEPARTMENT CHAIRMEN PRESENTED AT THE FOURTEENTH ANNUAL MEETING OF THE NATIONAL CIVIC FEDERATION

THE following annual reports of the chairmen of departments of The National Civic Federation were presented during the Thursday morning session (Dec. 11) of the Thirteenth Annual Meeting, at the Hotel Astor, New York. President SETH LOW occupied the chair.

WOMAN'S DEPARTMENT.

MISS MAUDE WETMORE, chairman: The work of the chairman of the Woman's Department of The National Civic Federation has to report is one of reorganization. Ten and a half months have elapsed since The National Civic Federation held its annual meeting here in New York. Since then the Woman's Welfare Department has become the Woman's Department, and is of equal standing with the other departments of The National Civic Federation. Permission has been granted it to deal with industrial economics as affecting women and children; including the question of wages and hours; taking up as well legislative work, but with the understanding and assurance that the Woman's Department would never act on legislative questions independently of, or conflicting with, The National Civic Federation.

This larger scope of work has enabled our department to respond to the offers of co-operation which have now naturally come from other organizations. No report can be made as regards this work as it is still in the early stage of construction.

Mr. Low has appointed Mrs. Harriet Blaine Beale and Miss Thalia Brown representatives of the Woman's Department on the Committee of Plan and Scope, for an inquiry in relation to the "minimum wage." Mr. Low also appointed twenty-five women of our department on the Advisory Council of the Industrial Economics Department, to help in the reorganization of this department of The National Civic Federation.

On October the 15th the chairman, accompanied by Mrs. Archibald Hopkins, Mrs. Francis McNeil Bacon, Jr., Miss Robinson Smith and Miss Elizabeth Porter, went to Knoxville, at the invitation of Mrs. Horace Van Derventer, the president of the Woman's Department of the National Conservation Exposition, to explain the object of our work. The day was known as "The National Civic Federation Day," and the outcome of this visit will be the formation in the very near future of a Tennessee section.

Five delegates of the Woman's Department were sent to the National Conservation Congress which met in Washington, D. C., on November 17, 1913. Although the chairman has to report the discontinuance of the Congressional Section, it is gratifying to know that our membership has increased from 1,436 to 1,779, and that Mrs. Woodrow Wilson has followed what we hope will now become a tradition of the White House, that the wife of the President of the United States be always the honorary chairman of the Woman's Department.

The chairman of the Government Employees Committee reports the formation of a National Committee on Prison Reform, but the work is practically only now being organized. The Assistant Secretary of the Treasury is considering the plan of asking the President to extend the executive order issued by the last Administration and place under the Bureau of Public Health all government buildings in the United States. It is also gratifying to know that this suggestion did not come from the Woman's Department, but because of the work the department has accomplished in Washington. The extension of the executive order means that where an officer of public health is stationed the Woman's Department would work in co-operation with him as it does with Surgeon-General Blue in Washington.

The National Vacation Committee is gradually establishing branches and mailing-in stations in different parts of the country.

The Metropolitan Section for New York and New Jersey has much of interest to report, but lack of space permits of but a few words to be said concerning the most important committees.

Navy Yard Committee.—At the Brooklyn Navy Yard the Men's Co-operative Association has run the restaurant most successfully, showing a profit on June 30 of $505, thus allowing the Association to declare a 10 per cent dividend. The month of October, 1913, showed a profit of nearly $100.

The School Committee, after a careful investigation from a selected list of over sixty-seven schools, carried to a successful issue its campaign for a sufficient number of perfectly equipped retiring rooms, suitable for lunch purposes for teachers in each public school. The findings of this committee, endorsed by different educational organizations, local school boards and teachers' associations, were presented to and passed on by the Board of Education. On September 27 the section was notified that the superintendent of school buildings had been authorized to purchase the necessary equipment with money already on hand for the schools of Manhattan and Brooklyn. Those of the Bronx, Queens and Richmond were laid over until 1914, when more funds will be available.

The growth of the Vacation Committee's work in the Metropolitan Section speaks for itself:

Stations existing to-day in New York.....	120
Girls opening accounts with the Vacation Savings Fund	14,000
Deposited by working girls in the two years of the Vacation Savings Fund's existence..	$101,000

The Society for the Prevention of Useless Giving was founded. It has enabled thousands of girls to continue saving their earnings at Christmas time, which earnings, until very recently, the "collective giving" and the "exchange system" had during that period pretty well eliminated.

The Committee on Occupational Diseases is at present investigating the effect of treadle work on women. An expert investigator is gathering the information, but her report will not be finished before the first of the year.

The District of Columbia Section continues its wonderful work in the Federal buildings of Washington. The new building of the Bureau of Engraving and Printing, soon to be opened, will be a model factory. Tumbling machines for the cleaning and disinfecting of mail bags in the General Post Office are being installed. The matter was brought before the proper authorities, and the acceptance of our suggestions means probably a far-reaching reform throughout the United States. The death rate in this division alone has run as high as 33 per cent.

The housing problem has been thoroughly studied, and a bill bearing the President's stamp of approval is shortly to be introduced in Congress. It provides that in ten years' time the alleys of Washington will be entirely done away with. Many of them are to be converted into minor streets, and in the meanwhile no new dwelling houses are permitted to be erected.

The question of making use of schools as social centres is one which has long been agitated by many organizations in Washington. Recently, under the auspices of the Woman's Department, a meeting was called at the White House by Miss Margaret Wilson, chairman of the Recreation Committee, and every society interested in this work was invited to a conference. The Woman's Department, acting as a "clearing house," encouraged a general and concerted action. Two bills, approved of by over a hundred organizations, are the result of this meeting, and their enactment into laws is almost assured.

The Massachusetts and Rhode Island Section is ever busy with its factory and mill inspection. The Vacation Committee has taken a firm hold in Boston, and is gradually increasing its membership. With the consent of Governor Pothier of Rhode Island, the State institutions are being visited and the hope is entertained of ultimately improving conditions which to-day fall far below our modern standards.

A system of drinking water along the lines suggested by the Federation is being installed in one of the large textile plants. The management furnished our committee with specifications and the cost of installation. This system is being offered to other manufacturers, with the result that the mill community is discussing the problem and four manufacturers are considering its introduction.

Statistics from hitherto unavailable sources covering infant mortality in a large textile city have been compiled and verified, comparing the mortality of the children whose mothers had worked in mills with that of the children whose mothers had not.

The chairman of the North and South Carolina Section reports no new work undertaken, but a general broadening on the old lines at Spray. Four trained nurses, where formerly one only was employed, are busy caring for the sick and teaching the well how to live and make their homes comfortable and attractive. A resident physician is always on hand, and a dispensary has been establsihed.

The Virginia and West Virginia Section reports growing interest in welfare work throughout these States, but no increase of membership, as the advantages derived from a national organization are not yet understood.

The Georgia Section in the past year has prepared, published and distributed through factory neighborhoods series of "Health and Right Living" bulletins.

In the spring of 1913 the Southern Sociological Congress met in Atlanta. An important place was provided for the work of the Woman's Department upon the crowded program of this busy gathering. The new work of inspecting jails and prisons has been largely covered by the Georgia Section, and a report will be made in the near future.

The Florida Section is investigating, for possible improvements, all jails, the county prison farm, the county hospital and State reform school.

Half holidays in business establishments have been suggested, and a change in the hours of opening and closing for the benefit of the employees.

The Woman's Department has a right to be proud of what it has accomplished in 1913. Its broader scope of work enables it to take its proper stand among the national organizations of women in this country. We are keen to occupy the same relative position among women that the Civic Federation does among men. We are a "clearing house," working for unselfish, universal co-operation. We gladly extend the hand of fellowship; our dearest wish is to have it cordially grasped.

DEPARTMENT ON WORKMEN'S COMPENSATION.

AUGUST BELMONT, Chairman: We have been working in this Department since 1908; first, to create, through public discussion, an interest in the subject of workmen's compensation for industrial injury arising out of and in the course of employment; and, second, to provide a model compensation act for uniform State legislation.

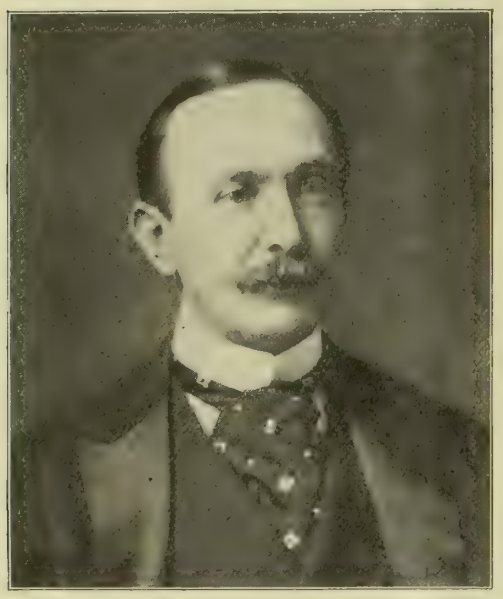
The National Civic Federation gave the first impetus in this country to the agitation for workmen's compensation, by its discussion at the annual meeting of 1908, preceding the appointment of the first State Commission—that of New York. This Commission had for its purpose a study of the subject of employers' liability and work accidents. It completed its work by recommending legislation, which was subsequently enacted.

The principle of workmen's compensation is, first, that industry in general should bear the burden of accidents rather than the particular person who happens to be its victim; and, secondly, that this can only be accomplished through the agency of the employer, who, in computing costs and fixing the price of his finished product, can and shall include in it the resultant losses. Human shortcomings that affect industrial operations being broadly considered, the question of direct fault is not material. The fact that loss of bodily faculty and regular wages occurs entitles the victim to compensation, unless his injuries have been received with willful intention. This is to-day's concept of a social obligation. It is interesting to note how it has worked out in the various States now under compensation laws.

[Mr. Belmont here traced the history of the Federation's efforts in behalf of uniform State legislation upon the subject, including the special campaign carried on in New York, culminating in the adoption last November of a constitutional amendment under which the legislature has already enacted a compensation law. Mr. Belmont also described the work of the Civic Federation's Joint Commission of six, appointed last July, which has been collecting data and visiting various States, from Massachusetts to California, in which compensation laws are in operation. Each of these phases of the Federation's work in connection with the subject was treated at length in the December issue of THE NATIONAL CIVIC FEDERATION REVIEW, and further particulars appear in the report of the Workmen's Compensation session at the recent annual meeting, published elsewhere in this number.]

As may readily be understood, our commission has gathered a larger amount of testimony bearing on every point of the compensation question than has been possible to any other agency. Whereas study of the question hitherto has been for specific, and at times self-interested, purposes on the part of attorneys or insurance companies, or has been conducted by official commissions having in view the conditions of industry in their own States, the Fed-

eration's commission has covered sufficient area to represent in effect all interests in the entire country. While a general summary of its findings may be given in brief space, the full report warranted by the large collection of facts will necessarily make a good-sized volume.



The present purpose of the investigation is to give to legislators and friends of the compensation movement everywhere the sifted results of the country's total experience upon the subject. It will be in a definite form which it is believed will meet the new problems that have arisen in the workings of the more or less experimental acts now in force. The information will also be of great practical value as a basis for recommendations which may be made for the drafting of a new model workmen's compensation law by the Federation. * * *

A large advance demand for the report of our commission has developed from citizens and organizations interested in proposed legislation in the various States having the matter under active consideration. * * *

There has been a great demand for the Federation's Model Safety Act. Its principles were the basis for the reforms in the labor laws of New York State last year which were of great moment.

The original draft of this proposed safety act has been improved through criticisms and suggestions from commissioners of labor, factory inspectors, members of safety boards in manufacturing concerns, labor representatives and other experts, and may be said to represent the best thought on the subject.

Employers in States where compensation acts are

AUGUST BELMONT,
Chairman Workmen's Compensation Department.

in existence have applied to us for our uniform accident reporting blank, and this we consider very encouraging, since it is practically impossible to draw conclusions from statistics existing to-day, because of the varied methods of recording and tabulating. * * *

The differentiations between workmen's compensation and various forms of social insurance are bewildering to the lay mind. As we are just beginning in this country to consider seriously the problem of caring for wage-earners in times of sickness and invalidity through accident and old age, it is right that at the outset we should discriminate and plan for each condition of disability upon correct lines, if possible, in order to avoid the pitfall of increasing pauperism, as seems to have been the result in Germany.

The correlation between accident compensation, sickness and invalidity insurance and old age pensions in Germany has brought this subject of social insurance before our Legal Compensation Committee, of which Mr. P. Tecumseh Sherman is chairman. The information so carefully collected by that committee, in connection with its special line of inquiry, will prove of especial and immediate value to our Welfare Department, which is already doing practical constructive work in the field of social insurance. Through its Committee on Wage Earners' Insurance, of which Mr. George W. Perkins is chairman, it has been and is devoting itself to the encouragement of employers' and employees' voluntary relief associations. It has for its further object an investigation of the need for uniform legislation covering sickness and accident relief, pensions and death benefit associations.

It seems to be the common assumption on the part of public speakers and magazine writers that there are great systems of social insurance in vogue in Europe, which if in effect here would prevent nearly all the suffering and distress from sickness among our poor. While that seems to us now to be misleading, in view of Mr. Sherman's investigation, it is apparent from the questions arising that the subject should have the most careful study. * * *

A number of vitally pertinent questions, which we can here merely indicate, suggest themselves in the light of Mr. Sherman's careful study of these experiences. What, for instance, can be done wisely and helpfully for the better protection of working people against misfortunes not covered by accident compensation? Do we see a solution in any of the various voluntary systems of workmen's insurance in vogue in this country, such as the trade union benefit features, the establishment funds and social societies? Would the foreign methods of sickness and invalidity insurance prove practical in a country having an immigration population so large as ours, or where so considerable a proportion of the working people frequently move from place to place and change occupations as opportunity may present? If voluntary methods of providing this class of insurance would prove inadequate, can we apply it through any workable compulsory scheme, under American conditions? If made a compulsory charge upon employers, for instance, would it be transferred by them to labor in the form of wage reductions, as some predict, or would the expense be added to prices and thus borne by the consuming public at large, or would the employers find themselves obliged to make good this added cost through new economies and better organization of industry?

We shall have to ask ourselves further, in facing this whole question of sickness and invalidity insurance, what is the meaning of the fact that the volume of poor relief in Germany has not diminished, nor has the cost of treatment, nor the average term of sickness? Is it true, then, as Price Collier has put it, that "the people are sick by being paid for it," and why is it that the neighboring wage-earners of France, thrifty by nature, obstinately oppose the adoption in their country of the German invalidity and old age insurance?

They insist that they can make this provision better for themselves.

We find in this connection that the voluntary system in France, whereby sickness insurace is carried in workingmen's self-managed mutual associations, with moderate government subsides and employers' contributions, secured through an attractive system of honorary membership, is yielding most significant results. The number of insured has increased from less than 2,000,000 in 1898 to about 6,000,000 at the end of 1912, while the showing of maintenance expenses is much more favorable than under the German method.

May not this French system prove, from the standpoint of our conditions, one of the most promising experiments in this perplexing and tremendously far-reaching field of social insurance? It demands at least our careful consideration, once we recognize the obligation resting upon us to at least move in this matter beyond our present practice of unregulated, unsystematized and unaided individual endeavor.

Merely to describe these manifold phases of the general problem of workmen's compensation and industrial insurance is to indicate the broad scope and complicated nature of a subject demanding the most complete information obtainable and much more thorough study than has yet been devoted to it in our American experience. It indicates further both the opportunity and the necessity for extensive work by the several departments of the Federation having different phases of the topic under consideration, to the end of assisting in the formation of sound public opinion and the framing of wise legislation in behalf of this great humanitarian cause. Mr. George W. Perkins is to promote this branch of work under a separate department, and no one can be found better equipped for such a task.

DEPARTMENT ON REGULATION OF INTERSTATE AND MUNICIPAL UTILITIES.

EMERSON McMILLIN, Chairman: At the last annual meeting of the Federation the chairman of this department reported the progress that had been made in the investigation of public utility regulation and the methods that had been employed. At that time the work of gathering, compiling and analyzing the material used in the investigation was about completed, and with a single exception the investigating staff was disbanded shortly thereafter. The statutory material gathered by the department has been published in a volume entitled "Commission Regulation of Public Utilities." This is a comprehensive compilation and analysis of existing public utility laws of all the States as at the end of 1912. * * *

The Executive Council has held many importar meetings during the year. At these meetings th bill for the regulation of public utilities has bee scrutinized with the greatest care and a wide rang of suggestions and criticisms has been ca vassed. * * *

As a result of its two and a half years' activitie the Council has prepared a bill for the regulatio of public utilities. This bill is now presented to th National Civic Federation—a copy thereof accor panying this report. The Council of the Departmer expresses the hope through its chairman that th bill so prepared may meet with the approval of you body.

That the regulation of public utilities is necessar is no longer a debatable question. The busines which they conduct is closely related to the publ welfare. The best interests of the public will b conserved ordinarily by the conduct of such bus ness only as a monopoly. Managers of public util ties no less than other members of the public rea ize that without recognition of the common interes in the conduct of such business conditions migh eventually become intolerable; in fact, it has com to be generally believed that regulation of publ utilities is the alternative to public ownership an operation. No one of the important public utilitie has reached a point where in the interests of th public it can dispense with the initiative, zeal, ente prise and courage which in the past have characte ized American business methods.

Accordingly the bill which we have prepared is a endorsement of the principle of State regulation public utilities. It stands squarely for the publ

EMERSON McMILLIN,
Chairman Department on Regulation of Interstate ar Municipal Utilities.

interest in these matters. Unhesitatingly and wit out equivocation it gives to a public commissio powers of the greatest importance to the well-bein and prosperity of the companies. The commissio may investigate and fix absolute rates. It may pr scribe absolute standards of service and require a herence thereto. It is required to provide unifor accounting and statistical methods, and companie are obliged to make such reports to it as the cor mission may desire. It is charged with the r sponsibility of approving issues of stocks and bon and the transfer of property and franchises from or company to another. These powers and others ar conferred on the commission in the firm belief th their exercise is required under a system of adequat regulation, but also with the belief that their abus will be as destructive, ultimately, to the public i terest as it may be immediately to the private i terests of the companies regulated.

The bill provides for a single State commissio to undertake the regulation of all utilities withi the State. This plan is believed to be eminentl preferable to any scheme of divided jurisdictio whether on territorial lines or on business line Municipal regulation of local utilities must nece sarily be expensive and probably inefficient. Util ties no longer are confined to the limits of munic palities. Of even greater concern, however, is th difficulty, if not impossibility, in a majority of case of obtaining through a municipal regulating body degree of scientific accuracy and judicial impartialit and fairness which is necessary to a proper solutio of public problems.

The bill throws about existing investments th protection from competition offered by the requir ment that a certificate of public convenience an necessity issue from the commission before a ne

rprise is begun in competition with an old one. provision summarizes the experience of a num- of States. Competition in a field which lends f naturally to a monopoly is economically and lly wasteful. The rule applies as well whether proposed competitor is a private company or a icipality. So long as an existing agency is fur- ing adequate service at just and reasonable rates ll respects in compliance with the provisions of public utilities law there can be no justification the introduction of competing agencies.

ne bill strikes a blow at another abuse which cost the people of this country humiliation, ical disease and the propagation of graft, which lts from the short-term franchise requiring re- als at periodical intervals. A modification of Massachusetts plan with respect to new fran- es granted after the passage of the act, and tly less extreme than the Wisconsin plan with ect to franchises existing when the act takes t—the bill takes a long step in the direction of ty in the adjustment of the important franchise ionship.

n important feature of the indeterminate fran- e principle is the provision made for the termi- on of franchises by municipal purchase. Full rtunity is afforded municipalities to purchase property of utilities operating under indetermi- grants for a price and on reasonable terms and itions determined by the commission. Munici- ies are authorized either to operate public util- so acquired or to contract with private com- es for their operation. Every municipality that s a public utility is required to keep uniform

W. R. WILLCOX,
Chairman Welfare Department.

unts prescribed by the commission and to re- to the commission as private companies are ired to do.

ne model bill as submitted to you is the result rduous and long drawn-out investigation and con- ration. It is of necessity a compromise produc- . Each and every member of the Council objects ome feature of the bill; but, as a whole, it has lly received the vote of the entire Council, with single exception.

WELFARE DEPARTMENT.

WILLIAM R. WILLCOX, Chairman; Our depart- ment has to its credit this year, as its larg- single achievement, the completion of the most austive study ever made in this city, or probably where else, of working conditions in the great cal department stores. This inquiry, carried on a group of expert investigators, with the single ive of learning the exact truth, went into the s of wages, hours and all the surrounding con- ons of employment in some twenty-two establish- nts in New York City, having a total of 39,000 em- yes, of whom 22,000 are women.

he report, which has been published in full in Department Store Number of THE NATIONAL C FEDERATION REVIEW, is exhaustive, containing 50 words and numerous illustrations of interest- welfare features.

Ve have encouraging signs of a new impulse in e quarters to remedy conditions found by our estigators in need of improvement. Just so far such results follow, the chief motive of the Wel- Department in undertaking this large inquiry be accomplished.

Ve found that the heads of some of these stores were not able to interpret the recommendations made to them, since they had not actually seen or studied welfare features in operation. We were disappointed, furthermore, to find that these same managers apparently do not as yet grasp the importance of establishing grievance boards and organized welfare departments, in the interest of harmony and of good relations with the working forces.

The inability of many employers in all lines of industry to realize these advantages has led our department to make plans for a permanent Welfare Exhibit. A vast store of material, photographs, models, descriptions and detailed data of successful work is in our possession; but at present it can be made available only by sending to inquiring employers selected portions suited to their needs. Once opened up, classified and properly displayed, as a permanent exhibit, where it could be studied at any time and consultation had with welfare experts, this fund of working knowledge upon welfare work—called "bumfare work" in the socialist papers—would become many times more useful to the industrial community and furnish the one opportunity most needed to-day for the wider adoption of welfare work.

The employer who adopts welfare work on any considerable scale is going to need trained help; and with this fact in view a course of study for welfare workers has been provided at the New York University School of Commerce, Accounts and Finance, under the immediate direction of our Welfare Department. No such attempt has ever before been made to give this special training in a thorough and scientific way. It means that welfare management is rapidly passing out of the field of experiment and becoming a trained profession.

The lectures were delivered by prominent welfare workers, leading economists, specialists, practical business men and one national labor leader. All phases of welfare work to be found in an industrial village or a city building were covered. An effort was made to bring before the students the pitfalls to be avoided, by explaining thoroughly the first principles in welfare work.

The economic phase of welfare work was presented by Dean Joseph French Johnson, while its origin was covered by the chairman of this department. Its full scope was described by Miss Beeks, with stereopticon illustrations of practical features and contrasting views.

The new welfare worker needs to be shown how to make inspections, especially upon going into a plant which previously has had no welfare work, in order to determine what are essential to the comfort of the wage earners, and this was taken up by H. W. Forster, mechanical engineer, who also covered the subject of "Industrial Accidents and How to Safeguard Against Them."

Other lecturers at the school were:

Robert D. Kohn, F. A. I. A., "Safe and Sanitary Factory Buildings."

Timothy Healy, President International Brotherhood of Stationary Firemen, "Trade Agreements."

Dr. W. G. Hudson (du Pont Powder Co.), "Industrial Poisons and Health Precautions."

Wm. R. Scott, Superintendent John Wanamaker Commercial Institute, "Commercial Training in Relation to Industrial Efficiency."

S. T. Simmonds (The Celluloid Co.), "Employees' Savings and Lending Plan."

John H. Derby, Consulting Engineer, "Fire Prevention, Extinguishment and Protection."

W. E. C. Nazro, Manager Welfare Department, Plymouth Cordage Co., "A Model Industrial Village" (Stereopticon illustrations.)

Miss Laura L. Ray, Secretary Welfare Department, Greenhut-Siegel Cooper Co., "The Work of the Welfare Secretary in a Department Store."

Frank J. Milman, upon working and living conditions in the coal mining regions.

Miss Maud E. Wyckoff, in charge of welfare work, American Woolen Co., "Comfort of Employees in a New Office Building." Trip through the structure.

Christoph D. Roehr, Commissary Department, Metropolitan Life Insurance Company, "Operation of Factory Lunch Rooms."

C. L. Close, Chairman, The Welfare Board for Safety. Sanitation and Relief, of the U. S. Steel Corporation, "The Organization of First Importance." (Students' inspection of safety exhibit.)

Miss Helen Howard Snow, Welfare Manager, Curtis Publishing Co., "Welfare Work for Clerks and Mechanics in a Large City." (Stereopticon illustrations.)

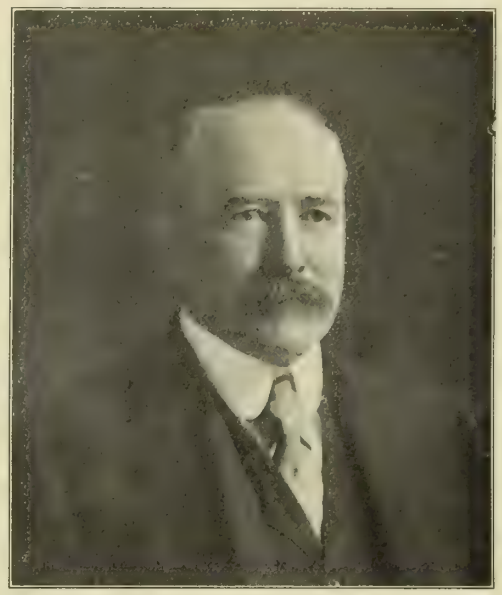
Miss Elizabeth F. Briscoe, Welfare Manager, Joseph Bancroft & Sons Co., "Factory and Home Conditions of Employees."

Dr. Thomas Darlington, Secretary Welfare Committee, American Steel & Iron Institute, "Factory Village Sanitation." (Stereopticon illustrations.)

Dr. Lee Galloway, upon "Business Organization."

Dr. R. W. Corwin, General Manager of the Sociological Department, Colorado Fuel & Iron Company, upon "Surgery in Welfare Work," with stereopticon illustrations.

M. I. Berger, Director of the Welfare Department, Chicago Wholesale Clothiers' Association, upon "Trade Recreation Centres and Other Efforts."



Anson T. Berry, Superintendent of the Relief Department, Interborough Rapid Transit Company, upon "Voluntary Relief Funds."

Dr. F. W. Loughran, Director of the Laboratory of Industrial Hygiene and Sanitation, upon "Medical Departments in Factories."

Some of our notable and unique efforts the past year can be here merely outlined:

An appeal came to us from the Synagogue and Labor Committee of the Conference of American Rabbis for assistance in conducting an investigation of the conditions of employees in the factories and other work places of Jewish employers. This determination on their part to look into their own labor conditions, with a view to bringing them up to par, is most encouraging. There was provided for them a detailed inquiry blank to be used by the investigators personally and to be mailed to Hebrew employers. It was so formulated that it could be understood by each individual, although quite unfamiliar with welfare work.

Another new scheme of welfare work is the one started by Mr. Robert Garrett in Baltimore, to provide especially for the employees of the tenants in his new building. He had our advice when erecting the building, and secured a welfare worker to take charge of the activities.

ALTON B. PARKER,
Chairman Department on Reform in Legal Procedure.

In two instances we have been called upon to formulate a comprehensive plan for a welfare organization; one in a large factory in New England, having thousands of employees, and another for this hotel, the Astor. The welfare worker in charge a year here has been encouraged by the proprietors to the utmost. They have gone even so far as to dismiss, when it was found that a certain set of the employees would not help to care for their coworkers properly, the entire crew responsible for providing food for them. There has been brought about co-operation between the public school system and the Welfare Department, through the establishment of maids' training classes with school teachers furnished by the City of New York at its expense, the hotel itself furnishing the school room, books and equipment in general.

We were appealed to by the welfare worker of one of our members in New Jersey having a large plant, to assist her in making her employers understand the inadequacy of their welfare features. Odd enough was it to find that an employer who would go so far as to employ a welfare worker would not even provide a proper hospital and lunch room. The miserable, dark emergency room called by the company "the fit room" was indeed unworthy of the effort of such an advanced corporation. This young woman spent a couple of weeks going about to view high standards of welfare work, with the result that there has been a complete reformation, with great plans ahead for new activities.

There are many inspections under our auspices to give standards which may be followed, and, fortunately, we have our headquarters in a building which is itself the highest example of welfare work for employees in city industrial establishments. We thus have practical illustrations of many phases

which can readily be shown to visitors from other cities, including devices for mechanics in the building across the street.

We are still having demands for information upon profit-sharing plans, and have an elaborate amount of data which is furnished with the statement that as yet we know of no plan operating successfully. One large employer having an enormous plant came to us only last week with his altruistic plan to make his men so well satisfied through a profit-sharing scheme that there never could be a strike. We hastened to inform him that he was following a "will o' the wisp," but he writes to us as follows:

"It may be that I am Quixotic in persisting with my plan, but if it can be worked out it will undoubtedly produce very large results and would work very much to the benefit of the men, for when the company makes profits they are large." We can only hope that he may devise and develop one which will add materially to the wages of his men and touch what it is intended to do—the rank and file.

One of our members applied to us for the experience of others upon the prevention of lead poisoning. We, therefore, instituted an inquiry, as there were no available data on the subject, and found that some of our leading members were able to furnish invaluable data for their use.

We are called upon to assist various employers to such a degree that we are now obliged, owing to our limited force, to diminish the amount of missionary work that we have done in the past and to make definite charges for the time of our experts.

Not the least important of our undertakings has been the advice, at their solicitation, to the New York factory investigating commission.

Specifically, we have suggested that there could be nothing more important than an inquiry into the hours and wages of the vast number of attendants in apartment buildings, apartment hotels and office buildings. The usual thing for elevator boys, for example, is a twelve-hour day, with the exception of those in some of our big office buildings, where there are some special arrangements for relief. A twelve-hour day means a fourteen or sixteen hour day really for those who live at a distance, and owing to their low wages they are burdened with the heavy carfare expense. These elevator boys who carry human freight are expected to be alert and keen and yet they have not sufficient time for rest nor wages to provide wholesome food and other comforts.

Another type needing relief is the night watchman who guards against fire in our great buildings and generally works seven nights in the week the year around. We can scarcely know what it would mean to these men to have one night off a week, and the same consideration should be allowed to the stationary firemen. There is urgent need also of better ventilation of the firemen's quarters. The insanitary conditions in tenement factories on the East Side demand attention. Here the employers are mostly foreigners and have no standards in the matter of sanitation. Something should be done for their better education on this line through illustrated lectures and instruction in cleanliness.

Other conditions which ought not to be tolerated are the crowding of young women operating typewriters into one room, as is the case in many offices. Many break down from nerve strain. Telephone operators working in unventilated or poorly ventilated booths give us another illustration of neglect. In few places is there a rest room for use at the noon hour, and if a girl is ill or faints there is no way to give proper attention; in fact, few employers as yet adequately comprehend the needs of women in business.

The Young Men's Christian Association has developed its work in industrial villages in the South and in logging camps in a most useful way. The secretary for the Southern States, during a recent visit at our office, stated that we had paved the way for them to go out and do the work and that before we popularized it they were scarcely able to get interviews with employers who now seek their help.

Half a dozen years ago we asked trade journals and employers' associations to inquire into the welfare work in their specific lines and publish the results. That has developed to such an extent that now we are able to secure much literature from them. All of this points to the splendid work of various companies and assists in calling it to the attention of others.

Several State Legislatures have appointed industrial welfare commissions to guard the health of the employees in those States.

DEPARTMENT ON REFORM IN LEGAL PROCEDURE.

ALTON B. PARKER, Chairman: During the year which closes with this month one significant and important step has been taken toward the simplification and modernization of legal procedure.

This movement toward the desired goal was the first conference, in connection with the meeting of the American Bar Association, of the judges of our Federal and State courts.

It is widely conceded that there can be no simplicity or uniformity nor indeed much common sense in our legal procedure until the legislative department of government in dealing with the courts be confined to its proper function of the definition and prescription of jurisdictional and fundamental matters, and the details of procedure be left completely to the regulation of the courts.

This is the basis upon which earnest effort is being made to repeal the act of Congress regulating procedure on the law side of the Federal courts to the United States Supreme Court, which attained a result so eminently satisfactory in its reformation of the equity rules of the Federal courts.

With the procedure all under the direction of the courts it needs no sign posts to lead us to an appreciation of the wisdom of an annual convocation of all our jurists. Reformation would follow discussion, and the experience of each court which had accomplished some simplification of procedure would inspire emulation.

The year has accomplished many changes for the better in countless jurisdictions. It would be impossible, of course, to catalogue these in a report even if it were possible to obtain a record of all the changes.

Even the omniscient press is not cognizant of all these reforms effected. One newspaper complained recently of the verbosity of criminal indictments, only to be promptly informed by James C. Cropsey, the District Attorney of Kings County, that even the time-honored phraseology of the Grand Jury indictment had, in that jurisdiction at least, been whittled down by common sense to the essential statements of allegations.

He submitted first an old form of indictment for murder which was in part as follows:

"The Grand Jury of the County of Kings, by this indictment, accuse John Johnson of the crime of murder in the first degree, committed as follows:

"The said John Johnson, late of the Borough of Brooklyn, of the City of New York, in the County aforesaid, on the 15th day of October, in the year of our Lord one thousand nine hundred and nine, at the borough, city and county aforesaid, with force and arms, in and upon one Peter Smith, wilfully, designedly, premeditatedly, feloniously, and from a deliberate and premeditated design to effect the death of said Peter Smith, did make an assault. And the said John Johnson, a certain pistol then and there charged and loaded with gunpowder and one leaden bullet, which said pistol he, the said John Johnson, in his right hand then and there had and held, then and there wilfully, deliberately, premeditatedly, feloniously and from a deliberate and premeditated design to effect the death of said Peter Smith, did discharge and shoot off, to, at, against and upon the said Peter Smith, and the said John Johnson, with the leaden bullet aforesaid out of the pistol aforesaid, then and there by the force of the gunpowder aforesaid, by the said John Johnson shot off and discharged as aforesaid, then and there wilfully, deliberately, premeditatedly, feloniously and from a deliberate and premeditated design to effect the death of said Peter Smith, did strike, penetrate and wound him, the said Peter Smith, in and upon the side, chest, lungs, body and vital parts of him, the said Peter Smith . . . "

He then submitted the form of indictment for murder which is now used in Kings County. The new and abbreviated and simpler form ran:

"The Grand Jury of the County of Kings by this indictment accuse the defendant of the crime of murder in the first degree committed as follows:

"The defendant on Oct. 15, 1909, in the County of Kings, wilfully, feloniously and of malice aforethought, shot Peter Smith with a revolver, thereby inflicting injuries of which he died on Oct. 18, 1909."

This is but another evidence of how a little leaven leavens the whole loaf.

A few recognized leaders of thought, a few great organizations like this Federation, the American Bar Association, and State, city and county associations of the Bar, direct the attention of the public and direct it persistently to a matter that demands attention and in addition to the organized effort that results, individual thought and effort are directed to the accomplishment of reformation at the point it is needed and the great work goes on and advancement is made in mass and in detail without the possibility that a full record of the enormous good accomplished shall be kept anywhere but in the "great ledger of the recording angel."

Emerson tells us "every reform was once a private opinion." The private opinions which become reforms are those accepted by the people. The idea of one man becomes the task of the masses laboring individually and through organization. Inevitably many of the details of accomplishment are lost sight of. But history shows the extension of territory to which every effort expended has made a material contribution. That is the story of this and of all great reforms. And the evidence of its vitality is the deep interest shown by individuals and great organizations like this Federation.

PLAN AND SCOPE COMMITTEE ON SURVEY OF SOCIAL AND INDUSTRIAL PROGRESS.

TALCOTT WILLIAMS, Chairman: The National Civic Federation has been carrying on for nearly half a generation the work of bringing labor and capital into closer and more harmonious relations. For a generation, since 1885, the organization of both these factors in production has been in progress through the trades unions and the trusts. The first general organization of labor in the United States, bringing the trades together, came a little over thirty years ago. The first trust, in the modern sense, was organized twenty-eight years ago. During nearly one-half of this period the National Civic Federation has been adjusting labor differences, preventing strikes by mediation, urging arbitration and seeking at manifold points the betterment of labor conditions, the enactment of new legislation, public education in the interest of both labor and capital, and public knowledge of the most important facts of American social conditions, the creation of a feeling among those who direct capital and those who lead labor, that there is no difference between them which cannot be adjusted by mutual consideration and settled upon a basis of justice.

While all this has been going on here after the American fashion, by the action of individuals, each doing his own personal duty, there has grown up in this country, first, a protest and next a violent opposition to the whole economic and social system. Whether it be the Socialist Party, polling one million votes, as opposed to sixteen times this number accepting the present social system and upon the whole satisfied with it, or syndicalism, deriding the socialistic movement and urging violence as a social remedy, both offer the challenge that the existing organization of society has worked injustice and that social and economic exploitation of the many by the few. All this demands that a national industrial survey help us decide whether these assertions are true or false. The Federal government, every State, many corporate inquiries and investigations by institutions of learning have brought together a great reservoir of information which can solve this issue.

First, the basis and plea of this social attack needs to be met and answered. Second, the information already accessible in regard to the shorter hours of hours, the improvement of labor conditions, the increase in wages, the advance in the standard of living, the betterment of housing, the widening of education, the opening of opportunity and the growth of the savings of the many, need to be made visible. Much of this will be done by the trade unions, which have entered heartily into this investigation. The rapid increase in the distribution of wealth, so that to-day nearly one-half the families in the United States own the houses in which they live, and at least two-thirds of the families own something, needs to be examined, and put in shape where all can know it. We have in America to-day that miracle the world has never seen before, the wage earner's house which has both a bathroom and a piano. To make that sort of thing visible is the object of this survey. What is needed is not simply to show what exists now, but to demonstrate that what exists now has come about by a steady continuous improvement.

For six months The National Civic Federation has been preparing to attack this problem. It has organized what may fairly be said to be one of the very strongest committees of over four hundred members ever brought together to take up a great work. It has received the assurance and desire to cooperate, so far as existing appropriations permit, from every government agency that has been approached, including the Interstate Commerce Commission, the Federal Bureau of Labor, and corporations, as well as other agencies, Federal and State. The leaders of the American Federation of Labor are as interested in this great task as are the managers of the great corporations in production, manufacture, transportation and distribution.

This work is now reaching the point of efficient organization and of the actual collection of the great mass of facts, most of which need only to be co-ordinated in order to complete the task. I trust that a year from now, at the next annual meeting of The National Civic Federation, we shall be able to lay an abstract of this investigation before you, that it will be in process of publication, and that this work will become a great arsenal of co-ordinated fact and of national record for those who desire to aid the progress of society.

THE NATIONAL
CIVIC FEDERATION REVIEW

Vol. IV. NEW YORK, MAY, 1914 No. 4

NATIONAL AUTHORITIES DISCUSS RURAL PROBLEMS

THE NATIONAL CIVIC FEDERATION RESPONDS TO WIDESPREAD CALL IN CONSIDERING THE FORMATION OF A DEPARTMENT TO CO-OPERATE WITH RURAL LEADERS FOR THE IMPROVEMENT OF AGRICULTURAL CONDITIONS

MEETING OF THE EXECUTIVE COMMITTEE OF THE NATIONAL CIVIC FEDERATION TO CONSIDER THE ESTABLISHMENT OF A DEPARTMENT ON AGRICULTURAL CONDITIONS. *(See next page.)*

DISCUSSION ON PROBLEMS OF AGRICULTURE AND RURAL LIFE

WHAT promises to be one of the largest and most useful lines of public service ever undertaken by The National Civic Federation was inaugurated at a meeting of the Executive Committee at Hotel Astor, New York, March 23d. It was an occasion of remarkable interest and enthusiasm, bringing together, in addition to members of the committee, a representative group of national authorities on agricultural conditions and problems of rural life.

The service the Federation has been able to render during the last fourteen years, from the public standpoint, in the fields of manufacture and commerce, transportation, and labor relations, has naturally suggested the extension of similar efforts to this great remaining field, representing the largest single producing group in the nation, and the basic industry essential to the life of all the others.

The call to this undertaking has been under consideration for some time. Recently, out of the rapidly growing interest in the subject and the multiplicity of suggestions and plans for rural betterment, it has become manifest that one of the greatest needs is intelligent co-operation with and extension of the movements developing among the farmers and citizens of rural communities themselves, thus approaching the subject from the first-hand standpoint of working with and through the people who themselves know best the really vital needs and the true nature of their own problems. Out of a forward movement starting at this point ought to come, naturally, improvement in the entire relation of rural interests to those of the rest of the community.

This was the point of view and attitude emphasized at the meeting of March 23d as the first essential in determining the character of the work in prospect. The tone of all the addresses might be epitomized in the language of a telegram received from Dr. T. N. Carver, director of the Rural Organization Service of the Department of Agriculture, that in entering this field "The Civic Federation has a great opportunity."

Mr. Carnegie's description of the work for a better educational system, which has already been undertaken with marked success in the State of Vermont under the auspices of the Carnegie Foundation, proved particularly interesting as an illustration of what can be done and is being done in a practical and not merely theoretical way.

The formation of the department was foreshadowed by the unanimous adoption of the following resolution, offered by Dr. Albert Shaw:

> "RESOLVED, That it is the sense of the Executive Committee of The National Civic Federation that a department on agricultural conditions and rural betterment be organized, and that President Low is hereby authorized to appoint a committee on plan and scope, which shall be representative of the various interests concerned, and of which he shall be the chairman."

President Low presided at the meeting, and after the luncheon outlined briefly the importance of careful consideration of the proposal in hand and the need of suggestions and frank discussion. The speakers of the afternoon were:

SHEFFIELD INGALLS (Lieutenant-Governor of Kansas), Topeka, Kansas.
ANDREW CARNEGIE, New York.
CHARLES McCARTHY (Expert on Co-operative Marketing, Dairies and Elevators), Madison, Wis.
DR. GRACE KIRKLAND (Farmers' Educational and Co-operative Union), Atlanta, Ga.
LEONARD G. ROBINSON (General Manager of the Jewish Agricultural and Industrial Aid Society), New York.
JOHN M. STAHL (Farmers' National Congress), Chicago, Ill.
ALBERT SHAW (Editor *The American Review of Reviews*), New York.
JOHN LEE COULTER (Secretary of the Commission to Investigate and Study Rural Credits), Washington, D. C.
Dr. LILIAN W. JOHNSON (Rural Organization Service, Department of Agriculture), Washington, D. C.
FREDERICK H. ALLEN (Delegate to the Permanent American Commission), New York.
MR. HAVILAND H. LUND (Chairman Executive Committee of the National Forward to the Land League), Chicago, Ill.
MRS. THOMAS M. OWEN (President-General of the Women's Auxiliary, Southern Commercial Congress), Montgomery, Ala.
A. P. BOURLAND (Secretary Southern Education Board), Washington, D. C.
WILMER ATKINSON (Editor *The Farm Journal*), Philadelphia.

The following cablegram, telegrams and letters were read:

From Hon. Myron T. Herrick, American Ambassador to France:

"Letter with invitation received. Good luck to you. Agriculture is a subject now occupying the attention of the best minds in Europe. National and international conventions have been held annually during recent years. It is a topic at social gatherings, as well as in financial and business circles, and newspapers and periodicals are full of it.

"The coming generation will witness a development in agriculture as great as that witnessed by the present generation in trade, commerce and industry. All agree in Europe that the best way to advance agriculture is to extend the practice of co-operation. The most successful farming communities are those where the farmers have organized co-operative societies for banking and also for buying supplies and marketing their produce.

"The propaganda and even organization work in the co-operative movement is conducted by altruistic bodies like The National Civic Federation in many instances. There is a great new field of activities for the Federation. I congratulate you upon deciding to bring the matter of opening up an agricultural department before the Executive Committee on the 23d."

From Professor T. N. Carver, Director of the Rural Organization Service, Department of Agriculture, Washington, D. C. (telegram):

"Civic Federation has great opportunity. Farmers will produce more whenever they can market more profitably, purchase raw materials of production more economically and improve their credit facilities. All these things call for organization."

In a letter following the telegram Dr. Carver said:

"There are two things above all others which need to be done. The rewards of labor, abstinence and enterprise in the country must be still further increased, and more of the adornments and embellishments of life must be made available for country people. In order to increase the farmers' income we must spread scientific information more effectively; we must have better methods of marketing, of purchasing farm supplies and of financing the farmers' business enterprises. In order to increase the adornments and embellishments of life in the country, we must have better schools, better sanitation, better recreation and more general beautification of the countryside. These are all essential parts of a constructive rural program. Every item in that program calls for organization."

From Hon. E. R. Bathrick, Member of Congress from Ohio (telegram):

"I commend in the highest terms your effort to establish a farm department of the Federation. Great sociological and economic problems demand relief of city congestion and repopulation of the farm. All efforts to accomplish this will fail of necessary expedition without low-cost money. Every leading nation on earth but ours lends low-cost money to farmers. Aside from cordial co-operation of your Farm Bureau with leaders of prominent farmer organizations, I suggest advocacy of material government aid, and that men of great fortunes and sincere beneficence divert their contributions from universities and libraries and employ their money to the establishment of low interest rate banks for labor and agriculture. Much precedent exists for these suggestions in the practice of the world. Should opportunity arise again I would deem it a pleasure to elaborate facts and conclusions respecting these suggestions."

From Arthur Capper, editor "The Topeka Capital," and proprietor of a group of agricultural papers:

"In my judgment The National Civic Federation does well to consider the organization of a department on Agricultural Conditions and Betterment. The Country Life Commission did a work of great and lasting value. I myself felt that this commission should have been made permanent. The Country Life Department of The National Civic Federation can do the kind of work for the farmer and for the country which a permanent Country Life Commission could have done. The National Civic Federation cannot better serve the country than by the application to farm conditions of the same unselfish effort it has employed in the attempt to adjust satisfactorily the relations between capital, labor and the public at large."

From T. C. Atkeson, Master of the West Virgini State Grange, Morgantown, W. Va.:

"I heartily endorse and am in full accord with the idea of the organization of a Rural Betterment Department in The National Civic Federation, and will do what I can to promote its work."

From Clarence Poe, Proprietor of "The Progressi Farmer," leading agricultural weekly in the Souti Raleigh, N. C.:

"I am very glad to know that The National Civic Federation is to undertake the work mentioned in your note of March 12th, and only regret that other engagements prevent me from being with you. I hope you will get the movement started, and shall be glad to co-operate with you in any way I can."

From Henry Wallace, Editor of "Wallace's Farmer," Des Moines, Iowa:

"I do think there should be a Department on Rural Betterment. Any betterment in rural conditions must come through the farmers themselves; and about the only thing that can be done is to inspire them with a desire to benefit themselves and to show them how, as well as an outsider can. I am sorry I cannot be with you, but will be glad to help in any way that I can in this work."

From Harris Weinstock, Member Federal Commission on Industrial Relations, Washington, D. C.:

"One of the weak spots in American rural life is, as was shown by our last census, that farm tenancy is increasing in this country out of all proportion to farm ownership, and that unless heroic steps are taken to check this tendency we are likely to become more and more a land of farm tenants, with absentee landlords, which in due time will bring with it all the ills to which Ireland was a victim for so many generations. No better way to check this ill suggests itself than some plan whereby the farm hand or the farm tenant who has accumulated a small capital can become a farm owner. A system of rural credits embracing the plan of a small payment down and small installment payments for the balance, spread over a period of thirty or more years at the lowest rate of interest, will do this effectively. As you perhaps are aware, there is now a bill before Congress, known as the Moss bill, presented by the United States Commission, which has this end in view. While to my mind it is not the best conceivable bill, it may be the best possible bill; and one that is at least worthy of the serious consideration of your executive council."

In opening the meeting Chairman Low said, i part:

"The National Civic Federation is fully conscious of the importance of the group of questions which we are here to consider in their national and in their State aspects.

"The questions which those who are responsible for the policy of the Federation are confronted with, briefly, are these: Can the Civic Federation do anything for these great questions that is not already being well done by some other agency? And if so, what is that thing, and how should we go to work to do it?"

The chairman read the following letter from Ho David F. Houston, Secretary of Agriculture:

"DEPARTMENT OF AGRICULTURE,
"Washington, D. C., March 18, 1914.

"My Dear Mr. Low:

"I regret very much that pressure of business here will make it impossible for me to visit New York in the near future. I especially regret that I cannot be at your meeting on Monday, March 23d.

"It is somewhat difficult for me to answer your question whether it is desirable for The National Civic Federation to establish a Department on Agricultural Conditions and Rural Betterment. There is a good deal of enthusiasm for rural improvement at this time. The danger is not so much that nothing will be done as that many half-baked schemes will be urged and that attempts may be made to put some of them into operation. Of course, I know that The National Civic Federation would make a most careful inquiry about any plan or proposal before lending it support and aid. Having this conviction, I naturally feel that the Federation could probably render a service by establishing the department suggested. The main function of the department, as I conceive it, would be to examine plans and proposals for rural better-

ment and to commend and support meritorious plans and to condemn unwise and futile ones.

"The plans proposed for rural betterment are numerous. There are plans for rural organization, for co-operative enterprises specifically for the marketing of farm products and for rural credits, for rural sanitation, for improvement of the social and intellectual side of country life, for good roads, etc. Unquestionably there should be improvement in all these directions. The question is mainly one of agency and method. I should be able, of course, to form and express a much more useful opinion after hearing your discussion Monday. I shall be very much interested in knowing what conclusion you reach.

"With best wishes, sincerely yours,

"D. F. HOUSTON, Secretary."

The chairman then presented Lieutenant-Governor Sheffield Ingalls, of Kansas, whose remarks, as well as those of the other speakers, are here reproduced as fully as space permits:

Sheffield Ingalls.

This great organization has justified its existence on so many previous occasions that I do not feel it can undertake a work of vaster importance to the world at large than this agricultural question.

There is no good reason why every intelligent farmer in America shoud not be using modern methods. America should be in the van instead of merely keeping up with the procession in agriculture. Since the passage of the Morrill act, in Lincoln's Administration, the United States has spent more money in establishing State and national departments or boards of agriculture and in founding agricultural schools and colleges than has any other nation. The technical knowledge thus acquired has made this country a recognized expert so far as theories are concerned. But some other nations have passed us by in the practical application of those theories. As a result, we have to go to Europe to learn how to use the ideas and things that we have thought out or devised in many instances.

Comparing farming by standards set for other business, I would say that the troubles of American agriculture are due largely to waste or needless expense in production; to the lack of organized systems for the purchase of supplies and the distribution and sale of farm products, to a failure to utilize credit facilities and the farmers' own financial resources in a judicious way, and last, but not least, the isolation which makes country life lonely and monotonous, especially to the women folks.

Can these troubles be removed? I believe that most of them are unnecessary evils and would disappear if associated action were applied to agriculture with the spirit of mutual self-help and fraternity which is gradually manifesting itself in all other industries.

Agriculture cannot be industrialized unless it be adequately financed. A man who wishes to become a farmer or a farmer who wishes to improve or enlarge his farm must have money; else he must have credit, and that means character. The credit value of American farmers is difficult to determine by reason of their isolation and distance from the money centers. This explains, in my opinion, the complaint that they are discriminated against by the banks and other money lenders. There is no question as to their sterling worth nor as to the safety of the security which they can offer. The easiest way to make this known and to utilize the security available is through the establishment of co-operative credit societies, to be owned and managed by the farmers themselves for their mutual benefit.

Andrew Carnegie.

One reason that gives me confidence that we shall determine this question rightly, whether the Civic Federation shall adopt this new addition to its labors, is that we have such a president to guide us in our decision.

It is a great gratification to me to see that this important question—this one department in which we are more behind than in almost any others, as compared with the leading nations—has been taken up by this Federation. We shall make no mistake. We have decided wisely, and we shall maintain the reputation that this Civic Federation has made.

Agriculture is a department with which heretofore I have had very little to do, except that as the owner of a large agricultural property I have had to learn something of farming, and of the Scottish, system. They are good farmers, the Scotch, and they have a system of banking from which we are taking lessons. There is not a poor farmer in Scotland who does not get a loan upon his property at the same rate of interest paid by the greatest banker in London getting money from the Bank of England. The rate is uniform throughout the country. But the model country is little Denmark. The State of New York is more than three times larger than the whole of Denmark, but just listen to what that little country does. Last year she exported to Britain alone butter to the value of fifty-two and a half millions of dollars, eggs to the value of over ten million dollars and bacon to the value of thirty-three and a half millions of dollars.

We have made great progress in the West, especially in California, in the one thing needful in farming—that is, co-operation. You drive through the orange groves and the great orchards of all kinds and you find that each little piece of ground sold carries with it a right to so much water, and this is part of the property; it cannot be sold separately. They bring their products to one warehouse, and they sell wholesale, and at the end of the season when accounts are made up each owner of a farm receives payment upon the same scale as his brother farmer.

Now, this is what we need. This will do more to meet the conditions of the farmer than anything else possibly can.

One of the Carnegie Foundations, I am happy to say, has taken up this subject. It was asked to investigate the education system of Vermont and has made its report. So pleased were the legislators of Vermont that they adopted it, and the recommendations are now being accepted. My friend, Sir Horace Plunkett, who has done so much for Ireland in aiding the small crofter to become owner of his farm, before sailing for the other side recently, left with me a report showing how he benefited those farmers and his mode of working, and our organization therefore has resolved to say to Vermont that we would be willing, on a small scale, to employ the proper men and to have them individually plant the Irish system or the Danish system in Vermont. I think that we show our modesty in choosing so small a State. We would not like to risk undertaking Kansas or Virginia.

I did not know, at the time I gave my consent to that plan, that this institution was to be asked to consider this subject, but I assure you you have only to take charge of it, when we shall be only too glad to be at your service and act under your orders, thinking the best will come.

Charles McCarthy.

Some people say that you cannot organize Americans; that they are too individualistic. There are no people in the world that organize like the American people when they get at it. The trouble is that we have organized so rapidly in the past, and we have not known what we were doing. It is a question now of showing our organizations which already exist how to do things.

The agricultural colleges have been very deficient in this matter. In the past we have thought it sufficient to tell the men how to get the right kind of potato seed and put it into the ground and put some particular matter on the bugs when they come along, and then sell the crop at auction afterward. We have not told them the rest of the story. The agricultural schools must pay just as much attention to the marketing of produce in a scientific way as they are now paying to the raising of the product itself. That is not a hard thing to do. All the agricultural colleges have to do is to send men to the countries where they have worked out these things, and then have teachers in the colleges to instruct from these examples.

In Wisconsin we have organized our people to standardize the potato, so that the railroads can take them by the hundred thousand bushels. That means the same kind of seed planting and the same kind of care. You get your potatoes to the market on those standards, and the middleman does not have to come in. So it should be with all products. I am now working on the question of standardizing cheese, and hope soon to have the first State brand on cheese, which will guarantee to you in New York that cheese under that Wisconsin brand will be of first-class quality and produced in sanitary factories.

Denmark has a standard for butter, establishing purity, quality, etc., and every one whose product comes up to that standard can have a certain brand. In order to maintain such a standard you must have a certain kind of inspection; to know the kind of cow, the kind of food given to the cow, etc. Hogs are another example. Most of the hogs in Denmark are killed at two hundred pounds; all the same breed, all fed in the same manner, and all this is represented in the brand. That is what we are going to do with our products in Wisconsin. But we are bound up by trust laws which forbid many of these things.

This is the work, and if your philanthropists and the people working with you go at it rightly it will be only a short time before the American colleges take it up. Mr. Carnegie is right. It is a question of self-help. The Government cannot do it. The men must do it themselves. When you bring the Government into it and make it paternalistic, it won't work. You have to work it out through hard-headed knowledge. Some of these so-called credit bills you must be mighty careful about. I have not seen any that I would favor.

I saw a plan this morning by Secretary Burleson, of the Post Office Department, by which he is going to have the post offices take parcels from the farmers and bring them into the city. I want to say that he had better study that problem carefully before he goes into it. What about the standardization of that produce? If you write to a farmer through the parcel post and you don't know the standards of butter and eggs, the first you get from him may be fine, but the next stuff may be poor. He will write you that he has something to-day, and to-morrow he will not have it. There is no way of pro-rating the orders to those who have the produce. You must deal through organization.

We cannot do this all at once. The fundamental thing is education, and your Civic Federation can do a tremendous service for this country.

Dr. Grace Kirkland.

There is but one way by which the farmers of this country can or will in any way be helped, and that is through themselves, through the leadership developed from their own ranks, leaders in whom they have confidence. The helping to train that leadership is one great work in which the Civic Federation could assist.

As has been made very clear, the Federation has no fixed plan at this date. It has looked over the field, seen a great deal that is being done by a great many other organizations—a great deal that is being attempted would be a better word. Every day we have new schemes, new systems and ideas presented, and there is no fault to find with almost any plan, except the fundamental one that it won't work. If we could only understand that handling commodities, handling of business generally, is not handling people! We can take butter or milk or bacon or flour as such and standardize them, but in a co-operative concern we must deal with the human beings who are producing these things.

The problem is to get the independent-spirited American to hang to the co-operative enterprise. In order to do that you must have him appreciate that those who urge upon him for his own good to do certain things are persons in whom he can confide. There comes again the great thing—the individual leadership of those the farmer knows and trusts.

The outsider can help if he stays modestly a little on the outside, but not by going into the organization itself and attempting to show the farmer what he should do. It simply is against human nature. The way by which the farmer can be really helped is by helping those among the farmers' own organizations whom the great mass of farmers both in the organization and out have the willingness, patiently and earnestly, to follow.

Leonard G. Robinson.

The Jewish Agricultural and Industrial Aid Society was organized in 1900. To-day there are sixty-four local Jewish Farmers' Associations in the United States. These are federated into a central organization—the Federation of Jewish Farmers of America. A number of co-operative enterprises were launched as a result. A co-operative purchasing bureau was established in 1910. The co-operative credit unions were founded in 1911. There is also co-operative fire insurance, a co-operative creamery, co-operative livestock insurance, co-operative marketing, and a mutual benefit fund. There is scarcely an angle in the many complex rural problems that the Society has overlooked.

While grappling with our own problems, I have often wondered why American philanthropy has overlooked so vast and so fruitful a field for constructive endeavor. Our rural problems are vital human problems. They will not be solved by the self-seeker or the visionary. What is needed is an organization of such unquestionable sponsorship and predominance as to command general confidence. I cannot think of any organization so eminently qualified to assume that commanding position as the National Civic Federation. If the new Agricultural Department of the Civic Federation accomplishes nothing more than the elimination of the visionary, the self-seeker, the irresponsible, from the agricultural field, it will perform a signal public service and fully justify its creation.

Albert Shaw.

I am going to say a little about the interesting work that the General Education Board, in connection with the Department of Agriculture, has been carrying on principally in southern States.

The Board, desiring to promote better rural education, soon found that country schools, to be supported, must have local taxation. But as the soil was not yielding enough to give the farmers who cultivated it more than the barest margin, they could not pay taxes. The consequence was, cabins for schoolhouses, very slightly educated teachers and the principal schools running no longer than three or four or five months in the year. The Education Board began to see that it was more important to teach those neighbors what they could do with their soil, how they could get a better living, have some-

thing to tax, than it was merely to see if we could establish a better kind of school house, and by degrees lengthen a little bit the school term. The Board began to co-operate with the Agricultural Department's demonstration service, and thousands of small farm demonstrations are going on in the South under the direction of the Department with the co-operation of the General Education Board.

I farm rather a large piece of Virginia soil, and the things I have been trying to learn about the conditions of the country in general, through editing, are the things that I find myself dealing with in the concrete. I could tell you why we in the East may go all the way to Wisconsin if we have Guernsey or Holstein calves to sell—we sell them to Wisconsin, and go there and buy them back! We have no other way to do, because in Wisconsin they have learned the business of producing dairy cattle. Organization is worth millions to Wisconsin. The single county of Waukesha shipped out several hundred thousand dollars' worth of surplus dairy cattle in carload lots, their surplus stock. They still maintain their herds to the full extent of the grazing possibility.

Heretofore we have not been farming in the United States, we have been pioneering. We have pioneered the country from one edge to the other, and we have wasted and spoiled the soil in doing it. Now we have got to learn to farm. We plowed up the prairies in a period when we had thirty or forty million people in this country, and now we have nearly one hundred million in just the same expanse of territory. That explains a great deal of the situation.

Under the laws of the Northwestern States we did get our wheat standardized—officially graded—and with regulated elevator service all along the railroads the farmer is now fairly well protected. In the South the cotton is graded, but just as the South is ripping up all the old yellow pine lands as fast as it can for the purpose of planting cotton, it is discovered that other parts of the world can raise cotton. Until this year our South raised a good deal more than half of the whole cotton crop of the world, but this year the rest of the world has raised a good deal more than half. The opium fields of China, which now by international arrangement, have had to be diverted to some other use, have suddenly begun producing cotton. The cotton crop of China last year was about four times as large as it was two years ago.

These international phases of the problem are very important. They mean for the South, that they must farm rather than raise cotton. The South has learned that it can raise grasses. If we can only bring about the business methods that Dr. McCarthy and our other speakers have explained, we can produce dairy products through the South, and we can develop both in the East and the South all sorts of diversification in farming, instead of doing those single things that belong to the plantation man and the wheat speculator. It is simply a matter of learning how to farm, and that involves as well the problems of association, standardization and neighborhood life.

John Lee Coulter.

In the first place, I think it would be worth while for a department of The National Civic Federation to make a brief survey of the question of productiveness of American farms as compared with European farms. The average American acre of land produces only about one-half to one-third as much as the average European acre, and I think it would be found that the low yield in America is not due to poorer soil, worse climate, or any other defect in nature, but due to the extensive methods of agriculture in this country. This brings us to the question, "Why do we not cultivate more intensively if it would yield so much more produce?" This is merely an illustration of the problems which might well be considered.

A department of The National Civic Federation might well ask for the facts with reference to ownership of farm property. Reference to public documents would show that 37 per cent., let us say, of all farms are operated by tenants, the other farms being operated by owners, and that in the last ten years the farms operated by owners increased only 6 per cent., while farms operated by tenants increased 16 per cent. The department might well investigate the causes of this tendency, and if the investigation showed that the country was drifting into an unfortunate condition, it would seem reasonable for the department to make a study of preventive measures, and probably suggest necessary legislation.

Naturally other questions arising would be such as the problem of supply, demand, wages and living conditions of farm labor. Reference to official reports will show that over 3,000,000 farmers in the United States each year employ more or less labor for wages. Labor bureaus have not been established having in mind the bringing of laborers to the farm operators when their work is needed. It might be that the department of The National Civic Federation could work out some recommendations with reference to employment agencies which would make possible quite a material improvement in this general field.

An inspection of the facts at hand would show that only one-half of the land in the United States is now in farms, and only one-half of the land in farms is improved. According to the latest reports, only 17 acres out of every 100 in the United States are actually in crops, cultivated regularly. It is possible that an investigation would show that our whole system is at fault, inasmuch as we have given little or no thought to the big problem of agricultural development.

Dr. Lilian W. Johnson.

It has been well said that co-operation must come from the people themselves; that self-help must be the motto. But I feel, too, that if the rural organization and betterment are to come it must be not by the organization of a class but by the organization of a community; that if the farmers attempt to organize in co-operative enterprises for their own economic good, irrespective of the good of the community, they will fail. We must have not only betterment in agriculture, but we must have betterment in education, in health, in the home, in the public utilities, such as good roads, telephone, and water power; in social, in moral and in religious life.

What we want is to secure leaders from the people themselves, and we must do this through the organized agencies. No more admirable way could be suggested than that which Mr. Carnegie has spoken of in the State of Vermont, to go to the organized agencies of education, agriculture and health in the State, and say to them, "We will help you to reach into each little community, to give to every county its county collaborator in agriculture, to give the health officer in that county a corps of nurses, and, if necessary, a sanitary engineer; to get the leaders for the improving of the public roads, the water power, etc.; to get also leaders for the social and moral and the religious side of life." I can tell you of a church aid society, where a woman started out to help lift the church out of debt, and the women at first gave the eggs that were laid on Sunday as their part of the contribution, and now from that they have standardized on butter and eggs, and are shipping eggs and butter from St. Louis to Montgomery, simply because a woman from town told them of a home bulletin of the United States Department of Agriculture.

The thing is to get the people started. Go to our great teachers' colleges, like Columbia, the University of Chicago, and the one at Nashville, and say to them: "You must organize to train the leaders, and we will stand behind you in what you do."

Frederick H. Allen.

It is as important to consider the city consumer as it is to consider the farmer. The National Civic Federation could do no better work than by approaching this matter and employing its activities in bettering the consumer's position. When one considers that among most of the people of the City of New York, or any other great city, forty-five to sixty per cent. of the family income is spent upon food, it can be readily seen what an important benefit could be brought about by securing less expensive distribution of food products, once they have reached the city. The wastes of distribution in our cities are enormous, and the tolls enacted by the wholesale jobber and retailer add unduly to the cost of food. An investigation which was made in the city of Rochester, N. Y., showed that the duplication of milk deliveries brought about an excess cost of over 2 cents a quart, and that $500,000 a year could be saved in the cost of milk alone to the citizens of Rochester by stopping this waste. The city of Turin was divided into quadrants, the farmers in each quadrant delivering their milk to certain depots in the city, each depot serving its own district, and milk was sold at these depots in the city of Turin for 4 cents a quart. If Rochester wastes $500,000 on the delivering of milk alone, probably New York City, with its 5,000,000, wastes ten times as much.

An immense work for the benefit of the wage-earners and the poorer classes of the city lies before such a body as the Civic Federation, whose energies are directed, as I understand it, toward the benefit of the wage-earner and the toiler.

Mrs. Haviland H. Lund.

We should here take stock of the national situation, find out all who are ready to do the work, the means at their disposal, and so plan that there will not be three men in one county endeavoring to do the same work, and other counties with no workers. Agricultural instruction, public health, farm labor both for men and women, marketing, credit and rural recreation, together with vocational training in the rural schools are vital parts of this huge problem. We need to tap the unused reservoirs of information that have been gathered at such great expense by the State and Federal Governments, and get it into the hands of the masses. There must be a proper distribution of information. This information must be made attractive to those who need it. This work is too heavy for any one body of laborers, however energetic. It is too great even for The National Civic Federation. The business of the department under consideration should not be to pull the train but to lay the rails. I am especially gratified to know that the great rural organizations of the United States so enthusiastically welcome the creation of this department by the Civic Federation.

It has been said by many: "Get the real farmer into this." We cannot get hold of the unorganized farmer, however much we wish, but the organized farmers can help and should lead. They are the first to be called to assist in working out the plan and scope of such a department.

We cannot expect people to be enthusiastic about living in the rural community as it is to-day. The death rate in the country is higher than in New York City. The boys and girls from the country flock to the town with evil results to both country and town. And all this while the moving picture and mechanical music have made wholesale amusement so inexpensive that it will be easy to transform every school house into a social centre. The very development which renders rural life what it should be to those now there also renders it attractive to the man in the city who longs for a home on the land, providing it does not rob his children of social and educational advantages.

One of the first things, it seems to me, this department should consider, is mapping out a course of instruction for instructors. The call for rural organizers, those who can teach the farmer co-operation, already far exceeds the supply. Our universities should give instruction to these organizers. The wrong people in the field doing this work will set us back years. Where we do anything we should see that it is done right.

Mrs. Thomas M. Owen.

The farmer down in our part of the country buys his grain and meat from the West. I went through a wholesale house in Montgomery the other day. They had a quarter of a million dollars' worth of stock on hand, meat, grain, flour, milk, and everything that we could grow and raise ourselves, and our farmers were coming in there with their cotton and carrying back those supplies from other parts of the country.

We certainly ought to change those conditions in some way, if it is possible to be done. We have such inefficient teachers and such poor leaders. Years ago the politicians would take charge of the Farmers' Union and use the men so to their own interest that they lost interest. They have undertaken co-operation and have at times failed in it, and been discouraged, but I think it is a great thing and I hope we shall succeed in getting the propaganda properly before the people.

I know the women of the country are very anxious to help. I succeeded in interesting women in sixteen of the southern States to the extent that they had an attendance of 250 at the convention in Mobile. The main things we talked about there were those we have talked about here: How we can better the home, how to improve the roads, how the canning club can help, how our women are not conserving the products of the farm or the garden as they should be taught to do, and all manner of country problems. We are working on these lines, and I think the South will try to do her part in this new movement.

Wilmer Atkinson.

It is well that The National Civic Federation should institute a department for rural betterment, and when instituted it will be the part of wisdom for the Federation to learn from rural people themselves what they stand in need of.

There are three primary requirements for rural uplift:

First, the power to borrow money on the part of the young men on the farm at a low rate of interest for a long period, so they may become land owners. Second, farmers must get a fair return for the produce they raise for market, which now they do not. Third, agricultural laborers on the farm and in the home must be adequately housed, which now they are not.

Given these three essentials and rural communities will uplift themselves.

Less costly money would enable young men with a desire to follow the honorable occupation to which they are brought up, to secure homes at the time in life when they have the most zest and therefore the greater likelihood of working out of debt and sooner becoming independent.

FREDERICK H. ALLEN

JOHN M. STAHL

DR. GRACE KIRKLAND

DR. LILIAN W. JOHNSON

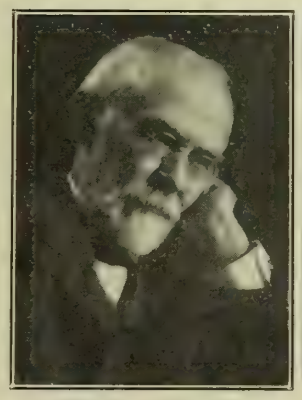
MRS. THOMAS M. OWEN

MRS. HAVILAND H. LUND

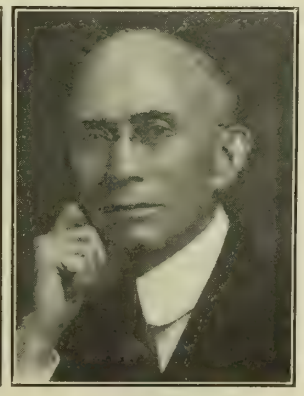
But it is also essential for the farmer's well-being that he should get more than 30 or 50 cents out of every dollar's worth which he produces. Sporadic efforts have been made at widely divergent points to bring the producer and the consumer together for their mutual advantage, but these efforts being unrelated and lacking co-ordination, have been for the most part ineffective. The recent extension of the parcel post, and the lowering of express rates, give promise of some relief to farmers, but no general concerted efforts have been made to bring consumers in touch with producers through these instrumentalities. The times cry loudly for some sort of concert that will reach the entire farming community and effect a solidarity that will insure to the farmer a just return for his labor and risk, both of which are now out of all proportion to his meager gains.

If conditions are hard at the barn and in the field they are much less tolerable in the kitchen and the dining room. What the housewife's situation demands is a tenant house where the farm help may be fed and sheltered, so that she may be relieved of the hard drudgery of cooking three meals a day, and of washing stacks of dishes; and that the family privacy and sanctity may be maintained both for the comfort of the wife and the welfare of her children.

Better schools are needed in the country; these will be provided if farmers prosper; more interest in the rural church will be shown if farmers prosper; the feathered friends of the farmer will be protected, as they should be, but are not, if farmers prosper; good roads will be built without mortgaging the future, if farmers are not too poor to build them; there will be better sanitation, better health, nurses to care for the sick and more pleasant and uplifting social intercourse if farmers become prosperous land owners; communities will be contented and happy if farmers have a fair chance to prosper.



To seek rural uplift in any other way then as here pointed out will prove a delusion and a waste of time and effort. There ought to be collective wisdom enough among the public spirited men who are genuinely anxious for rural betterment to help solve the problems above indicated. Any earnest well-planned effort that this Federation shall make in behalf of rural betterment will be gratefully appreciated by the objects of its solicitude.



John M. Stahl.

The National Civic Federation has done so many things so very well that we are justified in believing that it can have a department devoted to farm problems that will be a real help to farmers and a real benefit to agricultural interests and at the same time be of service to other classes. The live question is not whether there should be such a department, but how it shall work and what it shall do.

Farming has two parts of almost equal importance—the productive and the distributive. Literally, a thousand organized agencies, beginning with the national Department of Agriculture have been and are giving consideration to the productive part. If the farmer does not produce to the best advantage it is not because he is not taught how. The new department of The National Civic Federation need not concern itself about the productive part of farming, but it may well concern itself about the distributive part. Quite frequently the price paid by the city consumer for such staple products as potatoes or apples is three and even four times the price received by the farmer one hundred miles away. I believe that first of all the farm department of The National Civic Federation should concern itself with the problems growing out of the relations between the farmer and the man in the town. These problems are many. They cannot well be dealt with by the ordinary agricultural organization, nor by the ordinary city organization. In fact, The National Civic Federation is the only organization I can think of that can deal with these problems in the right way to obtain valuable results.

To give just one further illustration—in almost every State there is, in political conventions and in the Legislature, a decided feeling of distrust and hostility between the people from the town and those from the country. This is used by the lower class of politicians and office seekers to their benefit and to the hurt of the public. The town cannot get the legislation that it needs because of the opposition of country members of the legislature, and the country cannot get the legislation that it needs because of the opposition of town members of the legislature. The organization that has so often succeeded in getting hostile elements to confer, and has found that conference alone is needed to smooth out difficulties, is the organization best fitted of all to bring town and country people to a right understanding and to realize that at the bottom their interests are so nearly identical that there should be no distrust and hostility between their representatives.

WILMER ATKINSON

A. P. BOURLAND

LEONARD G. ROBINSON

JOHN LEE COULTER

SPEAKERS AT THE MEETING ON AGRICULTURAL CONDITIONS AND RURAL LIFE

In accordance with the resolution adopted by the Executive Committee, the Chairman has named the following Committee on Plan and Scope, which will outline the character and specific objects of the work to be undertaken, and plan of organization:

SETH LOW, Chairman, President of The National Civic Federation, New York.
FREDERICK H. ALLEN (The Permanent American Commission), New York.
THOMAS C. ATKESON (Master, West Virginia State Grange), Morgantown, West Virginia.
WILMER ATKINSON (Editor, *The Farm Journal*), Philadelphia, Pa.
CHARLES S. BARRETT (President, Farmers' Educational and Co-operative Union of America), Union City, Ga.
EDWARD N. BREITUNG (Ore Producer), Negaunee, Michigan, and New York.
CHARLES W. BURKETT (Editor, *American Agriculturist*), New York.
KENYON L. BUTTERFIELD (President, Massachusetts Agricultural College), Amherst, Mass.
WALLACE BUTTRICK (Secretary, General Education Board), New York.
ARTHUR CAPPER (Editor, *The Topeka Capital*), Topeka, Kansas.
ANDREW CARNEGIE (Capitalist), New York.
THOMAS N. CARVER (Director, Rural Organization Service, Department of Agriculture), Washington, D. C.
PHILANDER P. CLAXTON (Commissioner of Education, Department of the Interior), Washington, D. C.
JOHN LEE COULTER (In Charge Division of Agriculture, Bureau of the Census), Washington, D. C.
JOHN J. DILLON (Editor, *Rural New Yorker*), New York.
MYRON T. HERRICK (United States Ambassador to France), Paris, France.
CHARLES W. HOLMAN (University of Wisconsin), Madison, Wisconsin.
RALPH INGALLS (Writer on Farm Problems), New York.
DR. LILIAN W. JOHNSON (Rural Organization Service, Department of Agriculture), Washington, D. C.
DR. GRACE KIRKLAND (Editor, *The National Field*, official organ of Farmers' Educational and Co-operative Union of America), Atlanta, Ga.
MRS. HAVILAND H. LUND (Chairman Exec. Comm., National Forward to the Land League), Chicago, Ill.
D. O. MAHONEY (President, American Society of Equity), Viroqua, Wisconsin.
CHARLES McCARTHY (Expert on Co-operative Marketing, Dairies and Elevators), Madison, Wisconsin.
MRS. THOMAS M. OWEN (President, General Women's Auxiliary, Southern Commercial Congress), Montgomery, Alabama.
G. HAROLD POWELL (President, Fruit Growers' Association), Los Angeles, Cal.
LEONARD G. ROBINSON (General Manager, Jewish Agricultural and Industrial Aid Society), New York.
ALBERT SHAW (Editor, *The American Review of Reviews*), New York.
JOHN M. STAHL (Legislative Agent, Farmers' National Congress), Chicago, Illinois.
HENRY WALLACE (Editor, *Wallace's Farmer*), Des Moines, Iowa.
MISS MAUDE WETMORE (Chairman, Woman's Department, National Civic Federation), New York.
OLIVER WILSON (Master, National Grange, Patrons of Husbandry), Peoria, Illinois.

PROGRESS OF THE NATIONAL SOCIAL AND INDUSTRIAL SURVEY

MANY COMMITTEES ORGANIZE UNDER STRONG LEADERSHIP FOR STUDY OF COMPARATIVE CONDITIONS, PROMISING RESULTS OF REMARKABLE INTEREST AND VALUE

THE past month has seen the active organization of a considerable part of the work of the National Survey of Social and Industrial Progress, which is being carried on under the direction of the Industrial Economics Department of The National Civic Federation.

Many of the committees in charge of sub-divisions of the inquiry have held meetings to determine the scope and limits of the respective subjects, and to develop all available sources of pertinent data. At each of the committee meetings, attended by representative men and experts in close relation with each subject, there have been discussions of remarkable interest and value. Out of these have come suggestions and unforeseen sources of information such as rarely, if ever, lend themselves to the usual courses of government investigation, and when taken upon a broad scale with full verification afford a graphic illustration of changing conditions not possible to get from bare columns of official statistics.

The unique and distinctive feature of the survey, which is attracting so much interest and voluntary co-operation, is the fact that it is to show not merely the broad sweep of conditions as they are to-day, but side by side with this the corresponding conditions of a generation ago. This is the central idea of the entire inquiry, and the one in which it differs from any other ever undertaken in this country or elsewhere, except on single topics or in local fields.

Committee meetings which have been held thus far are:

February 16—*Social Insurance.* Chairman of Committee, George W. Perkins, New York.

March 11—*Division of National Income.* Chairman of Committee, William J. Pape, editor Waterbury Republican, Waterbury, Conn.

March 16 and April 15—*Business Ethics.* Chairman of Committee, J. G. Schmidlapp, President Union Savings Bank and Trust Company, Cincinnati, Ohio.

March 20 — *Immigration.* Chairman of Committee, Professor Jeremiah W. Jenks, New York University, New York.

March 20 — *Immigration.* Chairman of Committee, Vincent Astor, New York.

March 24—*Free Speech and Public Assembly.* Chairman of Committee, Alton B. Parker, New York.

March 25—*The Church's Influence on Social and Economic Progress.* Chairman of Committee, Charles R. Towson, International Committee of Young Men's Christian Associations, New York.

March 28—*Workmen's Compensation.* Chairman of Committee, August Belmont, New York.

March 31—*Penal and Correctional Institutions.* Chairman of Committee, Adolph Lewisohn, American Smelting and Refining Company, New York.

March 31—*Enforcement of Law and Order.* Chairman of Committee, James Bronson Reynolds, Counsel American Social Hygiene Association, New York.

April 8—*Factors Affecting Children.* Chairman of Committee, V. Everit Macy, New York.

April 9—*Tenement House Conditions.* Chairman of Committee, Paul D. Cravath, New York.

April 17—*Municipal Government.* Chairman of Committee, Clinton Rogers Woodruff, Secretary National Municipal League, Philadelphia, Pa.

April 29—*Distribution of Ownership in Investments.* Chairman of Committee, E. R. A. Seligman, Columbia University, New York.

Other meetings are being held each week and plans of work put into operation.

The preliminary discussion of the subjects and the means of investigating them show that for many of the topics authoritative material already exists in abundance but in scattered form, while in others it is comparatively rare. It appears advisable to supplement existing material in many cases, and in others to bring material to light by a direct appeal for information to the persons immediately concerned. For example, the subject of employers' welfare work, and that of labor conditions, lend themselves very conveniently to this form of investigation.

EMPLOYERS' WELFARE WORK.

The subject of Employers' Welfare Work is to be studied, in connection with the national survey, by a committee of which Mr. W. G. Mather, President of the Cleveland Cliffs Iron Company, is the Chairman. At the request of this committee, the Welfare Department of The National Civic Federation is preparing a thorough inquiry among employers with respect to this phase of the subject. The inquiry is confined to welfare work, i. e., the improvement by employers of the working and living conditions of employees in stores, factories, mines, upon railroads and in public institutions. The committee will advise its correspondents that the Federation seeks to learn what is being done for the physical well-being of wage earners; to provide for leisure time; to assist in the education of their children or increase their own efficiency; to provide comfortable, sanitary homes at reasonable prices —rented or sold; and last to insure them against misfortune resulting from industrial diseases or accidents, old age or family sickness, through voluntary provident funds.

It is proposed to send letters of inquiry concerning these matters to 25,000 employers in various lines of business. In order that no essential points may be overlooked the letter will be accompanied by a schedule of subjects pertinent to such a study. In the case of each one of these special topics the employer will be asked for information relating not only to the present time, but to thirty years ago, or as far back as the information may be had, within that period, in order that a study may be made of the changes which have occurred. Photographs will be requested, illustrating actual and comparative conditions. This outline, which gives a very useful summary of the scope of welfare efforts, here follows:

Length of Work-Day.
- Total number of hours constituting work-day.
- Length of lunch time.
- Seasonal work.
- Length of lay-off.
- Extended period of overtime work.

Method of Discipline.
- Fines for errors or lateness.
- Docking for absence.

Type of Work Place.
- Structural material.
- Method of heating and cooling.

Sanitation.

Drinking Water.
- Drinking water analyzed at definite periods to determine changing quality.
- Source of supply.
- Sewerage system to prevent contamination of wells by proximity to privy vaults.
- Bubble drinking fountains having high flow of water.
- Location of drinking stations.
- Paper drinking cups or other means of avoiding common drinking cup.
- Method of cooling drinking water.

Ventilation.
- Cross-current natural ventilation.
- Forced ventilation.
- Exhaust fans for cooling super-heated places.
- Devices for exhausting dust or noxious gases.

Light.
- Percentage of window space.
- Artificial system, especially where dangerous machinery is in operation, and for accountants.

Wash Rooms.
- Method of ventilation.
- Individual wash bowls.
- Number of bowls for given number of employees.
- Soap furnished—Liquid, powdered or cake.
- Towels furnished. Paper. Linen, and when changed.
- Hot water supplied for types of employees having unclean work.

Toilet Rooms.
- Accessibility to work places.
- Outside exposure.
- Method of flushing closets.
- When cleaned.
- Method of cleansing.
- Separate entrances for men and women.
- Number of closets for given number of employees.

Shower Baths.
- Furnished for stationary firemen, molders, painters, miners or powder workers.
- Where located and how heated.

Locker Rooms.
- Separate dressing roms for men and women.
- Individual metal or wood lockers.
- Drying racks for wet garments.

Lunch Rooms.
- Prices charged for food.
- Type of service.
- Style of equipment.
- Attractive decorations and furniture.
- Separate rooms for men and women.

Fire Protection.
- Fire brigade.
- Fire drills of employees.
- Sprinkler system of extinguishment.
- Automatic electric fire alarm signals.
- Enclosed stairways.
- Fire escape tower.
- Exit doors opening outward.
- Chemical engines, type approved by fire underwriters.

Seats for Women.
- Adjustable backs or foot-rests.

Uniforms.
- Furnished to women.

Laundry.
- Men's overalls, Women's uniforms, Towels, Lunch room linen. } Laundered.

Elevator Service.
- Separate employees' elevators.
- Escalator.
- Freight elevators used by women.
- Method of safeguarding elevators.

Janitor Service.
- Dustless or dry sweeping.
- Method of maintaining cleanliness.
- Sanitary corps.

Emergency Hospitals.
- Location and equipment.
- Physician, chiropodist, dentist, trained nurse or visiting nurse.
- Attendance charge.
- Medical examination of new employees.
- Care of tuberculous employees.
- Occupational disease—its prevention or treatment.

Accidents and Safeguards.
- "Safety First" organization.
- Methods employed to safeguard machinery and dangerous work places.

Recreation.
- Club house or social hall—a separate building or in industrial establishment.
- Type of entertainments—concerts, theatricals, billiards, pool or bowling.
- Club Canteen—
  - Control of liquor selling.
  - What factors have entered into reduction of intoxication.
  - Relation of recreation to liquor problem.
- Gymnasium—athletic field.
- Fresh air exercise.
- Roof garden.
- Play-grounds for employees' children.
- Women's rest or silence room.
- Railroad trainmen's rest houses.
- Men's smoking room.
- Attention to the aesthetic—artistic colorings and decorations.
- Vacations with pay.
  - Types of employees so recognized.
  - Length of vacation.
- Legal holidays recognized.
- Additional time given when legal holiday falls on Friday.

Educational.
- Instruction classes for beginners.
- Meetings of heads of departments.
- Suggestion system.
- Employees' periodicals.
- Charge made—free distribution.
- Kindergartens for children of employees.
- Manual training or gardening for sons of workmen.
- Cooking, dressmaking or millinery classes for women employees or daughters of workmen.
- Employees' classes in "first aid to the injured."
- Health lectures.
- Company contribution toward public schools.
- Assistance by State or Local Board of Education in technical class work, night classes or kindergartens.
- Library—in industrial concern or separate building.

Housing.
- Industrial villages.
- Homes rented or sold to employees; types and prices charged.
- Window screens.
- Garbage disposal.
- Sewerage system.
- Swamp drainage—elimination of the mosquito.

THE NEXT STEPS IN WORKMEN'S COMPENSATION LEGISLATION

EXECUTIVE COMMITTEE OF THE WORKMEN'S COMPENSATION DEPARTMENT DISCUSSES THE RESULTS OF EXISTING STATUTES AND THE PROBLEMS YET TO BE SOLVED

AUGUST BELMONT, Chairman Workmen's Compensation Department.

GEORGE SUTHERLAND, United States Senator from Utah.

EXECUTIVE COMMITTEE MEETING OF WORKMEN'S COMPENSATION DEPARTMENT

AUGUST BELMONT, Chairman of the Workmen's Compensation Department of The National Civic Federation, who presided at a luncheon given by the Executive Committee of that Department, Saturday, March 28, 1914, in the Metropolitan Tower, New York City, said in opening the meeting:

"We have come together to confer over the next step to be taken by The National Civic Federation in its Workmen's Compensation Department.

"Great emphasis was put upon the need for uniformity of State legislation by the Joint Commission of The National Civic Federation and the American Federation of Labor, which made a thorough study of the operation of existing State laws and reported exhaustively in a volume published as Senate Document No. 419, which you all doubtless have received.

"This report shows that in States where there are workmen's compensation acts, the principle of workmen's compensation is well established and the benefits of such legislation are fully conceded. In those twenty-two States, the problem for the future is to make the compensation acts equitable, scientific and as nearly uniform as possible.

"One important feature in developing legislation is the adjustment of the schedule in such way as to make it fit various injuries, and to give consideration to the probable decrease in a workman's earnings. An injury to a particular member in one trade may incapacitate a young man for following his occupation for life, while in another trade the same injury may not lessen his ability to perform his work after he has recovered from the immediate effect of the accident. A proper schedule, which must necessarily be complex in its application, is an intricate problem to solve.

"To determine upon what shall be adequate compensation to the workman (which is the first object of such legislation) and what shall be the cost to the employer, is essential to the ultimate success of this legislation.

"Here, as in the work of our Committee on the Prevention of Accidents, we find also the importance of uniformity of action with relation to the method of gathering statistics. This refers particularly to accident prevention. These statistics are needed to inform us where the majority of accidents occur and where safeguarding is most urgently required. For example, a chart recently issued by an important company in Illinois shows 35 per cent of its accidents in a given period to have been injuries to the eyes of the workmen. Then again, through the recent report of the Massachusetts Board, we learn that a comparatively small percentage of the fatal accidents were due to machinery—the great majority coming through hand labor. The Chairman of our Commission suggests that discipline is a large element in the prevention of accidents, and I hope he will enlarge upon the foregoing points during the discussion this afternoon.

LOUIS B. SCHRAM. CYRUS W. PHILLIPS JOHN MITCHELL.

MEMBERS OF THE COMMISSION WHO WERE PRESENT AND SPOKE AT THE MEETING

"The unprecedented demand for the report of our Commission on the operation of State workmen's compensation laws has indicated the value of the Federation's educational work in this connection. It has been sought in large quantities by the State Boards and by employers, who regard it as a convenient publication for the purpose of informing heads of departments, superintendents and foremen not familiar with this new type of legislation and their responsibility under it.

"A still greater need for education is indicated by letters received from States which have undertaken to secure laws this year. They indicate that the public, as well as State commissioners and legislators, are seeking knowledge concerning the subject.

"Hostility toward writing in the statutes the principle of workmen's compensation, on the part of legislatures which met this year, was due largely to the fact that either the lawmakers or the employers or workmen concerned were not prepared to deal with the subject, as it was too new to them."

Among the letters read by Mr. Belmont from governors, commissioners and members, was one from James Duncan, First Vice-President of the American Federation of Labor and a member of the Joint Commission of The National Civic Federation and the American Federation of Labor, who wrote expressing regret that he was unable to be present and said:

"I have received copies of the report of the Joint Commission to study the operation of the State laws, of which I had the honor of being a member, and I think the report puts us in a position of being of great assistance to all the interested parties in furthering the practical work incidental to legislating and practically putting into use the principles and purpose of workmen's compensation. I know that the discussion

of plans to make effective the report of our Commission is one of the very important phases of the main question."

FEDERAL BILL AND STATE UNIFORMITY.

Hon. GEORGE SUTHERLAND, United States Senator from Utah, who was the author of the Federal Workmen's Compensation Act applying to railroad employees in interstate commerce, now pending before Congress, opened his remarks by expressing the desirability of having uniformity in State legislation, especially upon the subject of workmen's compensation, although exceedingly difficult to secure, and commented upon the practical character of the report of the Joint Commission, written in plain English so that every man can understand it, adding that it should aid materially in bringing about uniform legislation. He expressed regret that some of the States were adopting the principle of State insurance which has weaknesses that are not developed at once; that the amount of compensation that is to be paid during the early years will be comparatively little, but that as the years go on they will accumulate and difficulties will develop. He feared that State administrative boards would be cultivated by the employer to have the tax upon him made as low as possible, and by the employee to get just as much compensation as possible—both tendencies being to deplete the fund, which will ultimately become insufficient, necessitating a resort to State taxation. The State board cannot settle a case without investigating it as the employer can, for he is dealing with his own money.

He said further: "I believe thoroughly in the English system of direct payments, although there must be some method of guaranteeing payments on the part of small employers. The system of direct payments is an incentive upon the individual employer to cut down the number of accidents. The best managed manufacturing establishment is penalized for the benefit of the worst managed, when the latter is not required to pay more in the form of a tax than the former."

Mr. Sutherland urged the exclusive remedy and a compulsory law, and said: "A law is supposed to be a rule of conduct demanding what is right and prohibiting what is wrong, but the so-called elective law does neither. It lays down a set of rules and says, 'You may accept these principles or not, as you please.' It is good advice, but not law, because the very idea of a law implies compulsion. If you give the employee the option of suing at common law or accepting the provisions of the compensation law, you continue one of the evils which it is intended to prevent—that is, the element of waste. To say that the employer should continue to respond, at the option of the employee, to the sometimes extravagant verdicts rendered by jurors, and at the same time be liable in every case for certain definite compensation is not justice. Furthermore, by preserving the two systems, it is not possible to pay the employee as large compensation. The injured wage-earners and their dependents should be given as large compensation as the employer can be burdened with and the whole compensation should go to the victims of industrial accidents." He illustrated this point by stating that the Federal Commission, before preparing its legislation, collected statistics from the railroads representing 57 per cent of the payrolls of the country, for the three years 1908, 1909 and 1910. It was learned that the aggregate amount paid out for personal injuries from 1908 to 1910 was approximately $10,085,000 per annum, of which amount nearly, if not quite one-half, was wasted in going from the railroad companies to the beneficiaries. Under the Federal Workmen's Compensation Act now pending, railroads would pay $18,000,000 annually for exactly the same number of injuries and the same character of injuries that occurred during those three years—approximately $18,000,000, as against $10,000,000 under the liability law. If the optional system were imposed, the cost would be beyond $18,000,000; but whatever it is, let it be imposed upon them so that the whole amount will go to the employees. Even though the cost to the railroads under workmen's compensation legislation would be increased, I believe they would be better off, as it would make for certainty in cost and they would not be compelled to maintain expensive legal and claims departments.

He urged the importance of treating the men as a class and distributing the $18,000,000 annually rather than to continue the present system under which nearly half the amount is wasted in going from the treasury to the pockets of the employees, the greatest amount going to attorneys. We should get rid of the system which makes the contingent fee a necessity and put into operation the one single system of compensation for every injury, irrespective of the negligence of the employer. No matter how much care is taken, modern industry is so huge and complex that a certain number of accidents are inevitable. The doctrine of averages has taken the place of the law of chance. We can predict by the use of statistics with a reasonable degree of certainty. Upon the railroads of this country there are approximately 4,000 men killed and 60,000 injured every year out of the total payroll of 1,700,000. He said that while a certain percentage of the accidents are due to the negligence of the employer and a certain percentage to the negligence of the employee and some to nobody's negligence, about one-half are due to the inherent risk of the industry, and it is not fair that that great mass of humanity should go without compensation or be a burden upon the community. He explained further that a fair compensation law takes away from the wage-earner his gambling chance of securing damages through litigation under a liability law and gives him instead, certainty of insurance, irrespective of negligence.

It will be difficult to get uniformity of action upon the schedule of compensation, as people differ so about details. His judgment is that it is better to extend the time over which payments are made to the injured than to extend the amount which shall be received for a shorter length of time. A man must be given a reasonable sum during the period of his disability, but it should not be fixed so high as to constitute an inducement to him to remain idle after he is able to work or to simulate injury which really does not exist. Men should not be paid more than they could earn year in and year out.

In speaking upon the status of the Federal compensation bill, Senator Sutherland said:

"When not as generous in its terms as it is now, it passed by a large majority in both the Senate and House, the latter adopting amendments too late to be ratified by the Senate because of the opposition. The present situation is irritating. The pending act would be of the greatest benefit to the railway employees. It is more generous than any law in any country in the world, and yet we find these employees meeting and passing resolutions against it, notwithstanding the fact that the heads of their organizations, who have studied the question thoroughly, have committed themselves in favor of the law with one exception. I am told that the opposition is due to the attitude of personal injury lawyers. I do not complain of the contingent fee lawyer, but of the system of which he is a part. We have only half a dozen men in Washington sufficiently familiar with the details of the act to push it, while in every community where railroad men live there are several dozen lawyers who depend upon the perpetuation of the present system. A lawyer goes to one of them and says, 'This law proposes to take from you your right to bring suit against your employer if he has been guilty of negligence. Do you want that?' He says no. The lawyer doesn't say to him, 'This law proposes to take from you your gambling chance for the future to maintain a successful action against your employer, and gives you in place of it a policy of insurance.' He does not put it to him in that way. He says to him, 'I had a case for Jim Smith, a brakeman, who lost an arm, and I got $10,000 for Jim Smith.' At once the employee thinks that is the standard; that if he loses an arm he is entitled to $10,000. What the lawyer neglects to say is that Jim Smith got this after two or three years of litigation, starving years for him and his family; that, when the judgment was paid, Jim Smith, of the $10,000, got $5,000 and the lawyer got $5,000. Tom Jones and Harry Robinson, two others similarly injured, got nothing. It seems to me if he had said to this man, that this proposed workmen's compensation law will take $15,000, instead of $10,000, and give it to the three men, or to the three families, in case of their death, instead of giving the whole $10,000 partly to the lawyer who has not been injured and partly to the employee who has been injured, that he would have been stating the case fairly. There are two engineers in a head-on collision. One is guilty of negligence, the other is not. Both are killed; both leave families, a wife and three children in each case. Those families must be taken care of by somebody. Isn't it better, in the interest of humanity, in everybody's interest, that each of those families should receive $10,000 than that one should receive $12,000 and the other nothing at all? That is the philosophy at the foundation of this legislation, as I understand it."

CYRUS W. PHILLIPS, of Rochester, N. Y., Chairman of the Joint Commission, said that uniformity will come by evolution and the knowledge of the growth of the subject in the different States, and that it can come about only through some central organization like The National Civic Federation that brings together the experience of the States. They are provincial, and each is apt to think that it has the best law. It is necessary that the experience of the different States shall be carried from one to another. In the beginning, workmen were slow to give up their rights, but the majority of the States now have the exclusive remedy. There is a tendency to increase the waiting period and toward a uniformity with regard to insurance. It is generally accepted that the workman is entitled to have his compensation guaranteed and that the employer should have the option as to the method of insurance.

The danger ahead is in the schedule, and we need to gather statistics and work out carefully that problem. The tax is indirect and falls on the consumers, who do not realize that they are paying it, and are, therefore, indifferent as to how much money is spent. Statistics, doubtless, would show that the workman will pay a larger proportion of the tax than a man with a greater income. The manufacturer who is making a ten-dollar suit of clothing is going to pay just as much for compensation as the manufacturer who is making a twenty-five-dollar or twenty-dollar suit. The result is that the man who buys a ten-dollar suit is paying just as much of a tax on compensation as a man buying a twenty-dollar one. The man who buys clothing from a custom tailor will probably pay a still smaller proportion of that tax. The workmen are most seriously affected—this tax would largely come out of them as consumers, and for that reason it is necessary to have thorough statistics and the whole subject of this cost brought home to the people.

California is trying to work out a schedule based on the nature of a man's occupation, so that he gets a larger compensation if his injury affects him to a greater extent in his particular occupation. The Massachusetts Commission has recommended to the legislature that that plan be adopted there. There will be difficulties in working out the plan. But you can only get at the right solution by attacking the subject and studying it thoroughly.

In New York State there is fear that our death benefits are going to run high. The reason is that a young widow will draw thirty dollars a month the rest of her life, if the man was getting a hundred dollars, which may run fifty or sixty years, and the children get their proportion until they are eighteen. We must have statistics on that; find out what proportion of widows are young and what proportion remain unmarried after widowhood, and the length of life afterwards. Then there has been another suggestion that in a good many cases the decedent may have been a man of advanced years, whose earning power had been nearly exhausted, and that for that reason his widow did not suffer any great financial loss. You will undoubtedly find by statistics that that will occur less often among working people than other classes. Very few elderly men, working at workman's wages, and whose working power is exhausted, will marry young women. So that that probably is a phase that will not affect the situation to any great extent. But yet, in order to ascertain these facts and demonstrate them, we must gather thorough statistics. Those statistics should be uniform throughout the country, with an idea of working out all these different questions. That can only be done by some central body like this, that will adopt a proper schedule for a proper table of statistics and present them to the different commissions.

Those are the principal questions confronting us, and also the practice of fraud, if any exist, in the making of payments. It comes back to the workman who is paying a large part of this tax, and it is to his interest that all malingering and fraud be cut out. If that tax was a direct one on the workmen, they would realize it, and it would encourage them to start safety committees among themselves. It being an indirect tax, they are slower to do so, as we are all slow in matters of that kind. The question of discipline among the men must be taken up, an affirmative action upon their part to prevent accident, as well as on the part of the employer, superintendents and foremen. It seems as though the statistics, schedule of compensation, and the prevention of accidents and then the active participation of the workmen themselves, are the essential things for the future upon this subject.

There is danger that a State working alone without co-operating with other States will gather only the statistics that are deemed necessary for the purpose of administering the particular law in force at that time; when, as a matter of fact, the statistics ought to be broader than the existing requirements in the particular State, as they will not only be of use in administering the laws of other States, but will also be available in case the State involved subsequently desires to change its law. While I will not at this time attempt to make a comprehensive suggestion as to the kind of statistics that are essential, it will occur to us at once that we need to know the number of employees injured in each industry, the cause of their injuries, the nature of their injuries, the average wages paid not only in the industry but to the employees receiving particular types of injuries. Of those receiving total permanent disabilities, it is desirable to know the average age at the time of injury and the average duration of life after injury. For those receiving fatal injuries we must know the proportion leaving dependents in each industry, the number of widows, the age of widows, their duration of life during widowhood, the percentage of subsequent marriages, the number of children, the age of children, the cost of medical attention. Many other subjects upon which statistics are necessary will occur to you.

It will be necessary to call the attention of the different State governments to the absolute necessity for gathering statistics in the hope that they will make sufficient appropriations to enable the industrial accident boards and commissions properly to carry on their work. In determining upon a plan of uniform statistics, the co-operation of the different State boards and commissions will be necessary.

SOME BACKWARD STATES.

ROYAL S. MARSTON, Chairman of the Maine Legislative Committee, of Skowhegan, said in part:

"We attempted to pass a bill in Maine, but no one understood what it meant. We exempted the farmers

n order to make possible the passage of the bill. A anufacturer, opposed to that provision, said there as no more reason why farmers should be exempted han small saw-mill men. Then the legislator who ad made the best popular speech in favor of the bill, aid: 'Of course, small saw-mill men are exempted. am a small saw-mill man myself.' We wound up ith a sort of compromise by appointing a committee o draw up a bill for presentation at the next session. Ve need all the information possible, and I want to hank you and the Federation for its report, which ave us more valuable information than we had from ny other documents or literature."

JOHN MITCHELL, of Mount Vernon, N. Y., one f the two delegates from the American Federation f Labor who assisted the Civic Federation in its tudy of the State acts, expressed the belief that the ederation could render the greatest service by placing ie emphasis upon the desirability of workmen's com- ensation legislation—that is, to continue actively to ecure the passage of compensation laws by States hich have not as yet acted. He said so many of the tates have enacted laws giving the workmen from 0 to 66⅔ per cent of their wages, and that they would ot willingly have this amount reduced to secure uni- ormity in schedules. The sentiment is growing among orking men, employers and others that the payment or those permanently and totally disabled should con- inue for a longer period than was originally offered o the legislatures in this country. Instead of com- ensating them for eight or ten years, some provision hould be made, perhaps on a reduced scale, for the ntire period of disability.

If working men are to accept compensation as their xclusive remedy, they will insist vigorously that they hall be paid more than 50 per cent of their wages. I m in favor of an exclusive remedy, provided the com- ensation is reasonably high. If not, I think the work- ng man should retain the right to sue for full dam- ges in case the accident is due to the gross negligence f the employer or to the violation of the factory law n the part of the employer.

There is no longer any question about compensation ecoming the established process for the settlement of uestions affecting injuries to workmen in all the tates, but the absence of information in some mani- sts itself every day in letters received by The Na- onal Civic Federation from men active in the work. mployers and working men and others want informa- on upon the character of the laws they should enact. n States not largely industrial, laws may be accept- ble which are not quite as liberal as in those where ie industrial population is numerous.

In referring to the Federal act, he said: "I hope will be revised, if necessary, to enable the members f Congress to pass it, since compensation, with its utomatic settlements, is preferable to litigation ith all its chances."

DAVID A. REED, of Pittsburgh, Chairman of the ennsylvania Industrial Accidents Commission, stated at the problem confronting them in his State was ie passage of a law, and not uniformity of that law ith those in other States. One has been urged with ncreasing success at three legislatures. He said: We have had the unqualified support of organized bor and all the larger employers outside of the soft al mining companies. Under the Pennsylvania Lia- ility Law, the superintendent, mine foremen and all perating officers around the mine are fellow servants ith the miners; the result is that recovery by an in- red miner is seldom found. One of the largest soft al mining companies in a recent year had forty-six talities, which cost them an average of less than $25 ch—less than would be awarded by any workmen's mpensation law. It is easy to understand why em- loyers in such a peculiarly favored position would sist the enactment of a workmen's compensation law.

"Such a law in Pennsylvania will have to be elective cause of the constitutional restrictions; but it is in- nded to have it an exclusive law, with the election as New Jersey, bringing every employer who does noth- g, under its terms. While in Michigan and Massa- usetts the exercise of the election is signified by the king of insurance, not so large a percentage signify eir acceptance. The Pennsylvania Commission, how- ver, believes the proper solution to be a compulsory w, compelling the employer to insure or signify his ility to carry his own risk. It is urging at present rect payments, leaving it optional with the employer insure or not. By placing the burden directly on e employer, we believe the result will be to make it ore to his interest to prevent accidents, than if the rden were to fall on the insurance fund, in which is interest is rather remote.

"We found it impossible to get through a law pro- ding a maximum of 500 weeks in cases of total per- anent disability, and we shall be obliged to accept e 400-week limitation and trust to the future to re- ove it.

"We have adhered to the idea that disputes were to adjudicated by the courts and not by a commission. e dread the tendency of a commission to administer e fund, dealing with each case as a charity rather an a matter of justice. We do not like to have a ublic official's position depend upon the favor of the class for which he is constantly making decisions, and we believe that there is greater chance of justice under the courts. While your Commission's report indicates that where the remedy is left to be enforced in the courts, the employee will receive less than the amount provided by the compensation law, it seems to us that eventually these cases will diminish to the vanishing point, as the law becomes known. It hardly seems wise to establish the injured workmen as the peculiar wards of the State. We think it best to leave the assertion of their rights to the men themselves or their dependents, and the enforcement to the courts.

"We think that this year we shall have a legislature composed of men who are in favor of the law, which was not the case at the last session."

MR. WILLIAM A. COAKLEY, of New York, General President of the International Protective Association of Lithographic Press Feeders of the United States and Canada, said:

"There is brought out the question as to the desirability of having awards made by an elected commission. I would raise a question—are not the courts also elective? That being the case, the same principle applies to both methods of administration."

MR. E. K. WOODWORTH, of Concord, N. H., representing the New Hampshire Manufacturers' Association, said:

"It is the desire of my organization to bring about the enactment of a proper compensation act which will put an end to litigation between the employer and the employee. I have come to detest thoroughly an economic condition which makes it possible or necessary for the employer and the employee to assume a position of hostility the moment an accident has happened. The economic waste seems almost criminal. The money paid to lawyers on both sides should go to the relief of the suffering, and go there promptly.

"The law in New Hampshire is the worst in the United States dignified by the name of a workmen's compensation act. It represents an effort to draft a law which would stand a constitutional test in fulfillment of a platform pledge. Section 1 is a drastic employers' liability law which the employer can get rid of only by electing in advance to be governed by the compensation features of the bill, while the employee is left to bring suit. The liability companies established rates very much higher for the employer who accepted the option of compensation than for the one who did not. The result is that very few employers have accepted the compensation option and litigation is more rampant than ever—in fact, well-nigh intolerable.

"At the last session of our legislature, the labor men introduced the bill of the Pennsylvania Commission. We supposed there was unanimity between employers and employees in regard to the establishing of the principle. We were surprised to find the labor interests not represented at our hearings by their attorney who had introduced the bill, but by attorneys who were engaged in bringing suits for plaintiffs, who persuaded the State Federation of Labor that they did not want a compensation law, but a wide-open employers' liability law. The result was no legislation. It was with the definite hope that I might find out the attitude of labor leaders who favor the principle of workmen's compensation that I came here, and I trust that we shall be able to get together. The employers are almost entirely in favor of workmen's compensation legislation in New Hampshire—just the reverse of the situation as given by Mr. Reed for Pennsylvania."

MR. HOLLIS R. BAILEY, of Boston, Mass., Chairman of the Workmen's Compensation Committee of the Uniform State Law Commissioners, explained the activities of that organization in this connection, and stated that several years ago The National Civic Federation suggested that his body should appoint a committee to help work out this problem, which was done. Successively the committee determined upon the exclusive remedy, a compulsory law, the administration by a new kind of tribunal not hampered by the existing rules of the court in their rigidity, and an alternative elective act for States having constitutional restrictions. He said:

"The Commission is considering the matter of compulsory insurance to safeguard the wage-earners' payments, believing that the employer should have an option to insure in mutual companies. The constitutional question arises, can you compel insurance? It seems to be a safe provision.

"Our schedule has been merely suggestive. When you say that a young workman of 21 permanently disabled is to receive 60 or 66 per cent of his wages for the rest of his life, the figures become so large that they frighten one; and the same is true where a young workman is killed and leaves a young wife who may live forty or fifty years, and the amount may run up to $40,000 or $50,000 for one person. Of course, it is possible to award 60 per cent, and then in fine print state that it shall not exceed a total of $6,000.

"I wish to add my word of praise for the work of the Civic Federation's Commission. Its report is of great practical value all over the country and to my committee. It is the latest word, and I hope the gentleman from Pennsylvania, before going to the legislature again, will consider whether the industrial accident board, after all, is not something better than going to the courts. If the experience in this country indicates that we are a little bit old-fashioned, we should stop and see if there is not something better.

"I think the Civic Federation may well have a committee of experts to work out a scientific schedule. Our Commissioners get only $100 or $200 from each legislature and have practically no money, but we have been successful in getting uniform laws when we have had the support of organizations like this. There has been great harmony and co-operation between my committee and the officers of the Civic Federation. By working together, we can accomplish more than by going singly in undertaking to get uniformity of legislation on this subject."

The following resolution, introduced by Senator Sutherland, was adopted:

"*Whereas*, It is important that there should be developed as great a degree of uniformity as is possible in workmen's compensation legislation, be it

"*Resolved*, That the Chairman of the Workmen's Compensation Department of The National Civic Federation be authorized to appoint a Committee on Uniform State Legislation to prepare, in co-operation with the Uniform State Law Commissioners, a memorandum of suggestions upon main provisions requisite to adequate workmen's compensation laws, taking into consideration the best features of existing laws, to be used as an educational document in the interest of such State uniformity of legislation; and

"That the Chairman be authorized to invite each State Board and Workmen's Compensation Commission to appoint a member to serve upon this committee, and that in any States where there are no administrative boards or commissions to study such legislation, the Governors be asked to co-operate by appointing a proper representative from their States; and

"That this committee be instructed to report at a meeting of this Department to be held not later than October 10, that an outline for such educational work may be determined upon in ample time for use among the large number of legislatures to be in session next year."

MR. LOUIS B. SCHRAM, Chairman of the Labor Committee of the United States Brewers' Association, spoke for his large and important group of employers, especially upon the percentage of wages which should form a basis for compensation. He said:

"I have never objected to the 66⅔ per cent of wages as the basis of compensation for several reasons. The additional burden which is cast upon the employer by reason of compensation laws will be calculated in the cost of his product, and will be borne ultimately by the consumer, and therefore the question is not so much what burden it imposes on the employer, but is it just and equitable? From my view, and I think that is the generally accepted view, the theory of compensation instead of liability is that the industry shall bear the burden of industrial accidents. The industry consists of the workman and of the employer, and when the workman gives up one-third of his earnings he is contributing vastly more toward the burden, toward carrying this burden, than the employer does. And, therefore, it does seem that a dispassionate consideration of this subject would indicate that this yielding up of one-third of his entire earning power is going a great step and doing a great deal by the working man toward carrying his share of the burden which is cast on the industry. But there is one feature of this branch of legislation which I think has been incorrectly solved by the New York law, and that is the definition of the average weekly wage of the workman. The New York law entirely ignores the fact that the working man does not work three hundred days in the year. A bricklayer in New York receives six dollars a day for his wages, but it is never contemplated, either by the employer or by the bricklayer himself, that he earns eighteen hundred dollars a year. It is well known that he works probably less than three-quarters of the year, as Mr. Sutherland has indicated. Under the New York law, the average weekly earnings of that bricklayer would be figured at the rate of six dollars a day, and not upon his annual earnings. The basis of 66⅔ per cent would be figured upon the annual earnings and not upon his daily or weekly compensation. In order to promote uniform legislation, the most essential point is that we should have as complete a knowledge as possible of everything that is incident to this subject, and that can only be gained, as Mr. Phillips has clearly stated, by a systematic and complete set of statistics, and in order that we may acquire as complete knowledge on that point as possible, and build up a system of statistics, I offer the following resolution:

"*Whereas*, It is vital that there should be some uniform method of collecting statistics that there may be a common basis from which comparisons may be made upon amounts paid to injured workmen, the cost of insurance to employers and types of accidents most prevalent, therefore be it

"*Resolved*, That the Committee on Accident Prevention of The National Civic Federation be authorized

(Continued on page 23.)

OFFICIALS AND EXPERTS UNITE FOR GENUINE PRISON REFORM

WOMAN'S DEPARTMENT OF THE NATIONAL CIVIC FEDERATION INAUGURATES FAR-REACHING MOVEMENT FOR IMPROVEMENT IN CONDITIONS AND METHODS

FOR the first time in American experience the idea of organized co-operation is to be applied to the treatment of the prison problem. Through the efforts of the Woman's Department of The National Civic Federation a Joint Committee has been formed during the past month of officers of a number of organizations interested in the subject, public officials and practical workers in the field. The object of this important action was, first, to agree upon certain central principles deemed to be vital; next, to bring the result of the united experience and influence of the members of the committee to bear in behalf of sound legislative and administrative reforms.

This Joint Committee, consisting of eighteen members, has already formulated a "platform" of principles and a comprehensive program of practical educational work which is to be carried forward in New York State during the coming season.

The plan for such a movement has taken form very rapidly. Undertaken first under the auspices of the Section for New York and New Jersey of the Woman's Department, it almost immediately aroused widespread interest and enthusiasm as a vital idea of much more than local significance. If important reforms can be brought about in one quarter through this means, standards are thereby established and methods tried out which ought to prove of great service in other States, under modifications suited to local conditions.

A two days' conference on the subject was arranged and held at Hotel Astor, New York, on Friday and Saturday, March 6th and 7th, with a mass meeting at Carnegie Hall on Friday evening. The presiding officer at both the Friday and Saturday sessions was Mrs. Francis McNiel Bacon, Chairman of the New York and New Jersey Section of the Woman's Department of The National Civic Federation. Mrs. Bacon introduced the Hon. William Church Osborn as chairman of the first part of the program at the day session on the 6th, at which the general subject of "Prison Systems and Correctional Institutions" was discussed by Mrs. Martha P. Falconer, Superintendent Women's Farm Colony, Darlington, Pa., and the Hon. John B. Riley, Superintendent of Prisons, New York. Dr. Katherine B. Davis, Commissioner of Corrections, New York City, was introduced as chairman of the second part of the program, which included two topics, viz., "County Jails" and the "Co-ordination of Boards and Commissions." Dr. O. F. Lewis, General Secretary Prison Association of New York, who exhibited a number of screen views of State and County institutions, spoke on the former topic, and Dr. E. Stagg Whitin, of the National Committee on Prison Labor, on the latter.

The Saturday session was devoted largely to the question of "Substitution of Outdoor Life for the Cell System." This fruitful idea was treated from several angles by Dr. Lewis, Dr. Whitin, Thomas Mott Osborne, Chairman of the New York Commission on Prison Reform; Harry B. Winters, Deputy Commissioner of Agriculture, New York; Dr. J. T. Gilmour, Warden of the Central Prison Farm, Guelph, Canada; Brother Barnabas, of the Lincolndale School, and Governor Oswald West, of Oregon, who emphasized particularly the industrial aspect of the prison problem and advocated a central board of control for all prisons of the State.

The Carnegie Hall mass meeting of Friday evening was a remarkable demonstration of the popular demand for a real forward movement in prison reform. At the same time it was evidence of public appreciation that in the co-operative idea a way had been found of real promise of tangible results.

The Governor of New York, Hon. Martin H. Glynn, presided at the meeting and gave most emphatic endorsement to the plan proposed by the Woman's Department for a general committee to bring about more effective treatment of the subject. "I am with you, heart and soul," said the Governor. "I believe that more criminals become so by accident than by intent. Society must not become the enemy of accidental criminals. Correction is far better than punishment, and crime should not be committed to punish crime." The other speakers of the evening, all of whom voiced the need of united action for the accomplishment of real progress, were:

Hon. Oswald West, Governor of Oregon.

Dr. J. T. Gilmour, Warden of the Central Prison Farm, Guelph, Canada.

Dr. Frank Moore, Superintendent State Reformatory, Rahway, N. J.

Mr. John J. Manning (United Garment Workers of America), New York.

Hon. Thomas Mott Osborne, Chairman, New York Commission on Prison Reform, Auburn, N. Y.

At the closing session of the conference, March 7th, the following resolution was unanimously adopted:

> "That the Chairman appoint as promptly as possible a committee consisting of representatives of all organizations participating in these two days' conferences and members of the Woman's Department of The National Civic Federation. This committee to develop a constructive legislative program and campaign of education on prison reform through the State."

In pursuance of this resolution, the New York and New Jersey Section of the Woman's Department promptly called a meeting of representatives of various organizations interested in prison reform, officials and experts on the subject, for the purpose of organizing for action. Substantially everybody invited to participate in the movement responded to the call, and a sub-committee was named to outline the plan and scope of the work in prospect. A second meeting of the Joint Committee, held on April 9, considered this report and agreed upon the program summarized below. The full committee, which is to work for the objects therein set forth, is made up as follows:

MRS. FRANCIS McNIEL BACON, Jr., Chairman.
THOMAS MOTT OSBORNE, Vice-Chairman.
ALEXANDER CLELAND, Secretary.
JOHN J. MANNING (United Garment Workers of America), New York.
HARRY B. WINTERS (Deputy Commissioner of Agriculture), Albany, N. Y.
COMMODORE A. V. WADHAMS (Member of Commission on New Prisons), New York.
O. F. LEWIS (General Secretary, Prison Association of New York).
MRS. WILLIAM EMERSON (First Director of the Women's Prison Association and Isaac Hooper Home), New York.
E. STAGG WHITIN (Member of the Executive Committee of the National Committee on Prison Labor), Columbia University, New York.
FRANKLIN H. BRIGGS (Superintendent, New York State Training School for Boys), New York.
FRANCIS C. HUNTINGTON (Vice-President, State Commission of Prisons), New York.
KATHERINE B. DAVIS (Commissioner of Correction, New York City).
SETH LOW (ex-officio—President The National Civic Federation), New York.
ADOLPH LEWISOHN (Chairman Penal and Correctional Institutions Committee of The National Civic Federation), New York.
MISS MAUDE WETMORE (ex-officio—Chairman Woman's Department, The National Civic Federation), New York.
MRS. AUGUST BELMONT (Member New York and New Jersey Section, Woman's Department, The National Civic Federation), New York.
MISS EMILY CROSS (Member New York and New Jersey Section, Woman's Department, The National Civic Federation), New York.
MRS. GILBERT MONTAGUE (Member New York and New Jersey Section, Woman's Department, The National Civic Federation), New York.
MRS. CAROLINE B. ALEXANDER (Member New York and New Jersey Section, Woman's Department, The National Civic Federation), Hoboken, N. J.

Mr. Alexander Cleland, in whose hands will lie the immediate direction of much of the educational program of the Joint Committee, was Investigator for Governor Hughes's Commission on Immigration, in New York State, and more recently Secretary of the New Jersey State Commission on Immigration. By reason of his experience in these and other fields of social and civic work, and his special studies of the prison problem in connection with the preliminary plans for the present undertaking, he comes to the large task in hand with a particularly strong equipment.

The Committee takes its stand definitely upon the following general principles:

> "The Joint Committee on Prison Reform regard the propositions embodied in the following statement as basic in any plan for improvements in administration, methods, and surroundings in the care and treatment of persons confined in correctional institutions:

"GENERAL

"1. The elimination of politics from the management of correctional institutions.

"2. The development of character and self-control in the prisoner through the honor system, and a larger degree of self-government within correctional institutions.

"3. The study and further development of the principle of the indeterminate sentence.

"4. The development of farm industrial prisons and other modern correctional institutions.

"5. The development of the State-use system of prison labor throughout the country in order to develop the best that is in the prisoner and at the same time conserve the interest of the State.

"6. Co-operation to secure Federal legislation which will make possible an effective State-use system in every State.

"7. The application of proper rules regarding just compensation of prisoners in all correctional institutions, with a view to creating an interest in the prisoner in his work and sense of responsibility for the support of himself and his family, and ability to provide such support.

"8. The establishment and improvement of prison schools for instruction in elementary subjects in correlation with industrial education.

"9. Specialized treatment of tramps, vagrants, inebriates, feeble-minded, and youthful misdemeanants.

"STATE.

"1. Improvement in administration.

(Note)—In New York State to-day improvement in management is far more vital than improvement in material appliances. And that does not mean that the latter is not also important.

The most perfectly constructed prison that modern science can invent will not reform the criminal unless it is run by a warden who has high executive ability and has also a heart and a personality that can win the confidence both of the guards and the prisoners.

"2. The State management of all County Penitentiaries.

(Note)—The five county penitentiaries in this State are an anomaly. Each one serves not only its own county, but many surrounding counties, and performs a State function. The penitentiaries should be taken over and managed by the State.

"3. The State care of all persons convicted of crime. County jails to be used only as places of detention.

(Note)—The present county management is, in general, deplorable. Prisoners are usually kept in idleness and herded together without adequate supervision, and for the greater part of the day with none.

The county jail should be used only as a place of detention for persons accused of crime. Convicted prisoners should be in State institutions.

"4. The development of the State farm for women at Valatie; the acquisition of a farm for the prisoners at Auburn; the development of the prison farm at Clinton; the extension of road and reforestation work and other outdoor employment for prisoners; the completion of the State Industrial Farm Colony for tramps and vagrants, of the Yorktown State Training School for Boys, the State Reformatory for Misdemeanants, and the establishment of a custodial asylum for the feeble-minded delinquents.

(Note)—*State Farm for Women.*

Two buildings to house women have been built at Valatie. This institution should be finished. It awaits appropriations. It is much needed. (Laws of 1908, Chapter 467.)

State Industrial Colony for Tramps and Vagrants

Established by the Legislature of 1911. This also needs appropriations, and should be finished at once.

Reformatory for Male Misdemeanants.

This was established by the Legislature of

1912, but no appropriations have been made since. This institution is much needed.

"5. An amendment to the Constitution allowing a bond issue for the completion of necessary State correctional institutions.

"6. Amalgamation as far as practicable by constitutional amendment of the various boards and commissions and other bodies having control over prisoners.

"7. The development of a court of parole for State prisons and of adequate parole boards for other correctional institutions. Also the development of adequate systems of probation and parole investigation and supervision.

(Note)—The probation and parole systems have grown up in a most haphazard way. Each has great good in it, but is open to grave abuse.

The work of a probation officer and of a parole officer is very similar. The ward of each is a convicted criminal. If he is put on probation it is immediately on his conviction, and without being sent to prison. If he is put on parole, it is after he has served a part of his sentence in prison. In each case he is convicted, and needs the same sort of supervision. The case of convicts on probation and convicts on parole should, therefore, be under one set of officers, covering the whole State, since personal contact between the officer and the convict is the essential thing, and a given number of officers dividing the territory between them will each have less territory to cover than if the whole body of officers is first divided into two divisions and each division tries to cover the whole territory. The officers also need more systematic supervision. The present system, by which a convict is turned over to a probation officer or a parole officer is very much like turning over a convict to a keeper in a prison with no warden to look after the keeper. Both systems should be thoroughly studied and plans worked out in detail.

"8. The establishment of a separate building, apart from the main prison, for incarceration of prisoners under sentence of death, and a separate building for executions.

(Note)—As all executions in the State are to take place at Sing Sing, it is desirable that a building separate and distinct from the main prison be established to avoid the present method which upsets the whole prison routine when an execution occurs.

"9. The study and survey of the Sing Sing problem, involving (among other things) the following possibilities:

(a) Renovation of Sing Sing as a permanent prison.

(b) Renovation of Sing Sing as a temporary reception prison and laboratory.

(c) Abolition of Sing Sing, as permanent prison, and establishment of a farm industrial prison on wide acreage."

The methods of work to be followed in the effort to translate these ideas into positive accomplishments are these:

"*Educational.*

A Prison Exhibit to be used throughout New York State during 1914-1915.

Conferences in New York City, and elsewhere in the State, Winter of 1914-1915.

Lectures, addresses, after-dinner talks.

Publicity campaign during Fall and Winter of 1914-1915, for unanimously endorsed legislation.

Press publicity.

"*Legislation.*

Conference in Fall of 1914 on proposed legislation.

Survey of legislation in other States."

PROGRESS OF THE NATIONAL SOCIAL SURVEY

(Continued from page 6.)

Location of closets.
Manchester system of cleaning.
Sanitary regulations.
Milk supply tested.
Co-operation with Board of Health.
Churches built or supported by firm.
Boarding houses or portable camps for men or women. Prices charged.

Additions to Wages.

Profit Sharing.

(Profit sharing is understood to involve an agreement between an employer and his work people, under which the latter receive, in addition to their full current district wages, a share, *fixed beforehand*, in the profits of the undertaking. Copartnership plans enable the worker to accumulate his share of profit in the capital of the business, with the possibility of leading to share in the management.)

(a) Periodical division of percentage of profits based on wages or length of service.

(b) Firm's stock sold to employees at special prices or on installment plan.

(a and b)
- Limited to superintendents and foremen.
- Rank and file included.
- Success of plan.
- Method of inducing employees to retain stock, to promote continued interest and loyalty.

(c) Employees' preference for higher set wages.

(d) Bonuses or commissions on extra amount of production or sales.

(e) Meritorious rewards for prompt attendance or efficient work.

Or for refraining from use of tobacco or liquor.

(f) Cash bonus at Christmas.

(g) Premiums on life insurance policies paid by firm.

Based on term of service or efficiency.

(h) High rates of interest paid on employees' savings, or for home building.

(i) Plan for lending to employees without interest or at nominal rate.

(j) Discounts on household goods or necessities sold to employees.

(k) Christmas or Thankgiving remembrances.

(l) Prizes for suggestions and gardens.

Provident Funds. (May be additions to wages or may be only half wages when ill.)

Relief or insurance association.
Sickness insurance.
Death benefits.
Pension fund.
Industrial accident insurance.
Company contribution toward fund.
Employees' contribution toward fund.
Voluntary or compulsory membership.

Supervision of Welfare Work.

Conducted by a systematically organized Welfare Department on same basis as any other business department.
Person in charge.
Number of assistants.
Supervisory Board composed of leading executives.

LABOR CONDITIONS.

The Committee on Labor Conditions proposes as a part of its work to utilize a similar procedure, and has prepared in the form of questions a series of inquiries covering a wide scope, the answers to which promise to throw a broad light upon labor conditions past and present. These inquiries will be addressed to the heads of wage workers' organizations throughout the country. The questions are given below in illustration of the careful effort which is being made to bring out adequately the real situation, both today and at the earlier point of comparison.

SCHEDULE OF QUESTIONS FOR OFFICIALS OF WAGE-WORKERS' ORGANIZATIONS.

(In cases where figures cannot be given for the periods named, i. e., the present date and twenty-five years ago, please give the closest that can be obtained.)

1. *Paid-up membership:*
   What has been the increase in the last twenty-five years?
2. *Wages:*
   (a) What has been the increase or decrease in the last twenty-five years?
   (b) Have there been additions of extra pay?
   (c) Has pay for holidays been added?
   (d) Have there been any other forms of wage increase?
3. *Hours of the workday:*
   What have been the changes in the last twenty-five years?
4. *Percentage of your trade organized:*
   (a) What percentage in cities or industrial centres?
   (b) In the country otherwise?
5. *Forms in organization:*
   (a) Has the tendency been toward concentration? or
   (b) Has the tendency been toward lesser autonomous groups?
6. *Changes in working conditions:*
   (a) Is there greater freedom from injustices of the management?
   (b) Is there greater freedom from blacklisting?
   (c) Is there greater freedom from fines, suspensions, discharge without cause assigned, etc?
   (d) Is there fairer apportionment of work among employees? If so, was it suggested by employers or by fellow workers?
   (e) Are appeals permitted to the management?
   (f) Are there betterments in workshop or while at work outside?
   (g) Are there betterments in sanitation?
   (h) Are there betterments in comfort in general brought about by organization or by employers?
   (i) Has there been abolition of the company store system?
   (j) Is there compulsory patronage (other than the company store) or tenantry of workmen and their families?
7. *Living conditions:*
   (a) Is there better housing?
   (b) Is there better transportation to and from work?
   (c) Are there better amusement facilities?
   (d) Are there better educational facilities (libraries, etc.)?
8. *Cost of living:*
   What have been the changes in cost of: (a) Food? (b) Rent? (c) Clothing? (d) Fuel? (e) Light? (f) Furniture and house equipment?
9. *Insurance:*
   (I) What have been the changes in your occupation as to compensation for accidents?
   (II) Have there been any improvements in forms of insurance not connected with labor organizations?
   (III) Have new forms of union mutual benefit funds been introduced?
   (IV) What are they: (a) Burial? (b) Accident? (c) Sickness? (d) Out-of-work? (e) Old age (or special easy work)? (f) "Home" or other institution for invalid or indigent members? (g) Tool? (h) Kit?
10. *Technical, trade or vocational education:*
    (a) Has any come through the union? or
    (b) Through the employer? or
    (c) for women, in the matter of home economics, civic rights and duties?
11. *Changes in status as between employers and employed:*
    (a) In trade agreements?
    (b) In welfare work?
12. *Organized labor and governmental agencies and representatives:*
    (a) New laws passed advocated by labor?
    (b) Especially, laws protecting women and children?
    (c) Are organized labor's present political demands in general practical?
    (d) In what particular have you suggestions to offer?
    (e) Is the attitude of the courts toward labor improving?
    (f) What suggestions have you to make for any improvements?
    (g) Are the radical political parties asking any improvements possible to labor at present which the unions have neglected advocating? If so, please state them.
13. *Organized labor and public opinion:*
    (a) Attitude of employers or the professional classes?
    (b) Attitude of church organizations?
    (c) Attitude of other organizations?
14. *Unemployment:*
    How is unemployment managed in your organizations, as compared with twenty-five years ago?
15. *Unity of organization:*
    (a) In working for immediately obtainable ends, how far do the Central Labor Unions, the State Federations and the American Federation of Labor, with its several departments, accomplish every effective point in all desired "solidarity"?
    (b) In the railroad brotherhoods, how far is the situation the same?
    (c) In appealing for legislation, how far is there a general co-operation between the American Federation of Labor organizations and the railroad brotherhoods?
16. *Organization of the unskilled:*
    (a) Is the lack of organization among your unskilled due to their own ignorance of or indifference to the American economic labor movement?
    (b) What have been the efforts of your union to organize the unskilled?
    (c) What is the proportion of the native-born whites in the unskilled of your industry?
17. *Age of beginning work:*
    (a) To the best of your knowledge, at what age did the children of the workers in your occupation leave school to go to work twenty-five years ago?
    (b) At what age now?

JOSEPH F. VALENTINE (President International Molders' Union of North America), Cincinnati, Ohio.
DENIS A. HAYES (President Glass Bottle Blowers' Association of United States and Canada), Philadelphia, Pa.
T. V. O'CONNOR, President International Longshoremen's Association, Buffalo, N. Y.

AND MEMBERS OF EXECUTIVE COUNCIL.

A National Campaign for Pure Food and Drugs.

The questionnaire on the subject of pure food and drugs published on another page indicates in part, but only in part, the detailed and exact nature of the inquiry under way by the new Food and Drugs Department of the Federation. It is definitely the end and aim of the Department not merely to learn just where we stand in this matter, but to bring about on the broadest scale an aggressive movement for the securing of pure food and drug products, correct labeling and honest advertising. In some cases this may mean new laws or amendments of present statutes; in others, better enforcement of existing regulations; while for all the purposes of this reform it will require a better and more efficient co-operation of responsible authorities, Federal, State and Municipal.

Back of all this there must be, of course, a working together of many voluntary agencies, representing both producers and consumers, for the strengthening of public sentiment in support of the maintenance of proper standards. The study of such standards, and agreement upon the requirements which should be considered essential, will form a further part of the plan the new Department of the Federation has in view. That this large problem is in the hands of public-spirited citizens, competent experts and officials of the highest standing, is the best assurance that we are to have at last a national forward movement for the conservation of our greatest natural resource—the health of the people.

To Study Agricultural Conditions.

The proposal to create a department to study agricultural conditions marks a further rounding out of the idea in the minds of the founders of The National Civic Federation. To bring to bear for the solution of our common problems the experiences and views of the best industrial and civic leadership of the country is a working theory of unofficial democracy which has proved its immense value in every field to which it has been applied. It has been the underlying plan alike of the Federation's national conferences, investigations and permanent departments for the constructive treatment of problems associated with manufacturing industry, transportation, public service utilities and the manifold phases of the labor situation.

But in all this, thus far, the interest of the farmer has been represented only indirectly. The chief difficulty in approaching this subject has been the very great range and variety of the problems involved, and the uncertainty as to which of these were fundamental. There has been the utmost confusion as to the line or lines along which useful service could best be rendered. Something of a key to this complex situation has been provided, however, in the growing activity and definiteness of various movements organized by, of and for the farmers themselves. Among these, the emphasis has been centering on the really pressing needs as known from their own experience—that of better rural credit facilities, for example, more direct relations between producer and consumer, co-operative marketing and buying, and the improving of rural community and farm life conditions.

The importance of wider knowledge of what is already being done successfully, of the methods employed, of the ways and means of correlating many of these efforts so as to secure larger effectiveness, and of strengthening the arm of the local association working on lines of larger possibilities —all this has been gaining clearness and points the way to the opportunities for helpful co-operation with local leadership. Details of the intended work of the new department are in the hands of the Committee on Plan and Scope, appointed by President Low, and it is expected will take definite form in the near future.

A Permanent Welfare Exhibit.

Definite assurance may now be given of the opening in the near future of a permanent Welfare Exhibit in charge of the Welfare Department of The National Civic Federation. The exhibit will occupy the entire Thirty-Fifth Floor in the Metropolitan Tower, above the offices of the Federation. The plan for such an exhibit has been long under consideration, and the collections of many years already in hand, with those immediately available as soon as proper facilities for display are ready, will make it in effect a museum of enlightened industrialism of national scope and service. Chairman William R. Willcox, in his last annual report for the Welfare Department, outlining the need for this new development, said:

"A vast store of material, photographs, models, descriptions and detailed data of successful work is in our possession; but at present it can be made available only by sending to inquiring employers selected portions suited to their needs. Once opened up, classified and properly displayed, as a permanent exhibit, where it could be studied at any time and consultation had with welfare experts, this fund of working knowledge upon welfare work would become many times more useful to the industrial community and furnish the one opportunity most needed to-day for the wider adoption of welfare work."

This is the need which the Welfare Department is now in a position to meet in a way and to an extent never before possible. Other recent achievements of the Department are of a similarly gratifying character, marking the steady expansion both of its practical work and of the idea for which it stands. Especially notable is the movement under way for the provision of modern welfare features for employees in all departments of the New York City Government. Particulars of this and other matters of interest in the industrial welfare field appear in another part of the REVIEW.

New Achievements of the Woman's Department.

It is a really remarkable record record that the Woman's Department of the The National Civic Federation is making from month to month, in many States and in many fields of useful effort. All along the line there is rapid growth in numbers and enthusiasm, and even more in the credit account of good work carried through to tangible results. Here, as in all parts of the working organization of the Federation, experience is confirming the strength and possibilities of its central idea—the co-operation of the best intelligence of the country, in all industrial, social and political groups, for the just and helpful treatment of our common civic problems.

In this number of the REVIEW may be found a detailed account of the work of the several sections of the Woman's Department, now in progress, and notable recent achievements in many directions. There is also a description of the spacious and attractive headquarters lately opened on Thirty-ninth street, New York City, to take care of the large and remarkably successful work of the Vacation Savings Fund. An account of still another large undertaking, the formation of a New York State Joint Committee on Prison Reform, composed of officers of several prominent associations interested in the subject, experts and public officials, is given in this number, together with a full statement of the principles and program of work agreed upon by the new committee as the basis of the campaign to be carried on in behalf of much needed reforms.

The total record is indeed a wonderful showing of what can be done for genuine social progress, with the aid of an inspiring idea plus businesslike organization, strong leadership and downright hard work.

A National and International Meeting Ground.

The exceptional position of The National Civic Federation as a common meeting ground of representative leaders in American civic and industrial life has enabled it to serve a similar purpose upon many occasions of international interest. The commissions of experts which have been sent abroad, in connection with certain investigations carried on from time to time by the Federation, and the co-operation with and assistance to similar commissions from other countries engaged in studies of American conditions, have firmly established this enlarged scope of the Federation's service.

Many interesting exchanges to similar purpose occur in the course of its regular activities. One such to be noted is a conference, held within a few days in New York City, apropos a visit to the Federation's headquarters of Sir Newton Moore, former Premier of Western Australia, for the purpose, as he put it, of "learning something more about one of the institutions of America." The former Premier found much to interest him in the varied activities of the Federation, and in the principle of voluntary co-operation for public service upon which it is founded. Within a few hours an informal gathering was arranged at a downtown lunch club of men interested in learning at first hand the present status of industrial conditions and social experiments in Australasia, and in a position at the same time to give the foreign guest a direct insight into the corresponding situations in this country and the lines upon which we are attempting the solution of more or less similar problems. In attendance at this meeting besides Sir Newton Moore and his associate, Mr. Wittenoom, were President Seth Low, of The National Civic Federation; Ogden L. Mills, Esq.; Isaac N. Seligman; W. L. Saunders; Louis B. Schram; Henry Bruère, City Chamberlain; James W. Sullivan, of the Typographical Union; Dr. Talcott Williams; John Mitchell; G. B. Woodward, and Miss Gertrude Beeks, Director of the Welfare Department of The National Civic Federation. Such issues as government ownership of railroads, the minimum wage and compulsory arbitration were among those discussed, and the interchange of experience and ideas proved of extraordinary interest to all participating.

In much the same way the possibilities of the common meeting ground were illustrated a few days ago t a conference arranged during a visit to the city of Charles S. Barrett, President of the Farmers' Educational and Co-operative Union of America, an association of more than two and a half million members. The remarks of Mr. Barrett and of Samuel Gompers, epresenting respectively the largest organizations of armers and of wage-earners in the world, were typical f the possibilities of these gatherings, many times erified, in bringing the special problems and needs f great organized groups into better understood relaion with those of the whole community. There were resent, besides Mr. Barrett, Seth Low, President of he National Civic Federation; Andrew Carnegie, Samuel Gompers, John Hays Hammond, Alton B. Parer, Albert Shaw, John Mitchell, William R. Willcox, Haley Fiske, Leonard Robinson, James W. Sullivan, I. D. Estabrook and Ralph M. Easley.

This co-operation of men directly representing forces f such magnitude in our national life, in a common urpose to further not merely class interests but the eneral welfare, is the most promising civic method vailable in the present confusion of economic and ocial issues. It is the particular method The National Civic Federation was designed to establish nd the object to which, in one form or another, its ntire public service has been devoted.

A NATIONAL ASSOCIATION OF WORKMEN'S COMPENSATION BOARDS AND OFFICIALS.

The Workmen's Compensation Department has met ith great success in its appeal for co-operation in the nterest of uniform State legislation made to the Govrnors of States having no workmen's compensation aws, to the commissions in such States now studying he subject with a view to formulating legislation, nd to the chairmen of industrial accident boards adinistering workmen's compensation laws.

They were requested to appoint representative citiens or representatives of their boards or commissions, a) one familiar with the legal phases of the question o serve upon the Federation's Committee on Uniform tate Legislation upon Workmen's Compensation; and b) another interested in statistical methods to act pon the Committee on Accident Prevention which has een authorized to extend its work to promote uniormity in methods of collecting statistics upon the ost of insurance to employers and amounts awarded or given injuries, types of accidents most prevalent nd their causes. The officials in many States have lready made their appointments. Hon. George Suthrland, Chairman of the Federal Workmen's Compenation Commission, has accepted the chairmanship of he Federation's Committee on Uniformity of State egislation on Workmen's Compensation, and Cyrus V. Phillips has been appointed Chairman of the ommittee on Statistics and Cost.

Sub-committees are preparing plans for consideration y correspondence on the two topics involved before alling the committees together in the early fall to ass upon definite outlines which may be circulated mong the forty legislatures convening next winter.

There will be close co-operation in this work not nly with the uniform State law commissioners, as ndicated by the remarks of Hollis R. Bailey, Chairan of its Workmen's Compensation Committee, appearing elsewhere in this number of the *Review*, but lso with the new national organization of State Inustrial Accident Boards and Compensation Commisons, formed at a meeting called by the Industrial ccident Board of the State of Michigan, held at ansing, April 14-15, 1914, at which The National ivic Federation was represented under an invitation xtended to Mr. August Belmont, the Chairman of the Workmen's Compensation Department.

The object of the conference was especially to conder administrative and legislative features in conection with existing laws. There were addresses by peakers from different States upon "Relation of Comensation to Safety," "Accident Prevention by Insurnce Companies," "Uniform Practice in Dealing with ifernia Cases," "Rates and Reserves Under a Comensation Law," "The Value of Compulsory Workmen's Compensation Laws," "State Insurance Experince in Ohio," "Lump Sum Settlements" and "The ational Civic Federation and Uniformity," which was resented by Hon. Cyrus W. Phillips, authorized to peak for the Workmen's Compensation Department f that organization.

The Workmen's Compensation Department of The ational Civic Federation was elected to membership n the new organization. This recognition of its work n connection with the enactment of compensation acts n the different States was highly complimentary, as was the only civic body elected to membership, the ther members being the various official boards and ommissions charged with the administration of the aw. This organization of the different boards and commissions will be of great public benefit and will materially help in perfecting the various laws, especially the administrative features.

The officers of the National Association elected were: President, John E. Kinnane, of Michigan; Vice-President, Dudley M. Holman, of Massachusetts; Secretary, Richard L. Drake, of Michigan.

The Uniform State Law Commissioners will hold their annual conference October 12, and for that reason the Federation's Uniform State Legislation Committee on Workmen's Compensation has been instructed to report, not later than October 10, an outline to be circulated among the large number of legislatures to be in session next year.

FOOD AND DRUGS INVESTIGATION BEGUN BY CIVIC FEDERATION COMMITTEE

A STUDY OF THE NATIONAL SITUATION TO BE UNDERTAKEN AS A BASIS FOR UNITED ACTION IN BEHALF OF PURE AND CLEAN PRODUCTS, RIGHT LABELING AND HONEST ADVERTISING

THE newly organized Food and Drugs Department of The National Civic Federation is actively entering upon its work in behalf of purity in the manufacture and honesty in the marketing of food and drug products. The Department has been established in accordance with action taken at the recent annual meeting of the Federation, as the outcome of a special conference on this question, second to none in vital consequence to every man, woman and child in the country. Some of the best known authorities in direct practical relation with the problem in the national field took part in the conference, and the Federation was urged to take the initiative in bringing about co-operation between Federal and State officials, the consumers and the producers, "in the interest of greater purity, proper labeling and honest advertising of foods and drugs." A resolution to this effect was unanimously adopted.

The Committee on Plan and Scope, appointed to outline the work of the new Department, has decided as a first step to make a national survey of the situation with the aid of expert investigators, and by means also of a questionnaire. This, the committee feels, will best develop the exact lines upon which the Federation can be most helpful in the work of securing pure food and drugs for the American people.

The questionnaire will be sent to the Federal and State food, drug and dairy commissioners, the State health officials, the municipal health officials in 5,000 cities and towns, the agricultural chemists, the professors of chemistry in the universities and colleges, members of the associations of food and drug manufacturers, representative wholesale and retail dealers in food and drugs in the particular cities of the United States, and organizations and experts dealing with any phase of the problem.

The committee in charge of the work is as follows:

VINCENT ASTOR (Chairman), New York City.

DR. CARL A. ALSBERG (Chief, Bureau of Chemistry, Department of Agriculture), Washington, D. C.

J. H. WALLIS (President, Association of American Dairy, Food and Drug Officials), Boise, Idaho.

DR. S. S. GOLDWATER (Commissioner of Health), New York City.

MISS MAUDE WETMORE (Chairman Woman's Department, The National Civic Federation), New York.

SAMUEL GOMPERS (President, American Federation of Labor), Washington, D. C.

JOHN M. STAHL (Farmers' National Congress), Chicago, Ill.

EDWARD N. BREITUNG (Ore Producer), Negaunee, Mich., and New York City.

The questionnaire to be sent to the Federal, State and Municipal officials will include such questions as the following:

Meat.

To what extent is the meat bought today in the average market from diseased animals? Putrid and decomposed and restored by the use of chemicals? Filthy because of unsanitary surroundings? To what extent is bobveal offered and sold?

Poultry.

In the average market, what proportion is represented as fresh, when it is in fact cold storage? To what extent has the cold storage poultry and fish deteriorated because of such storage and to what extent is such deterioration injurious?

Milk.

What is a clean milk? Is a really clean milk found in the average supplies of our cities? What is the significance of a high bacterial count arising from uncleanliness?—from age? To what extent is such milk responsible for disease in the average family?

To what extent is the average milk supply a source of infectious disease, such as tuberculosis, typhoid, scarlet fever, diphtheria, tonsilitis and similar conditions?

Eggs.

To what extent are eggs misrepresented as to whether fresh or storage? To what extent are storage eggs found in the average market of a good quality? To what extent is there deterioration from poor quality when entering storage, from too long storage, from keeping too long after leaving storage? To what extent are any or all of those conditions injurious to health?

Pastry.

What is the quality of the ingredients in the average baker's product? To what extent are such products unfit for food because of uncleanliness? To what extent because of poor quality of butter and eggs?

Are the dried and frozen eggs of bakers of good quality and healthful?

Drugs.

To what extent are the drugs of the average pharmacist true to standard? To what extent have they deteriorated from age? To what extent is substitution practised, either by regular dealers or peddlers, and what classes of drugs are the subject of such substitution? To what extent is it harmful or mere fraud?

To what extent have proprietary remedies advertised to the public a real therapeutic value? To what extent are the claims for such remedies fraudulent? To what extent do physicians prescribe such remedies?

Is the present method of establishing official standards of drugs satisfactory? Do you favor government control of the pharmacopoeia instead of through a convention of several hundred delegates, selected by custom from institutions, etc.?

To what extent are restraints needed in the sale of habit-forming drugs?

Stock Feed, Fertilizers and Seeds.

To what extent are food-stuffs for stock, fertilizers and seeds misbranded and adulterated?

Weights and Measures.

To what extent are our present weight and measure regulations efficient?

General Inquiry.

To what extent do the conditions noted in each of these respects result from incompetent or dishonest administration of efficient laws; from inefficient laws; from conflict of interstate and intrastate laws; or from lack of uniformity of laws?

On each of these points of inquiry as well as the all important matters of misbranding and adulteration. the information will be sought with specific reference to a classified list of the principal food and drug products. For example, in addition to those already named this will include butter, cheese, cereals, baking powders and other chemicals, vegetables, flavoring extracts, spices, sugar, molasses, etc., lard, wines, liquors and non-alcoholic beverages, tea, coffee, cocoa, etc., and all manner of official and non-official drug products. crude and prepared, proprietary and non-proprietary remedies and cattle foods.

In addition to securing this information, it has been decided to appoint a sub-committee to draft a model health and sanitary code for use in the smaller towns and rural villages. The theory is, that, while all the larger towns have some kind of restrictive regulation on this subject, the smaller communities very frequently have practically none.

A special committee will be named to draft a schedule of instructions to housewives on the question of how to select wholesome food in the market and how to protect such food from deterioration after it reaches the home.

WHAT ARE THE ESSENTIALS IN FEDERAL TRUST REGULATION?

VIEWS OF THE CIVIC FEDERATION COMMITTEE PRESENTED BY PRESIDENT SETH LOW AND PROFESSOR JOHN BATES CLARK AT CONGRESSIONAL HEARINGS ON PENDING BILLS

DURING the recent hearings before committees of Congress on the several bills to amend and amplify the Sherman Act, President Seth Low of The National Civic Federation and Professor John B. Clark of Columbia University appeared by invitation before the Committee on Judiciary of the House of Representatives and discussed the questions particularly of prevention of abuses without destruction of legitimate enterprise, and the relation of proposed legislation to labor and agricultural associations. President Low also addressed the House Committee on Interstate and Foreign Commerce, on the bill for an Interstate Trade Commission.

During the last two years a committee of the Federation, consisting of President Low, Professor Jeremiah W. Jenks, Professor John B. Clark and Dr. Talcott Williams, has been engaged in a thorough examination of the field of Federal trust legislation and the scope and character of the changes or new provisions demanded in the light of experience and of new conditions which have arisen. This committee drafted certain bills embodying the results of its consideration of the problem, but, as pointed out in the last number of the REVIEW, it was decided not to offer any specific measures to Congress, but to submit their principal features for the consideration of the Congressional committees having in charge certain bills designed to carry out the recommendations made by the President in his message of December 2. The text of the memorandum filed by the Federation committee with the two House committees referred it was also published in the March REVIEW.

It is particularly gratifying that the Trade Commission bill, as reported to the House by the Committee on Interstate and Foreign Commerce, proves to be in its most important particulars in accord with the conclusions reached by the Civic Federation Committee as set forth in the testimony of Mr. Low and Professor Clark.

In fact, the proposal in itself for the creation of such a Commission, with powers of investigation for the purpose of aiding in determining the status of business enterprises under the law, formed the central feature in the plan developed by the Federation committee for more scientific and effective regulation of industrial corporations.

The safeguarding of the publicity provisions was advocated by Mr. Low before the committee as of urgent consequence. The original proposal, under which all information of whatever name or nature gathered by the Commission would become virtually a public record, open to the inspection of anyone, it is believed would have opened the door to grave abuses by enabling business rivals to gain knowledge of each other's secret processes or trade connections. The bill as reported provides that information obtained in investigations carried on to determine whether a corporation is violating acts relating to restraint of trade, for the purpose of recommending readjustments to bring the conduct of its business within the law, may be made public only in the discretion of the Commission; further, that information obtained concerning any unfair practice not in violation of the law shall be reported to the President to aid him in recommending new legislation, and be made public only by his direction. Penalties are provided for the unauthorized publication of any information obtained by the Commission.

Still another matter favored by Mr. Low in the testimony at the hearing was that of uniformity in the system of reports to be required by the Commission. Obviously such a provision would greatly simplify the analysis and comparison of data and tend to forestall wrong conclusions which might be drawn from statistics compiled with no reference to a common standard. The pending bill provides that the Commission may prescribe, in so far as practicable, such a system of uniform reports.

The important provisions in the trust regulation bill reported by the Committee on the Judiciary, defining the status of labor and agricultural associations under the law, are also in substantial accord with the general principles advocated by Mr. Low with respect to this particular phase of the problem.

Apart from its immediate and significant relation to pending legislation, the testimony of Mr. Low and Professor Clark, based upon the careful and disinterested study given by the Federation committee to this problem during so long a period, is in itself of exceptional interest and value in its clear statement of fundamental principles. The more important portions of the discussion at the two hearings are here summarized, necessarily in condensed form.

Before the Committee on the Judiciary, Hon. Henry D. Clayton, Chairman:

STATEMENT OF HON. SETH LOW.

Mr. Low—Mr. Chairman and gentlemen of the committee: I am here in response to the invitation that has been given to discuss tentative bill No. 2, a bill—

> to include within the meaning of every contract, combination in the form of trust or otherwise, conspiracy in restraint of trade or commerce among the several States or with foreign nations, and within the meaning of the word "monopolize," certain definite offenses, and to prohibit the same.

I confess, Mr. Chairman, a certain feeling that it is not altogether wise to attempt to add definitions to the Sherman law; partly for the reason that because of the many litigations under it its meaning has become pretty definite already; and partly because we in the Civic Federation, who have been studying this matter for a good while, have come to exactly the same conclusion which was reached in Congress when the Sherman law was passed, that it is very difficult to define, and that it is better to leave the language of the law in general phrases.

Professor Clark and myself are members of a committee of the National Civic Federation which has been studying this question for a year or two. We kept certain definitions in our draft bill for a year or more, but finally took them out in order to substitute for definitions the language of the Interstate Commerce law, which, as you remember, forbids the railroads from making or giving—

> any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, or locality in any respect whatsoever.

Or subjecting—

> any particular person, company, firm, corporation, or locality to any undue or unreasonable prejudice or disadvantage in any respect whatsoever.

We think that under the clause a great many unfair practices have been obliterated from railroad practice. Perhaps you recall the report of the Interstate Commerce Commission in regard to the use of sidings and tracks belonging to industrial organizations. They said that they thought these practices amounted to rebating, but whether they did or not, they certainly were an undue or unreasonable preference or advantage in favor of these concerns as against all others. In other words, this practice, which could not have been in mind when the Interstate Commerce law was passed, is in the process of being brought to an end under that general language. Therefore, it seems to me that if more is needed than the Sherman law now contains, that is the form in which to embody it in any new bill. I think that if an interstate trade commission is created, and given authority to administer that clause, it would be able to put an end to one unfair practice after another in general business.

That leads me to the fourth paragraph of the bill concerning which I am speaking. I think it hits the wrong target. It is penalizing or forbidding combinations instead of forbidding unfair practices. This fourth section is so broadly worded that agreements entirely innocent in themselves, and which, perhaps, have never been in the minds of the framers of this bill, would be forbidden.

I would like to illustrate that proposition along the three lines with which I have had some little intimacy. First, from the point of view of the railroads; second, from the point of view of labor unions; and third, from the point of view of farmers.

The Interstate Commerce Commission passes upon railroad rates. Railroads no longer make rates in combination, but they do confer in advance in regard to rates before they are published and submitted to the Interstate Commerce Commission for consideration. They fear that that would be impossible under this paragraph, and that it would be impossible to conduct the railroads' business in any other way. They do not want to enter into agreements with each other which are forbidden by the Sherman law; but they want the privilege of discussing in advance the rate from New York to Chicago, for example, so that the different lines that are competing with each other may publish tariffs that the Interstate Commerce Commission can pass upon readily. I only refer to that as opening up a line of inquiry to your committee which is quite important, and I am quite sure the railroads themselves will develop it amply.

When it comes to the effect of this definition upon labor unions I think you are confronted with a situation of the utmost consequence to the welfare of our people. Let me read that fourth proviso:

> Fourth. To make any agreement, enter into any arrangement, or arrive at any understanding by which they, directly or indirectly, undertake to prevent a free and unrestricted competition among themselves or among any purchasers or consumers in the sale, production, or transportation of any product, article or commodity.

Now, how does that bear upon the policy of collective bargaining on behalf of labor unions? That certainly is an agreement to prevent free and unrestricted competition among themselves on the subject of wages, and that is reflected directly in the price of the article that is produced; and I should think that definition, if it stands, would make it absolutely unlawful for organized labor to protect its interests by uniting together in the matter of securing better wages and better hours of work. It seems to me that in considering the relation of labor unions to the Sherman law there is a very broad distinction which must be recognized, unless we are to drift into a situation that will be full of embarrassment to the country.

I favor absolutely taking out from the law—if it is there—any doubt whatever as to the right of laboring men to combine for the sake of shortening hours, improving wages, and the conditions of labor; for collective bargaining as to these things, if you please. But if labors enters into the field of boycotting, as it sometimes does, or has done in the past, which is a direct interference with interstate trade, then I think the law forbidding restraint of trade should apply. If you recall, the Anthracite Mine Commission discussed that question of the boycott and differentiated between what they called the direct boycott and the secondary boycott. They said that it probably was legitimate, in their judgment, for the members of a union to decline to buy of anybody that they were dissatisfied with; that they could do it themselves as members of a union as properly as they might do it as individuals; but that when it came to the secondary boycott and they pursued the merchandise beyond the limits of the original quarrel, they were entering a field that was not only improper but unlawful.

I look upon a corporation as a union of stockholders, and that they form the corporation for the purpose of collective bargaining through officials of their own choice. I do not see why labor should not have the same privilege of combining for collective bargaining that the stockholders of a corporation have. But that very right is in question under the Sherman law at the present time.

Some of you have heard of the so-called protocol in New York City. It was an arrangement made at the end of a long strike between the shirt-waist manufacturers, or cloak manufacturers, and their employees, providing for arbitration between the employers and shirt makers, and as a part of the arrangement there is a board of appeals. Under that protocol for two years or more industrial peace has been maintained in a trade that before was constantly in trouble; and not only industrial peace has been maintained, but the conditions of pay for these women workers and the conditions under which they labor have been greatly improved. Yet an independent manufacturer, who is not a party to the arrangement, has begun a suit under the Sherman Anti-Trust law as it stands to-day to test the legality of the protocol under that law. It would be, in my judgment, and, I think, in the judgment of almost everybody in New York City who knows anything about it, a most profound misfortune if that sort of an agreement were to be declared unlawful.

Now, if I may, I would like to take up the farm side of the proposition. The fundamental problem of the farmer, certainly in the eastern part of the country, and I suspect more or less all over the Union, is this: That he buys at retail and sells at wholesale. I submit to the committee that there is not another business in the country that can do that. Imagine what would happen to any manufacturer, or any railroad, if they had to pay retail prices for coal and everything that they purchased, and then had to sell their product at the wholesale price of the day. That was the problem that confronted Denmark and all the European countries. In Europe, where the pressure has been greater, they have solved it

through co-operative societies which have two objects. In the first place, they want to buy together, so as to get things at wholesale rates instead of at retail rates; then they want to sell together, so that they can get the benefit of businesslike care in the handling of their products.

England is especially notable for these co-operative associations of consumers. They were founded in Rochdale fifty or sixty years ago, and they have become enormous. Those people do not combine—either the consumers or the farmers—for the purpose of monopoly. Not a single co-operative association aims at monopoly; it aims at something very different. What it wants to do is to enable the small farmer to buy his plow, his fertilizer, and his seed at prices that a man with capital has to pay and at no higher prices. The members agree to give all of their business to the co-operative association, otherwise that association does not know on what scale it can operate nor what expense it can carry. As I see it, under this section 4, that would be absolutely impossible.

Then these co-operative associations perform another function for the farmers. It is not so hard for a farmer to get the science he must have, nor to get the art that he must have; but to add to these the business qualifications that lead to success is an immensely difficult thing, and that is one very great reason why farmers get such small incomes. But the co-operative association carries on the business side of his affairs. Take the co-operative associations for eggs in Denmark, for instance. The farmers give all of their eggs to this association, and the first thing the association does is to create a standard. It says to the farmer, "We will not take any old eggs you have; we want eggs that will candle free from defects." After a week or two the farmer understands that, and only good eggs are sent to that association.

The scale upon which they operate is so great that they can employ the most skilled expert in the disposition of eggs that Denmark can command. They grade their eggs; they keep in contact with wholesale markets everywhere, and they sell on a great scale. The result has been that Denmark has risen, within fifty years, from a country that was on the brink of despair into the most prosperous country of farmers to be found on the face of the globe. They have actually captured the London market for many things; and now Ireland by the same process is doing the same thing. I assure you, gentlemen, that if you want the greatest possible agricultural production kept up in this country, you have got to make it possible for our farmers to learn how to do that thing and to permit them to do it with the utmost possible freedom. The State of New York only last year passed a law especially authorizing co-operative associations; but this paragraph would make it absolutely impossible; that law would be a dead letter on the statute books. I do not think you at all realize the injury that would be done to the country if these definitions make such things impossible.

Mr. MORGAN—What is your view as to whether or not some governmental board or authority should be permitted to approve certain trade agreements before they are entered into or become valid? What do you think about the importance of that to the business interests of the country?

Mr. LOW—I think it is very important. In connection with natural products, like coal and timber, it is not only desirable, but is of the utmost consequence. In two addresses made at the last annual meeting of The National Civic Federation it was pointed out that in the coal mines only 40 per cent of the coal in the seam is taken out under existing conditions, because the operators are unable to agree as to the price of coal at the pit's mouth, and therefore the prices are much lower than they ought to be in order to permit a payment to the miners of a large enough sum to justify them in working on coal that is difficult to get out. Europe has been all through that. It was exactly the same in Belgium, France and Germany. A few years ago a large portion of their coal was not being mined, and for the same reason the protection of life and limb was very inadequate. They have since adopted a policy of permitting trade agreements under Government regulation, and the result is that they now get out all the coal in the mine and have fewer accidents to the miners. I think that is a thing we ought to do, and do as quickly as public opinion can be brought to sustain it. I think that in the matter of coal mining and in the matter of forestry we are pursuing a policy that makes low prices to-day at the expense of the people who are to come after us; they will have to pay much more than they ought to pay.

This forest question is a vital one. Some years ago I remember a public man saying to me that he had been asked by a great body of owners, men who owned contiguous stretches of forest land, about the conduct of their business. They said, "We want to conduct our forests in harmony with the most practical methods of modern forestry; none of us can do it alone; together we can do a great deal. Are we at liberty to enter into an agreement to do that together? Under the Sherman law can we do it?" My friend said to them, "I cannot tell you, and no other living man can tell you." This was years ago, before there had been so many decisions. He said, "You must do it at your own risk; but ten years from now you may be put in jail for making a mistake as to the meaning of the law."

(Supplementary Statement, with reference to the Bartlett bill proposing to exempt labor unions, agricultural and horticultural associations from the operation of the Sherman law.)

Mr. LOW—I have looked over this bill of Mr. Bartlett's very hurriedly, Mr. Chairman, and I am perfectly in sympathy with the first six lines: "That it shall not be unlawful for persons employed or seeking employment to enter into any arrangement, agreements, or combinations with the view of lessening the hours of labor or of increasing the wages or of bettering their condition." I think that ought to be the law of the land.

Do you not want to make it lawful for employers to enter into such arrangements with employees? Under the strict meaning of the definitions that I was discussing earlier, laborers might have the right to make such agreements, but employers might find themselves deprived of that right.

Mr. CARLIN—I think that is a valid criticism.

Mr. LOW—So I think you must make it apply to both sides.

I am personally in sympathy with the phraseology of this act from lines 15 to 21, where it says:

> In construing this act the right to enter into the relation of employer and employee, to change that relation, and to assume and create a new relation of employer and employee, and to perform and carry on business in such relation with any person in any place or do work and labor as an employee shall be held and construed to be a personal and not a property right.

I think it ought to be a personal right; I do not think it is a property right at all.

In regard to horticultural and agricultural combinations, it seems to me you would accomplish what is intended by saying in the law that nothing shall prevent the formation of co-operative associations on the part of farmers for the purpose of buying more cheaply and of selling their products to better advantage. I think in that way you would avoid a sort of criticism which I have seen aimed at this bill—that it is class legislation. I do not think anybody can say it is class legislation to say that laboring men can have the same right to combine for collective bargaining as stockholders have. Neither is it class legislation to say that farmers and consumers can combine for the sake of buying more cheaply or selling to greater advantage. That is not class legislation; everybody ought to have that right. I think you can leave the abuses to the general phraseology. If those associations when formed become offenders against the Sherman law, they can be brought to book under the Sherman law.

STATEMENT OF PROF. JOHN BATES CLARK.

Prof. CLARK—Mr. Chairman and gentlemen of the committee:

There are two ways in which the problem of dealing with trusts in the making may be approached, and both are legitimate; but one is enormously more important than the other.

The more important one consists in identifying monopolistic acts and putting an end to them; the other is dealing with combination as such without special reference to the means by which it is brought about.

History has something to say as to attacking combinations as such. At the time when manufacturing business was conducted in guilds and in very small shops with a master workman, a journeyman, an apprentice or two and now and then two or three hired workmen there were laws which forbade partnership, on the ground that it extinguished competition between those who formed the partnerships and without reference to the question whether any essential harm was done by it. It was discovered at once that if the partnerships competed vigorously with other partnerships no essential harm was done, and that the public was adequately protected. In many instances the competition which took place between the larger units was more vigorous and afforded a better type of protection for the public than did the competition which existed between the master workmen. The real distinction which the law needed to draw was between that amount of partnership building which would sacrifice the interests of the public by extinguishing competition outside of the partnership; and that which left competition in full vigor. The laws became a dead letter. They have stood on the statute books for centuries without having any effect or any attention paid to them.

There are, among others, two very familiar and well-known ways in which trusts can grow to the proportions of monopoly. One is local competition—cutthroat competition in a limited territory, where a rival is working, accompanied by a sustaining of prices elsewhere; the other is what used to be known as the factor's agreement; that is, an agreement not to sell a product to anybody who will buy a similar product from any one else. Suppose there is a manufacturing concern operating in about three States; there is a trust producing a similar product operating all over the country and in foreign countries. In addition to having a larger area of operation it has a larger variety of products. The small competitor has only one kind of product and the trust has twenty kinds of products. It could almost afford, if necessary, to give away the one kind on a large scale to carry out its purpose and acquire a complete monopoly. Now, under those conditions, the trust has two possible ways of easily crushing the local competitor. One is to enter his territory with cutthroat competition and make it impossible for him to sell his product at a rate that will pay the cost; the other is to refuse to sell any of the trust-made products to the rival's customers and so bring about a boycott of the independent producer by the merchants who have been handling his products.

Let us suppose it does the latter. Suppose it sends its agents to the customers of the independent producer and gives them notice that if they buy any more from the local producer they cannot have any of the trust-made products, which they need to have in order to conduct a successful mercantile business. That plan will produce a more immediate effect on the local producer and will be done with even less cost to the combination than the former method of cutthroat competition. It is cheaper and quicker in some cases. In some cases it is not as sure as the other, and the other has to be resorted to. I should not have a particle of objection, from an economic point of view, to the making of independent definitions of those things and forbidding them, provided I was satisfied it would not be necessary to bring suits in order to secure an interpretation of the language of the new statute.

The problem I would like to raise is whether the Sherman law as it stands, and under the construction that is now put upon it by the courts, would be sufficient to enable that man easily to bring an action that would at once restrain the trust from doing what it was doing, and so give him adequate protection and enable him to go on in safety in his business. If it would, that is all that is needed; and it is a lawyer's question whether it would or not; but unless something in the law will accomplish exactly that result and enable a person who is confronted with such a condition as the one described to get redress quickly and cheaply, and not be forced to wait for a complete monopoly to grow up before taking action, we shall have very troublous times.

Mr. NELSON—I would like to ask you this question: The Sherman law prohibits every restraint of trade. The Supreme Court has read into that the words undue or unreasonable. When a judge interprets the law in order to discover whether some alleged violation is undue or unreasonable, what will he have to draw upon, his legal knowledge or his economic views?

Professor CLARK—I should say that, with a background of legal knowledge which would be a very essential thing, he would here use his economic knowledge.

There is many a line which it is perfectly possible to draw clearly in theory, but it will take a good deal of skill and judgment to draw such lines in practice. That I conceive to be the situation here. I do not think there is any haziness whatever in the scientific delimitation of the reasonable conduct, but I do see that conditions shade each other by such imperceptible degrees that any court would be liable to more or less of error in applying the principles. I do not see how it is possible absolutely to avoid this, and yet I do not think it will be possible to have a tolerable condition unless the law brings the action of corporations into line with what is described as the rule of reason.

I would like to add that the sole objection which I have urged against any part of the series of tentative bills under consideration applies to a phrase in Bill No. 2. Four general purposes of combination are specified as bringing a combination under the condemnation of the proposed law. The fourth of these would seem to prohibit any combination or partnership between independent producers, even though competition were not less effective after they had combined than it was before. Competition has been rendered comparatively ineffective in some part of the market for the goods produced; a natural economic law fixes the prices of them and protects the public from extortion. After A has ceased to compete with B, and C has ceased to compete with D, A and B in partnership may compete so vigorously with C and D in partnership as to afford an undiminished

(Concluded on page 18.)

OPENING OF THE VACATION HEADQUARTERS

A DEMOCRATIC SOCIAL CENTER FOR SELF-SUPPORTING GIRLS AND WOMEN IN THE HEART OF INDUSTRIAL NEW YORK

RECEPTION ROOM IN THE VACATION LODGING HOUSE, VACATION HEADQUARTERS.

THE RESTAURANT.

THE new Headquarters of the Vacation Savings Fund at 38 West Thirty-ninth street, New York City, was formally opened on Wednesday, April 1. The occasion marked a long forward step in the development of the work of the Vacation Committee—the largest and one of the most interesting and successful undertakings of the Woman's Department of The National Civic Federation.

In two years the work of the Vacation Savings Fund, and the larger possibilities growing out of the idea, developed to such an extent that the provision of a definite centre for its many activities became a real necessity. A large house on Thirty-ninth Street, and two immediately adjoining in the rear on Thirty-eighth Street were taken for the purpose, connected, remodeled and equipped throughout with thoughtful attention to every detail of comfort, attractiveness and a homelike atmosphere. The controlling idea in the planning of all the arrangements was to meet the actual needs and desires expressed by the depositaries of the fund themselves. Indeed, the entire plan has in view a practically self-sustaining and self-governing home center and social gathering place for all the 15,000 or more members of the Vacation Savings Fund who may choose to become "taxpayers" to the extent of one dollar per year towards the maintenance expenditures of the Headquarters.

There are no restrictive "club" conditions of membership, and no rules other than the common obligation of the mutual observance of mutual rights. Included in the facilities of the two buildings are an attractive lunch room, a large and airy recreation hall, a lounging room, writing room, dressing room with private baths and dressing compartments, local secretaries' living room, juniors' room, reception room for men and women, and a considerable number of bedrooms, most attractively decorated and furnished, for rent upon reasonable terms to girls entitled to the privileges of the building.

The Executive Committee of the Vacation Savings Fund, under whose auspices the new Headquarters has been established, consists of Miss Robinson Smith, chairman; Mrs. August Belmont, vice-chairman; Mrs. Montague Flagg, secretary; Miss Anne Morgan, treasurer; Mrs. Rogers H. Bacon, Mrs. C. H. Hill, Mrs. A. W. Porter, Miss S. F. Robbins, Miss M. Sullivan and Miss Caroline Shippen.

The story of the Savings Fund work, merging into the enlarged activities of the new Headquarters, is best told by Miss Robinson Smith, chairman of the committee, to whom the original idea of the fund and much of the successful direction of its spontaneous growth are due. In The Bulletin of the Woman's Department, Miss Smith, in response to requests for a history of the undertaking, traces its origin to the forming of a committee in 1910 to bring about co-operation between the New York and New Jersey Section of the Woman's Department, and the Committee on Amusements and Vacation Resources, which had been engaged in investigating country boarding houses for the benefit particularly of women employees of industrial and mercantile establishments.

In the course of the work of this committee the fact developed that a great many girls could not avail themselves of the lists of approved boarding places, because no vacation money had been saved. Vacations with salaries are very far from universal, and many who do receive salaries while absent have other obligations to meet.

> "A number of years ago," says Miss Smith, "I was very much interested in a girls' club, and the first Summer of its existence we found that our girls did not leave the city during the hot months. In the Fall I asked a number of them about this, and they all said it was because they had not had the money to go away. I then suggested the perfectly obvious plan that they should put aside a definite amount each week for their Summer vacation, and in order to make it more interesting to them we organized a Vacation Club. A great number of girls took advantage of it, and the following Summer about fifty of them had enough saved to go away. The plan worked so admirably and suggested so many possibilities that it made me feel that it could be done on a larger scale; therefore, when we were confronted with the same 'lack of saving' problem in the Vacation Committee I wrote in August, 1911, to the chairman of the Section, Mrs. Francis McNeil

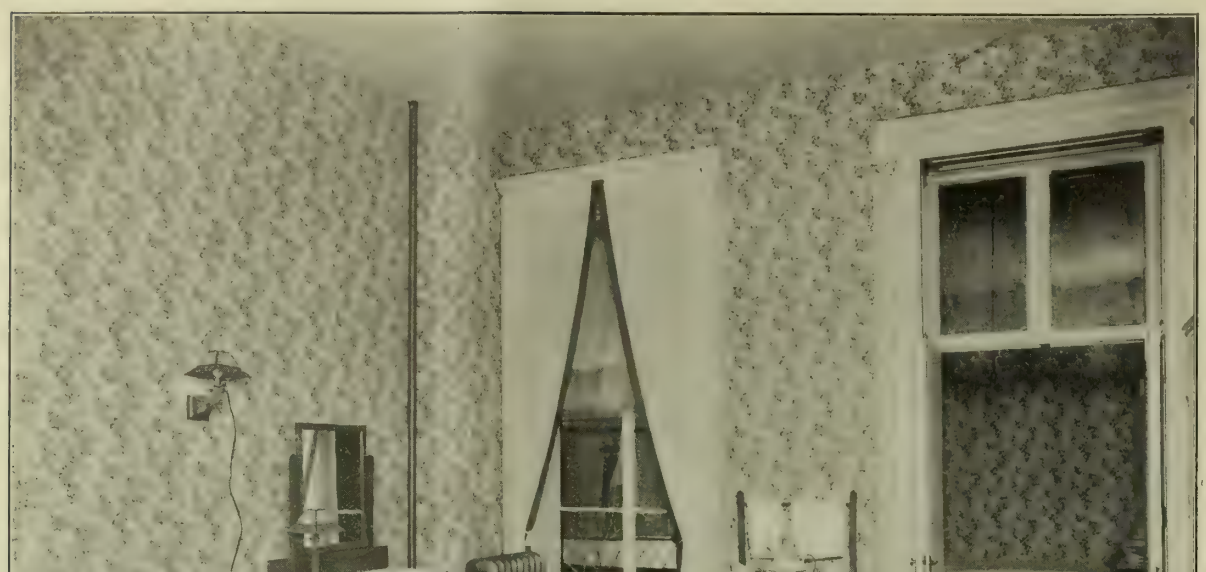
Bacon, and outlined the present system of the Vacation Savings Fund as a means of overcoming the difficulty. The question was presented to Mr. Low, president of The National Civic Federation, who approved of the idea. A mass meeting was called of the girls who had used the lists of investigated Summer boarding houses, and, after an informal discussion, they requested the Committee to work out some plan. As a result the Vacation Savings Fund was organized in December, 1911, with forty-three girls, who deposited $26.70.

"The stamp system was adopted, stamps serving as receipts for money deposited. These stamps are pasted on a card until the amount of $2.00 is reached, when the amount is transferred to a pass book, as the Committee assumes responsibility only for the pass book. No interest is paid to depositors, every one withdrawing cent for cent what she has deposited. In order to facilitate depositing by saving time and carfare we decided to seek the co-operation of the various employers in the city with a view to enlisting their interest so that they would arrange the time for one of their women employees to act as local secretary and permit a local station to be opened in their factory or shop. The local secretary must be in sympathetic touch with the girls, and the success of any station depends on the way she presents the plan to them. The employers' interest was immediate and sustained. To-day one hundred and fifty local stations have been opened, and over sixteen thousand girls have deposited $125,000, of which $98,000 has been withdrawn principally for vacations.

"To advertise the Vacation Savings Fund among the self-supporting women and girls of the city we hold vacation evenings every month; they also serve the purpose of bringing together informally the girls, the local secretaries and the members of the Committee. These evenings have been really illuminating, as they show the wonderful spirit of good fellowship which has been developed between the members of the Committee and the girls. The sympathetic interest which gave them birth was genuine and continues to increase in depth and potential possibilities. The meeting is opened by the girls singing the "Star Spangled Banner"; a monthly report is then made by the chairman, and is followed by an open discussion as to the ways and means of developing the work. The entertainments on these occasions are varied; music, fancy dancing, vaudeville skits, moving pictures (both educational and entertaining), have been included in the program, with talks on topics of interest by prominent speakers. Dancing and refreshments always close the evening. Three halls have been outgrown, the attendance increasing from one hundred and twenty at the first in December, 1911, to fourteen hundred at one time, when we were obliged to turn away five hundred girls. Since that time we have issued cards of admission for depositors.

"The success of this work largely depends upon the interest and co-operation of the local secretaries, who for the past year have been represented on the Executive Committee of the Vacation Committee. This group of women have become so essentially helpful that we suggested they should form a committee of local secretaries, and elect their own officers and representatives on our Executive Committee; in this way, all questions of importance are discussed by their committee, as well as by the depositors at the Vacation Evenings, before they are finally passed upon by the Vacation Committee. We try to make the work as nearly self-supporting as possible, though at present we are not entirely successful. The depositors help to defray expenses by their annual ball at the Grand Central Palace, in conjunction with which an entertainment is usually given, in which depositors take part. Last year the ball netted $3,000, and this, with the interest from the girls' money, represented their share of the expense of the Committee.

"Last Spring it was decided to further enlarge the work by renting a house for the use of depositors. This house, known as the Vacation Headquarters, was opened on January 1, 1914. There is a restaurant where girls may lunch and dine, and where they may bring their men friends for dinner. In the Assembly Hall there are weekly 'hops,' moving pictures, social evenings, Sunday afternoon concerts and classes in dancing, dramatics and singing. A special feature is a room where they may at any time receive their men friends. We feel that this is particularly important, as it prevents girls from meeting men in public places or on street corners. On the upper floors there are dressing rooms and baths and rooms where the girls may rest quietly, read or write. In the two adjoining houses we have bedrooms for rent. Any depositor wishing to have the full privileges of the Headquarters must become a taxpayer. This she may do upon payment of $1.00 a year. The taxpayers govern the policy of the Headquarters, and in time we hope they, too, will form a committee with their own officers, and so take more complete charge of the work. We try to keep the organization as elastic as possible in all its developments, so that at any time we can undertake anything new that presents itself. As, for instance, in the case of the SPUGS, which was an outgrowth of the Vacation Savings Fund.



"In the Fall of 1912 one of the local secretaries came into the office and told us that there was no need of sending our collectors to her station again before Christmas. When we questioned this she said that the girls would not be saving their money on account of the Christmas presents which they would have to give the girls in the shops, and the contributions that they would be obliged to make for the collective presents to the

BUSINESS OFFICE OF THE VACATION FUND.

THE ASSEMBLY ROOM.

ONE OF THE BEDROOMS IN THE VACATION LODGING HOUSE, VACATION HEADQUARTERS.

'man higher up.' We immediately started an investigation, and found that this evil was even more serious than we had at first been led to believe. The consequence was that Mrs. August Belmont made a splendidly stirring address at one of the vacation evenings, with the result that the Society for the Prevention of Useless Giving was organized, and, as you know, has been taken up all over the country. The first year we gave a SPUG Christmas party in our office, to which over one hundred and sixty people came. The success of this party made us feel that we wanted to do it on a larger scale this year, and so on Christmas Day the Grand Central Palace was thrown open to any lonely man, woman and child who had nowhere else to go. We had a beautifully lighted tree, which was given by the State of Maine, and a lunch counter from which coffee and sandwiches were served. A friend gave a band, so that there was dancing and great joy throughout the afternoon and evening for over five thousand people."

As we go to press, arrangements are in progre for the third annual entertainment and ball at t Grand Central Palace, on Thursday evening, Ap 30. This is, perhaps, the crowning event of the ye in the varied activities of the Vacation Fund a Headquarters, serving to bring together, as is p sible on no other one occasion, a very large prop tion of the entire membership. Judging from the perience of previous years, the attendance will upwards of ten thousand.

The Vacation Fund has been the most conspicuo feature, also, of the work thus far undertaken by t Massachusetts and Rhode Island section of t Woman's Department. More than two thousand positors have been registered there during twen two months, with a total account of upwards $18,000. The Vacation Fund idea proved to be t one, furthermore, which developed the most i mediate interest and enthusiasm in the recent form tion of a new section of the department in Chica where the organization of the work is now in s cessful progress.

ESSENTIALS IN TRUST REGULATION

(Continued from page 15.)

guaranty of fair prices. An economist must distinguish between the combination which reduces the total amount and efficiency of competition and that which does not, and the law will need to take account of that same distinction.

Before the Committee on Interstate and Foreign Commerce, Hon. William C. Adamson, Chairman.

STATEMENT OF HON. SETH LOW.

Mr. LOW—I welcome very heartily, Mr. Chairman and gentlemen, the development of the Bureau of Corporations into an Interstate Trade Commission, because I think that the Commission will prove itself a very useful agency for the advantage and benefit of business in the United States.

Section 3 of this bill gives the proposed Commission the widest possible rights of search, which I suppose to be a natural function of government for the enforcement of law. However, when you reach Section 4 the bill says that the information so obtained "shall be public records," and the Commission shall, from time to time, "make public such information in such form and such extent as it may deem necessary." It seems to me that the result of publicity is eminently good within the proper limits of publicity. I do not suppose that Congress would willingly take the ground that it could go into the private affairs of every individual practicing business, that is, carrying on interstate business in the United States, and make such affairs public records. Do we not find the basis for publicity, in the sense contemplated by this bill, in the fact of incorporation? In other words, when men are carrying on business at the hazard of their entire fortunes, they are entitled to a quality of privacy, if you please, that is not reasonable for anyone when he asks from the government the authority to carry on business with limited liability.

Mr. F. C. STEVENS—Are there not two other reasons upon which Congress has the perfect right to demand the publicity of private affairs; first, when-[illegible] it is needed for the purpose of legislation; second, for the purpose of administering justice?

Mr. LOW—Precisely. But have you the right under the [illegible] clause to send agents into private houses [illegible] to the details and secrets of business? All that I am contending for is that the Section 3 ought to be protected as Section 9 is protected, and as the Bureau of Corporations was protected. If you turn to Section 9, at the close, you find the permit in these words:

> "Said findings shall become a public record of the Commission, as provided in Section 4, only upon the direction of the Attorney-General or the President."

It seems to me that that restriction ought to be placed in Section 4 of this act. I should also be afraid of Section 3, unless it is very carefully administered; lest there would be built up a great army of "grafters," to use the phrase that is so common in the public life of the country, because of what they may thus learn. If the Commission keeps close track of all the inquiries that it makes through authorized agents, perhaps that fear is an unnecessary one.

Mr. SIMS—I should like to ask if you think it could possibly be to the public interest for rivals in the same business to have access to each other's books to the end that they might use them against each other, rather than to benefit or improve their own business? If they were ordinary public records, like the registry of deeds, they would be subject to anybody's inspection, and rivals in the same business would have access to them just the same as anyone else. Would it not be injurious to the public as a whole? Would it not promote controversy between rivals, rather than promote the public interest?

Mr. LOW—I think that would be the distinct effect. The suggestion that this bill should be further amended so as to provide for uniform accounting I think is a perfectly legitimate object for the Congress to try to bring about. Especially, now that the income tax has become part of the fiscal system of the country, it is almost incumbent upon Congress to have the accounts of these great industrial corporations kept in a similar manner, just as the railroads now account in a uniform way, so that they can be sure that the basis upon which the income tax is paid is the same in all cases. In its relation to the tariff question, also, we never shall know how much these corporations are making, at any rate comparatively, unless we have the same sort of accounting from them all. Of course, you could not compel uniform accounting of industrial corporations that were essentially unlike; yet I think it has been of very good service in connection with public utilities of every kind. I should like to see this Commission equipped to consider that problem.

Mr. ESCH—Do you believe that the Trade Commission should have the right even to investigate through its agents the secret processes or formulae?

Mr. LOW—I do not think it should. But I think that under Section 3 it could.

Mr. ESCH—I agree with you. I think that is very embracing language.

Mr. LOW—It seems to me that the two legitima objects of inquiry on the part of the governme are, first of all, to learn whether any law is bei broken. If there is anything that it is necessa to inquire into to determine that, I should think government could properly do it. The other thi is, so much publicity as to the financial methods a standing of a corporation as will justify the limit liability under which it operates. It seems to that as long as men carry on their business w their whole fortunes at stake, it is a very novel p position, to an American, at any rate, that the g ernment can inquire into everything they do, wh they are not charged in any way with wrongdoi

What we see at the present time is that the torney-General of the United States, by agreeme with different corporations which he thinks violating the Sherman law, arranges with one af another a basis which will bring them in his opini within the law. As a temporary procedure I inclined to think that plan is serving very well, as a permanent method of administering the law do not think I have been trained in a way to thi that it would work well. In the first place, Att neys-General do not remain always in the office, a one Attorney-General may succeed another wh views are entirely different. Consequently you have the law interpreted one way during one Pr dential term, and in another way during another Pr dential term, and instead of having a uniform you have a law that is changeable. It may mean thing during four years and another thing dur another four years. I had supposed that this was intended to do away with that danger, and s plant the possible variations of opinion of differ Attorneys-General by creating a permanent Tra Commission whose membership changes slowly, s whose administration of the law, in time, would come pretty uniform and well established, so t the business of the country would have the ben of uniform law.

Mr. ESCH—If a corporation dominates the fi to the extent of monopoly, would you advocate giv this Trade Commission power to order it to stop to reduce its size?

Mr. LOW—I do not think we gave any such pow to the Commission in the bill the Civic Federat drafted. The sub-committee, which prepared t draft, kept certain definitions in its bill for a y and a half, and the more we inquired into the ter the less possible we found it to make definitio which would accomplish only what we wanted tha to accomplish. We could not forsee the multit of effects that general definitions would have.

MANY-SIDED ACTIVITIES OF THE WOMAN'S DEPARTMENT

EPORTS OF WORK IN PROGRESS FROM NEW ENGLAND TO FLORIDA SHOW GROWING ENTHUSIASM AND A LONG RECORD OF PRACTICAL RESULTS

HAT the Woman's Department of The National Civic Federation is rapidly becoming one of the most effective of our present-day agencies direct social amelioration is clear from the survey e given of the vigor and success with which it is ing hold of great opportunities, as well as neg- ted corners, in many departments of industrial l civic life.

NEW YORK AND NEW JERSEY.

An account of the efforts of the New York and w Jersey Section in behalf of prison reform, culnating in the formation of a State-wide Joint Comtee of eighteen members, is given on another ge.

The opening of the new center on Thirty-ninth eet, New York, for the accommodation of the fast wing and varied activities of the Vacation Savings nd, is also described elsewhere in this number.

Simultaneously, the New York and New Jersey ction has been carrying forward aggressively the rk of its several committees engaged in special ases of social service.

Workhouse Committee. Mrs. F. H. Cabot, Chairman. is committee is actively co-operating with the w York Prison Association in its efforts to coinate and systematize the work of various agens already in the field. The improvement in condins at the Workhouse since Commissioner Katherine Davis took office has been marked. Physical and ntal examinations are now being made, enabling matrons to make suitable segregation of the men and transfers to the proper institutions for se mentally defective.

Hotel Employees Committee. Mrs. Marcus M. rks, Chairman. The work of this committee has en the amplifying on broader lines of the investation of last year. A special investigator has ited 100 hotels to date, finding the need of social rkers, and a right type of woman for housekeeper, be everywhere apparent.

Occupational Diseases Committee. Mrs. William nd, Jr., Chairman. A comprehensive study of the ect of treadle occupations upon women workers s undertaken, in charge of Dr. Ebba Almgren derer, of Cornell University. So persistent has en the impression that treadle work is injurious t exceptional care is being taken to trace all es, and forestall any charge of inadequate investation before the final report is printed.

School Committee. Mrs. Chauncey Marshall, Chairn. In October, 1913, the Board of Education inmed this committee that appropriations had been de of sufficient moneys to properly equip the chers' retiring rooms, according to our standard commendation, in the schools of Manhattan and ooklyn. The committee has been actively reinstigating, to be assured of the proper carrying out the recommendations.

New Buildings Committee. Miss M. B. Cross, airman. The New Buildings Committee has been pecially active, and many plans of hospitals, rses' training schools, factories and stores have en examined, and various suggestions for possible provements made.

Industrial Welfare Committee. Mrs. Magee Ellsrth, Chairman. This committee was recently rmed, to co-operate with the other committees d to follow up any suggestions from them rerding conditions observed and needing investigan. The scope of this committee is to be greatly larged, as it has been asked for advice and coeration by a number of managers of large office ildings.

MASSACHUSETTS AND RHODE ISLAND.

The annual report of the Massachusetts and node Island Section of the Woman's Department, st issued, is a splendid record of widening efforts d solid results achieved. The following portions the report prepared by the Chairman of the Secon, Mrs. George T. Rice, give an illuminating acount of the progress of the work in hand. With pecial reference to the work of the Industrial Comittee, the report says:

"Under this committee, Mrs. Roger Wolcott, Chairman, sub-committees on Building, Housing and Occupational Hygiene have been formed. Since the last Annual Report more than 100 interviews have been obtained with officials, and 161 visits have been made to manufacturing and mercantile establishments in 43 cities and towns.

"Typewritten recommendations forwarded to the manufacturers following visits have been well received. Inspections have been undertaken of the Stations in the Boston Postal District, and have been completed at the main office, North and South Postal Stations, and Essex Street."

"The Prison Committee," says Mrs. Rice, "with Mrs. Francis Gray as chairman, is now in process of formation. This committee, with the approval of and in conjunction with various authorities, intends to undertake the care of women for at least one year after their discharge from penal institutions, each member taking an interest in one ex-prisoner.

"Upon the request of the Governor of Rhode Island, visits were made to State and county institutions, including jails, House of Correction, Alms House, Prison, Reception Hospital, State Hospital for the Insane, and Industrial Schools for Boys and Girls. Reports of inspection, together with recommendations for the new buildings for which an appropriation has been made, have been submitted to the Governor."

Attention is elsewhere called in this number to the growth of the Vacation Savings Fund in Massachusetts, represented chiefly by the stations in Boston and Worcester. Miss Elizabeth S. Porter is chairman of this committee, which "has registered in its Stamp Savings Fund over 2,000 depositors, with a total deposit, since the beginning of the work twenty-two months ago, of more than $18,000. * * * A list of investigated summer boarding-houses, both country and seashore, has been prepared for the past two years, and distributed, gratis, to depositors."

The report calls attention to the lectures given during the past winter under the auspices of the Lecture Committee. Mrs. Malcolm Donald, Chairman, and states that it is expected to continue these lectures next winter, with a longer course.

DISTRICT OF COLUMBIA.

Similarly inspiring is the report recently made public by the District of Columbia Section of the Department, covering the work of the last three months. Mrs. Archibald Hopkins, Chairman of the Section, thus summarizes in part the recent activities in progress:

"The Government Employees' Welfare Committee, Mrs. McLaughlin, Chairman, reports that in the Sixth Auditor's Office of the Treasury a recommendation has been made by Surgeon-General Blue of the Public Health Service, that the punching machines used in that office should be worked by electricity instead of by women, as it is a most injurious form of work. There is every reason to think that this recommendation will be carried out in the near future.

"The Public Printer, Mr. Cornelius Ford, has promised to install much needed rest and lunch rooms in the Government Printing Office, where 4,000 employees work day and night. * * * The Department of Commerce has promised to install lunch and rest rooms in their new building to which an addition is being built for the use of the permanent Census Office.

"A dispute between employer and employees in a large business firm has been settled to the absolute satisfaction of both sides. The personal thanks of the heads of the concern have been received. This is felt to be the best piece of work done by the District of Columbia Section.

"The lunch room at the Navy Yard, started by this Section and now managed by a committee of three men, is self-supporting and is feeding 800 men daily, with good food. * * * The Tuberculosis Hospital is under the management of a committee, whose chairman is Mrs. McGill, and her committee is working with the approbation and full consent of the Board of Charities. The hospital is quite equal to any similar one in the country and the dietary is above the average, and practically on a level with that of any family of ordinary means.

"The Section, in connection with the Monday Evening Club, the Associated Charities and other civic and charitable organizations, over 200 in number, have united in presenting and pressing a bill for opening the schools as civic centers. This work is under the chairmanship of Miss Margaret Woodrow Wilson.

"In connection with other civic organizations the Section is urging the passage by Congress of three items in the District Appropriation bill. The first is for a new Municipal Hospital, the conditions of the present one being absolutely impossible. The appropriation for a new municipal lodging house is being urged, as the existing one is a disgrace. Again the Section, in connection with all other associations, is urging a bill for a place where feeble-minded of both sexes and both races can be sent.

"The Alley bills for converting the alleys, in the course of the next ten years, into minor streets, playgrounds, garages and stable alleys, have been introduced by Senator Smith and Hon. Ben Johnson, Chairman of the District Committees in the Senate and House, and are now being carefully considered by the sub-committees to which they have been referred. Should these bills pass, it is felt in them alone, the existence of the District of Columbia Section will have been justified, as they will change the living conditions of over eleven thousand people who until now have been living under unbearable conditions.

"With a view to the passage of these bills, a tremendous effort is being made to provide sanitary dwellings for the thousands to be evicted, and to that end the Section has been the means of turning $15,500 into the treasury of the Sanitary Housing Company, an organization which furnishes sanitary houses from $7.50 to $15.50, and pays 5 per cent to subscribers, with a reserve of 4 per cent. This company placed nearly a year ago 214 of its apartments in the hands of the Housing Committee of the Section, Mrs. Ernest P. Bicknell, Chairman, for management. With the aid of a trained social worker, success has been very great, and it is planned at the end of the year to hand the property back to the company, to be continued, it is hoped, under the management of the same worker, and to try to get other houses and to bring them up to the same standard.

"The membership runs an average of about 350. The semi-monthly lectures on topics of interest are largely attended and create a great deal of interest. Mrs. Wilson honors us almost invariably by her presence, and her influence and help are of the greatest possible value.

"Mrs. Archibald Hopkins, Chairman of the District of Columbia Section, has been appointed by the President of the United States as Government visitor to the Hospital for the Insane."

A further extension of the work of the District of Columbia Section is the recent formation of a Teachers' Section, which is interesting itself chiefly in the subject of vocational guidance in connection with the public school system. A meeting of this committee, of which Miss Elizabeth V. Brown is Chairman, was held at the public library in Washington, and addressed by Mr. Meyer Bloomfield, director of the Vocation Bureau of Boston.

PROGRESS IN OTHER SECTIONS.

Efforts along similar lines to those in Washington for the improvement of alley and housing conditions are under way in Baltimore and Richmond. A recent meeting of the District of Columbia Section, devoted to a discussion of the co-related work in these two cities, was addressed by Miss Harlean James, of Baltimore, and Mr. Gustavus A. Weber, of Richmond. Mrs. Hopkins, presiding at the meeting, urged the co-operation of Washington with Baltimore and Richmond for the solution of these and other civic problems common to the three cities.

Mrs. John K. Ottley, Chairman of the *Georgia Section*, reports that improved conditions for employees are being provided by employers with increasing interest. Some of the most important work being carried on by the Georgia and Florida Sections has been that of prison inspections, followed by recommendations of needed changes.

Mrs. William Brooks Young, Chairman of the *Florida Section*, states that deplorable conditions were found at the State Reform School at Marianna, and reported to the Governor. The Florida Federation of Women's Clubs was asked to take up the matter. "This year," said Mrs. Young, "the Legislature gave an increased appropriation, changed the name of the institution, and appointed a much more efficient board of managers. While much remains to be done, public opinion in the State has been aroused."

Among the various other useful labors of the Florida Section, Mrs. Young notes that owners and lessors of large buildings under construction have been visited and asked that especial attention be given to retiring rooms for women employees. These

(Continued on page 24.)

PRACTICAL WORK OF THE WELFARE DEPARTMENT

SOME of the most significant and interesting among the recent activities of the Welfare Department have been the services rendered in connection with the following new undertakings:

(1) Establishment by the Sinking Fund Commission of the City of New York of a restaurant and rest room for the five hundred women employees in the new Municipal Building; followed by a conference of the Mayor, the Comptroller, the City Chamberlain and the presidents of five boroughs of the city to consider the introduction of welfare work for municipal employees in all departments of the city administration.

(2) Installation of extensive welfare features at the Shelton Looms, Derby, Conn.

(3) Provision of a rest room, including emergency hospital equipment, for the use of women employees of tenants of the offices in the new Garrett Buildir Baltimore.

(4) Exhibit of welfare work at Hotel Astor duri the recent annual meeting of The National Ci Federation.

Particulars of two of these matters are given belo and a description of the other two will appear in ne number of the REVIEW. Each furnishes, from differe angles, illustrations of the modern spirit in industr

WELFARE WORK FOR NEW YORK CITY EMPLOYEES

Welfare work for municipal employees in New York City has been launched in a big way by the new administration. The initiative was taken by the City Chamberlain, Hon. Henry Bruère, who wrote to the Welfare Department of The National Civic Federation at the end of February, stating: "We are to have about 500 women in our new Municipal Building and I am very anxious that we should make proper provision for their comfort by way of rest rooms, lunch rooms, et cetera." His request for an interview with the Director of the Welfare Department resulted in an appeal on her part for a general scheme to cover all Departments of the city, with the result that the entire Board of Estimate enthusiastically accepted an invitation extended by Mr. Haley Fiske, a member of the Executive Committee of the Welfare Department, to attend a luncheon on Friday, March 27, 1914, to consider the matter and to learn what has been done in private enterprises which might be regarded as good examples to be followed. The luncheon was held in the Executive Dining Room of the Metropolitan Life Insurance Company for the reason that it has provided model welfare arrangements for its employees in that building worthy of emulation in an exceptional degree, and applicable in most respects to conditions under which large numbers of men and women are employed in the service of the city.

Those who were present, in addition to the Mayor, John Purroy Mitchel; the President of the Board of Aldermen, George McAneny; the City Chamberlain, Henry Bruère; and the Comptroller, William A. Prendergast, were: The Borough Presidents, Marcus M. Marks, Douglas Mathewson, Lewis K. Pounds, Maurice E. Connolly, C. J. McCormack, and the Commissioner of Bridges, F. J. H. Kracke; and John R. Hegeman, President of The Metropolitan Life Insurance Company; C. L. Close, Chairman Welfare Bureau, The United States Steel Corporation; William R. Willcox, Chairman Welfare Department, and R. M. Easley, Chairman Executive Council, The National Civic Federation; Dr. Lee K. Frankel, Sixth Vice-President, The Metropolitan Life Insurance Company; Miss Gertrude Beeks, Director, and Miss Mary G. Potter, Secretary, respectively, of the Welfare Department of The National Civic Federation.

Mr. HALEY FISKE, Vice-President of the Metropolitan Life Insurance Company, who was the host on this occasion, in extending a cordial welcome to the city officials, stated that the Chairman of the Welfare Department, William R. Willcox, had long been of the opinion that the municipality ought to be the leader in welfare work for its employees. He explained that the bundles of literature at the guests' plates contained, in each instance, accounts of beneficial arrangements of twelve corporations and that, during luncheon, there would be thrown upon the screen stereopticon views of features in the plant of The Curtis Publishing Company at Philadelphia and of like conveniences in the Metropolitan Building in New York, applicable to the various buildings of the city, as well as others indicating some of the developments and large expenditures in this connection by employers throughout the country.

Upon request, Mr. Fiske outlined the activities of his company. He stated, among other things:

> "We have 12,000 men in the field and 4,000 employees in our home office. We spend $300,000 a year in pensions, treating each case according to its needs—a man with a dozen children receiving more than a bachelor.
>
> "We have something over $2,000,000 in our staff savings fund and nearly 9,000 depositors. The company contributes 50% of the deposits made by the employees each year. An employee cannot draw out the company's contribution until laid aside by sickness, but his own may be drawn at any time. Employees receive about 9% on their savings.
>
> "We built a sanitarium at Mt. McGregor, costing about $2,000,000, for the care of tuberculous employees. It will, when completed, accommodate 200 patients. At present there are 250 men and women there. It is being made a scientific centre for the study of diseases.
>
> "Our clerical force numbers about 3,800, 2,000 being women. The men average $20 a week in pay; their length of service 9 years and their age about 30. The women average $10 in pay, 7 years in service and 27 years in age. The women receive $300 in cash at the end of five years, $500 at the end of nine years and $200 extra per year thereafter. The minimum wage for women clerks is $9 and for stenographers $11.
>
> "Lunches without expense to them and regarded as a supplement to wages are given to all men and women clerks and to elevator men, porters, stationary firemen, mechanics in the printing building, and to heads of departments, amounting to more than 4,000 every day and costing last year $166,982. The menu to-day is: Clam chowder, Spanish mackerel, corned beef hash, potatoes, cup custard or ice cream, and tea, coffee or milk. This is, in the case of many women, the most substantial meal of the day.
>
> "Wedding lunches are permitted in the young ladies' lunch room. We had 27 weddings last year.
>
> "There is a gymnasium, both interior and outdoor, upon the roof. We have a large and beautifully decorated assembly room for recreation thirty-five minutes after luncheon and to be used by the Choral Society, the Men's Glee Club, and for dancing. There is an athletic association.
>
> 'The hospital is attended by trained nurses and physicians, among these being eye, nose and ear specialists. Ten thousand cases were cared for last year in the emergency hospital.

A nurse visits the sick in their homes. About [illegible] of the patients are women. The head nurse, Miss Robbins, makes friends with all the girls, inquires into their circumstances and home surroundings and performs every type of service from 'burying the baby to arranging a European trip.'

"At present, we are especially concerned as to our hygienic conditions. Five hundred cubic feet of air is allotted to each person, the ceilings being 12½ feet high. We are now analyzing the air, looking into the means of ingress and egress and looking generally into the physical efficiency of the plant.

"Sanitary arrangements are of the best type. Shower baths are provided in the gymnasium and for the stationary firemen in their quarters. There is a locker for each employee; 2,000 umbrellas are maintained to be loaned; individual towels are furnished and laundered free, each employee having a small individual towel locker with key.

"The men and women use different elevators. They work from 9 a. m. to 4:30 p. m., except on Saturdays, when they stop at 1 p. m. Employees are rewarded for punctuality and fined for absence without leave.

"Two weeks' vacation are allowed with the right of the superior officer to grant four with pay. After that, the matter is taken up by the Finance Committee. In case of serious illness, there is no time limit. Such contingencies are guarded against by having physical examination of new employees. In spite of this, they sometimes break down after a few months in our employ but, once in, we always take care of them when ill.

"There is also a civil service examination in writing, arithmetic and other fundamentals. Our examination papers are equivalent to the Eighth grade of the public school. The applicant passes on an average of 80% and is placed on the available list, generally numbering about 1,500 or 2,000, from which we make selections.

"We have a library for the employees containing from six to seven thousand volumes, and also have a branch of the New York Public Library.

"Our employees are given instruction in stenography, English, French, German, business letter writing, and so forth. The classes are held after 4:30 o'clock."

Chairman WILLIAM R. WILLCOX said that there as been a great step forward among employers in ndustrial enterprises in the way of providing wel- are accommodations, but that much had not been one in this connection by the governments of the tates or cities. He also said that the large sum of 6,000,000 expended annually by the United States teel Corporation for its 200,000 employees is in- icative of what might be undertaken by a city ke New York and that, in his experience as a ublic official, he had not known of a government uilding properly arranged for the purpose for hich it was intended. Particularly did he find ais to be true in post-offices, where two-thirds of ie force was sorting letters by artificial light and entilation was poor.

It may be laid down as a principle that the workman is entitled to good light and air and should ot be required to be without the ordinary comforts f life in basement work rooms, or health endangered by contact with insanitary mail-bags. He tated that, of course, it is not possible to rebuild ll municipal structures, but that a great deal can e done to improve conditions; that rest and reering rooms might be provided and welfare work radually widened along the line of the great mercantile establishments and insurance companies. e said that we all realize that it is impossible or the city to give free lunches and some other ings which a company like Mr. Fiske's might find profitable to do. He advocated the establishment f a Welfare Board to look into conditions of emloyment in the various departments, believing that iere is a great field for effort. He closed by thankng the city officials for giving the time from their usy lives to give thought to the subject as applied city employees.

The officials were given for consideration a proosed plan for a Welfare Board which follows:

ROPOSED WELFARE BOARD FOR NEW YORK CITY.

It is especially desirable to have a Welfare Board composed of a representative of each Borough, appointed by the Borough President, and a representative of each Department, selected by the proper authority.

This Board would meet periodically—perhaps monthly.

While the conditions of the departmental employees vary greatly, as their duties are different, there are many principles in common, and policies could be worked out jointly—and this would be particularly helpful in the matter of preventing overlapping.

The Welfare Board could have the conditions of different classes of employees investigated and reported upon, and then make recommendations for carrying out suggested plans for improvements.

Periodical inspections of working conditions could be made and reported upon by sanitation, medical or other experts, who would gradually come into the welfare organization.

Such a Welfare Board would tend to harmonize sub-officials who are jealous of their prerogatives, as a recognition through special committees in the departments would gradually come.

Such Welfare Boards exist now in companies manufacturing steel, agricultural implements, twine, garments, cotton goods, etc., and in a hotel.

Mr. C. L. CLOSE, Chairman of the Welfare Board of Safety, Sanitation and Relief of the United States Steel Corporation, in support of the idea, said:

"I think that if you are seriously considering taking up the work, a proper organization should be formed. I will recite to you our welfare organization. First, we have the Steel Corporation Committee; it is made up of representatives from our different subsidiary companies; we get together periodically and discuss all these problems. We have in each subsidiary company a committee made up of representatives of different plants, mines or railroads. Then we have committees of individual plants made up of the different departments—representatives of each, and last, department committees composed of the workmen themselves. We feel that it is a very good thing to take the workmen into consideration in this connection and find out their ideas. We give them as much time as they need to make a thorough investigation of the property and recommend what should be done to improve conditions. By the process of elimination these suggestions go from the plant committee to the committee of the subsidiary company and thence to the Steel Corporation Committee, if necessary.

"We had last year 4,678 men on that work. We take a workman, a foreigner who cannot speak English, put him on a committee, leave him on a month or two and then take him off. He understands that he is then an ex-officio member—our idea being that in time every employee will be a part of our organization. They are appointed by the superintendent or foreman. In one or two cases, they are elected by the workmen. At a recent election of this kind, 97% of the men voted, showing the great interest in the matter. This is all new; we are trying it out. We have so many localities, different places, different conditions under which we work, and different classes of labor that the problem is quite complex. We try to put the burden upon the subsidiary company itself to do this work. They are responsible for the costs and the product, and we maintain that they are also responsible for the welfare of the workmen. We assist them through our committees and bureau, by disseminating information regarding work done by the subsidiary companies. We started it on accident prevention, and as it proved successful, its scope was widened. If one company had an accident and they devised some means of preventing such an accident thereafter, the information was sent to my office and disseminated from there to all the companies. We have over 11,000 men to our credit that we have saved from serious injury through safety prevention measures."

In illustrating methods employed, Mr. Close said:

"For instance, if the question comes up about putting a swimming pool in a mining town—whether it would be a good thing for the men, etc., we pass upon it and also upon such questions as those referring to sanitary drinking fountains and the like. We recommend to all companies that they abolish the common drinking cup and the common roller towel. We pass upon sanitary regulations—the number of lockers, shower baths, wash basins per employee, etc. All the companies understand that what we recommend is in a sense law. It is not hard to keep up interest, because every one has a feeling for humanity—almost every one is willing to do something for some one else. The president of one company said to me lately, 'I have the greatest trouble now to keep down this expense. They all want to go further than they should.' So it is not hard after you get the thing going in the right way. The all-important point is to have the organization with some one at the head of it full of practical ideas and wholesome enthusiasm with ability to impart the enthusiasm to others. In 1912 we spent over $6,000,000 in our welfare work—this covering pensions, accident relief, etc."

The City officials asked many questions both of Mr. Fiske and Mr. Close to draw out information which would assist in solving the problems surrounding city employees.

The Mayor, JOHN PURROY MITCHEL, among other things, said:

"That the Board of Estimate is anxious to make a beginning is shown by the determination to establish a rest room in the Municipal Building. How far we can carry the work is difficult to say owing to the limitations of the law.

"Yesterday, I established a Review Board for police cases, which is practically a grievance board. One of its functions is to consider cases of men dismissed by the Commissioner, and it will report to the Mayor with recommendations that he may determine whether or not a rehearing shall be granted. There has been some discussion as to whether or not something approximating that should be established in all the Departments and how to solve these questions without interfering with discipline while we are trying to establish ameliorative measures.

"We shall try to secure the co-operation of city officials by making them understand that what we are trying to do is in their interest. It seems to me that the things shown here suggest the possibility of carrying matters further than we have in mind. Possibly the Committee on Welfare Work would be best adapted to assist our Board of Estimate in this connection.

"We had planned only to have a nurse in attendance in the rest room in the Municipal Building, but here we find not only nurses but physicians in the Metropolitan Building. It seems to me possible for us to have a physician. The matter is worthy of serious consideration. There are 5,000 men and 500 women to be housed in the Municipal Building."

Comptroller WILLIAM A. PRENDERGAST said that a physician would be especially useful as the Departments had always lacked medical care. To illustrate this point, he said that for many years there was a physician in the Department of Finance who, up to four years ago, had nothing to do except testify in cases of personal injury in the city's interest. Since that time, he has been used as a departmental physician to examine the physical condition of employees, and has been very helpful. Employees asking for vacation on the ground of illness are examined. In one instance, the physician reported: "Two weeks will not help this man at all. What he needs is three months. In several such instances, where I have sent a man away, he has come back entirely recovered."

The President of the Board of Aldermen, Mr. GEORGE McANENY, in commenting upon the medical examinations of the United States Steel Corporation, which Mr. Close stated had revealed the necessity of coping with trachoma, said:

"I think the degree to which we can use a physician ought to depend upon our courage in the matter of going the whole length."

The Mayor called attention to the fact that the present estimate for pensions for employees in New York City is $10,000,000 a year, and said that the figure of the United States Steel Corporation of $6,000,000 annual expenditure for all its welfare work, including insurance and pensions, made a sharp contrast.

The President of the Borough of Manhattan, Mr. MARCUS M. MARKS, introduced the idea of having the city as a model to all employers and evidenced his willingness to co-operate in forming a welfare board.

The City Chamberlain, Mr. HENRY BRUERE, advocated the necessity for the officials to take the employees into their confidence and make every effort to obtain from them the co-operation and support needed. He said:

"I think we would get along more quickly if the employees could be made to understand that they will have the opportunity, in a measure, to determine the policy, by getting them to make suggestions."

The Comptroller brought out the difficulties due to the short tenure of service on the part of public officials.

Attention was called to the fact that the Welfare Board was advocated partly because of the lack of continuity in office for the reason that a system is likely to continue from one administration to another, whereas the policy of any individual head of a department may not.

The officials have taken a deep interest in furthering the work so auspiciously started at the luncheon above described. The City Chamberlain and Commissioner of Bridges have taken up the details of the Municipal Building with three experts of The National Civic Federation. Information as to the methods employed in conducting the lunch rooms in the Navy Yard, Bureau of Engraving, Census Department, Treasury Building and Pension Building at Washington, D. C., as well as the

WELFARE EXHIBIT AT HOTEL ASTOR, NEW YORK, DURING ANNUAL MEETING OF THE NATIONAL CIVIC FEDERATION.

An exhibit of typical welfare arrangements was made at the annual meeting of The National Civic Federation, by the Welfare Department. Although comprehensive and elaborate, it was designed merely to be illustrative of the vast store of material, photographs, models, descriptions and detailed data of successful welfare work already in its possession and which it is intended to classify and display as a permanent exhibit. Arrangements have just been completed for the early installation of this exhibit, which is to occupy the entire thirty-fifth floor of the Metropolitan Tower, New York City.

The inability of many employers, who have not had experience or have not observed model welfare institutions, to appreciate their advantage has led to this undertaking to provide standards applicable to different industries which may be studied at any time, both by employers beginning such endeavors and those desiring to extend lines already established. Such examples of welfare work, it has been proven thoroughly by the past endeavors of the Welfare Department, encourage the wider adoption of such arrangements when graphically illustrated either to employers individually or in groups in separate trades.

Industrial villages, large factories, small factories, big department stores, small retail stores, railroads, mines and public institutions—Federal, State and Municipal—showing what may be done for the comfort and social well-being of all types of employees in large and small enterprises, had their part in the exhibit at the annual meeting. There were shown model homes, lunch rooms, wash rooms, changing houses for miners, rest houses for railroad men, first-aid devices, ventilation schemes, club houses and other recreative arrangements, and other features to alleviate conditions of employment—not the least being thrift and money-lending plans, as well as schemes for insurance against sickness, accident and death.

The exhibit was in charge of Miss Anna C. Phillips, one of the twenty-nine students graduated from the first welfare training class under the direction of the Welfare Department of The National Civic Federation, held a year ago at New York University. She was assisted by Miss Ruth Schram, daughter of one of our leading employer members, and by Miss Clara H. Kenyon, an experienced welfare worker. A number of the students in the course in welfare work acted as a reception committee to explain the exhibit to members and guests of the Federation. Among these were: Mr. Everett Dominick, Miss Faith Habberton, Mr. J. P. Jacobson, Miss M. C. Hyatt, Mr. W. P. Gallatin and Miss Genoveva Petit.

A stereomotograph was in constant operation, showing stereopticon slides of the very remarkable arrangements in the new building of the Curtis Publishing Company, of Philadelphia, and two hundred other typical views—running the gamut from sanitary work-places, educational opportunities for employees, recreation, and homes and boarding houses, to the picture of the old pensioner, eighty years of age. Photographs of the welfare work of more than one hundred companies were mounted upon fifty placards of uniform size in neat frames and spread about the assembly room. Books outlining the thorough and practical work of the Cadbury Company, an English corporation, were distributed through the courtesy of Mr. John H. Patterson. Other foreign books showing extraordinary developments, with architectural drawings, portrayed activities of the Kanegafuchi Spinning Company of Japan, the Krupp Steel Works, the Arbeiter Rolonde (Gwindersdorf) and the Badische Company, of Germany. Among other companies or associations of employers whose welfare work was exhibited were: The Edison Electric Illuminating Com pany, of Massachusetts; John Wanamaker, of Phila delphia; American Iron and Steel Institute, Colorad Fuel and Iron Company, International Harvester Com pany, Plymouth Cordage Company, Sears, Roebuck Co., National Cash Register Company, Delaware, Lack awanna & Western Railroad Company, National Foo Company, Pennsylvania Railroad Company, Nationa Cloak and Suit Company, General Electric Company Morgan Machine Company, United Gas Improvemen Company, Westchester Lighting Company, Drape Company, Ballard & Ballard, Avery Company, Ameri can Woolen Company, Westinghouse Air Brake Com pany, Parker Cotton Mills Company, Ludlow Manu facturing Associates, Eagle and Phoenix Mills, Ameri can Waltham Watch Company, Enterprise Manu facturing Company, Cleveland-Cliffs Iron Company Elgin National Watch Company, American Locomotiv Company, Gorham Company, Solvay Process Company H. J. Heinz Company, Sidney Blumenthal Company Edward V. Price Company; The Emporium of San Francisco, John A. Roebling's Sons Company, Lowne Chocolate Company, and such department stores a McCreery's, Altman's, Lord & Taylor's, Macy's, Green hut's, Gimbel Brothers' and Bloomingdales'.

What may be done in a rural community in a larg way was shown by the very elaborate and handsom exhibit of the United Shoe Machinery Company, in charge of Mr. J. M. Van Heusen and Mr. Towle, o Boston. Equally convincing model arrangements fo employees in a great city were indicated by literature photographs and charts of the Metropolitan Life Insurance Company and the American Telephone and Telegraph Company. A screen, put up by the United States Steel Corporation, called especial attention to what has been done to improve sanitation in mining villages.

Navy Yard in Brooklyn, has been furnished for their guidance, together with statements as to the amount of space provided for lunch rooms, rest rooms, and hospitals by the Federal government in those places. Attention was called to the fact that employers, except in banks where the clerks are needed at noon time, generally charge nominal prices for lunches. After outlining the plans of the Federal government lunch rooms, the Welfare Department recommended the following one for the Municipal Building in New York.

SUGGESTED PLAN FOR LUNCH ROOM—MUNICIPAL BUILDING.

Board of Trustees to be appointed by the proper city official.

This Board to have charge of fund for operating expenses and the lunch room manager to be responsible for it.

After the lunch room is in operation, it would be possible to raise a fund for operating expenses by having a lunch club and charging dues. It would be much better to be able to demonstrate before undertaking to organize such a club than to appeal to the imagination in advance of the opening of the lunch room.

In the event that the City should not find it practicable to appropriate the fund, several citizens might be interested to subscribe the amount for operating expenses, and it could be refunded within a reasonable time after the club is organized.

The Board of Trustees should continue to be responsible for the operation of the lunch room in the event that a manager is employed by the club. This course is the best, as a better quality of food and larger portions will be ensured than by contracting out the privilege.

The foregoing is based upon the supposition that the City will furnish the space without rental charge and will supply the equipment.

In determining this plan, there were analyzed answers to the following questions sent to public officials in Federal Departments having lunch rooms

(1) Do you serve warm food cooked in the building to your employees?

(2) Do you charge rental space against the operating expenses?

(3) Did the Government furnish the money to purchase the equipment?

(4) Do you contract out the privilege?

(5) If not, have you a committee appointed, to whom the lunch room manager is responsible, or do you take the responsibility?

(6) Have you a lunch club? If so, what are your dues?

(7) How did you secure the initial operating expenses?

In the Bureau of Engraving at Washington, D. ., at present, lunch is supplied by a woman caterer, he Government furnishing without charge the nec- ssary space and cooking utensils. It is intended, owever, that a co-operative association now being ormed by employees will operate the lunch room— he initial funds being obtained by men members ontributing one dollar and women members fifty ents, the number of employees at this time being bout twenty-five hundred. Plans are not yet com- leted, but the general proposition is that an experi- nced manager not an employee will be engaged. he Government will have no financial responsi- ility in them thereafter, and will simply have gen- ral supervision.

At the Navy Yard in Washington warm food is erved; the Government makes no rental charge gainst the lunch room and furnished the equip- ent. There is a committee of officers and em- loyees to supervise the contractors and the Gov- rnment allotted the initial operating expenses. At he Brooklyn Navy Yard, where 7,000 square feet ere set aside by the Government for a lunch room hich seats 500 men at one time, the Brooklyn avy Yard Committee of the Metropolitan Section f the Woman's Department of The National Civic ederation purchased and gave the equipment to he Government and it is now thoroughly in opera- ion. The Commandant of the Navy Yard is virtu- lly in charge, but there is a stockholders' co-op- rative association of 1,000 employees, the shares eing $1 each, and there is a waiting list, there eing 3,300 men in the shops there. The manager f the lunch room is held entirely responsible by he elected board, but has absolute freedom in urchasing and managing the lunch room, the latter act being the secret of its success. The books re audited by the directors. There is a good dinner ith roast beef, including dessert, coffee and bread nd butter, for 25 cents. Roast beef, potatoes and ne vegetable are given for 15 cents. A dividend f 20% was declared during the past year.

The Municipal Building has been inspected by the ederation's experts with reference to possibilities n arranging lunch rooms, and the City has been ommended upon the fine sanitary rooms therein. articularly has it been fortunate in having them laced on alternate floors and not too remote from ork places. An advanced step has been taken by aving a retiring room, which will be equipped with couch, adjacent to each sanitary room. Too much annot be said in praise of these conveniences.

THE NEXT STEPS IN WORKMEN'S COMPENSATION LEGISLATION

(Continued from Page 9.)

o extend its work, which heretofore has been con- ned to uniform accident reporting blanks, by ex- ending its personnel to bring into co-operation repre- entatives of the various States having workmen's com- ensation laws and which are now collecting statistics, hat their methods may be compared with a view to niformity." (Adopted after some discussion as to the agnitude and large cost of such an undertaking.)

BUREAU OF INVESTIGATION AND STATISTICS.

DR. LEE K. FRANKEL, sixth Vice-President of the Metropolitan Life Insurance Company, while deeming hat uniformity is a desideratum to be worked for, xpressed the belief that at the present moment we eed to tabulate the experience in the respective States. Insurance companies, life and fire, have gotten eyond the doctrine of chance, due to the tabulation of heir experience. He said: "The most important de- artment of any insurance company is its actuarial or tatistical department.

"After twenty-five years' experience in Europe there s no such thing as uniform legislation. It is conceded hat the system in England is not applicable in Ger- nany, because of the peculiar conditions. It is likely n the United States the law in New Jersey could not e maintained in Colorado where we have compara- ively little industrial development, and the develop- nent is mining and agriculture. It may be more de- irable to have a variety of laws than uniformity of aws. Whether or not that is true, with the limited xperience we have in the United States—I think now ractically all of our legislation is less than five ears old—we are not in position to know which ethod of settlement or law is better, which amount f benefits should be maintained, and what the pre- ium should be, whether it should be taken care of y the State, whether it should permit accident and ther companies to come in. All of these questions we ust determine by actual experience.

"It seems to me that the opportunity here is given o The National Civic Federation to do a rather re- arkable piece of work. The government cannot do t. Commissions cannot do it because they are apt to be prejudiced. Insurance companies cannot do it for the same reason. Here is the Civic Federation, an altogether impartial body that could undertake, in the fashion not possible to any other organization, to definitely tabulate the experience that is being gathered in every State in the Union and by the Federal Government.

"I should like to go even further than the resolution offered by Mr. Schram. It seems to me what the Civic Federation ought to have is a permanent investigation bureau with a paid official at its head, with a staff sufficiently large to constantly make inquiries and to get the co-operation, as recommended in this resolution, of commissioners in every State, and of departments in every State, definitely tabulate the experience and eventually present to the people of the United States the data and results thus ascertained. When we once have that, we are in position to say which law is better, which we ought to vote for and strive for, as uniform legislation."

Mr. W. A. Coakley, in furthering the idea of Dr. Frankel, said: "Statistics on the cost of workmen's compensation are especially important to the interests of labor when increases in wages are asked, because workmen's compensation is a charge upon the industry and employers will claim that their expense item in that connection is so high that they cannot afford such increase in wages. In every arbitration case, it is the operating cost which is brought to us in argument against our demand."

COMPENSATION REPORT A PUBLIC DOCUMENT

THE UNITED STATES SENATE ORDERS PRINTED FOR DISTRIBUTION THE EXHAUSTIVE STUDY OF THE OPERATION OF STATE LAWS, MADE BY THE NATIONAL CIVIC FEDERATION AND THE AMERICAN FEDERATION OF LABOR

THE report of the Commission created last July by The National Civic Federation to investigate the operation of State laws on workmen's compensation has been published and is now available for distribution. This Commission was appointed by the Workmen's Compensation Department, of which Mr. August Belmont is chairman, and was composed of employers, legal experts and representatives of the American Federation of Labor.

The extraordinary value of the report is attested by the fact that the United States Senate ordered it printed as a public document.

Both the Federation's edition of the report and that printed by the Government were almost immediately exhausted by demands from all over the country, as well as from abroad. There is under consideration the issuing of a further edition.

In advocating the passage of the original resolution calling for the printing of the report with an additional edition for distribution, Senator Sutherland, of Utah, said in part:

"Mr. President, that document is an exceedingly valuable one and one which will have a very wide circulation. * * * The investigation made by the Joint Committee of the Civic Federation and the Federation of Labor was a very thorough one.

"The great value of the report which has been presented by the committee is that it takes up these various laws and enters into a discussion of their operation in the various States; and the great usefulness of it will be that it will have a tendency to bring about a uniformity of legislation upon this subject which is very sadly wanting at present. There are almost as many different kinds of workmen's compensation laws in this country as there are States that have passed upon the subject. One deals with it from the standpoint of State taxation and State adjustment, as in Washington and Ohio; other States, as New York, from an entirely different standpoint; Michigan from another standpoint, and so on. It is comparatively a new subject in this country. It is one which we are concerned in. I mean by 'we' Congress itself. It is exceedingly important that we should have all the light we can upon this subject. * * * There can not be the slightest doubt about there being an exceptionally large demand for this document. It is a subject that is engaging the attention of nearly every State of the Union. Commissions are at work, and there are hundreds of people who are investigating it in its various phases."

The volume is practically a working handbook of 200,000 words. The workings of the various compensation laws in States having had any important experience are reviewed and analyzed in a way to bring out distinctly the strong and weak provisions.

The findings are based upon personal conferences and hearings in different sections of the country all the way from the Atlantic to the Pacific Coast, and upon replies to thousands of letters of inquiry and questionnaires, the answers representing a payroll of $358,640,383. The labor viewpoint as to the benefits derived from workmen's compensation laws was sought and opinions were secured from employers, public officials and insurance men.

Some of the subjects covered are: "Degrees of satisfaction given by compensation as against liability laws;" "The value of elective versus compulsory compensation laws;" "Reasons for accepting or rejecting elective acts;" "The amount of compensation;" "Contributions by employees;" "Methods of insuring;" "Cost of compensation;" "Exclusiveness of compensation remedy;" "Employers' defenses abrogated under elective acts;" "Employments covered;" "Injuries covered;" "Who are dependents;" "Non-resident alien dependents;" "Contractors' liability to employees of sub-contractors;" "Length of waiting period;" "Medical and surgical aid;" "Effect on prevention of accidents;" "Litigation under compensation acts;" "Methods of administration;" "Effect upon relations of employer and workmen," and "Suggestions for amendments to State laws."

Other provisions of the report are: A topical digest of the principal provisions of statutes in force January 1, 1914; rules and forms used by State boards to facilitate the administration of the laws, and valuable statistics furnished by them.

PLAN AND SCOPE COMMITTEE.

The Committee on Plan and Scope, which outlined the inquiry, appears below:

Chairman, Otto M. Eidlitz, New York Building Trades Employers' Association, New York City.

Samuel Gompers, President American Federation of Labor, Washington, D. C.

Louis B. Schram, Chairman Labor Committee, United States Brewers' Association, Brooklyn, N. Y.

W. H. Marshall, President American Locomotive Co., New York City.

Frank V. Whiting, General Claims Attorney, N. Y. C. & H. R. R. R., New York City.

Timothy Healy, President International Brotherhood of Stationary Firemen, New York City.

E. H. Letchworth, Rogers-Brown Iron Co., Buffalo, N. Y.

M. F. Westover, Secretary General Electric Co., Schnectady, N. Y.

Raynal C. Bolling, United States Steel Corporation, New York City.

THE JOINT COMMISSION.

The Commission, which gave six arduous months to this investigation, was made up as follows:

Chairman, Cyrus W. Phillips, member of the former New York State Commission on Employers' Liability, Rochester, N. Y.

J. Walter Lord, Chairman of the Maryland State Commission on Employers' Liability and Workmen's Compensation, Baltimore, Md.

Otto M. Eidlitz, of the New York Building Trades Employers' Association, New York City.

Louis B. Schram, Chairman Labor Committee, United States Brewers' Association, Brooklyn, N. Y.

James Duncan, Vice-President American Federation of Labor, Quincy, Mass.

John Mitchell, Vice-President American Federation of Labor, Mount Vernon, N. Y.

Mr. Duncan and Mr. Mitchell were appointed by the American Federation of Labor to co-operate with The National Civic Federation.

FIVE MILLION WORKMEN UNDER COMPENSATION LAWS.

The Commission found that not only are more than 5,000,000 workmen now under the operation of compensation laws, but that laws going into effect during the coming year will bring several million more workmen under this system. Even elective acts have been so generally accepted by employers and employees in States where they are in force that in

(Continued on next page.)

those instances a vast majority of industrial accidents are covered.

The employer who complains of the law because it requires him to pay compensation for an accident in which he is clearly not to blame, or which possibly may be due to the fault of the injured person, will get a broader view of the law when later he is relieved from a liability suit with full damages in a case in which he has been wholly at fault. Likewise, the employee who receives no compensation, for the reason that his injury incapacitates him for a time shorter than the legal waiting period, will get a different and a better idea of the law later when he or some fellow-worker meets with a permanent injury and receives compensation promptly without controversy.

While at the outset the compensation acts were not exclusive, but were given in addition to the workmen's common law right of action for negligence, the tendency to make the compensation remedy the exclusive one has grown until now the majority of the statutes furnish an exclusive remedy, and it can be well said that the principle of making the remedy exclusive, provided the compensation is adequate, is now accepted by both employers and workmen as the proper method.

In the absence of compensation laws, undoubtedly there would have been a further expansion of the employers' liability, with their defenses removed and the adoption of strict safety requirements. This is indicated by the recent decision of the United States Supreme Court in reference to the Federal Safety Appliance Act, under which the railroad company is even held liable to an injured employee for failure to keep safety appliances in order. But it is recognized that under the best liability law a large percentage of workmen must be without protection, as many accidents cannot be traced to legal fault on the part of the employer and may occur where safeguarding appliances cannot be installed.

The Commission found a growing satisfaction with compensation laws among both employers and workmen. All suggestions for changes related to the compensation law, no one seriously thinking of repealing it or going back to the old liability system. Persons attended the conferences who had originally opposed the compensation plan, but who, after experience under it, expressed their warm approval of its principles. Among these, beside both large and small employers, were workmen.

RELATIONS BETWEEN EMPLOYER AND WORKMEN IMPROVED.

The workmen's compensation laws have improved the relations existing between the employer and workmen; they have had a marked effect upon accident prevention by calling attention to the subject and exciting interest in safeguarding machinery and in the organization of safety committees, and they have created a general campaign for accident prevention. The difficulties feared by some employers and some workmen have not, to any great extent, materialized under the actual operation of the laws; while the Commission heard some statements to the effect that the laws lead to fraud, deception and malingering on the part of employees, and discrimination by employers against certain classes of workmen, these complaints have generally come from those who have had little or no experience under such a law, or have had so few accidents in their establishments that their opinion can hardly be considered against those of men at the head of establishments who have had a large and active experience even in the short time that the laws have been in effect. The latter class of employers generally stated that they have found little, if any, malingering or deception; that that can be avoided, and that the laws are easy in administration and fair in their operation. However, it is claimed by some that there has not been sufficient experience, during the short time that the statutes have been in force in the United States, for these troubles to develop; that they do exist in European countries, and that they will develop here unless the administration of the laws is safeguarded in these respects.

ADMINISTRATION FAIR UNDER STATE BOARDS.

In the States where there are Industrial Accident Boards, having power to pass upon settlement agreements; to make rules and regulations; to require the filing of receipts showing the actual payments of compensation to the men; and having arbitrations and hearings before them in cases of dispute, the law is being fairly administered, and employees are receiving promptly their full compensation under the law. It is evident that danger of fraud and deception can be prevented only when the law is administered through a board or officials charged with powers and duties similar to those of the existing State Boards. For instance, in New Jersey, where there is no duly constituted authority, not over 60 per cent of the amounts payable under the statute are received by the workmen.

It is the general opinion both of employers and workmen in the States covered by this inquiry that all employments, with the possible exception of farm labor, domestic servants and casual employments, should be included, and that any restricted classification is not only unjust but leads to confusion and uncertainty.

MEDICAL ATTENTION.

The subject of medical attention to injured employees is one of utmost importance. With a few exceptions, the States require that the employer, in addition to the compensation, shall pay the medical bills of the injured workmen, with certain restrictions. Outside of the State of Washington, the Commission found no sentiment opposed to this requirement, it being generally conceded that the workman is not only entitled to medical treatment in addition to his compensation but that it is to the interest of the employer and society to see that he receives it, thereby to minimize the extent of the disability. There has been a great deal of discussion, however, with regard to the cost of medical service. Various methods have been suggested and are now being worked out in different States for the purpose of reducing this cost, which amounts to a sum equal to 40 to 50 per cent of the amount of compensation received by the workmen.

AMOUNT PAID WORKMEN.

The amount of compensation has aroused considerable discussion, and it varies from 50 to 66 2-3 per cent of the wages of the injured employee with minimum and maximum weekly amounts varying in different States, to be paid during the period of his incapacity, or, as in some States, limited to specified periods, with definite allowances for amputations and certain enumerated injuries. While employers, in States paying only 50 per cent of the injured workmen's wages, feel that their schedules are fair and are fearful of the effects of increasing the percentage, there is not much complaint from employers in States having a higher rate of compensation. Definiteness in provisions relating to awards for particular injuries is desired by both employers and workmen.

Uniformity of cost is an element of vital interest to employers. For this reason they have frequently asked, first, that the elective acts of their States be made compulsory, so that all employers may compete on the same basis; and secondly, that there be uniformity in cost under the acts of the various States. Among workingmen the sentiment for compulsory compensation laws is practically uniform, and the tendency of legislation is in the direction of compulsory enactments. This is evidenced by the recent change in Ohio and California from elective to compulsory acts, and by the adoption in New York State of a compulsory act.

LITIGATION ELIMINATED.

Litigation, so far as accidents to workmen are concerned, has been practically eliminated in the States in which compensation acts have been generally accepted by employers. About 2 per cent only of the compensation cases are disputed so as to require arbitration; not more than ten cases out of 10,000 compensation cases have gone into the courts. The payments of compensation to employees are prompt and usually commence at the end of the second or third week, and where arbitration is had, the payments are not delayed on an average more than three or four weeks.

PROTECTION AGAINST EMPLOYERS' INSOLVENCY.

One of the most difficult problems, and one that has caused more diversity of views than any other, is that of protecting the injured workman against the insolvency of his employer. As the payments are not usually made in lump sum but extend in some cases through a long series of years this is important from the standpoint of the workman and his family. The Commission found it generally accepted by employers that the workman was entitled to as full protection in this respect as possible, but a strong feeling existed among employers against being restricted in their method of insuring. Many wanted to carry their own risks without insurance, provided they could show that their financial condition would warrant it, claiming that in that way they could better carry on their safety plans. Some wanted power to create mutual insurance companies, and, in most States, laws have been passed permitting this; others desired permission to insure in stock companies, while others wanted the State to create an insurance fund by assessment upon employers. In States in which either of these methods, or all of them, were in operation, there was little, if any, complaint as to the methods of making settlements or payments. It was generally felt that, with an industrial accident board passing upon all settlements and determining all differences and with such other restrictions and regulations as might be necessary, both employer and employee were protected under these three methods of insurance, and that the employer received the benefit of the resulting competition. The mutual companies have undoubtedly, by their competition, aided in the reduction of rates to a larger extent than the amount of their business would indicate, as they furnish a field to which employers can go in case they feel that the rates of stock companies are too high. This also true of the State insurance funds, except th they have been organized to a less extent and ha done a smaller business than the mutual compani

COMPENSATION PRINCIPLE ESTABLISHED.

Mr. Belmont said, in announcing the publication the report:

"It is apparent that the principle of workmen's compensation is well established, i. e., that the industry rather than the victim shall bear the financial burden resulting from accidents incident to it. The experiments with different theories in the first stages of legislation upon the subject have developed workable features worthy of perpetuation, but now we have reached the melting-pot period.

"Education never was more needed upon the subject than now, and we propose not only to give to legislators, citizens and organizations interested in the movement this sifted result of the country's total experience, but also to utilize the report in drafting a new model workmen's compensation act to be used as a guide. To Legislatures convening this year and workmen's compensation commissions in twelve States studying the subject, the report has been made immediately available.

"The report bears every evidence of a conscientious effort to present the facts impartially, with no attempt to offer theories or to make recommendations. It is believed that it will be of benefit not only to States which have not yet enacted workmen's compensation legislation, but also to those proposing to amend their laws, and especially in promoting uniformity among the twenty-two States having such laws."

ACCIDENT PREVENTION.

In commenting upon accident prevention, Mr. Be mont said:

"Two documents, also available *gratis*, in the interest of accident prevention, are the Civic Federation's model safety act and uniform accident reporting blank.

"The safety act, now reflected particularly in the factory laws of New York, New Jersey and Illinois, not only enables State officials to place the responsibility directly upon employers, but, at the same time, gives the latter information as to their obligations in the matter of accident prevention.

"Adequate safeguarding cannot be had without statistics showing the causes of accidents, and where they occur in the greatest number. Accuracy in drawing conclusions from such statistics depends upon uniformity in collecting them."

ACTIVITIES OF THE WOMAN'S DEPARTMENT.

(Continued from page 19.)

requests, so far, have been given the required co sideration. A canvass of all business establishmen was made with a view of ascertaining how many ga a weekly half holiday. The largest retail establis ment in the city decided, at the Chairman's sugge tion, to change its hours of opening and closing f the benefit of its employees. The regulation of dan halls, investigation of State and county institution and wonderful improvement in the County Hospita the County Jail and the City Prison Farm can be r ported.

The *Virginia and West Virginia Section*, of whic Mrs. J. Allison Hodges is Chairman, is doing exce lent work, chiefly in the nature of co-operation wit other bodies engaged in improving economic cond tions of women and children. Owners of tobacc factories and cotton mills, particularly, are begi ning to realize the importance of the work. Mr Hodges mentions that the Riverside and the Da River cotton mills of Danville are examples of th finest type of welfare and efficiency.

The year 1914 promises to be a busy one for th *North and South Carolina Section*, in the opinion o the Chairman, Mrs. B. Frank Mebane. Speakin particularly of the welfare work at Spray, N. C., Mr Mebane says:

"Sand and building bought for a hospital, the building being a large house which will be equipped with everything necessary for a modern up-to-date hospital. Work on it is going ahead rapidly and it is a cause for much rejoicing, since it is something that is much needed. In addition land has been purchased by the mill owners for a school building of generous dimensions and work will be commenced on that at once; the old school building is not large enough to accommodate all of the scholars. We hope to equip it for a girls' club—girls and married women—a modest beginning, which may later develop into a large Y. W. C. A., or, at any rate, into a place of rest and recreation for tired girls and worn-out mothers."

SAMUEL GOMPERS' GREAT MESSAGE

FFORTS OF DISLOYALISTS TO DIVIDE LABOR FROM ALLIED GOVERNMENTS DEFEATED, BUT FIGHT AGAINST ANARCHY MUST CONTINUE TO SAFEGUARD A JUST AND VICTORIOUS PEACE

By CHESTER M. WRIGHT

(Of the American Alliance for Labor and Democracy)

AMUEL GOMPERS returned from his remarkable tour of Europe bringing warn- g of these things: Bolshevism, acifism, Pro-Germanism, and ocialism. And for the most part wraps all of these things up one package and puts a com- site label on the mess.

Mr. Gompers went to Europe chairman of an American Fed- ation of Labor mission, and ursuant to instructions of the ederation given him by the St. aul convention last June. There as no pussyfooting about the ompers' mission, if reports ought back by him and his fel- w members tell the story. It as a fighting mission.

President Gompers made his st address upon his return on ovember 8, in the Chicago Audi- rium, at a national mass meet- g arranged by the American lliance for Labor and Democ- cy. Men and women from all arts of the country and of all alks of life were present. In r. Gompers' stirring address ere was this clarion note:

"The principles of democracy not flash in the air; they are t fanciful, they are not theo- tical. If they are thought of in at connection they lose their tency and virility and effect. emocracy must be practiced and ted every day of our lives to true."

In its day to day work the merican labor movement exem- ifies this teaching. It practices mocracy by dealing in the most ndamentally democratic fashion ith the employers of labor. rganized labor meets and bargains, collectively, mocratically, with employers of labor. Democ- cy is bedded deep in the structure and life of e labor movement. There could be no labor e without democracy.

In his Chicago address, Mr. Gompers paid a arm tribute to the fidelity and integrity of

SAMUEL GOMPERS

Premier Lloyd George, Premier Clemenceau, and the principal guiding spirits of the war in each of the Allied nations. He found that the great masses of the people in all these countries had appreciated the worth of their true leaders and that there had been a generous, intelligent and unflinching loyalty on the part of all except a small minority of noisy pacifists and pro-German propagandists.

Of these it seemed evident that the mission found the most pronounced brand in Italy, where every possible effort was made to undo the work of the mission. But in every case where Bolshevism was encountered the overwhelming mass of people turned to the mission with such accord as to prove beyond doubt the status of the disloyalists in point of numbers.

Mr. Gompers did not mention Arthur Henderson in his speech. He made no mention of pacifism in England. But this was learned from other members of the mission:

MISSION ENCOUNTERED "STOCKHOLMISM" AND BOLSHEVISM.

The London Inter-Allied Labor Conference appointed a sub-committee of two from each nation. A meeting of this committee was arranged to be held in Paris on the return of the American mission to that city from Italy. Mr. Gompers did not remain for the meeting, owing to the death of his daughter, but two members of the mission did stay. The meeting was not held. When Mr. Henderson, with Camille Huysmans, secretary of the one-time Socialist International, went to the dock at a British port to board a channel steamer events transpired which prevented the sailing. As the two proceeded to board the ship, the crew declared that if Henderson and Huysmans came aboard the crew would go ashore. Thereupon the two did not go aboard. Henderson thereupon went to the commander of a destroyer flotilla and demanded passage. The commander said that if the channel steamer would not carry him the destroyers could not undertake to do so. The next appeal was to the commander of a sea-plane squadron. The sea-plane commander de-

clined to go over the head of the destroyer commander.

Henderson and Huysmans then picked up their luggage and loaded it into a cab, into which they also climbed. A crowd of soldiers and civilians acquainted the cabbie with the identity of his passengers, whereupon he immediately ordered them to get out. The two picked up their bags and walked to their hotel, jeered on the way by the assembled crowd. Thus has the glory of Stockholmism faded.

But the spirit that was in Stockholmism is not dead entirely, either in France, England, or Italy, according to the mission. And the fact that there is in this spirit the essentials of Bolshevism is proved by the fact that when one object of its attacks is removed as an issue by the passing of events it immediately seizes upon another. Stockholmism has ceased to be an issue. But the spirit that was in it fights on against those who stand for the protection of human liberty by armed force when necessary, and for the development of human life through the orderly processes of democracy. It may safely be drawn from the utterances of President Gompers and his mission that the fight must be made in the days to come, as in the days just passed.

President Gompers did not go exhaustively into the work of his mission in his Chicago speech. But he did indicate the general trend and the general result, which was one of victory for sanity, solidarity and orderly progress. For the first time since war began unity among all the democratic nations was secured on a program of fundamental principles. The conference endorsed the fourteen points laid down by President Wilson and long since approved by the American labor movement.

AMERICA'S IDEALS.

From President Gompers' Chicago speech are taken the following paragraphs revealing the trend of his thought on that wonderful homecoming night:

"It was a great mission entrusted to my associates and myself—a mission to convey the message of fraternity and good-will and cooperation and sacrifice, that the opportunity to live the lives of free men and women shall not be crushed from the face of the earth; the message that America had arisen to the stature of her greatness and thrown herself across the path of the conquering Hun; a message that if need be our America would sacrifice and die rather than live the ignominy of cowardice.

"America is more than a country. America is more than a continent. America is more than a name. America is an ideal. America is the apotheosis of all that is right.

"Where a great principle is involved and men fail to defend it, where a great principle is involved and men refuse to make a sacrifice to preserve it, there is no hope for them or for those who come after them. Fight for the right and even though you are defeated, the spark is still in the heart and the brain, handed down from father to son, from mother to daughter and to the generations after that until finally that spark bursts into flame and the torch of liberty is again alight.

"In the work of our American Federation of Labor Mission to England, to France and Belgium, our conferences with our men there, our public discussions with the men of labor and of other affairs there, we predicated our position upon the declared basis of the American labor movement, and we put forth our position not only upon the righteousness of our cause and our stand, but upon the further fact that we had two million of our own American boys over there.

AMERICAN LABOR DECLARATION AT LONDON.

Before the United States entered into the war it might have been regarded as gratuitous for us to even suggest anything to any of the democratic nations involved in the struggle, but now that we are in the war up to the hilt, well, nothing could be done by Kings or Cabinets or men of labor without the full consent of the representatives of our Republic. And it was with no mealy mouths that the American Labor Mission expressed their firm convictions.

"I call your attention to part of the declaration adopted by the conference of America's workers at Washington on March 12, 1917, to which the Executive Council had summoned representative labor men. American labor, American workers stood one hundred per cent behind the Government and the President of the United States. I am quite confident that as time goes on the utterances in this declaration will become more and more important. I refrain from reading it because it is too lengthy. I will not even read the declaration made by the London Inter-Allied Labor Conference of September. I wish merely to call your attention to the fact that *the American labor mission proposed and the conference adopted,* not in the same words, but in the same sense and purpose and meaning, *the declaration of organized labor of America of more than a year and a half before.*

"That conference which in secrecy had declared its pacifism, and some other things, was held in executive or secret session; but at the demand and at the proposal of our mission, that conference in which we participated was had with the searchlight of public opinion right upon every delegate present. We held that we could not be consistent in denouncing secret diplomacy and at the same time hold executive, secret sessions ourselves. Whether they liked it or not, they voted for open sessions. From that time we knew that America's position was right and would be endorsed. Men can't help being a little more decent in public than they may be in secret and private.

FOES OF REAL DEMOCRACY ABROAD.

"The condition which we found to exist in our Allied countries was something to give us all concern. Every attempt that we made was combatted by the pro-Germans, by the propagandists, by the pacifists and by the French and Italian Bolsheviki. The Socialist Bolsheviki press of those countries endeavored to forestall every movement we made or were about to make. In Italy, for instance, we were represented by this press as fakes and frauds, as not representing American labor. We answered that the difficulty with these people is that whatever labor movement exists is usually dominated by some professor, some failure in professional life, who had got his fangs into the labor movement there and usually poisoned and destroyed it; that the American labor movement was composed of working men and working women, and that the men in the official positions of our movement were men who had been taken from the mine, from the shop, from the building, and we said: 'Now, you don't build any more, you don't mine coal any more, you don't make brick any more; we want you to be our spokesman, our defender, our advocate.' And that doesn't sit well in the crop of the so-called intellectuals of England, France or Italy, or even in the United States.

"I shall not pay too great a tribute to my associates nor make any claim for myself. All I think I should say, and what I am justified in saying, is that we did try and succeeded to some degree in putting some stiffening into the backbone of the people of the countries which we visited to stand behind their countries at least until after the war was won. We have come back to our country more thoroughly American than ever; more thoroughly convinced that our people and our government stand out as a wonderful object lesson to the peoples of the whole world.

PROBLEMS AND REWARDS OF THE FUTURE.

"*We, in our land, expect to live our own liv and work out our own problems. As a result this war there must come a new understandin of the rights of man. As a result of this wo there must come new relations not only betwee nation and nation but between man and man.*

"Our men and women have bent and are ben ing their backs to the task of production of th things upon which armies and navies depen Men and women of labor of America have don their full duty and will continue to do their fu duty, and for the sacrifices which they hav made out of their strength and health, for th sacrifices they have made upon the battlefiel freedom must not be lost to them in times o peace. They want an accounting of the steward ship of our people, of what we have done an what we have failed to do to maintain the stan ard of life, the American standard of life, tha no pauperization of the sisters and brothers an fathers and mothers shall occur while our boy are at the front mingling as they do, ditch digge with the son of millionaire and business man, a of them in the same trench, in the same ten sharing the same fare, the same hardships an the same risks. These men will come back to ou country with glory and victory written into thei very souls and they shall want an accounting o our stewardship while they have been over ther

"They know now that the peoples of th world, regardless of where their countries ma be, are now so much nearer than before.

"We want to see this world governed by th peoples of the land, by the people who must wor and serve and pay, and they shall have a voic in determining finally and once and for all wha the condition of service shall be.

"We want the Declaration to defend us—th right to life, liberty and the pursuit of happi ness, not to be mere generalities, but the rules o every-day life where every man shall be a kin and every woman a queen by her own fireside.

"In the time now near at hand we have ye much to do. When this war shall finally hav been triumphantly closed, there will come th problem of reconstruction and rehabilitation The demobilization of our army and the men o our great fleets into their civic life will mea either intelligent demobilization or rampant de moralization. To meet the new problems afte the war will take the best thought of our bes men and our best women, unselfish and true, wit high consciences and high resolves, determine to do it right.

"It has been a terrible war. It has cost mor lives and more sacrifice than any previous strug gle in the history of the world; it involved more The Crusade was for an ideal. What was con tained in our Revolutionary war, what was con tained in Lincoln's immortal proclamation o freedom for the black slave—all of these ideal will, with the intelligent cooperation of our peo ple, become the rules, regulations and the consti tution of the nations of the whole civilized world

"You and I who have given our flesh and ou blood as a contribution and as a sacrifice to thi world struggle may feel our losses keenly. But in the time that shall come, when the story shal have been written, generations of men and wo men yet unborn will praise and glorify the sacri fices of those who went before, just as we praise and glorify those who by sacrifice made possibl the life of the American people. As we see it and understand it, so will the future rise up and cal us blessed for the service which we have done, fo the sacrifices which we have made for glorious America, for the glory and the civilization and the freedom and the justice of the peoples of the whole world. And then the song of the poet and the dream of the philosopher shall have been realized in the universal brotherhood of man."

The Shipbuilding Labor Adjustment Board

THE Shipbuilding Labor Adjustment Board owes its existence to a written agreement entered into on August 20, 1917, between the Navy Department, United States Shipping Board Emergency Fleet Corporation and the officials of the International unions affiliated with the American Federation of Labor whose members are employed in shipyards. In accordance with this agreement, the Board is composed of a representative of the public appointed by the President of the United States, a representative appointed by the Navy Department and the Emergency Fleet Corporation and a representative of labor appointed by President Gompers of the American Federation of Labor. The original members of the Board were V. Everit Macy, appointed by the President; E. F. Carry, appointed by the Navy Department and the Emergency Fleet Corporation, and A. J. Berres, appointed by President Gompers. Early in October Mr. Carry was succeeded by Mr. Louis A. Coolidge and in August Mr. Coolidge was succeeded by Dr. L. C. Marshall.

Owing to defects in the organization contemplated by the original memorandum, the memorandum was amended on December 8, 1917, by those who had agreed to the original memorandum. The signatories of the amended memorandum which is still in force were: Franklin D. Roosevelt, Acting Secretary of the Navy; Charles Piez, Vice-President United States Shipping Board Emergency Fleet Corporation; William Blackman, Assistant to General Manager, Emergency Fleet Corporation; James O'Connell, President, Metal Trades Department, American Federation of Labor; John I. Nolan, Vice-President International Molder's Union of North America; J. A. Franklin, International President of Boilermakers, Iron Shipbuilders and Helpers of America; James Wilson, President, Pattern Makers' League of North America; Milton Snellings, General President, International Union of Steam and Operating Engineers; G. C. Van Dornes, General Vice-President of International Brotherhood of Blacksmiths and Helpers; F. J. McNulty, President of International Brotherhood of Electrical Workers; John J. Hines, President of Amalgamated Sheet Metal Workers of America, and William H. Johnson, President of International Association of Machinists.

The memorandum gives the Board authority to adjust disputes concerning wages, hours and conditions of labor in connection with the building or repair of ships under contract for the Navy Department or the Emergency Fleet Corporation or with the construction or extension of shipbuilding plants, the money for which is supplied by the Navy Department or the Fleet Corporation.

Experience soon demonstrated that in order effectively to adjust disputes in one yard it was necessary for the Board to issue decisions regulating hours and working conditions in all shipyards in the same district. Beginning with relatively small districts, the Board has found it necessary, because of competition among districts, to enlarge the area covered by its decisions until in its latest decisions it has divided the whole country into two districts, the Pacific Coast District and the Atlantic, Gulf and Great Lakes District.

To enable it to adjust grievances promptly, the memorandum further empowers the Board to appoint adjusters or examiners for each district and to give them such powers as representatives of the Board as may be found necessary as a means to the prompt settlement of disputes. As the result of experience the Board

V. EVERIT MACY

has adopted the policy of making its districts co-terminous with those established by the Emergency Fleet Corporation.

The present districts are as follows:

(1) New England District
(2) North Atlantic District
(3) Delaware River District
(4) Middle Atlantic District
(5) South Atlantic District
(6) Gulf District
(7) Great Lakes District
(8) South Pacific District
(9) North Pacific District

In each one of these districts there is a chief examiner who has the authority of the Board within his district in settling disputes and adjusting grievances, but subject always to appeal to the Board.

In addition to their duties as examiner, these men are also District Representatives of the Industrial Relations Division of the Emergency Fleet Corporation and in their dual capacity are responsible for all labor matters in the shipyards under their jurisdiction.

The Board early discovered not only that its decisions must apply to neighboring shipyards as well as to the yards actually involved in a dispute, but that the district for which uniform wage rates were established must be made larger and larger to prevent the wasteful shifting of employees from yard to yard, consequence on difference in rates of pay for similar work. In the decision issued on October 24, 1918, not only are the shipyards of the country divided into two districts for wage adjustment purposes but the rates of wages for most of the shipyard occupations are made identical in the two districts. The only important exception is the rates for labor were made higher for the Pacific coast than for the Atlantic coast and Great Lakes and that a lower rate was authorized for common labor in the South Atlantic and Gulf corresponding to local conditions.

Next to the adjustment of wages, the most important work of the Board has been the establishment of standards with reference to hours and working conditions. The Board has made standard in all shipyards the eight hour day, with time and a half for overtime in connection with new work and double time for overtime in connection with repair work and on the stated holidays.

A third matter to which the Board has given much thought has been the establishment of shop committees in shipyards which had not already adopted the policy of dealing collectively with their employees through their regularly constituted labor organizations. In the development of such shop committees the Board has attempted to insure that every employee shall be given the privilege of voting for a shop committee of three to represent his craft. The Chairmen of these shop committees constitute a joint shop committee through which grievances affecting more than one craft are handled. Both types of committees have the privilege in case they cannot adjust a dispute without outside aid of calling in an adviser to take up issues with the higher officials of the plant. Only after the attempt to adjust the grievances through the shop committees has failed or when the issue is of such a nature that it must be referred to the representatives of the Board which the examiner brought in. Only when the examiner cannot make a decision that is satisfactory to both sides is the issue brought to the attention of the Board for settlement.

The most striking difference between this shop committee plan and the plans worked out by several employers is that it respects the predilection of employees to handle disputes along craft lines rather than through a general plant committee which can only deal with grievances along industrial lines. This is due to the conviction of the Board that organization along craft lines is in conformity with a sound principle which should be encouraged. Moreover, it reconciles the international unions who have been parties to the creation of the Board to the activities of shop committees which they might otherwise deem inimical to the interest of organized labor.

Although organized to meet the war emergency, there is nothing in the constitution of the Board or the machinery which it has created which would not seem to be equally well adapted to peace conditions, particularly in connection with an industry which is largely carried on for the benefit and at the expense of the government. Steps have been taken to insure the continuance of the Board for at least a year after the peace treaty has been signed and it is gratifying that this extension appears to have the approval of all of the parties interested.

The principal achievement of the Board has been the maintenance of industrial peace in the shipyards during the past year. Shortly after its organization serious strikes occurred in the shipyards in San Francisco, Seattle and Portland. The first work of the Board was to visit the Pacific coast and adjust wages there. All the strikes were settled through its efforts and efforts of local representatives of the government. The decision it rendered in November, 1917, has regulated wages and working conditions in the Pacific coast shipyards, except as modified by subsequent rulings, and until it was superseded by the wage decision issued on October 24th, 1918. There have, of course, been stoppages of work in different yards on the part of groups of employees, but during the entire period there has been no stoppage affecting all the employees of the yard and no interruption has continued for more than a few hours until the machinery for the adjustment of grievances could be brought into effective operation. In view of the fact that in this period the employees in shipyards under the jurisdiction of the Board have increased from 50,000 to 400,000, this is a remarkable demonstration of the essential soundness of the underlying policy upon which the Board rests.

War Activities of The National Civic Federation

CO-OPERATION WITH COMMITTEE ON LABOR, ADVISORY COMMISSION, COUNCIL OF NATIONAL DEFENSE—CONSERVATION AND WELFARE OF WORKERS—EDUCATIONAL CAMPAIGN EXPOSING GERMAN PROPAGANDA—ORGANIZATION OF LEAGUE FOR NATIONAL UNITY

NOW that the war is over, it is proper that the general membership of The National Civic Federation should be made acquainted with the activities of the organization since our entrance into the international struggle.

Recognizing in February, 1917, that our participation in the war was impending, an official pronouncement of the organization was issued and telegraphed to President Wilson. It follows:

> "At this crucial hour, which may well mark a turning-point in our nation's history, The National Civic Federation, composed of representative wage earners, employers, and the general public, sends you our pledge of hearty support in the continuance of peace, if possible, and in prosecuting war if that is necessary. We wish that our country's honor be upheld, its citizens be protected and that it play a fitting part as the leading neutral nation to promote the permanent welfare of mankind. On you rests the responsibility of leadership—on us the burden of action in loyal service. Call upon us in whatever way the service will be greatest."

When there was authorized by Congress the Committee on Labor of the Council of National Defense, having for its Chairman Samuel Gompers, President of the American Federation of Labor and Vice-President of The National Civic Federation from its inception, Mr. Gompers recognized the peculiar adaptability and utilized the machinery of the Civic Federation in promoting the work of his Committee. The first among its officers and members to become especially active was President Macy who accepted the chairmanship of Mr. Gompers' National Mediation Committee and afterward, because of his practical experience in dealing with labor problems, was appointed by President Wilson Chairman of the Labor Adjustment Commission of the United States Shipping Board. Various other departments of the Federation, in addition to the one on Mediation, lent themselves as readily to the development of the work of the Committee on Labor, to which Mr. Gompers added "including Conservation and Welfare of Workers." For example, Louis A. Coolidge, Chairman of the Federation's Welfare Department, became the Chairman of the Labor Committee on Welfare Work under which H. E. Miles, as Chairman of the Section on Industrial Training for the War Emergency, actively developed it for 18 months and later was appointed Chief of Training in the Division on Dilution and Training of the United States Department of Labor. Philip Hiss, Chairman of the Federation's Industrial Housing Committee, became Chairman of the Section on Housing. In the fruition of this effort, Otto M. Eidlitz, a member of the Federation's Executive Committee, successively became Chairman of the Committee on Housing of the Council of National Defense, and Director of the Bureau of Housing and Transportation of the United States Department of Labor. Other members of the Federation served upon the Labor Committee's Executive Committee—namely, Louis B. Schram and Dr. Lee K. Frankel; while Dr. Frederick L. Hoffman took the Chairmanship of the Committee on Information and Statistics.

The following members of The National Civic Federation also participated in the work of the Committee on Labor: Percy S. Straus, Chairman Executive Committee, Section on Industrial Training for the War Emergency; Dr. Thomas Darlington, Chn. Division on Industrial Fatigue; Dr. W. G. Hudson, Chn. Division on Industrial Diseases and Poisons; Robert D. Kohn, Chn. Division on Structural Safety; M. A. Dow, Chn. Division on Accident Prevention; Lewis T. Bryant, Chn. Division on Dust and Fumes; Dr. Alvah H. Doty, Chn. Section on Public Education in Health Matters; and A. Parker Nevin, Chn. Section on Standard Guides for Employers.

Some additional experts who were brought into the activities through the Welfare Department of the Federation are: L. R. Palmer, Chn. Industrial Safety Section; Ira H. Woolson, Chn. Fire Prevention Division; Dr. William A. Evans, Chn. Sanitation Section; L. B. Marks, Chn. Lighting Division; Werner Nygren, Chn. Heating and Ventilation Division; Albert L. Webster, Chn. Drinking Water Division; Dr. George M. Kober, Chn. Village and Public Sanitation Division; and Dr. George J. Fisher, of the Young Men's Christian Association, Chn. Recreation Section.

COMPENSATION FOR ENLISTED MEN.

Compensation for soldiers and sailors and their dependents was the first vital effort initiated and furthered by the Committee on Labor. In June, 1917, the Council of National Defense authorized the Committee on Labor, in accordance with its earlier recommendation that the Government should assume full responsibility for the care of the men in the Service, and for their relatives, to draft legislation covering the questions of separation allowances, compensation for injured soldiers and sailors and death benefits for their dependents. To this there was added the opportunity to secure insurance, at low rates, in amounts from $1,000 to $10,000. To carry into effect that portion of his plan of work (proposed April 2, 1917, and adopted April 6), Mr. Gompers called into conference on the 8th of July, 1917, at the headquarters of the Workmen's Compensation Department of The National Civic Federation, New York City, leading experts who were affiliated with it in the study or development of workmen's compensation, social insurance, pensions and foreign systems for separation allowances, to advise with him and Judge Julian W. Mack, Chairman of his Section on Compensation for Soldiers and Sailors and Their Dependents, one of the activities of the National Sub-committee on Welfare Work of the Committee on Labor.

Among those participating in this advisory conference, in addition to Judge Mack, who presented exhaustively the different phases of the subject, were: August Belmont, Chairman of the Federation's Workmen's Compensation Department; Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers; P. Tecumseh Sherman, Social Insurance Expert and Attorney-at-Law; Dudley M. Holman, President International Association Industrial Accident Boards; V. Everit Macy, President The National Civic Federation; Dr. Lee K. Frankel, Third Vice President, Metropolitan Life Insurance Company; Frank V. Whiting, General Claims Attorney, New York Central Lines; D. L. Cease, Editor *The Railway Trainman;* Captain S. Herbert Wolfe, Consulting Actuary; Charles Thaddeus Terry, Chairman Committee on Uniform State Laws, American Bar Association; Prof. F. Spencer Baldwin, Member Former Massachusetts Commission on Pensions, Annuities and Insurance, and Manager State Fund, New York Industrial Board; Ralph M. Easley, Chairman Executive Council, The National Civic Federation; Hugh Frayne, Labor Member, War Industries Board, and General Organizer, American Federation of Labor; Dr. Frederick L. Hoffman, Statistician Prudential Insurance Company; William J. Moran, Attorney, Travelers Insurance Company; John Golden, President United Textile Workers; A. Parker Nevin, Counsel, National Association of Manufacturers; Leon S. Senior, Secretary New York Compensation Inspection Rating Board; J. W. Sullivan, of the Typographical Union, and Assistant to Samuel Gompers as Member Advisory Commission, Council of National Defense; E. E. Rittenhouse, Public Service and Conservation Commissioner, Equitable Life Assurance Society; John Mitchell, Chairman New York State Industrial Board; Timothy Healy, President International Brotherhood of Stationary Firemen; and Miss Gertrude Beeks, Secretary Executive Committee, Committee on Labor.

The result was the appointment by Mr. Gompers of a committee to draft the proposed legislation. The members of the Drafting Committee were: P. Tecumseh Sherman, Chairman; D. L. Cease, Secretary; Frank V. Whiting, Prof. F. Spencer Baldwin, Captain S. Herbert Wolfe, and J. W. Sullivan. It held several sessions in New York and at Washington in conference with Judge Mack and the Chairman, P. Tecumseh Sherman, in the light of the discussions performed the invaluable service of drafting the bill. For this purpose, with Judge Mack, he also studied the necessary administrative requirements in the Treasury Department, through which it would have to function when enacted by Congress.

The bill was adopted by the Committee on Labor on the 20th of July, 1917, soon thereafter sent by Secretary McAdoo to the President, approved by him and introduced in the House on August 10. With some amendments, it was enacted into law and signed by President Wilson on the 6th of October, 1917. It is considered the greatest humanitarian measure ever devised along insurance lines and an improvement upon Civil War pensions dependent upon annual Congressional appropriations.

INDUSTRIAL TRAINING FOR THE WAR EMERGENCY.

H. E. Miles, a practical manufacturer of long experience in mechanical training and Chairman of the Industrial Training Committee of the National Association of Manufacturers, was drawn from the Federation's Welfare Department to take charge of this Section of the Committee on Labor. It advocated the installation of vestibule schools by the manufacturers, and actually installed or was influential in starting a large number in aeroplane, heavy ordnance, light arms, textile and other plants, both government and privately owned. It has thereby helped to increase production all the way from 10 to 40 per cent in those places. The plan followed has been to adapt and instruct skilled mechanics from idle trades, such as the building line; and to train unskilled men and women, under the scheme of "dilution" used in England and France.

As an indication of the influence of this work upon industrial peace, it may be said that there was secured a joint agreement between leaders of labor and employers in New Jersey covering the method of training to be adopted in that state throughout the period of the war.

The Section, which is composed of an equal number of representatives of labor, employers and educators, developed similarly organized local committees in states where war production is extensive and in cooperation with State Councils of Defense.

HOUSING OF WAR WORKERS.

In June, 1917, the congestion in munition making and shipbuilding plants owned by the Government such as arsenals and navy yards, and in those privately owned having government contracts, was taken up by the Executive Committee of the Committee on Labor.

Mr. Philip Hiss, Chairman of the Section on Housing, under the direction of Mr. Gompers, surveyed the entire country, reporting in September, 1917, that, in a number of instances, fifty per cent of the machinery of munition-making plants was idle and fifty per cent of the output of the shipyards was held up, with labor available, due to inability to house the workers. Inadequate transportation to and from the work places added to the difficulty.

It was made apparent that neither American ships nor supplies for our boys in Europe could be adequately forthcoming without shelter for the workers and that there must be government financial aid because local capital had practically been exhausted to provide operating expenses where enormous contracts had been placed and it could not even be furnished to complete private housing developments already inaugurated. These findings were confirmed by statements from bankers, employers having government contracts and Federal departmental heads in the War and Navy Departments and Shipping Board, not only as exhibits in his report but later by personal testimony at a week's hearing called by Mr. Daniel Willard, Chairman of the Advisory Commission, Council of National Defense, to which President Wilson had referred the matter—and still later before the Housing Committee of Five of the Council of National Defense.

As one who could give expert aid, Mr. Otto M. Eidlitz, a member of the Executive Committee of The National Civic Federation, was recommended to Mr. Willard, upon whose request he appeared at the hearings above mentioned. At the close thereof, Mr. Eidlitz was appointed Chairman of the Committee on Housing of the Council of National Defense, the other members having been: Theodore W. Robinson, Vice President Illinois Steel Co.; William J. Spencer, Secretary Building Trades Department, American Federation of Labor; C. G. du Bois, Comptroller American Telephone and Telegraph Co.; and Gertrude Beeks Easley, Director Welfare Department, The National Civic Federation.

The report of the Housing Committee was followed by the President's appointment of Mr. Otto M. Eidlitz as Housing Director. Legislation resulted in Congressional action making available $160,000,000 to provide shelter—$50,000,000 from funds of the Emergency Fleet Corporation, $10,000,000 being assigned to the District of Columbia to erect quarters for government clerks, and the balance to munition-making centers. The President directed Secretary William B. Wilson to administer the fund for his bureau, who in turn delegated the authority to Mr. Eidlitz. Pending the appropriation by Congress, he worked in a preliminary way among the departments concerned, built up an organization of architects and other experts and undertook topographic work in which there were involved numerous large projects. The ultimate outcome was the formation of a corporation entitled the United States Housing Company (Inc.), with Mr. Eidlitz as president, to which was referred the program of the Bureau of Industrial Housing and Transportation of the Department of Labor, and which has vast developments under way.

The three big welfare activities, above described, were inaugurated and effectively engineered by experts, the leaders in America in their respective lines, furnished by the Civic Federation. All gladly gave their services and paid their own expense.

MEDICAL EXAMINATIONS.

Medical examination of applicants as one of the functions of government labor recruiting agencies was recommended by Chairman Gompers to Secretary William B. Wilson, as the result of a conference held at headquarters of the N. C. F., July 15, 1918. A resolution, favoring the proposition designed to help maintain the health of our industrial army, embodies the consensus of opinion of experts, industrial physicians, public health workers, representatives of labor, and employers. The purpose is health conservation, essential to maximum production —a war necessity—and not to eliminate but to adapt the employee to work for which he is physically fitted, and also to permit follow-up or curative efforts. A standard examination eard, dealing with such subjects as previous occupations, laboratory diagnosis, general appearance relating to deformities, malnutrition and glands, diseases of eyes, ears, nose, mouth and throat, lungs, heart, nervous system, extremities, and such general matters as hernia, hemorrhoids, and evidence of actual venereal disease, was adopted as the result.

HEALTH CONSERVATION REPORTS.

Reports upon subjects important to physical comfort and health of workers were rendered promptly by committees whose chairmen and members largely were experts from the Welfare Department of the Federation.

MUNITION WORKERS.

A guide to employers in providing healthful conditions for workers in the manufacture and loading of high explosives—to prevent industrial diseases and poisons—and indicating the fixtures requisite for toilet arrangements, eating facilities, and dust prevention, also proper medical supervision and other essentials, was one of the first adopted. Representative of employers in that trade previously were drawn into conference and agreed to adopt these standards as the practice of their shops. Thousands of copies were circulated upon application from employers in the poisonous trades and from many others since the standards are applicable to other lines of manufacture.

LIGHTING CODES.

Similarly, lighting codes have been prepared and distributed, in cooperation with state authorities, in the various states where war products are being made. Four states have adopted these codes. The National Lighting Committee, with a representative in each state, has inaugurated instructional conferences for the special guidance of factory inspectors. They consist of a series of talks by specialists, together with laboratory demonstrations of practical lighting, its technique and measurement. The effort is to improve industrial lighting which it has been proven results in saving eyesight, in the increase in quantity and quality of output, and lessened spoilage and waste.

INDUSTRIAL FATIGUE.

The best means of preventing industrial fatigue and the safe conditions under which maximum output may be obtained, have been indicated in a pamphlet widely circulated among employers. It deals not only with the means of detecting fatigue but the introduction of rest periods, providing adjustable seats, omitting unnecessary motions, proper ventilation of workrooms, adjusting the hours of work, avoiding overtime, omitting Sunday work, and sanitary conditions outside of factories.

VENTILATION.

A report upon requirements and standards for heating and ventilation, comprehensible to the layman, gives practical advice on what may be accomplished through natural and mechanical means without inordinate expense and with increased working efficiency. It refers both to home and shop conditions.

VILLAGE SANITATION.

Another report, with special reference to new industrial villages and construction camps, deals with rural sanitation. It takes up all phases of the subject in detail and is a vertiable text book for executives in welfare work.

INDUSTRIAL SAFETY.

The Section on Industrial Safety prepared codes for educational purposes upon (a) structural safety, (b) fire prevention and (c) accident prevention. There were incorporated in these recommendations only such codes as the modern employer would naturally have in his plant and therefore no hardship, or possible interference with quick war production, would be entailed by their adoption. It is intended to use them in drafting safety standards, the Bureau of Standards of the Interior Department, the Division on War Labor Service of the Department of Labor and the Section on Industrial Safety of the Committee on Labor of the Council of National Defense cooperating.

RECREATION.
